A recent visit to the Customs examination house at Sagaramatz, revealed a state of things rather surprising to us. We at least expected to see a proper staff of officers stationed there to examine goods when brought on shore for inspection. Instead of this, we only found three officers, but no interpreter; while the whole work of examination appeared to be done by a single individual, although the day we happened to pass the place, was, perhaps, the most busy one in the week, owing to the arrival of the *Oregonian* on the previous day. There we noticed cabbages, bales and cases of goods, and a variety of Chinese commodities lying about in hopeless confusion. Here we saw boxes broken open by the inexperienced coolies employed, who destroyed many or rendered them beyond repair; while a crowd of carrying coolies assembled outside, stood looking on with apparent satisfaction at a scene of so much interest, eager to see the articles exposed during examination. From what we then observed there can be but little doubt that the present system is ill-adapted to this port until such time as proper buildings are erected, and a more numerous staff is appointed. This is the root of most of the trouble people have. Proper buildings in which the examination is made are absolutely necessary; and the plaster godown on the same lot should be also used instead of being let to Chinese. A better classification of the business to be transacted should be made. It should be so arranged that sundries, *pyer* which many knotty points are likely to be raised about duty, and which after all do not give so much revenue as they do, trouble to examine, should be inspected in a separate department—such articles should not be allowed to interfere and prevent other goods of greater value from being passed in time to enable the duty on them to be paid and the goods taken away the day they are landed. These are but a few of the shortcomings noticed during a casual visit. More might be observed by those who are constantly there on business, but we are confident that all will confirm the correctness of what we have now written.—*Ibid*.

AN inquiry was held at the British Consulate on the 27th inst., to investigate a charge brought against a firm here, for breaking the Customs' new Regulations for the landing of cargo. The circumstances of the case are briefly these. A boat load of goods was brought to the Sagaramatz jetty from the *Oregonian*, and arriving there at 11.10 a.m. the person in charge handed his Customs permit to the Inspector, but no notice was taken of the goods until 2 p.m. when the consignee personally applied to the officers, and got one of them to go to the cargo boat and look at the goods, but he was told the goods must still wait. At 3.30 p.m., the consignee, after giving due notice removed the goods without further reference. H. B. M.'s Consul after hearing the above particulars pointed out to the officers who were present, that such a delay as there was in this case, viz. four hours, was most unreasonable and not in keeping with Article VII. of the Convention, and urged upon them the necessity of using greater efforts to expedite business, instead of putting obstructions in the way; and he felt sure if such were the case the government would find they would have had the hearty co-operation of every merchant here.—*Ibid*.

To judge by the present mortality, a pest seems to be raging among the poultry of all descriptions throughout the country. Fowls, ducks, and geese are dying by hundreds daily.—*Nagasaki Gazette*.

By way of Kagosima we learn the arrival of the Japanese steamer *Bertha* at that port a fortnight ago, dismasted, from

Loochoos and O-hosima. After the fact of having encountered a severe gale herself, she reports a European vessel, name of which is not known, wrecked close by O-hosima, all hands lost, with the exception of the Captain and two sailors. The Captain died from injuries received in the breast.—*Ibid.*

We hear that small-pox is very prevalent at Amakusa at the present time.—*Nagasaki Express.*

H. I. R. M. S. *Scutellana*, bearing the flag of Vice-Admiral Possiet, and having on board His Highness the Grand Duke Alexia, arrived at Nagasaki on Dec. 26th, in company with the *Vikis*, bearing the flag of Rear-Admiral Fedorofsky, both vessels from Vladivostock. Both vessels are now coal-ing, and leave for Hongkong in the course of next week. After a short stay at that port, they will visit Manila. The *Scutellana* will next proceed to Singapore, whence His Highness will proceed in another vessel to Russia, via the Suez Canal, the *Scutellana* returning home by way of the Cape of Good Hope.—*Ibid.*

#### HIOGO.

It is said that the news of the success of the Yokohama Gas scheme has made the local authorities of Osaka emulous of following the example of the rulers of the Kanagawa Ken.

The Hiogo Ken has issued a notification calling on all of the late debtors to refund any money or rice formerly borrowed by them. They are informed that even if the document acknowledging the debt be not stamped with their seal, they will be obliged to liquidate the claim if evidence of its authenticity be adduced.

### Shipping Intelligence.

#### ARRIVALS.

Dec. 23, *Polkam*, British barque, Gardner, 340, from Hongkong, November, 19th, General, to Order.  
Dec. 23, *Bourayin*, Russian corvette, Captain Lenes, 460, from Kobe, December 21st.  
Dec. 16, *Phase*, French steamer, Walter, 960, from Hongkong, Mail and General, to M. M. Co.  
Dec. 27, *Juno*, H. M. L., J. K. E. Baird Commander, 6 guns, 400 H. power, 1,460 tons, from Shanghai and Kobe.  
Dec. 28, *Oregonian*, American steamer, Dearborn, 1,914, from Shanghai, December 19th, General, to P. M. S. S. Co.  
Dec. 28, *Lauderdale*, British ship, True, 854, from Newcastle, via Hongkong, Coal—Walsh, Hall & Co.  
Dec. 28, P. M. S. S. *Japan*, Howard, from San Francisco, to P. M. S. Co.  
Dec. 31, *Volga*, French steamer, Flambeau, 971, from Hongkong, December 23rd, Mails and General, to M. M. Co.  
Jan. 1, *Ada*, British ship, Jos. Amls, 638, from London, General cargo, to Walsh, Hall & Co.  
Jan. 2, *Ariel*, American steamer, Newell, 1,750, from Hakodate, General cargo, to P. M. S. S. Co.  
Jan. 2, *Sadan*, North German vessel Boysen, 400, from Shanghai, General cargo.  
Jan. 2, *Mercury*, British barque, Thomas, 361, from Sydney N. S. W. Coals, to Wilkin & Robison.  
Jan. 4, *New York*, American steamer, Farber, 2,217, from Shanghai, December 27th, General, to P. M. S. S. Co.

#### DEPARTURES.

Dec. 21, *Waski*, British steamer, Coster, 221, for Kobe, General despatched by Hudson Malcolm & Co.  
Dec. 21, *Relief*, American steamer, Corning, 795, for Shanghai, General, despatched by P. M. S. S. Co.  
Dec. 22, *Ariel*, American steamer, Newell, 1,736, for Hakodate, General, despatched by P. M. S. S. Co.  
Dec. 24, *Menzaleh*, French steamer, Mourier, 1,008, for Hongkong, Mails and General, despatched by M. M. Co.  
Dec. 24, *Colorado*, American steamer, Warsaw, 3,767, for San Francisco, Mails and General, despatched by P. M. S. S. Co.  
Dec. 26, *St. Aubin*, French ship, Blouet, 1,136, for Hongkong, Rice, despatched by Walsh Hall & Co.  
Dec. 28, *Harwick*, British barque, Dickson, 613, for Hongkong, Rice, despatched by Walsh Hall & Co.  
Dec. 28, *Costa Rica*, American steamer, Williams, 1,917, for Shanghai, General, despatched by P. M. S. S. Co.  
Dec. 31, *Bombay*, British steamer, Davies, 1,183, for Hongkong, Mails and General, despatched by P. & O. Co.  
Jan. 4, *Clita*, British bark, Middleton, 520, for New York, Tea, despatched by Aspinall Cornes & Co.

#### PASSENGERS.

Per P. M. S. S. *Relief*, for Shanghai.—T. B. Jamieson, and 1 in the steerage. For Nagasaki.—20 in the steerage. For Hiogo.—Messrs.

J. Rowe, W. Smith, and 2 Japanese in the cabin, and 75 in the steerage.

Per P. M. S. S. *Ariel*, for Hakodate.—1 Japanese in the cabin, and 10 in the steerage.

Per M. M. steamer *Menzaleh*: For Hongkong.—Mr. and Mrs. Sheppard, Mr. and Mrs. Dinnecke, Mr. Magniac, Mr. Whittall. For Port Said.—Mr. and Mrs. Bernard, Mr. and Mrs. Kiriakidi. For Marseilles.—Mr. and Mrs. Micham and Infant, Mr. and Mrs. Dinquetil and Infant, and Mr. Gimon.

Per P. M. S. S. *Colorado*: Mr. French, Dr. Knight, Messrs. Y. E. Oldis, B. R. Lewis, Mr. and Mrs. Warden, Miss Warden, Chas. Weiss, Mrs. Montague, J. R. Macrae, H. G. Hollingworth, G. H. Mason, Michel de Miczoul, W. H. Hagedern.

Per P. M. S. S. *Oregonian* for Yokohama.—Messrs. J. M. Reynvaan, wife, infant and nurse, J. Von Fischer and servt., Shephard and servt., Reside, 10 Japanese officers, James Cook, Brillmar, Vatake, 113 in the steerage.

Per P. M. S. S. *Japan*, from San Francisco. For Yokohama.—Jas. H. Mole, J. D. Carroll, F. Geisenheimer, W. Wilkie, Miss Mary Barre, W. F. Patterson, Mrs. P. G. Hubbard, Robert Stewart, J. Schultz, J. Sanga, Dr. H. K. Platt, K. Moridera, J. S. Mabon, G. Kanabada, Richard Niewerth, Mrs. Wm. Thomas and eight in the steerage.

For Shanghai.—J. P. Mellor, wife and servt., Miss L. Klein, F. Rouse, W. J. Blydenburg, wife and child, Miss M. Stuart, Francis J. Green, John Cornwall, L. Harre, Thos. B. Hedge, Rev. J. H. Quinby, wife and two children, Rev. G. D. Miller and wife.

For Hongkong.—Mr. Ghuldhan, wife and servt., Robt. B. Smith, J. B. Browne, T. M. O'Toole, 855 Chinamen.

Per M. M. steamer *Volga*: Messrs. Barrelet, Kobagaski, Hiyassi, Itautenije, Takautenije, Kagawa, Ekada, Hino (Japanese).

Per American steamer *Ariel* from Hakodate. Messrs. J. H. Hawes and wife, B. T. Lathrop, Capt. Withers, Tuck Hong, and 75 in the steerage.

Per British barque *Mercury* from Sydney. Nine Cabin passengers, Mr. Marsh and family.

Per P. M. S. S. *New York*, from Shanghai, &c.—Messrs. Geo. Hamilton, J. F. Twombly, M. Dunker and servant, A. H. Macomber and servant, M. Twirellet and servant, C. S. Stewart, A. S. Forbes and servant, Capt. T. Robertson, and 53 in the steerage.

#### CARGOES.

Per P. M. S. S. Co. *Oregonian*, from Shanghai:—

Treasure.....\$891,481

#### REPORTS.

The British ship *Laude* reports leaving Hongkong on November 29th; same day pilot left off Pootay island; December 3rd met with a heavy N. E. gale and a very high sea. Passed between Formosa and Botel Tobago; on the 8th strong N. easterly breezes blowing; were off Craig island on the 12th, and from that date till near Linschoten experienced a succession of heavy Southerly and N. E. gales, with a high dangerous sea running. Passed Volcano island on the 19th; thence had light northerly winds up to Cape Siwo; during the gales and stormy weather lost several sails and portions of the bulwark; took a pilot on board off Rock island on the 25th; December 15th while Wm. Murray, a boy was loosing the main top-gt. sail, he lost his hold and fell to the deck, thereby causing such severe injuries as to cause his death on the 28th instant.

P. M. S. S. Co. steamer *Japan* reports: left Wharf at San Francisco Nov. 30th; came to anchor shortly after in a thick fog, and was detained until 3 p.m., Dec. 1st.

Dec. 14th: two Chinese sto. passengers died; embalmed the remains.

Dec. 24th: Owen Trainer, ship's Butcher, died of inflammation of the lungs, the remains were embalmed and brought to Yokohama for interment.

Dec. 26th: 11 a.m., met and communicated with company's stmr. *Colorado*, hence 24th inst.

Have experienced moderately fine weather since leaving San Francisco.

The British ship *Ada* reports: Sept. 11th crossed the Equator with strong Southerly gales; October 6th, in the meridian of Cape Good Hope 39° S.; ran the casting down on the Parallel of 39° S.; Nov. 14th, made Sandle Wood Island; Nov. 26th, passed through the straits of Ombay; Dec 30th, sighted Fusayama 7 a.m., and received the Pilot on board at 11 a.m.; experienced light winds, and fine weather throughout.

The American steamer *Ariel* reports: First 36 hours very heavy N.W. gale, latter part fine weather.

The North German vessel *Sadan* reports fine weather throughout. The British barque *Mercury* reports fine weather all the passage.

## BIRTH.

April 4th, at H.B.M. Legation, Yokohama, Lady PARKES, of a daughter.

## Summary.

SINCE our last issue we have the following Mail arrivals and departures to note. Arrivals:—March 23rd, M.M. Str. *Volga*, from Hongkong; March 26th, P. & O. Str. *Malacca*, from Hongkong; March 29th, P.M.S.S. *Japan*, from San Francisco; April 3rd, M.M. Str. *Menzaleh*, from Hongkong. Departures:—March 25th, P. & O. Str. *Bombay*, for Hongkong; March 30th, P.M.S.S. *Japan*, for Hongkong; April 1st, M.M. Str. *Volga*, for Hongkong; April 8th, P. & O. Str. *Malacca*, for Hongkong.

We have to announce the return of Sir Harry and Lady Parkes on the 26th ultimo. A number of residents met them on landing and general expressions of welcome have been published in the local press. (Page 220.)

M. Von Brandt, Minister Resident for the German Empire has also arrived. We omitted to notice this in our issue of March 10th where, however, his arrival was noted among the passengers by the S. S. *Madras*. (Page 220.)

The negotiations between Captain Garcia, the Peruvian Envoy, and the Japanese Government, are in progress. The Mission has left the residence at Hamagoten, assigned to it by the Japanese Government, and has rented the building in Yedo known as the Oriental Hotel.

Among our Correspondence will be found a most important letter from M. Armbruster of the Mission Apostolique. It announces the fact that the Christian prisoners in Owari have been allowed to return to their homes, and it is hoped that the other native Christians who have been deprived of their liberty on account of their religion will be set free. This, in conjunction with the abolition of the decrees against Christianity, is naturally to be construed as showing that the Imperial Government is duly impressed with the necessity of the toleration of the religions of Western nations. (Page 218-19-20.)

Two of the local papers have, during the past fortnight, repeatedly asserted that trouble is arising in the province of Satsuma, and the usual canards of an immediate outbreak

have been current, it being alleged that Shimadzu Saburo well, but unfavourably, known for his antagonism to foreigners had headed an anti-foreign demonstration against the Government. On the most authentic and reliable information we are enabled to categorically deny these rumours. Shimadzu Saburo has left his native province for Yedo where he is expected to arrive in a few days. (Page 221.)

We republish in our columns a statement of the Revenue and Expenditure of the Japanese Government, which first found its way into print in a local contemporary. From its very questionable authenticity we are inclined to look upon it as of doubtful accuracy, and would warn our readers against giving credence to figures which have in no way received official confirmation. (Page 221.)

On the night of Saturday, 23rd ult., a fire broke out in a section of the native town and, a high wind blowing at the time, soon assumed such proportions as to be quite uncontrollable by the efforts of either the foreign or native fire brigades. It is said to have been the most destructive fire which has occurred in Yokohama since that of 1868, when the foreign settlement suffered so severely, and the official returns estimate that no less than 1,509 houses were burnt, covering nearly 44 acres of ground and rendering 5,672 persons houseless. (Page 222.)

An official enquiry has been held into the loss of the British brig *Wanja* while en route from Hakodate to Yokohama with a cargo of ice and sundries. The Court held that the ship was unseaworthy when she left the northern port, and the judgment would therefore seem to throw some blame upon those who allowed her to depart. (Page 222-23.)

An outbreak is reported from the province of Etchizen, the farmers, who express themselves antagonistic to Christianity and Shintooism, being the ringleaders. The presence of a large body of police was, however, soon able to restore order, though not before it was deemed advisable to ensure the safety of the foreigners living in the capital of the province by giving them protection in the castle. (Page 220-21.)

By latest news from Hakodate we learn of a fire which destroyed the Gankiro (Yoshiwara) and a portion of the native town. (Page 224.)

The dissensions among the members of the Yokohama Race Club have been brought to a termination by the election of Mr. Kingdon to a seat on the Committee, vice Col. Shepard who resigned, as reported in our last. (Page 222.)

The receipts of the railroad are increasing, an average per mile of \$549.99 being reported for the week ending March 30th, against \$450.34 for the week ending March 2nd. (Page 225.)

On reference to our list of passengers it will be seen that the Governors and Vice-Governors of several of the provinces have arrived and proceeded to Yedo. The business which has required their presence has not yet become public.

A native Marine Insurance Company has been established under the auspices of the Kaitakushi, (Agricultural Department.) It promises to succeed. (Page 224.)

A system of letters of credit or circular notes has been established between the various towns of Japan, the native Banks having undertaken to carry out the project.—(Page 224.)

Two new lines of Japanese steamers for mail, passenger and cargo transit have been established, one between Yedo and Shidzuoka, and the other between Yedo and Kisaradzu. (Page 224.)

We publish elsewhere a lengthy letter from the Correspondent of the *Hiogo News* at Kioto, giving a detailed description of the Exhibition now open there. Although the American Department, chiefly represented by California, makes a very fair show, it would seem that the Exhibition is hardly to be compared to its predecessor of last year. (Page 216-18.)

# THE WITHDRAWAL OF THE ANTI-CHRISTIAN EDICT.

WE recently made some comments upon the withdrawal by the Government of the notices posted upon the Edict-boards throughout the Empire, the most interesting of which in foreign eyes was that which denounced Christianity. We hailed the withdrawal of this special notice with sincere gratification, as an evidence not only of an altered attitude of the Government towards our religion, and generally towards us as foreigners, but as evidence also of the consolidation of its power and influence—a subject for real congratulation. We were subsequently forced, however, to confess that our rejoicings over this welcome intelligence were premature, and that a more recently posted notice, to the effect that all the old notices were removed *because the people knew them by heart*, impugned the good faith of the Government in regard to those representations, if not indeed to those promises, which had been made to the Foreign Representatives on this subject. Now we have no wish to harrass the Government by a constant reference to a matter which we have always acknowledged to be one of extreme delicacy and difficulty. We have no wish that it should embroil itself with its subjects by taking a step for which the general sentiment of the country is not prepared, and we should be reluctant to appear to press it unduly upon a question which the progress of events is sure to solve in a satisfactory way. But we ardently desire to see its promises faithfully redeemed when once they have been given. Whether they are given somewhat sooner or later matters little or nothing. But when once given, they should be inviolably kept. The fundamental difference between European and Asiatic morality consists in this: that, in the former, truth is a rudimentary virtue, and in the other it is not. We do not pretend for a moment that we are always as good as our principles. But we do pretend that the theory of European diplomacy or statesmanship excludes the idea of deliberate falsification or the application to politics of a system of immoral expediency, and we are certain that until the Japanese see and understand this, and act upon the same theory, they will always be liable to these charges of tergiversation which it is so extremely unpleasant to make and to have made. Our most earnest wish is to see the Government trustworthy and trusted, not alone in its financial relations with foreigners, but in similar and all other relations with its subjects, and in its promises or representations to the Foreign Ministers. Whatever advantages it may momentarily, or for once, gain by the course which apparently comes to it with a kind of mechanically operating instinct, are more than lost by the distrust engendered by the discovery of this policy, and the alienation which succeeds this discovery. The object of the Government at this moment is to secure in the revised treaties some recognition of its right of jurisdiction over foreigners resident in its territory—the normal and natural right of all governments, but from the exercise of which certain of them are excluded by special provisions. In order to secure this recognition it is desirous of appearing as well as possible in the eyes of the world, and, knowing that so long as the offensive Edicts against Christianity are extant the Christian Powers will not yield one tittle of the rights guaranteed by treaty to their subjects, it is anxious to show that these Edicts have been withdrawn. But how can it claim this in the face of the facts which we shall now adduce to prove that this claim is but an unfounded pretence? The Edicts are as follows:—

## Board No. 1.—Law.

Human beings must carefully practise the principles of the five social relations. Charity must be shown to widowers, widows, orphans, the childless and the sick. There must be no such crimes as murder, arson, or robbery.

4th year, Kei-ō, 3rd month.

(March 24th—April 22nd, 1868).

(Signed) DAIJOKAN [GOVERNMENT].

## Board No. 2.—Law.

Persons uniting together in numbers for any object soever are called leaguers; persons leaguering together for the purpose of petitioning in a forcible manner, are called insurrectionists; persons who conspire to leave the ward or village in which they live are called runaways. All these acts are strictly prohibited.

Should any persons commit these offences, information must at once be given to the proper officers, and suitable rewards will be given.

4th year, Kei-ō, 3rd month.

(March 24th—April 22nd, 1868).

(Signed) DAIJOKAN [GOVERNMENT].

## Board No. 3.—Law.

The evil sect, called Christian, is strictly prohibited. Suspicious persons should be reported to the proper officers, and rewards will be given.

4th year, Kei-ō, 3rd month.

(March 24th—April 22nd, 1868).

(Signed) DAIJOKAN [GOVERNMENT].

This was subsequently modified as follows.

## Law.

With respect to the Christian sect, the existing prohibition must be strictly observed.

Evil sects are strictly prohibited.

10th month of the first year of Meiji.

(November, 1868).

## Board No. 4.—Ordinance.

(Already published in the Yokohama papers as a notification, being the new law enacted for the protection of foreigners).

## Memorandum.

When any person sings songs boisterously in the streets, knocks up against things, stops a person's passage, obstructs the thoroughfare, or proceeds to draw a sword in order to frighten passers by or to kill animals, or behaves violently in an eating-house, he must be instantly arrested, his sword be taken from him, and a complaint must be made to the nearest police-office.

12th month, year of the Horse.

(January—February 1871).

(Signed) THE COUNCIL OF STATE.

As soon as incendiaries, robbers, murderers or forgers of *Kiasatsu* are seen or heard of they must be at once arrested and brought to the nearest (police) office, or denounced to it, and if after inquiry there is no doubt of the fact, rewards shall be granted. Should any person receive wounds or be killed on the spot in making such arrests he shall be liberally assisted by the Government. When informers are summoned to the (police) office to give evidence, suitable allowances shall be made so that they shall not suffer in their business or trade, and therefore such persons should state exactly what they know should they conceal the facts, and the truth becomes known afterwards from another quarter, they will be considered guilty of an offence.

12th month, year of the Horse.

(January—February, 1871).

(Signed) THE COUNCIL OF STATE.

The above are the ordinances which have been posted on the Edict-boards for years—for generations, as far as we know.

The following is the recent Edict to which we now refer to as impugning the good faith of the Government.

## No. 68. To the Cities and Prefectures.

In order that the people may know all Proclamations by heart, they must hence forward be exposed at some convenient spot for the space of thirty days after their promulgation.

Note.—With regard to local notifications you will proceed in the same manner as heretofore, but as to the permanent noticeboards (*Kōsatsu-men*) which have hitherto been exhibited, they will be re-

moved for the future, as they are universally known by heart (*japan-juku-ohi no koto ni tsuki*).

24th February, 1878.

(Signed) THE COUNCIL OF STATE.

Information of a very reliable character which has reached us from Osaka and Nagasaki, reports that the old edicts have not been withdrawn, and that the special one directed against Christianity, which we have persistently pursued in this journal, enjoys its old position and prominence. We are therefore justified in our charge that the Government has untruthfully represented its action in this matter; or—to state the case with all the leniency it can possibly admit—the Government has not been straightforward (we sincerely trust the Japanese language has an equivalent for this admirable word) in the case. It may have done all that it safely could, and we frankly allow that no more could be expected of it. But it has not done all that it represented itself to have done, and on this charge we arraign it.

This method of procedure may be in harmony with Japanese views, and it must be confessed that grave difficulties, for which due allowance must be made, beset a government which has to deal with a question of this nature in ignorance of the amount of support which its action would derive from popular opinion, or the amount of antagonism such action would excite. But in all matters having a bearing upon the relations existing between the Japanese Government and foreign powers, it is essential that a frank and manly confidence should be established on both sides. The habit of mind which engenders this may be difficult of attainment among men accustomed to the intrigues characteristic of Asiatic politics, and to whom the unconcealed, yet not unfriendly, antagonism of party warfare or diplomatic struggle, regulated as it is among ourselves by considerations of morality and the sense of honour, are unknown. But there are few lessons better worth the learning by Japanese statesmen than those which teach them the habits of the European mind, its attitude and instincts, the laws it obeys and to which it expects obedience in others. We have no desire to betray any of that moral intolerance which refuses to acknowledge virtues in others because they are not the prominent virtues of the European ideal. We presume that each race and each country, as each individual, has its infirmity or defect, and is inclined to regard with special antipathy the vices from which it is most free, and to which its neighbours are most addicted. The moral ideal of the Japanese must necessarily differ from our own. It has a widely different origin and has been moulded by widely different circumstances. Their code of honour may, for all we know, shame our own in certain particulars, and it by no means follows that they are destitute of great national virtues because those virtues are not the ones most prized by us. But the history of the relations of this country with foreign powers will be vastly simplified when that spirit of truthfulness which lies at the foundation of all that we consider best in our European ideal of character, so entirely pervades the Japanese that their “yea, yea” and “nay, nay” will inspire a confidence which hardly yet attaches to their most solemn promises or assurances.

#### CLAIMS ON THE GOVERNMENT.

SOMEWHAT more than a year has elapsed since we drew attention to the claims on the Government which were then notoriously a source of much perplexity, if not of much embarrassment, to it. We remarked upon the equivocal origin and peculiar features of many of them, and are convinced that had our knowledge of their

details been greater than by any possibility it could be, the remonstrances which we made against them might justly have displayed even more warmth than that which they then excited. The pressing of these claims, and of others of a similar nature at earlier dates, gave those to whom they were entrusted many misgivings. There was undoubtedly the bond, signed, sealed and witnessed; the grim penalty for forfeiture was in order; the claim to the pound of flesh was clear; the court awarded and the law gave it. But there was often grievous injustice done by the sentence, and no Portia—no technical objection that the right to the flesh gave no right to the blood—stepped in to save Antonio from Shylock. Is it not true that at least one foreign Minister urgently prayed the Japanese to appoint some foreigner to review and adjudicate upon such claims, so as, on the one hand, to relieve him and his colleagues from the burden of pressing demands of which they disapproved, but which they could hardly refuse to press consistently with their duties as advocates of their countrymen's interests, and, on the other, to protect the Japanese against a rapacity skilful enough to make Law itself the instrument of injustice? And was not this prayer acceded to by the Japanese?

These old wrongs have now produced their natural reactionary effect. It was right, indeed, that the system which produced them should have an end. It was right that some one should be placed between the claimants, or rather, between the advocates of the claimants, and the Government;—right that the force of the Minister's application or demand should have its first impact upon a passive and well-padded medium, almost impersonal, yet so composed and adjusted as to be incapable of partiality and indifferent to concussion. But the reactionary effect is also bad, and shows how in this strange confusion of right and wrong which theologians call the moral government of the world, the innocent suffer for the guilty. The difficulty now is to get any claim settled. It may be as clear as noon-day, as just as Aristides, as simple and consistent as truth, and as pressing as poverty; yet all these attributes will avail it little or nothing. It is not that there is no voice, nor any answer, nor any that regardeth, as was the fate of the Baal-worshippers. There is no need for knives or lancets on account of there being no response. The need for or use of them is suggested by the nature of the response, which is usually some contemptible technical quibble, utterly unfit to be imported into a question having broad definite issues in it and susceptible of solution upon these issues. The fact is that there are two ways of looking at claims: one which we shall venture to call a fair way; and the other,—without any disrespect to stuff, silk, or cloth,—which shall venture to call a lawyer's way. And we must be excused if we go still further, and say, with all respect, that one is a gentleman's view of a claim, and the other is not. The quibbles and arguments which a gentleman would rather forfeit his estate than urge, are precisely those suggested by a purely legal view of such matters. And we must do lawyers the justice to say that this not their fault. It is their duty to fight for verdicts for their clients, and to use all the verbal weapons they can find in their law-books. A lawyer paid by the Japanese to contest the claims of foreigners does quite rightly in encasing himself in calf, and defying his assailants to find a weak or unprotected spot in him or his armour. But a government does itself an injustice in taking such views as may be very legitimately taken by a lawyer, especially if its own system of jurisprudence is as simple as that of the Japanese is and must be. Of all those refinements and subtleties which belong to our own necessarily complex

system, the Japanese know nothing, and in dealing with them no one makes provision for the possible intrusion of these. To us they are necessary ;—evils, it is true, yet necessary evils. To them they become mere instruments for the evasion of clear and undoubted responsibilities, and are wholly unworthy as weapons of defence. We shall not deny for a moment that these very subtleties have been resorted to in the cases which provoked our first remonstrances, and in such cases the fight should be waged with precisely equal weapons. But we make bold to think that similar weapons are often used against claims arising out of transactions entered into in all the simplicity of good faith, and where an escape from clear obligations has been sought and found by the use of unworthy and dishonouring quibbles or arguments. But we hold that it is not for European lawyers to make the Japanese imagine that our legal system lends itself to the perpetration of injustice, or the denial of justice. With all its faults this system has been, and is, the means by which scores of millions of free and intelligent men, endowed with keen perceptions of their rights and liberties, have been held together in peaceful and willing cohesion. It is based on the immovable foundation of natural law, and is therefore not alone the outcome of our particular views and condition as members of a special race, but represents those laws and rights which are conditions of the existence of civil society. It is a bad thing that this system should be wrenched from its proper office of securing justice, and perverted to support pleas which have no foundation in equity and can find no echo in conscience.

#### "THE ECONOMIST" ON THE JAPAN LOAN.

THE power wielded by the Press in Europe, and especially in England, can only be very faintly appreciated by Japanese statesmen, especially such of them as have not been abroad. But they will do well to familiarize themselves with the idea of this vast power, to bear in mind that its good opinion is invaluable to them, that its adverse criticism is capable of crippling or paralyzing them, and that its wide-reaching arm can at any moment touch them in a vital part. They are accustomed to think that if they can satisfy the demands made upon them by the Representatives of the Treaty Powers, their external relations need cost them but little further care. The ever-present idea of their own polity, and of the simple economy of their national life, disposes them to imagine that all the good-will they need to conciliate may be found among a comparatively small number of leading men, either holding official positions, and thus the depositories of a certain amount of power and authority, or among those whom wealth, family influence, or former political prominence has endowed with a certain power independent of actual office. They will do well, however, to remember that in Europe, it is far otherwise. There, there are thousands of men of immense wealth who hold no official position, who never dream during their whole lives of taking office, who never think of going to Court, who are never consulted by Ministers, never enter Parliament, and who are little known beyond their homes and their offices. But they wield a great power indirectly, and this power consists in their wealth, and is exercised in directions in harmony with their opinions. These opinions, on most subjects at least which stand apart from their immediate concerns and interests, are very largely formed by the Press, whose office it is to report and generalize such facts as come under its notice. Where this is done, as in England, by men of great ability and high

character, the power wielded by the Press is incalculably large, and the impersonality which shrouds a public writer enables him to speak with a cumulative force the measure of which depends on the moral and intellectual antecedents of the Journal through which he addresses the world.

It is impossible, however, that the Japanese should be able to discriminate between the characters of the vast numbers of newspapers which discuss their affairs, and in many of which they must necessarily meet with much that is calculated to excite their smiles. These they can afford to disregard. But it is far otherwise with such opinions as that expressed by *The Economist* on their lately issued loan, and which will be found elsewhere in our columns. *The Economist* is a journal which carries with it immense weight. It has been edited successively by men who have resigned this duty only to occupy positions as Finance Ministers, and is now conducted by a gentleman of great ability and high standing whose choice lay between the post he now holds and a seat in Parliament, where his powers would have been, if not so usefully exercised, at least productive of a personal reputation which he has consented to forego. Such an opinion as this, backed by the whole force belonging to a Journal of such antecedents, the Japanese cannot disregard. It must not be supposed that because it consists of a few short lines it is the less weighty. It has cost years to store up the force which gives these few lines their power,—years of thought, labour and experience. When Titian was reproached for demanding a hundred gold crowns for a picture which he painted in a week, he replied, "But it has cost me thirty years to learn how to paint this in a week." And opinions such as those we speak of must be regarded in like manner.

It must be conceded that the opinion of *The Economist* is not complimentary to the new loan or to the Japanese Government. It enumerates three chief objections to the loan: *First*, that nothing is known of Japanese finances: *Second*, the indefiniteness of the pretext under which the loan has been asked: and *Last*, that we know nothing of Japan, its Government or people.

Assuredly there is much force in these objections, addressed, as they are, to capitalists seeking a safe investment, by a Journal whose business it is to point out what kind of securities such investors should seek or avoid. It is true that we know very little of the Japanese finances. The statements recently made in regard to them in an article published in *Blackwood's Magazine* to which we devoted some attention a few months back, are of very doubtful truth, and it may even be questioned whether the Finance Minister himself could at this moment give any such accurate information about them as would satisfy a very careful investor or a rigid financier. The Administration may not be much to blame for this, because the country has undergone vast changes during the past few years of revolution, has undertaken great liabilities in one form or another, and has been put to great expenses which are at present represented by a paper currency of swollen dimensions, uncertain period of redemption, and very various forms and dates of issue. All this may have been inevitable, but it is not the less disquieting to thoughtful men who wish to lend money, or to embark money in a trade liable to severe disturbance in case of political commotion. That the Japanese are making earnest efforts to place their currency on a sounder footing, to redeem their paper issues, and to curtail their expenditure, we all know. But we are still very much in the dark upon all essential points, and, meanwhile, borrowing is no evidence of stabili-

ty. Farsighted and experienced men here, who know what panics are even in countries whose finances are regulated on the soundest principles, are often beset with great misgivings in regard to the foundations of that trade in which they have invested their capital, and earnestly desire more particular knowledge of the finances of this country than they have ever been able to obtain. Many have even thought that their Representatives might demand from the Japanese some statement on this subject which would tend to reassure them. They know that a collapse of the paper currency would entail vast losses on them, and they have vague fears of such collapse, all the more distracting because no measures are taken by the Government to dissipate them. It is assuredly no frivolous objection to the new Loan that we know little or nothing about the Japanese finances.

The second objection refers to the indefiniteness of the pretext on which the Loan has been demanded. We attempted recently to show that there is a fair ground for the measure, but we must frankly state that our only information on the subject was derived from the prospectus of the Loan. If we were right in our surmises as to its object and the proposed application of the money raised by it, we think we have successfully shewn that the Japanese have done well in extinguishing a large yearly charge by the payment of a sum which is comparatively small when viewed in relation to the amount which such a yearly charge would represent at a moderate rate of interest. Nor do we feel much doubt that our view of the intention of the Government is correct, though a Government always does well in making the most explicit announcement possible on such a subject.

We have left ourselves but scant space to speak of the third objection urged by *The Economist*, but we cannot disregard it. It consists in the ignorance of Europeans "of the people and Government of Japan, and of their political character." The objection, like its fellows, has undoubted force:—but the *Japan Mail* can hardly allow that this ignorance is altogether excusable.

An important moral, however, is pointed by the article which we have now analysed. Japan is rapidly coming under the "bull's-eye" of the European Press, and must walk with great circumspection in consequence. As soon as money relations spring up between people, the nature of their respective interest in each other assumes more than a mere sentimental form. It is now no longer a mere question of surprise and wonder at the intellectual movement made by this country, the theme of vapid schoolboy declamation and historical disquisition. A new curiosity has sprung up, and a creditor's scrutiny is a piercing one. An opinion of one kind or another he will certainly hold. The ability and the disposition to pay the contracted obligations have now become the objects of curiosity, and it is well that Japan should give a satisfactory account of herself in both these respects.

#### UNION IS STRENGTH.

THE organization of the Trading Societies all over the country of Japan, in corporations under the control and superintendence of the Government, has long been a subject of serious consideration with many of the foreign residents. The advantages arising from these Associations are indisputably great and numerous. One cannot but regard with admiration the amount of information collected and diffused, the facilities granted, and the assistance rendered by them, nor is the secrecy with which these and other of their operations are conducted less striking. But if they act beneficially to the members, they are propor-

tionately prejudicial to those who are without their pale. The heads of these Associations issue edicts or ordinances for the guidance of their associates, and we have recently seen here instances of the rigour with which they carry them out, to the detriment of those who are opposed to them. In the nature of things these Associations are protective of their own members, and inimical to others. The whole force of their combinations is brought to bear against the foreign merchants, who, having no engine of the same kind, and acting singly and individually, would be almost powerless to resist the Guilds, were it not for the capital at their command, which, in a large measure, acts as a compensating power to the unanimity of their opponents. On the other hand, the spirit of enterprise and speculation, the rivalry and jealousy of one another, the variety of interests and the competition which exist among the foreign houses, leave them a prey to the concerted action of the native Associations.

It has often been a matter of wonder to many, that in face of the obstacles of every kind which are thrown in their way by these native Associations, the foreign Houses have never adopted some plan which would enable them to withstand or counteract the difficulties under which they labour. Clashing interests and keen competition make unanimity of purpose among foreigners an impossibility. But though all the Houses will not join together, why should not a Society be formed by a certain number of them for the protection of their interests, whether in the import or export trade? Let us take, for instance, the exporters of Silk, of whom there may be about forty. Surely there must be at least a moderate portion of them who have often thought how desirable it would be to have perfect freedom in transactions on the part of the native traders, in lieu of the dictation of their Guilds. We know very well that in an active market, or at the opening of the season, when some of the foreign Houses are anxious to secure the first muster bales of the new produce which come down, the native silkmen need no recommendations or commands to put the prices up as high as they can. But when the home markets are flat and drooping and business here is slack in consequence, many Japanese dealers, especially those of small means, although they would often be glad to meet the buyers on reduced terms, are prevented from doing so by the Guild which fixes the price at which only they will be allowed to sell their produce. The market rates are thereby artificially supported, and the buyers find it impossible to execute their orders without the risk of loss. To persevere in paying here more money than the article is worth in Europe is a folly that has been committed too long, and has just brought many houses to the end of their tether. What then should be done under these circumstances?

If it is impossible for the whole of the foreign Houses to arrive at an understanding, we would suggest to at least a portion of them to form themselves, as we said above, into a sort of Society for the protection of their interests, not necessarily on the same plan as the Japanese Guilds, but on a system better adapted to our customs and habit of thought. There might be a sort of Exchange or Bourse held daily for a short time, say at half-past eleven in the morning, at the Chamber of Commerce, when all the intelligence received by mails or telegrams might be freely communicated and discussed, the settlements of silk truthfully reported, the present state and future prospects of the market considered, a concerted course of action decided upon in cases of emergency;—in a word, when anything pertaining to the welfare of the Society and the benefit of its members would be entertained and

adopted. We would moreover suggest the appointment of a Committee of three members who would serve by short terms, say fortnightly, and whose duty it would be to collect all available information, or to make proposals useful to those connected with the silk trade in general and the Society in particular.

We do not overestimate the services which such a Society might render. But some good would be very likely to ensue from its formation, were it only to bring the foreign silkmen more into communication with one another than they generally are. There should be nothing, in our opinion, in the constitutive principles of such a society to fetter in the least degree the individual action of its members. Its sole object being to promote the welfare and the interests of all those connected with the silk trade, it is by moral suasion only that action should be taken. Many who are now averse to such an institution as we suggest, might in the course of time become disposed to join it and bring their portion of usefulness to the general capital of the Association.

It is a trite truth that "One never knows until one has tried." Two years ago Japan silk had fallen into disrepute in Europe, owing to its growing deterioration. A large portion of the silk trade at Yokohama agreed upon the necessity of doing something to remedy the evil. A Committee was appointed whose recommendations were published, translated and circulated among the silkmen in the interior, and the result proved very satisfactory in all respects. Who is to say that if a Society for the protection of the foreign silk houses were formed now, it would not prove, some time hence, conducive to the interests of the whole silk trade of Japan?

We have spoken here of the interests of the exporters of silk only. But all the other branches of trade both in Exports and Imports, being equally interested, might, on the same system, form separate Associations, the meetings being held at the same time and in the same place as that which we have suggested as the model for all. Or one Society might be formed for exports and imports, with committees for each of the principal branches of business; viz: one for Tea, one for Silk and one for staple imports. The main object is to bring together the foreign Houses for their mutual protection against the native associations. The expense would be *nil*, or inappreciable, and the results might easily be such as to create a sense of wonder that no institution of the kind had been hitherto formed, in order to oppose a combined action of a formidable and successful nature by at least such a measure of combination as circumstances admit of, and in the absence of which the scattered force which it would unite into a powerful body is taken and destroyed in detail.

It will be urged against us that foreigners are unaccustomed to these combinations, that their idiosyncracies and habits of mind are opposed to them, and that the objects sought to be attained, however desirable, are not attainable by these means. Our reply is:—New modes of warfare which have proved successful against you must be met by new tactics on your side. You confess that you are constantly beaten, and complain bitterly and not unnaturally of the defeats which exhaust and impoverish you. You are not beaten by any inherent force in your opponents which you do not yourselves possess. They are no abler, no richer, no more industrious or astute, than you. It is idle to suppose you can beat them by your present mode of warfare. You have tried it for years, and whatever success you may have formerly achieved, the issue is always against you now that your opponents have thoroughly perfected themselves in their tactics and

the use of their own special weapons. Nothing but the display of similar tactics and the use of similar weapons, or, at all events of some new weapons, will enable you to cope with them with any probability of success, and however much your natural habits of mind may rebel against this new mode of warfare, however conservative you may be, the choice lies between conservatism and failure on the one hand, and innovation and some measure of success on the other. It must be obvious to anyone who carefully considers the present position of this trade and the China trade, who reads of the failures in the one, listens to the complaints of those who conduct the other, and catches the floating whispers of the unsound conditions which characterize both, that some radical change must be wrought before either can be brought into a satisfactory condition. What that change may be it is impossible accurately to define, but it is for those most interested in bringing it about to give it shape and consistency, in spite of disinclination and regardless of unproved objection.

#### THE NEW STEAMERS' BILL OF LADING.

WE have before us a pamphlet written by Mr. ALFRED HOLT, of Liverpool, on the subject of the "Eastern Bill of Lading," and it is our intention to examine as thoroughly as we can Mr. HOLT's arguments, the old form of bill of lading, and the form now in use and styled the "Eastern bill of lading." Mr. HOLT begins by explaining that from 1850 to 1871, screw steamers as a conveyance for cargo came into general use, and alterations and additions were made in the forms of bills of lading as varying circumstances required, and goes on to say; "One thing, however, is certain, that, for years together, a large and increasing trade was carried on under these bills of lading, and, so far as I know, no merchant or shipper ever suffered by any clause in them." So far so good, but the old adage that the pitcher goes often to the well, but is broken at last, seems applicable to this statement. The history of the new bill of lading is that about April or May, 1871, the attention of shippers was called to the innovations which were being made by steamship owners in the old form of bill of lading, and the usual course of holding a meeting, and appointing a committee to report, was adopted. But the first step was taken by the Salvago Association of London, who issued a circular to their members, stating that, having examined the bills of lading of 148 vessels trading to and from all parts of the world, they had found considerable deviations from the ordinary form, which they classified as follows:—

1st.—As affecting the voyage. Four deviations.

2nd.—As limiting the liability of ship-owners for damage to goods. Twenty-five deviations.

3rd.—As affecting the carriage. Five deviations.

After the issue of this valuable and important document, a meeting was held, resulting in the appointment of a committee of merchants to consider the stipulations in the bills of lading, and to draw up a general form which should be equitable to all parties. The consequence was that the form called the "Eastern bill of lading" was adopted by nearly all steam-ship owners, and Mr. HOLT says "Its main object is to compel a shipowner, when he lays his vessel on the berth, to state the exact ports he intends her to call at. This is with the intention of: 1st.—Preventing a shipowner vitiating the merchants' policies by deviations not provided for in the policies, and which were unknown to the merchant at the time he effected his insurance: 2nd.—Preventing a loss of market to a merchant through the delay in the arrival of his goods, owing to the time spent at port of call." And Mr. HOLT proceeds to show

that: 1st.—Although a shipowner may be bound down by the shipper, nothing the latter can do will prevent deviation if the master chooses to commit it. 2nd.—The only mode to prevent deviation is to render the master and owner liable for all consequences. 3rd.—That two ships have deviated under the new bill of lading and that the inducements to do so are yearly increasing. 4th.—That the only remedy the shipper has for loss after deviation is against the shipowner for £8 per registered ton of the offending vessel, or, if the deviation occurred with the owner's knowledge, the expense of litigation to prove such knowledge; and supposing this point to be decided in favour of the shipper, "How does he fare then? He is one of a number of claimants, amounting to £200,000, on a shipowner who has lost his ship worth, say £40,000 (the figures being assumed). Is there any shipowner in England so very solvent as to make this a very desirable position for a merchant or banker to assume willingly?" Or, if the ship should be owned by a limited company with a fully paid up capital of £100,000, the shipper would, "if all goes smoothly", recover one-half and lose the other half. That Mr. Holt's pamphlet is a most serviceable and valuable document, distinguished by conciseness and brevity, there can be no doubt, and up to the part we have quoted, logical and correct; but we fear we cannot, with justice, support the remedy for all the evils suggested by him. The substance of Mr. Holt's observations appears to be, in brief:—

1st.—That no clauses in a bill of lading can prevent deviation.

2nd.—That deviation vitiates policies of insurance.

3rd.—That the shipper can only recover a proportion of £8 per ton, for each registered ton of the vessel which commits the deviation.

We have now to consider what deviation is deemed sufficient to discharge the underwriter. In MAUDE and POLLOCK's work on the Law of Merchant Shipping, page 359, the following definition is given: "It may, however, be said generally, that any unnecessary departure from the shortest, or most usual course, and any improper or unaccustomed stoppage at a port, is a deviation;" and at page 358: "If liberty be reserved 'to call at one port, the assured may not call at another, although it is not more out of the usual course of the voyage; for every wilful deviation determines the policy, and it is immaterial from what cause, or at what place, the subsequent loss arises." And Sir JOSEPH ARNOULD, in fewer words, writes: "The true proposition, therefore, is, that every voluntary and unnecessary departure from the prescribed course of the voyage by which the risk is varied, is a deviation, whether the risk be thereby aggravated or not" (Part I. Chap. X.) It will be seen that deviation must be *voluntary*, but a departure from the usual course of the voyage through the gross ignorance of the master, will be so considered.

Mr. Holt continues: "I will suggest what I believe to be his (the shipper's) best course."

"Give the shipowner the power he has heretofore had 'to make any deviation he likes."

"Get the underwriter to cover all deviations; then the shipper cannot fall between two stools."

This is, without doubt, a happy thought, and would be an excellent solution of all difficulties were it not for an obstacle in the way—the underwriter declines "to cover all deviations", and, to our mind, naturally and properly declines. Such a concession would be a premium to the shipowner to deviate; he would then run no risk whatever in endeavouring to pick up a few "roadside earnings" and the laughter

would be transferred from the underwriter to the shipowner. Deviation being the only point calling for attention in Mr. Holt's remarks, it will suffice if we show the difference in the wording of the old form and the "Eastern" form of bill of lading, regarding the power given to the shipowner to deviate. The first is,—"*Port of Liverpool and bound for Shanghai (via Suez Canal), having liberty to call at any port or ports in or out of the customary route, in any order, to receive and discharge coals, cargo and passengers, and for any other purpose.*" Goods shipped under this bill of lading are insured under policies which do not cover the risk of calling at any except the ordinary and customary ports for coaling or other necessary purposes. The clause in the bill of lading therefore frees the shipowner from all the consequences of a deviation, disproportionate as those consequences are in comparison with the gravity of the offence; and the underwriter cannot be made liable; for he has expressly stated that he will not be responsible for deviation. The wording of the Eastern Trade bill of lading is: "*Liverpool to Shanghai via the Suez canal, with liberty to receive and discharge goods and passengers at —, and to take in coal or other necessary supplies at any intermediate port or ports.*" And so long as the vessel keeps to the course of the voyage the policies hold good, but the deviation of the master from the terms of this bill of lading invalidates insurance and compels the shipper to seek redress from the owner, while the latter is carefully protected by the Merchant Shipping Act of 1862 from any claims amounting in the aggregate to any amount in excess of £8 per ton of his vessel.

A more difficult question to deal with can scarcely be found. A large and influential meeting has been held; a committee composed of members of leading shipping firms in London has reported upon and drawn up a form of bill of lading; and the underwriters have expressed their willingness to cover "all deviation of voyage provided for in the said bill of lading." Two steamers have already deviated within the first twelve months after the adoption of the present form, and the inducement for more frequent deviation is yearly increasing. The shipper, the shipowner, and the underwriter are all anxious to protect themselves, and the result is that the obnoxious deviation clause has been withdrawn from the bill of lading, and the respective positions of the concerned are the same as they were before its introduction. We are, we must confess, somewhat at a loss to understand the causes of the cry which has been raised on the bill of lading question so far as deviation is concerned, that is, unless deviation is to become a rule instead of an exception with ship-masters; for unless it does so become a rule the position of the shipper is the same as it has been for years. Marine Insurance does not cover deviation, and we cannot see how underwriters are to fix a premium for a risk the nature or extent of which they can neither estimate nor comprehend; though, even were they able and willing to cover this additional risk, they should refuse to do so lest they relieve the owner from a penalty which justly attaches to him for wilful deviation or gross ignorance of his employés, while the shipowner, on his part, instead of preferring such a request, should feel grateful for a law which tends to screen him from more than a per centage of loss caused by the wilful misconduct of his servants committed without his knowledge, and should strive to meet the shipper and the underwriter in a liberal spirit and bind himself to the shippers in heavy penalties for each deviation, whether accidents and losses do or do not follow. A steamer destined for certain ports is, during the course of the

voyage, devoted absolutely to the service of the cargo-owners, and no act which might tend, in the remotest degree, to prejudice their interests ought to be committed; and if positive instructions to this effect were given to the master, the risk of loss from deviation would be reduced to a minimum. We admit our own ignorance of the "intricacies of the working of a line of steamers taking cargo for several ports," but we think the interests of shippers concerned to the value of £200,000 should take priority over those of the shipowner concerned to the value of £40,000.

There are a few other clauses in the old form of bill of lading so manifestly prejudicial to the shipper, that the wonder is not so much that shippers should have submitted to them so long, but that the ship-owner should have had the courage to insert, or the business position or monopoly of trade to enforce them. We refer to such clauses as this: "If prevented from discharging by weather the goods may be taken on to the next convenient port for transshipment to their destination." To use similar language to Mr. Holt's, we may ask if there are any ship-owners so superior to profitable charters advised by telegram and depending upon the vessel's arrival at her final port at a given date, as not to take every possible advantage of the liberty given them by this clause. In the Eastern bill of lading this extraordinary condition does not appear, and the entire document appears to us to be based upon principles which are eminently just to all concerned. True, the question of deviation is still open, as that question has been almost from the commencement of regular marine insurance and the passing of the Merchant Shipping Act of 1854 and the Amendment Act of 1862. In fine, the old bill of lading relieved the shipowner from almost every responsibility; and, for the continuance of this form, Mr. Holt is willing to sacrifice one half of the primage he has hitherto charged. On the other hand, the Eastern bill of lading defines clearly the position of the shipper and the shipowner. It prevents the avoidance by the ship-owner of the obligations imposed on him by law, and tends to secure the shipper, as far as such a document can secure him, from those losses against which he had no remedy whatever, under the old form.

The matter is of so grave an importance, and the interests affected are so vast that the final remedy can only be prescribed by the Legislature, before whom it will probably soon be brought.

#### DIE GEGENWART ON JAPAN.

OUR readers will find elsewhere in our columns a translation of a very able sketch of the political history of Japan which has recently appeared in *Die Gegenwart*, a leading weekly journal published in Berlin. It is another proof that the Press of Europe is turning its attention in the direction of this country, while the marked ability displayed by the article proves that men of insight, intelligence and information are occupying themselves with the political history and institutions of Japan, its present position and action, and, above all, with its future prospects. The sketch we have republished shows how far aloof from all real executive power the Mikados of Japan have ever stood. Their pretended divine origin from the Sun-Goddess seems to have placed them in a position in which they, if not those who surrounded them, could calmly watch the play or strife of the lightnings below them, secure in a position which the superstitious ignorance of the people made it

something akin to a blasphemy even to approach in a questioning attitude. The transition of the chief executive office of the state from an appointment held during the lifetime of its possessor to an hereditary office, was no improbable result of this removal of the Supreme Head to such a distance from the actual work of government, and accordingly the Shōgunate at last became the appanage of one family whose founder contrived the means of depriving the Imperial line of any such remnants of real authority as still attached to it, and whose successors, in virtue of their remarkable administrative capacity, retained the power which their ancestor had acquired. But it is obvious that such a system as this bore in it the seeds of dissolution. And when at last the foreigner arrived in Japan, and the new external relations of the Empire forcedly brought about the direct participation of the MIKADO in State affairs, the last blow was given to a system always in the highest degree artificial, and the inherent weakness of which was only counter-balanced by the great energy and determination of the men who were successively its centres. The Shōgunate fell after a somewhat inglorious struggle which afforded evidence of but little military or political insight, and the MIKADO added the title of actual ruler of the Empire to that claim on its superstitious reverence which his asserted divine origin extorted. In 1871 came the degradation of the *Kugés* of the Imperial Court, the sequestration of the possessions and revenues of the *Daimiōs*, and it is in this state that we now find the Empire.

The positions of the stars having been taken, the writer of the article proceeds to cast the horoscope of the Empire, and does so with the sternness and gravity of one who forebodes evil. In the Supreme Head of the State he sees only a young and inexperienced man who cannot be more than a nominal ruler. In the few *Kugés* who have remained in their places he sees nothing but the shadows of the departed pageant of the Imperial Court, the possible tools of disaffection should something of substance still cling to them, but more probably the mere effigies rather than the depositaries of power. He sees the mediatised Princes waiting to avenge themselves for the injustice which dispossessed them of their revenues, and, in the furthestmost background, the image of SHIMADZU SABURŌ, like Achilles sulking in his tent, detached from the administration, displeased at a progress which belies his prophecies, and left behind in the current of events the direction of which he formerly to a great extent controlled. He further sees the course of affairs guided by men who know neither how to obey nor yet to rule, who are flighty and self-sufficient, ready to pull down but incapable of constructing, changing without reforming, and indifferent whether the changes are or are not reforms. He sees ferment and disaffection everywhere, a peasantry discontented with the increase of taxation, an official class hostile to the Government, an hereditary nobility chafing against the injustice of confiscation, and from all those signs he foretells a new crisis and a protracted civil war.

We have paid a just tribute to the great merit of the sketch which we have epitomised, but before giving our reasons for differing with the writer in regard to his conclusions, it may be well to correct some few errors of fact and certain misapprehensions which have crept into his article.

Para. 3.—It is not quite correct to say that the Minamoto and Ashikaga, cousins of the Tokugawa family, had previously given a long series of Shōguns. Yoritomo was the first of the permanent Shōguns. He was succeeded

by two of his sons in succession, after whom the Minamoto Shōguns came to an end, and during a period of nearly a century the power was wielded by the Hōjō, who obtained young sons of the Fujiwara, or princes of the Imperial blood from Kiōto, whom they acknowledged as their nominal chiefs. After the overthrow of the Hōjō, Ashikaga Takauji, who was himself a member of the Minamoto *gens*, founded the line of Shōguns which lasted nearly to the end of the 16th century.

Para. 6.—None of the *daimiōs*, even the eighteen independent, such as Satsuma and Chōshū, were considered as feudatories of the Mikado.

Para. 9.—The conspiracy which was laid to the charge of the Chōshū clan of trying to gain possession of the Mikado's person dates from 1863, as may be seen by referring to the *Genji Yumé Monogatari* and the *Kinsē Shirakū* (number published last week). On the 30th Sept. the gates of the palace were closed and the Chōshū clan ordered out of Kiōto. It was on this occasion that seven *Kugēs* fled from the capital with the Chōshū leaders. SANJŌ, at present Prime Minister, was one of these, not IWAKURA, who at that time was rather favourable to the Shōgun's party. In 1864 the Chōshū clan marched on Kiōto, but was defeated. It was some time after this that a coalition was formed between SATSUMA and CHŌSHŪ, and finally TOSA. Most of the others held aloof from the contest, and the destruction of the Shōgunate was effected by these three clans. HIZEN joined, rather reluctantly, after the revolution was accomplished.

Para. 13.—The sequestration of the *daimiōs'* revenues is a matter generally misunderstood. What foreigners (Dr. DICKSON for one) call the revenue of the *daimiōs*, was the amount of rice which their territories were supposed to produce, and is more correctly called assessment. If the assessment were exact, the revenue of the clan, consisting of the *daimiō* and his retainers, would generally be about one-half, but in many cases the nominal assessment was considerably below the real figure, and the clan may have received, say, two-thirds of the assessment as revenue, but this had to be divided between the *daimiō* and his retainers, many of whom had large incomes. In Satsuma there were great retainers with lands assessed at as much as 15,000 *koku*, which amounts were included in the general assessment. The general verdict is that the *ex-daimiōs* are very well off as regards income, while they also enjoy personal freedom, and can afford to dispense with a large part of their establishments. The Prince of Satsuma, for instance, who had sixty waiting-women, now lives in Yedo with fifty retainers in all. The only cause of resentment which they could have would be the deprivation of political power, but, as is well known, the majority, in fact all but five or six whom we could name, were so brought up as to be quite ignorant of and indifferent to public affairs, and the amount of stupidity amongst them seems almost incredible to Europeans who are accustomed to see noblemen taking a leading share in the government of their own country. The same thing may be said of the *kugēs*, though to a somewhat smaller extent, as some few of them have displayed a considerable amount of talent for diplomacy. Of the *daimiōs* known to the world as being men of weight in political matters there were six, the *ex-princes* of HIZEN, TOSA, ECHIZEN, OWARI, UWAJIMA and SHIMADZU SABURŌ, the father of the prince of Satsuma. The first two are dead. Of ECHIZEN and OWARI nothing has been heard for the last two years. The *ex-prince* of UWAJIMA certainly cannot be called disaffected. There remains SHIMADZU SABURŌ, the father of the Prince of SATSUMA, who is represented by *Die Ge-*

*genwart* to be the soul of the policy of Satsuma, and to whom various treasonable projects have lately been ascribed by local contemporaries. There is no doubt that this prince, who has been secluded in his native province since 1867, belongs to the old school who take their ideas of government and policy from the writings of Chinese philosophers, and that, unable to appreciate the meaning of the reforms attempted in Yedo, he has spoken unfavourably of the present policy of the government. That he possesses great influence in the province of Satsuma is equally certain, but he by no means represents the opinion of the chief men of the clan. It will surprise the public to learn that he is on his way to Yedo at the present moment, and that men who belong to the Satsuma clan view his approach without any fear as to the course he may pursue. It is far more likely that he will be convinced of the judiciousness of the policy of the government, than that, standing alone in his conservative opinions, he will be able to compel it to become retrograde.

The last paragraph but one is more or less a correct account of the present state of things, and there is no doubt that a good deal of discontent exists in the country. The danger will not come from the *ex-daimiōs*, *ex-kugēs* or *ex-country* nobility, who are generally effete and have no power of combination. There are two questions which threaten to cause trouble. The first is the future position of the *samurai* class. Hitherto the *samurai* have been in possession of certain annual allowances, inherited from their forefathers for many generations. These are their only means of subsistence and it is proposed to confiscate them entirely. If this proposition be carried out trouble may be feared, though it cannot be expected that the Government, which knows the feeling of its fellow countrymen far more accurately than we can pretend to do, would really effect it if serious danger were apprehended. The other question is that of taxing the merchants. The thin end of the wedge has been inserted by the recent stamp acts, the taxes on servants, dogs and carriages. Perhaps the peasants may be conciliated by a remission of part of the heavy taxes which weigh them down, but in face of a deficient treasury this is hardly to be hoped for.

We must now give our reasons for differing with the conclusions of the writer in *Die Gegenwart*, and for convenience sake have relegated these to another article.

#### THE REASONS FOR OUR DISAGREEMENT WITH THE CONCLUSIONS OF *DIE GEGENWART*.

IT appears to us, then, that the fall of the Shōgunate and the impossibility of its resuscitation, are in themselves very real and solid grounds for believing that civil war cannot again easily arise in this country. The existence of this office must from its very nature have been a perpetual and fruitful source of jealousies, intrigues and strife, and its destruction has removed those temptations to individual ambition which were the alluring fruits enjoyed by the Shōgun, and enjoyable by any one who could snatch them from him. Prior to the fall of the Shōgunate the affairs of the Empire moved, so to speak, in an ellipse, of which the Mikadoate and the Shōgunate were the two *foci*. There was perpetual danger that either of these might at the moment of greatest attraction absorb everything within itself. But now that one of these *foci* has disappeared, the other has become a centre of gravity around which everything can revolve without danger of disturbance from a rival force.

It is also, we think, erroneous to imagine that any real danger can arise from the discontent of the *ex-*

*daimiōs*. They are rapidly dying out, and their training kept them, as we have already shewn, in a condition of miserable unfitness for leadership. The provision made for them is by no means inadequate to the maintenance of such state as befits their birth, they enjoy a liberty of which formerly they never were permitted the smallest taste, and their attention is greatly diverted from their real or imaginary wrongs by foreign travel or the distractions arising from a new condition of things in which they are carried forward without the power of resistance or even of protest. The able men who administered the affairs of the daimiats have been conciliated by high office in their respective provinces, and can hardly feel that their personal consequence is diminished under a system which makes them the immediate officers of the Emperor instead of servants of a mere feudatory prince. The occupation of their time in carrying out the orders of the central Government, even with such modification or self-serving as a corrupt bureaucracy interposes between the will of the Throne and the welfare of the people, must in a great measure interfere with their old habits of plotting and intriguing against neighbouring or rival principalities. The majority of them may be expected to have accepted as irreversible the revolution and the changes it has produced, nor is it incredible that some of them are zealous and earnest participators in the views of the Government itself, and convinced that their own welfare and that of the Empire lie in a vigorous prosecution of its present line of policy.

That the national mind has undergone during the past three years—we might even say during the past eighteen months—a very surprising change, may be better inferred, as we think, from the following fact than from almost any other we could adduce. The whole country has voluntarily disarmed itself, under a permissive regulation issued by the Government that the wearing of swords might be dispensed with. It is not two years ago that in view of several attempted assassinations of foreigners by two-sworded men, the Foreign Representatives joined in sending a *note identique* to the Government on this subject, urging upon its earnest attention the liability to interruption of the friendly relations existing between itself and their respective countries arising out of the commission of such acts as those which suggested the protest. The Government rightly apprehended the gravity of the case, and, in order to show that it was willing to do the uttermost of what it could do with safety, issued the permissive regulation referred to, with but small hope, however, that it would be of any avail. Yet the minds of the upper classes were so far prepared for change that the two swords were laid aside not only without apparent reluctance, but seemingly with a sense of satisfaction and even pride that the more enlightened spirit of the age had condemned them as no longer fitting emblems of superior birth or worthy guardians of individual honour. The Japanese are a proud and high-spirited race, their annals are warlike, their social system is aristocratic, and the visible badge of high birth, or of the possession of office or military employment, must have been dear to many who would not have exchanged it, even with attendant poverty, for the wealth of the undecorated merchant or the luxury which that wealth could command. Five years ago such a permissive regulation would have made the Government the laughing-stock of the Empire, and covered its members with contempt—the bitter contempt which a spirited aristocracy would naturally connect with low birth and cowardly temper. And yet the Empire is now virtually disarmed,—by its own act and to its own satisfaction.

As regards the disturbances which arise from time to time in the country, and to which the writer in *Die Gegenwart*, misled, in all probability, by newspapers which have long lost any local power of misleading, attaches a wholly undue importance, they have their origin in no faction, they possess no one party-cry, they are wholly unrelated and have no common object. Sometimes they are protests against a too heavy local taxation, sometimes they have a religious bearing, as lately in Echizen; but they raise the standard of no faction or family, their proportions are altogether inconsiderable, and they have been quelled by a very small exercise of power on the part of the Government. That the Administration is very popular, we shall not pretend; but neither is it violently hated. It embraces some very sound and earnest men, and when reinforced by two or three of the members of the Mission now abroad, may exhibit less of that restless disposition to over-govern and to force on unnecessary changes which has been its besetting sin for some time past. We see, therefore, little danger from the quarters indicated by the writer in *Die Gegenwart*, and while we are not free from a certain anxiety, as we showed in our summary of the events of 1872, we have no apprehensions of any such serious or protracted trouble as he forecasts.

But we foresee danger sometime hence in a quarter in which it is somewhat invidious to indicate it, but in which it is our duty to show that it lurks. So far as we know, it has only excited one native protest, and this was published in the *Japan Gazette* of last Friday week, the 28th March, in the form of a letter addressed by one KUROTA YOSHITADA to SHIMADZU JIUSAMMI (SHIMADZU SABURŌ). Whether it actually reached this noble, or is merely one of those *brochures* to which the name of a celebrated man is attached for the purpose of drawing attention to it, it is impossible to say. But it deserves serious consideration, as well on account of its grave and statesmanlike tone, as of the dangers to which it directs attention, one only of which we shall now point out. We allude to the possible and probable inoculation of the younger minds of this Empire with republican doctrines, than which we can conceive no more dangerous poison. Upon the abstract question of the alleged superiority of republican over monarchical forms of government—a superiority in which we do not for a moment believe—we shall not say another word. But what must be clear to the veriest babe in political philosophy, is, that such a form is not suitable to this country, and that any attempt to introduce it, or any coquetting with the doctrines on which it is based, is nothing less than political incendiarism. Many young Japanese go abroad for their education and reside, while in pursuit of it, in countries governed as republics. They see around them vast wealth, great progress in certain directions, much cultivation and refinement, much virtue and orderly conduct, much, in a word, that is valuable and desirable, and they desire that their own country should share all these benefits. But they are necessarily unable to discriminate between what are the concomitants of a certain phase of civilization, and the fruits of a special form of Government. They naturally connect the results they see with the political system under which those results are produced. They fail to connect them with antecedent causes, with such an inherited body of laws, such a literature, religion, race, or such and such transmitted virtues, powers, and moral inheritances. And thus whether the movement of society is upward or downward they cannot see. They find liberty desirable and delightful, but they know not

that one of the greatest of modern political philosophers, himself an ardent advocate of regulated liberty, expressed long ago, and long before his prophecy carried with it the semblance of fulfilment, his fear, if not his conviction, that the greatest blow ever dealt to liberty would come from the quarter in which the vastest experiment of it had been made. But be this as it may, the doctrines of republicanism are unsuited to a condition of society such as we see in this country, and those who are little aware of their explosive nature may take warning and advice from others who have watched their development elsewhere.

Lastly; it must not be forgotten that Japan is emphatically in a state of transition, and this always involves a period of *malaise*, the commission of many errors, and even follies, the encountering of many perils, the dangerous antagonism between old beliefs and new hopes and aspirations. The critic must make allowance for all this, and the larger his store of political philosophy the greater will be his disposition to do so.

#### JAPAN.

(From *Die Gegenwart*, a Berlin Weekly Journal.)

From the most ancient times of the Japanese Empire, i.e., since its foundation, the rulers had preferred to be content with the honour shown to them as descendants of the Gods, and to deliver over the care of state affairs to relations, friends, or trusted servants. What part of the actual power, and what influence the individual rulers were really able or attempted to preserve for themselves, it is difficult to decide from the annals of the Imperial Court and other Japanese sources; this much alone is certain, that the administrators of the Government and the Crown commanders, the latter originally destined to fight against the eastern and western barbarians, i.e., the races of aborigines who still survived in these parts of the Empire, are always to be found among the long Imperial line of the successors of the Sun-Goddess. That under such circumstances the actual power soon passed over to the representative of the ruler, and only so much influence remained to the latter as he was able to secure for himself by a clever use of the disputes between his most distinguished officials, is clear, and the great number of Emperors who were either murdered, or abdicated freely or by force, proves that even at that time the business of ruling was not amongst the pleasantest and most free from danger. Soon the great officer of state became hereditary, but that the branches of individual great families contested with each other for the possession of the power, it lay constantly in the interest of the Emperor to attempt by distribution of ranks and dignities to new families to hold the balance with respect to the old ones which had become too powerful and troublesome. Besides, the circumstance that the officials who were originally appointed as civil and military governors of the several districts had in reality made themselves independent, and in the contest for the power had sometimes attached themselves to one family and sometimes to another, just as seemed good to their interests, did not a little assist in disturbing the tranquility of the land.

Thus it came to pass that towards the end of the 16th century the empire had broken up into numberless small and great principalities, the rulers of which were continually inimical to and waged war against each other, and acted only according to their own interests if they did not happen to be within the direct influence of a greater neighbour. Above all these "kings," as the reports of the missionaries and travellers of those times call them, stood the Emperor, the Mikado, without any actual power, but the centre of the intrigues of all those who sought to avail themselves against a stronger adversary of the weight of his name and divine dignity, both of which were not without influence. Between the Emperor and the Princes stood the Regent, (Kuambaku) and the Crown-General, (Shōgun) which latter had, generally issuing from the Mikado, his nomination at the

point of the sword, and was engaged in continual wars with the princes, wars which he waged in the name of the Emperor, but to his own advantage.

Out of these wars of all against all, with which, after the introduction of Christianity, religious questions were also mixed up, there finally arose a conqueror in the first years of the 17th century, Iyeyasu, the first Shōgun of the Tokugawa family, whose cousins, the Asicaya and Mina,\* had a considerable period previously given a long series of Shōguns. But exhausted through long contests, in which he himself had been severely wounded, he had no longer the power, nor perhaps the will or the capability, to create anything complete, but was content with introducing a system, in which each power at once found by its side a counterbalance, and which deserves more than any other name that of a see-saw system.

The Mikado, with his whole surrounding and all the hereditary dignitaries of the empire, whom he was accustomed to appoint, continued to exist, but the unimportant power which they still possessed was taken away from them, and their revenues were diminished to the smallest scale. By the 18 laws† the Mikado was forbidden to interfere in state affairs, to give audiences, or to leave his palace, and a strong garrison in the capital, Kiōto, and in the palace itself, took care that these rules were not infringed. The Mikado's surrounding retained their rank, the highest dignitaries of the Empire, and even the Shōgun, were obliged to bow in the dust before people who had not the income of their grooms and porters, and who, therefore, were doubly accessible to presents, notwithstanding that the acceptance of the same, as well as the contracting of marriages with members of the Princely houses, was most strictly forbidden to this Court nobility (Kugé).

The whole administration of the Government was given over to the Shōgun, to whose relations and highest feudatories, however, a part thereof was entrusted, as Regents and members of the first and second Councils.

The earlier Princes became hereditary feudatories, either directly of the Emperor, as the eighteen most powerful, or indirectly, standing in direct dependence on the Shōgun, and only through him in indirect dependence on the Mikado; the lesser nobility became either vassals of the Shōgun, Hatamoto, or of the Princes, in whose territory their lands lay. There was so much the more art in this system, because immediate feudatories of the Empire in the North and East of the land were, it must be confessed, devoted to the Shōgun, and it lay in their interest to support his policy, whilst in the South and West the greater Princes had yielded rather from exhaustion than from having been actually conquered, and the Shōgun could have no doubt that his dominion in those parts would only be recognised as long he was able to maintain it.

The whole structure would indeed, probably have fallen to pieces a few years after its founder's death, had not his immediate successors been remarkable men, who replaced by energy and determination what the system lacked in cohesiveness and consistence. They understood, although according to the laws of the Empire they had, at least, with respect to the eighteen great Princes only the right to take the position of a *primus inter pares*, how to reduce the high nobility to the position of vassals, and to make themselves virtually rather than nominally, the real rulers of the land. But from the moment when the Shōguns and their Councillors, on the strength of the indubitable successes of their predecessors and of the machinery of the administration which apparently worked without a fault throughout the land, relaxed in their efforts, all the faults of the intricate system broke out with redoubled force.

Whilst everything remained externally as of yore, under this calm surface a storm of intrigues commenced, such as perhaps the Court diplomacy of the time of Louis XIV and XV never knew. Questions of etiquette, marriages, appointments to dignities and offices, all served the contending parties with pretexts to measure their strength, and although apparently the Shōgunate came out of these conflicts as conqueror, because the forms of the constitution were preserved, in reality it suffered defeat upon defeat, as it was almost always obliged to

\* Ashikaya and Minamoto.  
† Made by Iyeyasu.

purchase the preservation of the form by yielding in the essence of the thing. In the West and South the great feudatories had become almost independent, at the Mikado's Court the threads of all intrigue, which were weaved against the Shōguns, were concentrated in the hands of the most influential members of the high nobility, and in the North amongst the only families hereditarily eligible for the Shōgunate feuds were continually breaking out, which had to be decided more than once by poison and dagger.

This was the position of the land when it was opened to intercourse with foreigners, and thereby a convenient and welcome arm was placed in the hands of the enemies of the Shōgunate against it, of which they made the most reckless use. The dislike to the strangers may doubtless also have had much to do with the frequent murderous attempts against them, and with the loud demands for their expulsion, but, on the whole, one will not be in error if one considers that the side of the question whereby difficulties and dangers were to be prepared for the Government was that which appeared the most just to the Court party and to the Princes of the South. The results, however, were not to come up to the hopes of these parties. Still they succeeded in dealing heavy blows to the Shōgunate (which since the intercourse of Japan with foreigners had changed its name at least, with regard to them, and was erroneously called Taikunate), the heaviest of these blows being the direct participation of the Mikado in State affairs. But the attempts to bring the foreigners into open rupture with the Taikun did not attain their intended objects, and often rebounded on the promoters in a very unpleasant manner, as the Prince of Satsuma had to experience by the bombardment of Kagoshima. At last in the year 1864 the Hotspur of the parties hostile to the Taikun and the foreigners, the Prince of Chōshū, considered the moment arrived to make a master-stroke. But his attempt to gain possession of the person of the Mikado failed; his own friends, especially the Prince of Satsuma, turned against him; his fellow conspirators, the *Kugés* to whom the chief of the embassy, now sojourning in Europe also belongs, were obliged to flee; and the Mikado, though also in the conspiracy, put a good face on a bad business and proscribed his rash adherents. The good days of the Taikunate appeared as if they would recommence; the Taikun himself left Yedo at the head of a strong detachment of troops and proceeded to Kioto, the residence of the Mikado, partly to be near the scene of war, partly by his presence to defeat all the intrigues at the Emperor's Court, but the princes of the south were not minded to grant this triumph to the central power, and to permit it entirely to annihilate the companion of their plans who had only failed through lack of haste.

Thus it happened that the war against the insurgent vassal was protracted until the Taikun died, some say by poison, others of a broken heart, and, as he left no children, the question arose as to the choice of a successor. The choice fell upon one of the younger sons of the family of Mito, who had been adopted by the Prince of Hitotsubashi, and had already once appeared on the scene as a candidate. On that occasion the Government party had succeeded, and Hitotsubashi had been excluded from the choice as not hereditarily entitled. It might be difficult to go into the different phases of the negotiations, and tiresome to give the reasons why he was not considered to have the right to succeed. Enough that he was chosen, probably because the princes of the south and the Court party, with whom he had constantly been in close connection, believed they would find in him a willing tool for the accomplishment of their plans, and because it is likely that he had given to the Taikun's party assurances which caused them to look upon him as a deserter from the enemy's camp. In any case, when he took up his office he seemed inclined to give up the part he had been playing, and to wish to apply all the forces of the party to the strengthening of the Taikunate, which in the last few years had been lowered and weakened especially through his own fault. Of great capability, and with a talent for intrigue rare even for a Japanese, he however lacked those qualities which he most required under the actual circumstances, personal courage and decision. He left Kioto and made Osaka his head quarters; a fault so much the greater, because the princes of the south immediately

took possession of the Mikado's person, and could then inscribe on their banners that they were fighting for the Emperor against the insurgent general. The troops which the Taikun sent against Kioto, in order to free the captured Emperor, for as such he described him in his proclamations, were beaten at Fushimi, some miles from Kioto, in consequence of one of the smaller princes going over to the enemy, and the whole of the structure, long rotten and decayed, fell to pieces. Hitotsubashi himself fled by night and got on board of an American war steamer lying in the Osaka roads, and from there on board one of his own vessels in which he returned to Yedo; the army hastened back in wild flight over the Hakoné pass; and all the land west of it fell into the hands of the southern coalition. Still nothing would have been lost if the Taikun had only possessed the courage to place himself at the head of his party and openly raise the standard of opposition to the Mikado; but for this he had neither physical nor moral courage enough. After vain attempts to find another to whom he could give over the burden of the Taikunate, he submitted, and was granted his life at the hands of his old party companions, who had not forgotten his earlier services; the opposition of the northern princes, who fought less out of love for the Taikun than out of hatred against the conquering south, brave but without unity in leadership and plans, was broken with comparatively few victims, and the end of the year 1868 saw the Mikado, or much more, the party which had inscribed his name on their banners, almost undisputed rulers of the whole empire.

Meanwhile the composition of the conquering parties made it impossible that the result of the conflict which had turned out so fortunately could be the erection of strong united Government. Both elements, of which they were composed, the Princes of the South as well as the Court party, had only been able and willing, during hostilities against the common enemy, to put on one side their own interests; as soon, however, as the outward danger, which held them together, had disappeared, the bond which in other respects was loose had to be dissolved. The first defeat which the Court party suffered, was the question respecting foreigners, which they tried to settle by expelling them. But the Princes of the South had become prudent from injury, they knew that the call to arms against the foreigners would always end to their disadvantage, and they preferred the rupture with the members of their party to that with the foreigners. The next years passed in small skirmishes; the attempts of the leaders of the Princes' parties to bring the independent Princes to lay down their Government, failed, although they themselves set the best example, on paper, nor could they exclude the *Kugés* from the Government, but were obliged to look on and see how they obtained possession of one important post after another.

But the old truth, that Revolutions destroy their own children, was to assert itself here also.

In the spring of 1871 an understanding was arrived at between the heads of the *Kugé* party and the men in office, who apparently worked for the Princes of the South, but in reality for themselves; the *Kugés*, with the exception of three or four of their most influential heads, were overturned, driven from their offices and dignities, and lowered to a position which was much more unimportant than that which they had occupied formerly at the Emperor's Court at the time of the Taikunate. Kronos had eaten his first child; the second was soon to follow. Through the assistance of the Prince of Satsuma, the most powerful leader of the Southern coalition, of the few *Kugés* who had remained in this place, and of all those people whom the unclean water of a revolution is wont to raise to the surface, the central power now took strong measures against the indirect princes of the empire, declared them deposed, sequestrated their possessions and revenues, and left them only a tenth of their former incomes as private property. It was universally expected that some of the most powerful princes would oppose these measures, if necessary, with arms in their hands, but nothing of the sort happened, and this great revolution took place, at least, so far as related to the principal persons whom it concerned, without serious difficulties and without bloodshed.

If it is now asked what is the nature of the new Government and what is the position of parties, the question is not hard to answer; harder, however, if not impossible might it be, to predict, what the next years will bear in their womb. At the head of the Government stands the Mikado, a young man, who, although he has lately visited some of the open ports of the land, and has personally opened to traffic the railway from Yedo to Yokohama, should still hardly be looked upon otherwise than as the nominal ruler, whose name and seal must serve to impart the necessary nimbus to the acts of the Government. The few *Kugis* who have remained in their places seem to feel that they too are only tools in the hands of third persons; they serve the purpose of calling to mind the splendour of the Imperial Court and the divine origin of the Emperor, and they play, perhaps, rather an ornamental than a really important part; one portion of the mediatised Princes sulks and waits for the opportunity to avenge themselves for the injustice done to them; another portion have already consoled themselves for the loss they have sustained, and spend the income granted to them in joyous company, and partly in travelling abroad; but in the back-ground darkly, and if one may credit the indications which have come to light in the last months, threatening and discontented, stands the Prince of Satsuma, or much more the soul of the whole policy of Satsuma, the old Shimadzu Saburo, by whose followers the Englishman Richardson was cut down. Notwithstanding all the fine speeches the administration of Satsuma is still exclusively in the hands of adherents of the stock, the troops of Satsuma still remain as purely and distinctly under their own leaders as if the whole revolution had not really been effected, and the Prince of Satsuma only does what pleases him, and not what the Central Power commands.

But the maintenance of the Government lies in the hands of a majority of people who a few years ago were quite unknown, and whom the waves of the last revolution have brought to the surface; many of them appear strong, earnest men, who certainly would much prefer to proceed on the path of reforms with slow thoughtfulness than with precipitate haste. But most of the new high officials are young men, who make up for their lack of knowledge and experience by an imperturbable self-conceit, and whose blind system of reform, whereby at least up to the present time much has been destroyed and nothing built up, is preparing a stormy future for Japan. But in the country itself there is ferment everywhere; the whole class of small country nobility, vassals and officials of the Taikun and of the former indirect Princes of the Empire, are hostile to the Government, which has robbed them of their incomes and their hereditary offices, and they use their influence over the country people, who are besides discontented with the expulsion of their legitimate princes and the increase of taxes, in order to strengthen them in their opposition to the government, an opposition which in the last years has shown itself in innumerable small and great insurrections; but this discontent of the country people is a sign so much the more significant as the harvest of last year was an excellent one, and there was therefore no material want, the cause of so many revolutions.

Thus Japan appears to stand instead of at the end of a great, and in its results beneficial, revolution, on the eve of a new crisis, which only too easily, as in former centuries, can lead to a protracted civil war.

#### KINSÉ SHIRIAKU.

##### VOLUME I.

(Continued from our Last.)

In the 6th month (July 10—Aug. 7.) an epidemic of cholera spread throughout the land, and about 30,000 persons died in Yedo alone.

The Shōgun Iyēsada being childless, Ii Kamon no kami chose Iyémochi, the prince of Kishiu, to be his heir and successor.

During the same month American and Russian men-of-war came to Yokohama and gave information that the

English and French squadrons would arrive in a few days with the object of concluding a treaty. Harris took advantage of this to point out what he considered the best course for them to pursue, and to urge the ratification of his own treaty. Ii Kamon no kami began to think that if, in the presence of these constant arrivals of foreigners of different nations, he were to wait for the Kiōto people to make up their minds, some unlucky accident might bring the same disasters upon Japan as China had already experienced. He therefore concluded a treaty at Kanagawa, and affixed his seal to it, after which he reported the transaction to Kiōto. Immediately afterwards the Russians, English and French entered Yedo, and concluded treaties on the model of the American treaty. It was at this time that the agitation for 'expelling the barbarians' was started, and many people began to discuss domestic and foreign affairs.

Some time before this the Shōgun Iyēsada had fallen ill, and he eventually died in the 8th month (Sept. 6th—Oct. 5th).<sup>13</sup> He was succeeded by Iyémochi, who was only twelve years of age. Ii Kamon no kami kept him in his power, and wielded immense authority. He was generally nicknamed 'the swaggering Chief Minister,' (*Bakko Genrō*). When a proposal to choose an heir to the late Shōgun was first made the princes of Owari, Echizen and several others advised that Shitotsubashi Giōbukiō, who was a grown man and had both reputation and popularity on his side, should be adopted by the head of the Tokugawa family. Giōbukiō was the eighth<sup>14</sup> son of the ex-prince of Mito, who loved him more than all his other children, but Ii Kamon no kami rejected his candidature, and put in the prince of Kishiu. When the treaties were made, the princes of Owari and Echizen and the ex-prince of Mito, who were much offended at his arbitrary conduct, at once ordered their palanquins and proceeded to the castle. The populace was afraid that an outbreak of a dangerous kind would result from this extraordinary event. The three princes insisted on seeing the Shōgun, in order to argue the matter with him personally, but Ii Kamon no kami refused, and receiving them himself crushed their remonstrances. The three princes retired in a rage, and Ii Kamon no kami forbade them to appear again at the castle. Ii Kamon no kami was devoted to a species of theatrical entertainments called *Nō*, and he borrowed ten thousand *riō* from the public treasury to defray his expenditure. Every day he had performances and gave himself up to amusement; but when the Court, hearing of the state of affairs at Yedo, summoned him and the three princes to Kiōto, in order to restore peace among them, he reported the circumstances which had led to the disgrace of the princes, and excused himself from appearing on the ground of his multifarious public duties.

During the same month secret instructions were sent from Kiōto to the ex-prince of Mito, which ran thus: "The Bakufu has shown great disregard of public opinion in concluding treaties without waiting for the opinion of the Court, and in disgracing princes so closely allied by blood to the Shōgun. The Mikado's rest is disturbed by the spectacle of such misgovernment when the fierce barbarian is at our very door. Do you therefore assist the Bakufu with your advice; expel the barbarians, content the mind of the people, and restore tranquility to His Majesty's bosom."

When the princes of Owari and Echizen tried to have Shitotsubashi Giōbukiō adopted as the Shōgun's successor, Ajima Tatēwaki and Aizawa Idaiyu, retainers of Mito, and Ukai Kichizaemon and his son who were resident at Kiōto, sought counsel in the matter, by order of the Court, from Kobayashi Mimbūtaiyu, a retainer of Takadzukasa dono, and Muraōka, one of Takazuka dono's women. It happened also that Hashimoto Sanai also came to Kiōto upon the same business, and consulted with Kobayashi. They were also assisted by Kusakabé Isōji and Ii-idzumi Kinai at Yedo. Isōji eventually came to Kiōto by Ajima's orders, whereupon they all took counsel together and the negotiations were going on well, when the whole project was ruined by the opposition of Ii Kamon no kami. Isōji was eventually selected to carry the private instructions of the Court to the ex-prince of Mito.

(13) August 15th, G.Y.M.

(14) 7th according to the Taihei Bukan, or list of Japanese territorial nobles.

Ii Kamon no kami had some time previously sent his retainer Nagano Shiuzen to Kiôto as a spy. This man discovered that the secret instructions had been sent, and also got hold of the correspondence of Ajima Tatéwaki and the rest relative to the proposal to make the Giôbukiô heir to the Shôgun. There was also a considerable body of Court nobles' retainers and of Chinese professors who blamed Ii Kamon no kami's conduct in the matter of the treaties, and Shiuzen, having ascertained their names, reported everything to his master. Ii Kamon no kami at once despatched the Minister Manabé Shimôsa no kami to Kiôto, where, after having consulted with Sakai Wakasa no kami, the Shôgun's Resident, he placed Takadzukasa, Konojé and Sanjô (Court nobles) in confinement, and arresting Kobayashi Mimbutaiyu, Kasuga Sannuki no kami, Moridera Inaba no kami, Takahashi Hiôbu, the woman Muraôka, Ukai Kichizaemon and his son, Hashimoto Sanai, Rai Mikisaburô and Uméda Genjirô, thirty persons in all, sent them to Yedo in the charge of an armed force. Twenty-seven persons, including Ajima Tatéwaki, Kusakabé Isôji, Ii-idzumi Kinai and Fujimori Kôan were arrested at Yedo.

1859.—In the 12th month of the 6th year of Ansei (Jan. 3—Feb. 1, 1859) the office of Shôgun was conferred by the Mikado on Iyémochi.

The ex-prince of Mito had frequently pressed the questions of the necessity of showing due respect to the Mikado and the expulsion of the barbarians on the attention of the Bakufu, which however paid no attention to him, and he finally put his views in writing and forwarded them to Kiôto. In the 8th month (Aug. 27—Sept. 24) the Chief Minister and his colleagues reproached the ex-prince, saying: "When we refused to listen to your lordship's advice, you laid your views before the Court, upon which Ajima Tatéwaki abused the Bakufu, alleging that it misgoverned the country, in order to mislead the Court nobles. He then privately brought instructions to your lordship from the Court, and nearly succeeded in bringing about a rupture between the Mikado and the Shôgun. Furthermore, when the succession question was pending, he obstinately besought the Mikado to order the adoption of Shitotsubashi Giôbukiô. Although the ostensible actor was Tatéwaki, your lordship was the real author of these proceedings, and you, whose duty is to be the support of the Bakufu, have 'have failed in your obligations.' They consequently placed the ex-prince in perpetual confinement at Mito, and in order to punish Shitotsubashi for having desired the office of Shôgun, they forced him into retirement. Shortly afterwards they made the princes of Owari, Echizen, Tosa and Uwajima resign their *daimiates* to their sons, and retire into private life at their secondary *yashikis*<sup>15</sup> for the offence of having shared in the conspiracy. Kobayashi Mimbutaiyu and twenty others were condemned, some to exile, and others to imprisonment, while Ajima, the two Ukai, Hashimoto, Uméda, Rai and others were put to death.

In the same month Yoshida Shôin of Chôshiu suffered capital punishment. He had been confined in prison ever since the Bakufu delivered him to his clan in the autumn of 1854. During this period his fanatical patriotism constantly increased, and all his hopes were fixed on forcing the Bakufu to expel the barbarians. Some one having proposed to make war on the Bakufu, Shôin, who felt the injustice of such a proceeding, wrote a pamphlet against the scheme, and was afterwards released from prison. When Ii Kamon no kami assumed the reins of government, and the Bakufu, estranged from the princes who were blood-relations of the Shôgun, was left without supporters, Shôin declared that it could not be saved. He secretly wrote to a court noble named Ôhara Shigétami<sup>16</sup> inviting him down to Chôshiu, in order to get up an agitation in the clan for the expulsion of the barbarians, and the restoration of the Mikado. It happened that Manabé Shimôsa no kami had arrested, by order of the Chief Minister, all the patriots of Kiôto, and Shôin, collecting a number of desperate men, despatched them to the capital to assassinate Shimôsa no kami. The project came to

nothing, and the clan, observing that there was something strange in Shôin's proceedings, cast him a second time into prison, fearing to incur the resentment of the Bakufu. Not long afterwards the Bakufu found reason to suspect Shôin, and despatched Nagai Uta<sup>17</sup> to Chôshiu, to bring him to Yedo in a cage. He was then interrogated about his having conveyed an anonymous document into the Palace at Kiôto, and about a secret conspiracy into which he had entered with Uméda, when the latter was on a visit to Chôshiu. Shôin had always been a friend of Uméda's, and knew nothing about the anonymous document. He therefore gave complete explanations on these two points, but confessed his letter to Ôhara and his plot to assassinate the Minister. These matters had been hitherto quite unknown to the Bakufu, which was exceedingly astonished when it heard of them, and inflicted capital punishment on Shôin. Every plan conceived by this man since his failure in the attempt to get a passage on board the American squadron had ended in disaster, and his fate excited universal pity. A great number of upright and loyal men lost their lives about the same time, and their fate was compared to that of the learned men of Tunglin under the Ming dynasty.

Kanagawa, Nagasaki and Hakodaté were opened in the summer of this year, and permission was given to Japanese and foreign subjects to trade with each other. In the 10th month (October 25th—November 22nd) the chief Castle at Yedo was destroyed by fire.

1860.—Envoys were despatched to the United States of America for the first time in the first month of the 1st year of Manyen (January 22nd—February 20th, 1860).

When Ii Kamon no kami punished the princes of Owari, Mito and Echizen all classes held their breath and looked on in silent affright. From that moment his power increased daily, but a few *rônins* conspired to assassinate him, and watching for an opportunity, approached his palanquin one day as he was proceeding to the castle, under the pretence of presenting a petition. Snow happened to be falling heavily, and rendered every object indistinct, so that the escort taking the men to be ordinary petitioners, scarcely noticed them. Suddenly the head of the train was attacked, and the commotion which ensued in that quarter drew away the attention of the guards at the side of the palanquin. The petitioner profited by his opportunity to cut down the bearers, and to reach the palanquin, and a number of confederates sprang up instantly, who succeeded in slaying the Chief Minister, and in escaping with his head. The escort engaged the men who had attacked the front of the train, and fought vigorously. Four, including Nagoshi Genji and Kusakabé Naiki, were killed on the spot, while Kusakari and nineteen others were wounded. The affair occurred so suddenly that they were unable to assist their master, and on looking round were horrified to see what had happened. They pursued the *rônins* but could not overtake them. This affair, known as the Sakurada outrage, occurred on the 3rd day of the 3rd month (March 23).<sup>18</sup>

The perpetrators of this deed were Ôzeki Wahichiro, Sano Takénoské, Saitô Kemmotsu, Kuroda Chiuzaburô, Arimura Jizaemon, and twelve other Mito men. Some were killed, while others escaping to the house of the Minister Wakizaka Nakadzukasa no taiyu, addressed a letter to him in which they enumerated the crimes of Ii Kamon no kami. They accused him firstly of possessing himself of the person of the young Shôgun, and of dismissing and appointing officials as his own selfish objects suggested; secondly, of receiving enormous bribes and granting private favours; thirdly, of having driven away the princes of Owari, Mito, and Echizen, thereby depriving the Shôgun of the support of those who were most nearly allied to him by blood; fourthly, of having deluded His Highness Kujô, by means of Manabé Shimôsa no kami and Sakai, the Shô-

(17) Nagai Uta was a Chôshiu man who held moderate views, and wrote a pamphlet to prove that the *daimios* owed allegiance to the Shôgun, and not to the Mikado.

(18) In Sir R. Alcock's despatch to Lord Russell of the 2nd April, 1860, the attack on the Regent is said to have taken place on the 24th March. As will be seen by reference to this despatch, Sir R. Alcock was still unaware of the result when he wrote, and it is quite possible therefore that he may also have been misinformed about the date. Anyone can verify the date given in the text by comparing the European and Japanese almanacs back to the year 1860. The earliest comparative Japanese and European almanac accessible to the translator was that of 1864.

(15) Every *daimiô* had a *kami yashiki* or chief residence, and one or more *shimo yashiki* or private residences.

(16) This is the elder Ôhara, still alive at the present day (69 years old in 1873), known also as Ôhara Sakingo, Envoy from the Court to the Shôgunate in September, 1863.

gun's Resident, besides confining Prince Jôren-In and many Court nobles, and putting numbers of the *Samurai* and common people to death; and fifthly, of being frightened by the empty threats of the foreign barbarians into concluding treaties with them, without the sanction of the Mikado, and under the pretext of political necessity. These five crimes being such as neither the gods nor men could pardon, they as the representatives of divine anger had chastised him. They prayed that death might be at once inflicted upon them, and shortly afterwards underwent capital punishment.

From this time the advocates of the expulsion of the barbarians increased every day, and in the 8th month (Sept. 14—Oct. 12) motley band of thirty men came to the Satsuma *yashiki*, praying the clan to give their support, and to allow themselves to lead the van. The Satsuma clan pacified them, and lodged them for a while within the walls of the *yashiki*.

During the same month a large number of dissatisfied men, who also advocated the expulsion of the barbarians, collected together in Hitachi and Shimôsa. The foreign merchants had been daily arriving in greater numbers at Yokohama, which so increased in wealth and importance as to form a new city of itself. The *rônins* in Hitachi and Shimôsa consequently conceived the idea of attacking it, but the Bakufu issued orders to the neighbouring clans to take every possible precaution. However, the secretary of the American Minister who resided at Yedo, one Heusken<sup>19</sup>, was assassinated one evening in Mita as he was returning home from an excursion.

During the 10th month (November 12th—December 10th) the re-erection of the Shôgun's principal castle at Yedo was commenced.

1861.—During the 1st month of the 1st year of Bunkiu (February 9th—March 9th) the numbers of the *rônins* in Hitachi and Shimôsa increased to such an extent that they proceeded into Kôdzuké and Shimotsuké, where, under pretext of requiring war contributions for the expulsion of the barbarians, they extorted money from the peasants and tradespeople. The Bakufu ordered the house of Mito to arrest them.

During the same month some Russians landed in Tsushima under the pretext of repairing their vessel. Sô Tsushima no kami complained of their behaviour to the Bakufu, which despatched some of its officers to bring them to reason and make them leave the island.

In the 5th month (June 7th—July 6th), some *rônins* attacked<sup>20</sup> the house occupied by the English at Tôzenji in Takanawa. The vassals of the Bakufu and the troops of the Kôriyama clan who acted as guards to the temple repelled the assailants, and a large number of the *rônins* were killed. The troops of the Bakufu also suffered some loss in killed and wounded, while two of the English were wounded by the *rônins*. The English Minister was angry, and said such ruffians only existed because the Japanese Government could not rule its own country. Remarking that in future it would be useless to appeal to reason with such a people, he retired with the French and Dutch representatives to Yokohama, in order to prepare for an attack with troops. The Bakufu made ten thousand apologies, and the affair, after some difficulties, was peaceably settled. From this time onwards English troops were always stationed at Yokohama, to guard against surprises, and they were commonly called 'the Scarlet Regiment' from the colour of their clothing.

During the same month the Bakufu ordered the House of Mito to arrest the men who had broken into the English temple-residence, but they made their escape into Ôshiu and Déwa.

The ex-prince of Mito died in the 8th month (Sept. 4—Oct. 3). Whilst he was still alive Ii Kamon no kami applied to Kiôto for leave to make him give up the letter of instructions which had been sent to him some years previously by the Court, and his application was granted. Ii Kamon no Kami then despatched Andô Tsushima no kami to communicate this to the house of Mito, but the *Samurai* refused, believing it to be nothing but an invention of the Bakufu, and hundreds of them were ready

to quarrel about the affair. A great commotion ensued in the clan, which the house of Mito had much difficulty in appeasing. The ex-prince, who disliked having to resist the Shôgun's orders, wrote a letter for the information of his retainers, which was so perfectly reasonable that they withdrew their opposition. Upon this the Imperial letter was given up to the Bakufu.

In the 11th month (December 2nd—30th) the Princess Kazu, younger sister of the Mikado, arrived in Yedo. The Minister had argued that the marriage of the adopted daughter of the prince of Satsuma with the previous Shôgun had been evidence of the submissiveness of that great clan. But he had died early, before any support could be derived from his consort's relatives. On this occasion they married the Shôgun to the Mikado's younger sister, in order to show to the world that the Imperial family and the house of Tokugawa agreed in their political views.

Envoys were despatched this year to<sup>21</sup> England, France, Russia, Holland, Prussia and Portugal for the first time.

1862.—In the 1st month of the 2nd year of Bunkiu (Jan. 30th—February 28th) as the Minister Andô Tsushima no kami was going to the castle a number of *rônins* attacked him in front of the Sakashita gate.<sup>22</sup> His escort repelled the assailants and Tsushima no kami escaped with a wound on his shoulder. Several of the *rônins* were killed, and a document was found on each of them in which Tsushima no kami was reviled. The substance of it was: "The Minister Andô, inheriting the ideas of the 'Chief Minister Ii Kamon no kami, has made friends of 'the barbarians. In concert with the Resident Sakai 'Wakasa no kami he has placed in confinement honourable and loyal Court nobles. He has abused the influence of the Bakufu in order to bring the Mikado's sister 'to Yedo, and, worst of all, has commanded learned Japanese scholars to collect precedents for the deposition of 'the Emperor, his intention being to depose the Son of 'Heaven. His crimes are too heinous to be spoken of 'with calmness, and we have therefore sacrificed our 'lives in order to kill this wicked traitor." The Bakufu at once deprived Tsushima no kami of his office as Minister, and tried to get into the good graces of the influential court nobles by increasing the official salaries of Kujô, Hirohashi, Bôjô, Asukai, Chikusa, Iwakura and thirteen others.

During this period the *samurai* deserted from their clans in daily increasing numbers. They allied themselves with the *rônins* in all parts of the country to raise the cry of 'honour the Mikado and expel the barbarian,' thus creating a great ferment throughout the empire. In the 2nd month (March 1—29) the house of Shimadzu published a proclamation to its retainers, expressing approval in the main of the policy of supporting the Mikado, but forbidding them to ally themselves with the *rônins* for the advancement of the objects above-mentioned, or to do anything without the instructions of their superiors.

Not long previously the Prince of Chôshiu, who was in Yedo, had addressed a letter to the Bakufu, saying: "Since the conclusion of the treaties the people of this 'empire have done nothing but protest against them. They 'declare that you have disregarded the Mikado's wish 'that the country should be closed to foreigners, and that 'you treat him as if he were not of the slightest importance. I beg most earnestly that the Shôgun will 'recognize the supremacy of the Mikado, so that the 'harmony existing between the two may be made evident, 'and the comments of the people be put a stop to." He added that his retainer Nagai Uta was familiar with the state of opinion at Kiôto, and the Bakufu sent for him to ask his advice. Nagai was altogether in favour of a conciliatory policy, and his advice entirely fitted in with the views of the Ministers. The Bakufu rewarded him handsomely, and proposed to send him to Kiôto with secret instructions, but the very suspicion of his being in the Bakufu's interests greatly diminished his influence with his own clan.

(21) The embassy to the Treaty Powers left on the 21st Jan. 1862, before the Japanese New Year, which accounts for the apparent misstatement in the text.

(22) This gate stands between the Hommaru or Chief Castle, the Nishi no Maru, or western Castle, formerly appropriated to the heir apparent of the Shôgun, and now converted into a Palace for the Mikado. The attack took place on the 14th Feb. G.Y.M.

(19) Mr. Heusken was murdered on the night of January 14, 1861.

(20) This attack was made on the 29th day of the 5th month or July 5th. Takanawa is the southern suburb of Yedo.

In the 4th month (April 29th—May 28th) Nagai Uta arrived at Kiôto, furnished with special instructions from the Minister Kuzé Yamato no kami, and addressed a letter to the *Tensô* Nakayama Dainagon, in which he set forth in detail the nature of the circumstances which rendered the Imperial sanction to the treaties so necessary. At this moment the agitation for the expulsion of foreigners arose throughout the length and breadth of the land. A great deal of hostile criticism was directed against Nagai, who was unable to attain his object, and shortly afterwards set out to return to Yedo. The Chôshiu men who were at Kiôto were much offended with his expressed opinions, and lay in wait to assassinate him at Ôtsu on the Tôkaidô. Nagai divined their intentions, and avoided them by starting earlier and taking the route by the Nakasendô. In the following year the Chôshiu clan ordered him to perform disembowelment.

During the same month Shimadzu Idzumi<sup>23</sup> was travelling to Yedo, and had got as far as Himéji in Harima. It happened that a certain Hirano Jirô of Chikuzen, who was lurking in those parts, had caused a good deal of excitement by raising the cry of 'honour the Mikado and expel the barbarians.' He had collected together a body of two hundred sympathetic spirits, and proposed to them that as it was impossible to preserve discipline amongst so motley a society, the best plan would be to place themselves under the leadership of one of the great clans. They were on the look-out for an ally of the kind they wanted, when they heard of the arrival of Shimadzu Idzumi at Himéji. Hirano, who was aware of the intrepid character of this prince, at once proceeded thither with his men and addressed a letter to him. It said: "The Bakufu has lately been treating the Mikado's orders with contempt, and has concluded treaties without his sanction. The Empire is on the point of becoming a hell. We wish therefore to get you to become our leader, in order that we may release the Court nobles who have been confined in consequence of the Bakufu's displeasure, seize the castles of Ôzaka, Hikoné and Nijô, send orders to all the clans, carry the Mikado to Hakoné, punish the crimes of the Shôgun, and immediately afterwards sweep out the barbarians. Pray take our request into your gracious consideration, oh Prince, and grant it." They then asked him to forward their letter to the Imperial Court. Idzumi felt secretly alarmed at their violence, and giving an evasive answer, pacified them as well as he could. Having left them at the town of Fushimi he went on to Kiôto, and sent Hirano's letter to Konoyé (a Court noble). The Court was so frightened at the seditious style of the letter, that it retained Idzumi at Kiôto to keep the *rônins* in order. It happened that the *rônins* at Ôzaka and some Satsuma *samurai* of the same way of thinking heard of this, and were enraged at what they called Idzumi's temporizing policy. Some forty or fifty started for Kiôto at once, intending to put pressure on him, and proceed to action. On receiving this news, Idzumi sent some of his retainers to stop them at Fushimi, and to persuade them to remain quiet. The efforts of the retainers were unavailing, and after a long dispute, they were obliged to use force. Numbers were killed on both sides, and the town became the scene of an indescribable commotion.

Not long before this the prince of Chôshiu, who was still at Yedo, had addressed a letter to the Bakufu in which he said that the domestic and foreign troubles which threatened the land were entirely destroying the national tranquillity. The Shôgun ought therefore to proceed to Kiôto, and call an assembly of *daimiôs* in order to ascertain the opinion of the nation. All matters concerning the general government of the country ought to be ordered by the Court and the Bakufu in concert, in which case the

general opinion would be easily obtained. The Court at once sent for the writer of this letter, and ordered him to undertake the preservation of order among the *rônins* in conjunction with the house of Shimadzu.

In the 5th month of (May 29—June 26) the English addressed a letter<sup>24</sup> to the Bakufu in which they asserted that the Bonin islands did not belong to Japan. However, the Bakufu had already, in the previous year, despatched Midzuno Chikugo no kami thither to ascertain the facts, and they were thus enabled to produce proofs of our title in reply.

On the 22nd day of the 6th month (18th of July)<sup>25</sup> a retainer of Matsudaira Tamba no kami, named Itô Gumpei, one of the guard at Tôzenji, in Takanawa, the lodging of the Englishmen, murdered two of them in the garden, and returning at once to his house committed suicide. The English and their allies demanded satisfaction from the Bakufu, which produced to them the corpse of Gumpei, and made an apology. The charge of maintaining guard was also taken away from Tamba no kami.

Gumpei himself hated foreigners, and, chafing under the idea that his prince should have to protect the objects of his dislike, had hoped that something would happen to put a stop to it. It happened to be Gumpei's turn to be on guard, and one of the Englishmen having committed an act of discourtesy towards him, he flew into a rage, and took advantage of the darkness to accomplish his purpose.<sup>26</sup>

During the same month the Mikado's envoy, Ôhara Saëmôn<sup>27</sup> no kami came down to Yedo and delivered the following message from His Majesty. Firstly, the Shôgun must come up to Kiôto with all the *daimiôs*, great and small, ascertain the opinion of the country, expel the barbarians, and so calm the indignation of the Mikado's divine ancestry. Secondly, five of the greater princes were to be selected, according to the precedent established by Toyotomi Taikô (Taicosama), to be consulted as Chief Ministers upon the conduct of public affairs. Thirdly, Shitotsubashi Giôbukiô was to be appointed guardian to the Shôgun, and the ex-prince of Echizen (Matsudaira Shungaku) to be made Chief Minister of State.<sup>28</sup> The object of these three measures was the renovation of the institutions created by the founder of the Tokugawa line, and to promote the efficiency of the administration. The Bakufu undertook to carry out these instructions, and determined to go up to Kiôto. Two hundred and thirty years had elapsed since the Shôgun Iyemitsu had last observed this practice, and most people only became aware of the fact that the rule existed for the first time.

In the 7th month (July 27th—Aug. 24th.) the Bakufu dismissed Sakai Wakasa no kami from office, and confined him in his own domains. It also ordered the house of Ii to inflict capital punishment on Nagano Shiuzen.

Some time before this the Bakufu, in obedience to the orders of the Court, had released Prince Jôren-In, Takadzuka Konoyé, Sanjô, the ex-prince of Owari, Shitotsubashi Giôbukiô, the ex-*daimiôs* of Echizen, Tosa, Uwajima, and others from domiciliary confinement. The Shôgun now had frequent interviews with Owari, Shitotsubashi and Echizen, and passed the time in friendly conversation with them. At the same time Itakura Suwô no kami, [afterwards Iga no kami] who was one of the Ministers, made great changes among the officials of the Bakufu. Shitotsubashi was raised from the rank of Giôbukiô to that of Chiunagon, and appointed guardian (*kôhen*) to the Shôgun, while the ex-prince of Echizen was made Supreme Director of Affairs (*Seiji-sôsai-shoku*) in accordance with the orders of the Court.

In the same month some *rônins* murdered Shimada Sahei and Ugô Gamba, retainers of Kujô dono, at Kiôto,

(23) The *Tensô* were Court nobles appointed to act as mediums of communication between the Court and the Shôgunate. They were generally two in number. The institution of this office is attributed to Yoritomo. *Ten* is 'to communicate' to an inferior; *sô*, 'to report to the Sovereign.'

(24) The father of the Prince of Satsuma, afterwards notorious as Shimadzu Saburô, then known as Shimadzu Ôsumi no kami and now as Shimadzu Jiusammi. He is the younger brother of Satsuma no kami, the previous prince of Satsuma, who having no children of his own, adopted the eldest son of Saburô. Saburô is thus legally only the uncle of the prince of Satsuma, (Prince of Satsuma no longer).

(25) The castles of Ôzaka and Nijô (at the end of Nijô street in Kiôto) belonged to the Shôgun. That of Hikoné in Ômi to the Ii family.

(26) The despatch here alluded to does not claim the Bonin Islands for Great Britain, but, on the contrary, offers to recognise the right of Japan to those islands so long as the European settlers are not disturbed.

(27) An error for 26th June. The second attack took place on the anniversary, according to the Japanese calendar, of the previous attack, namely, on the 29th day of the 5th month. There is no reason to suppose that this was anything but a coincidence.

(28) The author does not apparently mean that either the unfortunate sentry or corporal of marines who fell victims to the fury of Gumpei was the persons who insulted him. It is more than probable that the story of an act of discourtesy having been committed is a fiction.

(29) Also called Ôhara Sakingo.

(29a) According to the G. Y. M. these three alternatives were offered to the Shôgun, and he might accept any of them. It will be seen that the first and third were elected by his advisers.

and pilloried their heads on the dry bed of the river at Shijō. The cause of this deed was the fact that these two men had been active associates of Nagano Shiuzen when he was at the capital. The Court therefore punished Kujō, Koga, Chikusa, Iwakura, Tomi-no-kōji and other Court nobles, and appointed Takazdukasa to be Kuambaku. It was generally supposed that these measures were attributable to the misconduct of the above-named persons in the negotiations with Yedo.

The prince of Tosa was now in Kiōto, and the Imperial Court, anxious to preserve the tranquillity of the capital, commanded him to act in concert with Satsuma and Chōshiu in the repression of disorder. From this time, whenever the people wished to express the influence and popularity of the princes they always mentioned Sat-chō-to (a compound of the first half of each clan's name).

In the intercalary 8th month (Sept. 24—Oct. 22) the Bakufu established an office at Kiōto called *Shiugoshoku*, (or Protectorate) and Matsudaira Higo no kami, the prince of Aidzu, was chosen to fill it.

Hitherto it had been a part of the Bakufu's system that the princes should pass each alternate year at Yedo, their wives and children being compelled to reside there continually. The object of this rule was to divide the strength of the clans and to render them easier to keep in order. But in consideration of the great expenditure required from the country, the time which they had to pass in Yedo was now lessened, and they were permitted to keep their wives and eldest sons at home in their domains. The style of dress was also reformed, unnecessary ornament being discarded. The prosperity of Yedo, which had in a great measure depended on the residence of the princely families, received a heavy blow from this constitutional change.

During the same month the Bakufu, after enumerating the crimes of the late Ii Kamon no kami, confiscated two-sevenths of the lands belonging to his heir, and punished Andō Tsushima no kami and other adherents of the murdered Minister.

1863.—In the 11th month (Dec. 21st—Jan. 19th, 1863) Sanjō Chiunagon\* and Ané-no-kōji Shōshō came to Yedo as envoys from the Mikado. The message they bore declared that the Bakufu must clear away the old abuses, entirely reform the constitution, and so give peace to the Mikado's mind. Further, that the Shōgun must come up to Kiōto in the following spring, issue his orders to the clans, and proceed without delay to achieve the expulsion of the barbarians.

Shortly before this the Court had ordered the Bakufu to proclaim a general amnesty for political offences. A decree was therefore published throughout the country by which all persons who had been confined for taking interest in the national affairs since 1858 were released. Pensions were also granted to the widows and orphans of those who had suffered death for their opinions.

During the same month the Bakufu besought the Court to make Toda Wasaburō, a relation of the Toda family of *daimiōs*, commissioner of the Imperial Tombs, and to raise him to the rank of Yamato no kami. Yamato no kami was a man who had remonstrated against these tombs being left in their dilapidated state, and had conducted their restoration.

During the 12th month (January 20th—February 17th) certain persons unknown set fire to the residence which the Bakufu was erecting for the English at Gotenyama behind Shinagawa.<sup>30</sup> Hanawa Jirō was also assassinated on the top of Kudanzaka. This man had been much detested for having collected precedents for the deposition of the Mikado by the orders of Ii Kamon no kami. The act was generally attributed to men of the Chōshiu clan.

During the same month the House of Shimadzu presented ten thousand *koku* of rice to the Imperial Court.

Some time before, as Nakagawa Shiuri no Daibu was passing through Fushimi on his way to Yedo, Prince Jōren-In and the Court nobles sent a number of *samurai* belonging to various clans to rebuke him for placing Yedo before Kiōto. He thereupon turned back to the capital,

and the number of princes who were now assembled there was more than eighty. The city became more crowded than it had ever been within the memory of man.

During this year the Bakufu commissioned Holland to build it a man-of-war, and despatched Enomoto Kamajirō, Akamatsu Daisaburō, Uchida Tsunéjirō and others to that country, to study the art of naval warfare. It also enlisted men belonging to the lower classes to serve as infantry soldiers, and formed its own vassals the Hatamoto into cavalry and artillery. These troops went by the name of the *Sampeitai*.<sup>31</sup> Enomoto and those who went with him to Holland made great progress in their studies, and five years later they all returned to Japan with the man-of-war, which was named the "*Kaiyō-Maru*."

Shitotsunashi Chiunagon arrived at Kiōto in the first month of the 3rd year of Bunkin (18th February—March 18th,) whereupon the *samurai* of the different clans and the *rōnins* pressed him about the expulsion of the barbarians. He replied that the matter would be settled as soon as the Shōgun should arrive. The *rōnins* were disgusted with this temporizing policy, and assassinating Kagawa Hajimé, a retainer of the noble Chikusa, sent the head to the Chiunagon as a blood-offering for the expulsion of the barbarians. They sent the arms to Chikusa himself. Kagawa was a man who in previous times had intrigued with Shimada and Ugō in the interests of the Yedo Government. Todoroki Bubei of Higo and Kusaka Gisuké of Chōshiu also called on the Kuambaku, and urged him to fix a date of the expulsion of the barbarians.

It was about this time that Miwada Kōichirō of the Matsuyama clan and a number of *rōnins* cut the heads off some wooden images of Ashikaga Takanji, Yoshinori and Yoshimitsu,<sup>32</sup> which were enshrined at the temple of Tōji-In, and pilloried them in the dry bed of the river at Sanjō. This was intended as a hit at the Tokugawa family, whose acts might be compared to those of the Ashikaga. The prince of Aidzu, offended at this outrage, arrested Miwada and his accomplices. The city was in a commotion, and the prince of Chōshiu interceded for their lives, but the prince of Aidzu and the ex-prince of Echizen were obdurate. From this time onwards the *rōnins* entertained great affection for the prince of Chōshiu.

In the same month the Court established the Gakujū-In, which was intended as a place wherein the *samurai* might freely express their opinion on politics. The prince of Kurumé recommended Prince Jōren-In to both the Court and the Bakufu, who permitted him to lay aside his priestly robes. He was henceforth styled Prince Nakagawa, and took part in affairs.

In the 3rd month (April 18—May 17) the Shōgun came up to Kiōto, and went to Court on the same day, after which he took up his quarters at the castle of Nijō.

During the same month the prince of Satsuma addressed a memorial to the Mikado, saying: "For some time past I have criticised the political situation, and have offered my humble opinion to Your Majesty. But the tongue of the slanderer has been busy, and my suggestions have not been carried out. If under these circumstances I remain at the capital, I am merely justifying the slanders which have been uttered against me, and I am afraid that some disaster may be the result. Besides, as the time for the expulsion of the barbarians is drawing near, I must make my preparations. I beg therefore that Your Majesty will grant me a few months' leave of absence." Having sent in this letter he departed for Kagoshima on the following day, without waiting for an answer. It was currently reported that he was moved to this course by the remarks which had been

(31) Lity. three bodies of troops. It would be more convenient in English to call them by the name of 'The Drilled Troops.'

(32) Takanji (b. 1305, d. 1358) was the first Shōgun of the Ashikaga line. His son Yoshinori (b. 1330, d. 1367) did not rise above the rank of Dainagon. He was succeeded by Yoshimitsu, who became Shōgun in 1368 and died in 1408. The insult offered to their effigies occurred on the 9th April. G.Y.M. Ashikaga Takanji at first took the side of Go-daigo Tennō against the Hōjō family, but afterwards turned traitor and seized the power for himself.

(33) When the Prince of Satsuma is spoken of as taking a part in affairs, it must be understood that either Shimadzu Saburō or the leading men of the Satsuma clan acted under his name. Scarcely any of the *daimiōs*, except the ex-princes of Hizen, Tosa, Echizen and Uwajima, were of any personal importance. It is clear in the present instance that it is Shimadzu Saburō who writes.

\* Now (1873) Daijō-Daijin, or Chief Minister of State under the Mikado.

(30) This event happened on the night of February 1. Several men of low social standing who had a share in the work are now high officials of the Mikado's Government.

made by some of the clans<sup>(34)</sup> at Kiôto about the assumption by the house of Shimadzu of too large a control over affairs.

During this period the Court deliberated daily upon the expulsion of the barbarians, and finally sent the prince of Mito down to Yedo, to superintend the closing of the ports. All the maritime princes were sent home to their respective provinces to make preparations for war.

The *samurai* of the different clans and the *rônins* had addressed themselves frequently to the ex-prince of Echizen, pressing him about the date for the expulsion of the barbarians. The ex-prince, who knew the difficulty in which this matter was involved, resigned his office of Supreme Director of Affairs, and furtively quitting the capital, returned to his native province.

In the 4th month (May 18th—June 15th) the Shôgun, Shitotsubashi Chiunagon, the Minister Itakura Iga no kami, and other high officials of the Bakufu went to Court. The Mikado thereupon fixed the 25th of June as the date for the expulsion of the foreigners, and ordered the Bakufu to communicate it to all the clans. The Bakufu found itself compelled to obey, but privately resolved to do nothing. The Mikado next proposed to visit Otokoyama,<sup>(35)</sup> and to deliver to the Shôgun at the shrine of Hachiman the sword emblematic of his authority to expel the barbarians. The Shôgun, however, declined to join the procession, on the ground of sudden illness, but sent Shitotsubashi Chiunagon, who was in attendance on him, to act as his proxy. Shitotsubashi was extremely embarrassed, and suddenly pretexting illness, descended from the shrine. When the *rônins* heard of this they were violently angry, and said: "bah! this sluggard is not fit for the work." They therefore insisted upon the Mikado's taking the field in person, and asked to be allowed to march in the van. The Court, however, managed to appease their wrath for a while.

During this month the Court appointed the ex-prince of Owari assistant to the Shôgun, while the ex-prince of Hizen was made Superintendent of Civil and Military matters. Shitotsubashi Chiunagon was sent down to Yedo to assist the Prince of Mito in closing the ports.

About this time the Shinchô gumi disturbances occurred at Yedo. There was a Déwa man named Kiyokawa Hachirô, in that city, who for some years past had advocated the expulsion of the barbarians. He persuaded one Adzumi Gorô and several others of the same way of thinking, to join him in disturbing the peace of Yedo and its vicinity. They had committed several murders, and being hotly chased by the secret police, had fled by way of Echigo into Ôshin and Déwa, whence they managed to reach Kiôto without detection. The agitation for the expulsion of the barbarians was going on there; and Hachirô tried to egg on the *samurai* of the Satsuma and Chôshû clans. At this moment the Bakufu was collecting the *rônins* from all parts of the country at Yedo. It gave them pay and formed them into a corps under the name of the Shinchô gumi. Hachirô, profiting by this lucky event, obtained pardon for his previous offences through friends in the Aidzu clan and among the officials, went down to Yedo, and became chief of the corps. The men composing it amounted to five hundred, and there were a large number of lawless ruffians among them. They exacted money from the rich citizens under the name of contributions towards the expulsion of the barbarians, and were preparing to attack Yokohama. Great uneasiness was felt far and wide, and the efforts of the Bakufu to restrain these men were almost ineffectual. At last it issued orders to the clans to arrest them whenever they might be found, and the ring-leaders having been caught, tranquillity was restored. Hachirô is said to have been killed not long after by an Aidzu man named Sasaki.

(34) The word *han*, here translated clan, literally means fence, the duty of a *han* being to defend the throne against its enemies; but clan seems the best term by which to denote a fractional part of the nation, which, held together under one chief by the closest ties, looked with hostile eyes on other similar fractions of the nation. As an instance of this feeling it is sufficient to state that a *daimio's* retainer invariably meant by the term 'my country' not Japan, but the territory ruled over by his lord.

(35) Otokoyama in Yamashiro, also called Iwashimidzu, situated on the left bank of the Yodogawa some twenty miles from Kiôto, is the site of a celebrated shrine to the memory of Ôjin Tennô, whose worship was there established under the title of Hachiman Daibosatsu. This deified emperor is considered a sort of patron of warriors.

All this while the Court was daily urging the Yedo Government to close the ports. The prince of Mito, Shitotsubashi Chiunagon and the Minister Ogasawara Iki no kami finally told the foreign representatives resident at Yokohama<sup>(36)</sup>: "Our people dislike intercourse with foreigners, and numbers of them are ready to assassinate you at any moment. Our Government has done all that ingenuity could suggest, but the effect of this dislike is that the Mikado has ordered us to inform foreign countries that the ports are to be shut and foreign intercourse terminated. We beg you to consent." The foreign Representatives replied: "When the treaties were concluded a compact was made that they were not to be changed. Why then do you now wish to make a change? If your country designs such an extraordinary thing as this, extraordinary calamities will follow. We are here by order of our respective nations, and have no authority to decide such an important matter without referring home. You had better consult our governments about it, who will decide as they think right." The Bakufu consequently prepared to send ambassadors to foreign nations.

In the 5th month<sup>(37)</sup> (June 16th—July 15th) the English came to Shinagawa by sea, having certain requests to make. When Ôhara went down to Yedo in the previous year as Envoy from the Mikado he was accompanied by Shimadzu Saburô (formerly Idzumi), and on his way back some English people came riding through the head of his train at a place called Namamugi in the province of Musashi. The prince's escort was enraged at this insult and slew the offenders. The Mikado's envoy had just reached the town of Shinagawa, when he heard of the affair. He delayed there for three days in consequence. The English then came with their men-of-war to Yokohama, and addressed a letter to the Bakufu, saying: "Last year you killed some of our officers. You must arrest the person who directed this act to be done, and execute him in the presence of our officers. If you cannot do this, we shall demand an indemnity of \$500,000 from the Bakufu, and we will also go to Kagoshima and take \$30,000 there also." The letter also fixed a date by which the reply must be given.

As the Shôgun was still at Kiôto the Ministers could do nothing but repeat over and over again that the affair should be adjusted on his return. They also sent a hasty message to the Shôgun, who represented the state of matters at Yedo to the Mikado, and asked for leave to return home. The Court refused to grant it, and the clan of Satsuma, on learning what had occurred, said to the Bakufu: "We hear that the English have demanded the person of Saburô, a relation of our prince, and that the government is much embarrassed by their demands. Saburô says: the English insulted me, and my escort simply inflicted punishment upon them. But if the anxiety of the Government can be removed by the English getting hold of me, let it be decided by an appeal to arms. I certainly will not surrender to them unresistingly. This is what Saburô says, and he prays for the instructions of the Government." The Bakufu, anxious and troubled about domestic and foreign affairs, debated for several months without coming to a conclusion. The English were daily expecting to receive our answer, and the day for the payment of the indemnity was drawing nigh. The Bakufu, fearing that hostilities would break out, issued a proclamation to the townspeople of Yedo, who packed up their property and took refuge in the country round. The commotion was so great, that the Bakufu at last made up its mind, saying: "It looks as if the wrong was on our side in the affair of Namamugi. Let us clear our reputation, and then put an end to foreign intercourse." So it gave the indemnity to the English, who then departed from the Bay of Shinagawa.

(36) This announcement was made by letter on the 24th June, after the indemnities demanded from the Shôgunate for the second attack on the English Legation in 1862, and for the murder of Mr. Richardson had been fully paid. The author has reversed the two transactions.

(37) The negotiation here referred to was commenced at Yokohama in April, when a despatch containing the demands of the English Government was sent in to the Shôgunate. The *Haroc* alone proceeded to Yedo on that occasion. The period granted for a definite reply to be given was repeatedly extended, until on the 20th June the English Chargé d'Affaires found himself compelled to place the affair in the Admiral's hands. The *Pearl* and perhaps another vessel were sent up to Yedo, but in the meantime, the Japanese Government consented to all the demands, and hostilities were avoided.

For some time past the house of Mōri had been constructing batteries at Shimonooséki in Chōshiu, with the object of commencing hostilities against the barbarians. Some Dutch, American and French vessels happening to pass through the straits, our troops fired on every one of them. Several of the foreigners were killed and wounded, while the batteries were destroyed in a visit from a second American vessel. When the order for the expulsion of the barbarians was first issued, the Kokura clan believed that the Bakufu was in reality averse from the measure, and therefore afforded no help to Chōshiu on these occasions. The Court consequently issued a proclamation to the clans observing that it had learnt that certain clans had put their hands in their pockets and looked on quietly when the barbarian ships had been attacked. This had profoundly distressed the Emperor, for now that a commencement had been made by Chōshiu, it was the duty of all the clans to strive to achieve the work with all possible speed.

During the same month the house of Mōri presented ten thousand *ri* in gold to the Imperial Court.

About the same time\* the Minister Ogasawara Iki no kami arrived at Ōsaka by sea, and was about to enter the capital, when the Court refused him leave to do so. It proceeded to censure him for his misconduct in paying the indemnity to the English without asking for sanction, deprived him of his rank and titles, and confined him in his *yashiki* at Ōsaka.

In the 6th month (July 16th—Aug. 13th) the western castle at Yedo was burnt to the ground. It was rebuilt during the following year, and is now known as the castle of Tōkiō.

During the same month the guardianship of the palace gates by the Satsuma clan was discontinued. Some time previously Ané-no-kōji Shōshō had been assassinated one evening in the streets on his way home from the palace. The murderer fled and was not discovered, but common report said that he was a Satsuma man. It was also rumoured that the order above alluded to was given because the Court secretly disliked the Satsuma clan for the murder of the Shōshō.

In the 7th month (Aug. 14th—Sept. 12th)\* the English came with ten men-of-war to Kagoshima in Satsuma, saying: "Although the affair of Namamugi is settled so far as regards the Japanese Government, we must have twenty thousand dollars from your clan for the support of the widow and orphans of the murdered official. We also ask why you killed an Englishman." The Satsuma clan was about to reply when the English seized the men-of-war belonging to the clan without the slightest provocation. A great storm was raging at the time, and the troops seized the opportunity to repel the enemy. Several artillery engagements ensued in which the English ships were severely knocked about and had to retire. They burnt the town of Kagoshima before leaving. After a short interval had elapsed the English began to prepare for a second attack, upon which the house of Shimadzu sent men to Yokohama to pay over \$20,000, which they borrowed from the Bakufu, and the affair was peaceably arranged. When our troops fired on the English ships, the crews were in such a hurry to escape that one vessel had no time to get in its anchor, so the cable was cut and the anchor left behind. Our troops seized it, and handed it over at the earnest request of the English. When the English get hold of an enemy's anchor they proclaim the fact everywhere, to show how they have gained the victory. The enemy bitterly feels the disgrace, and when peace is made, often pays large sums of money to recover the article. But as the English got back their anchor without the expenditure of a single cash they were moved to admiration for Japanese magnanimity.

Shortly before this Shitotsubashi had addressed a letter to the Mikado in which he said: "I have been the unworthy recipient of Your Majesty's boundless favours, and have received the office of Guardian to the Shōgun. But I have been completely unsuccessful, and feel most uneasy in my mind. Your Majesty has also specially instructed me to arrange for the closing of the ports, but though I have striven day and night to requite one ten-thousandth part of the benefits I have received from

"Your Majesty, I have been unable to carry out that measure also. My guilt in accepting such a grave responsibility, without duly appreciating the action of events and estimating my own capacity, is too great to escape unpunished. I pray Your Majesty, therefore, by an exercise of that great goodness which is Your Majesty's chief attribute, to release me from the office of Guardian to the Shōgun." The Court had always placed great confidence in the Chinnagon, and therefore refused to grant his request.

The prince of Aidzu was rewarded by the Court with a sum of money in gold and a war surcoat for his services in protecting the capital, and the Shōgun was allowed to return to Yedo.

When the Court decided upon expelling the barbarians some of the princes declined to obey. The *rōnins*, also, had been active in seditious intrigue, and the Court began to feel secretly alarmed. From this time onward it began to believe in the Bakufu.

During this month the Bakufu despatched envoys to Chōshiu, to reprimand the clan for having fired on foreign vessels without orders. The Chōshiu people insisted that they had only obeyed the instructions of the Court and the Bakufu, justified their proceedings, and refused to acknowledge themselves in the wrong. Eventually they forcibly detained one of the envoys named Nakané, and as he did not return, it was believed that he had been assassinated by them. From this moment a breach was formed between the Bakufu and Chōshiu. Some of the court nobles supported the former; others detested Chōshiu for its high reputation. Another party occupied a neutral position, but the Court cherished a secret dislike to the clan.

A short time previously the Chōshiu clan had besought the Mikado to make a progress to Yamato in order to show to the Empire his intention of taking the field in person against the barbarians. The proposal was accepted, and public notice was given that he would proceed to open the campaign in person. Some, however, remonstrated, saying that Chōshiu merely wished to get possession of the Mikado's person in order to be able to dictate to the Empire. This accusation caused the Court and the Bakufu to regard Chōshiu with suspicion, and they became desirous of excluding him from a share in the councils of the Mikado. On the night of the 18th day of the 18th month (30th September) Prince Nakagawa, the Prince of Aidzu, with certain court nobles and men of the military class assembled together, and proposed to dismiss Sanjō and six other Court nobles and the Chōshiu clan. Fearing an outbreak they hastily gave orders to all the clans in the capital to guard the palace gates most vigilantly. The town was thrown into a state of violent commotion and the public anxiety became great. Mōri Sanuki no kami, prince of a subordinate Chōshiu clan, and Kikkawa Kemotsu knew nothing of what was intended, until they saw the excitement of the citizens, and imagining that a revolution must have broken out at the palace, hastened thither with all speed. Admission was refused to them, and their men were removed from the guardianship of the Sakai machi gate, which was placed in charge of the house of Shimadzu. The two clans of Satsuma and Chōshiu, though devoted to the cause of the Mikado, had all along been on bad terms, and this occurrence showed that they were not likely to act any further in conjunction.

Prince Nakagawa was at the side of the throne, and assembling Konoyé, Tokudaiji and other nobles, said: "Sanjō Chinnagon and his friends, adopting the violent views of the Chōshiu men, have falsified the wishes of the Mikado, and have given out that His Majesty intended to go to Yamato in order to take the field in person against the barbarians. His Majesty is deeply offended with them. The Chinnagon and his friends have plotted high treason with the Chōshiu men." Orders were then issued that the Imperial progress should not take place, and a resolution was taken to punish Sanjō and the other six Court nobles.

The Chōshiu *samurai*, discovering on the 18th (Sept. 30th) the change which had occurred in the policy of the Court, made their preparations and departed for their native province, and the seven nobles fled with them. The Court thereupon deprived the latter of their titles

(38) On the 22nd July, G. Y. M.

(39) The squadron arrived before Kagoshima on the 12th August and left on the 17th. £25,000 was the indemnity demanded from Satsuma.

and rank, punished eighteen other official court nobles who had been acting in concert with Chōshū all along, and prohibited the Mōri family from entering the capital. Troops were levied in the surrounding provinces, and measures were taken for the defence of the city. A proclamation was also issued, which declared that many of the decrees lately promulgated were from the mixture of truth and falsehood in them calculated to mislead the people. But those which appeared after the 18th (30th Sept.) were to be considered as genuine expressions of the Mikado's will.

About the same time Matsumoto Kenzaburō, Fujimoto Tessēki and Adzumi Gorō took up arms in Yamato. These men had previously been wandering about from place to place in Yamato and Kawachi, and advocating the expulsion of the barbarians. They were joined by a court noble named Nakayama Tadamitsu, who had absconded from the capital some time before because the dilatory policy of the Bakufu disagreed with his own anti-barbarian views. Nakayama was elected commander-in-chief by this band of men, who now numbered a thousand strong, and styled themselves the "Tenchū-gumi." (40) Pretending to act by orders of the court they sent detachments to Sayama, Tannami, Shiraki and other places in Kawachi, to talk over the *daimiōs* and borrow muskets, cannon, saddlery, etcetera, from them. Having crossed by Chihaya they arrived during this month at Gojō in Yamato, attacked the residence of Suzuki Gennai, the Collector, murdered him and five subordinate officials, seized all the rice, weapons and ammunition they could find, and established their head-quarters there. They were prompted to these acts by Gennai's refusal to comply with their orders. Proceeding next to inform the people of the locality that the Mikado was about to make a progress into the province, they declared the country round Gojō to be Imperial territory, and remitted one-half of the land-tax, in order to become popular with the inhabitants.

Before they had been long at Gojō they received information that the policy of the court had undergone a change. Matsumoto and his companions debated together, saying: "Seeing the turn which affairs have taken, the 'Bakufu' will assuredly punish us. Rather than sit down 'to await its attack, let us make one desperate effort.'" On the morning of the 9th October therefore a detachment of five hundred men attached the town of Takatori, also situated in the province of Yamato. The troops of Uyēmura Suruga no kami, prince of the domain, defended it. The attack was so fierce that the *rōnins* almost succeeded in forcing an entrance, but the garrison fought so valiantly that they eventually repulsed the Tenchū-gumi, and made fifty prisoners. The Tenchū-gumi retreated to the hills near Amanogawa-tsuji and placed pickets all round them.

The Bakufu had already ordered the clans of Kishū, Hikoné, Tōdō and Kōriyama to march against the rebels, and Midzuno Tamon, the Kishū commander, led his troops to the attack on the 18th October. The assault was received with a well directed fire of musketry. Tamon received a bullet-wound, and lost a good many of his men. On the 20th Tōdō Shinshichi, the Tōdō commander, advanced against Amanokawa-tsuji with five hundred men. The Shinchū-gumi had planted an ambuscade, and pretended to take to flight, and as Tōdō's troops, who fancied the victory already won, advanced and fell into the trap, they arose on all sides, and routed the advanced body; but the Hikoné troops coming up to the rescue, the united forces finally succeeding in repulsing the *rōnins*, whom they pursued as far as Totsugawa. Hereupon the victors withdrew from the field of battle, as the sun was setting. During the evening the Tenchū-gumi surprised the Hikoné quarters, and retreated again inflicting a loss of thirty killed.

On the 25th the Tōdō troops fell upon the rear of the Tenchū-gumi, and succeeded at last in capturing the stockade of Amanokawa-tsuji. The *rōnins* dispersed, but detachments of the Kishū, Hikoné and Kōriyama troops pursued them far and wide, inflicting a sanguinary defeat on them. Matsumoto Kenzaburō, Fujimoto Tessēki and others were killed. Nakayama Tadamitsu fled to Ōzaka, while Adzumi Gorō and fifty more were made

(40) *Lily, the Heaven's chastelant band.*

prisoners. The common name for this outbreak was 'the disturbances of Gojō.'

Hirano Jirō, who was at Kiōto before this event, had obtained leave to try and pacify the Tenchū-gumi. He proceeded accordingly to Gojō, and had been there some time when he heard of the change which had occurred at Kiōto on the 30th September, and he at once returned thither, to pray the Mikado to re-admit the seven court nobles and the house of Mōri to the capital. The Court paid no attention to his petition, and Jirō, perceiving that everything was arranged as Prince Nakagawa and the prince of Aizu pleased, went off to Chōshū. Here he got hold of one of the seven nobles named Sawa, and with the object of renewing the agitation in favour of the Mikado's opening the campaign in person, went to Ikuno in Tajima in the 10th month (November 11th—December 10th) with no more than one hundred soldiers under his command. Having proclaimed the crimes of the prince of Aizu, he was preparing to enter Kiōto to present a petition to the Mikado. He began by attacking the residence of the local Collector in order to provide himself with the funds necessary for the accomplishment of his object, and seized all the money and rice to be found there. But the peasants arose on all sides and attacked him, while the Bakufu sent orders to the neighbouring clans to take the field. His followers occupied Miōkenzan, and fought valiantly for three days, until they could hold out no longer. Some were killed, while others fled back into Chōshū with Sawa. It will be remembered that in 1862 Hirano Jirō assembled together a number of hot-headed spirits, and tried to force Shimadzu Saburō to commence the great work, but that he was placed in confinement in his native province because of the seditious nature of the project. The Court had sent for him in the previous part of the year, and had appointed him chief of the Gakujū-In. Having absconded from Kiōto before, he was now captured by the troops of Sengoku.

During the course of this month Shimadzu Saburō arrived again at Kiōto, and had an audience of the Mikado on the same day, to urge the necessity of a second visit from the Shōgun and Shitotsubashi Chūnagon. Probably he wanted to take counsel with them.

In the 11th month (12th Dec.—8th Jan.) the Mikado appointed Prince Nakagawa President of the Censorate (*Danjō-no-In*). Henceforth he went by the name of the In no Miya. The Bakufu also increased his allowance, and gave him a thousand bags of rice annually in addition.

During the same month the Chief Castle at Yedo was burnt a second time, and it has never been rebuilt since.

About this time the Court dismissed Takadzukasa from the office of Kuambaku, and appointed Nijō in his stead. Shortly before this, when the Bakufu was about to shut the ports, it represented to the Mikado that it was afraid of the clans proceeding to commit acts of violence, and the Court now issued an order to the princes, directing them to wait for instructions from the Bakufu. The latter then despatched Ikeda Chikugo no kami on a mission to foreign countries to discuss the closing of the ports. The advocates of the expulsion of the barbarians were dissatisfied on hearing of this, feeling that the Court was becoming retrograde in its policy, and fled in a body to Chōshū.

#### END OF VOL. I.

#### VOL. II.

1864.—During the twelfth month (Jan. 9—Feb. 7)<sup>(41)</sup> a Satsuma merchant vessel, which had anchored off Tanoura in Buzen on her way from Iliōgo to Nagasaki, was fired on from the forts on the opposite shore of the strait, the Chōshū people mistaking her for a foreign vessel on account of her build. Thirty Satsuma men were killed, and the resentment of the clan was great.

Shitotsubashi Chūnagon went up to Kiōto during the course of the same month.

In the first month of the first year of Genji (Feb. 8—March 7) the Shōgun proceeded a second time to Kiōto, where he was joined immediately afterwards by Echizen Chūjō. On the 25th February the Shōgun went to court accompanied by Shitotsubashi Chūnagon and Aizu Chūjō, and the In no Miya addressed him on behalf of the

(41) Feb. 1, G.Y.M.

Emperor as follows: "We are not in favour of a hasty and ill-considered attempt to expel the barbarians, but Fujiwara no Sanéyoshi<sup>42</sup> and others, wilfully blind to the actual condition of affairs in the Empire, have misrepresented Our Will, have proclaimed the expulsion of the barbarians without being properly authorized to do so, and have stirred up war against the Bakufu. The turbulent retainers of the Saishō of Nagato have made a fool of their lord, they have fired on barbarian vessels without provocation; they have murdered the envoy sent to their prince by the Bakufu, and finally seduced Sanéyoshi and his companions to follow them down to their native province. These fellows must be punished. Nevertheless the true cause of these evil deeds is our own want of virtue. Henceforward do you assist us in carrying out our wishes, by restoring domestic harmony to the country and cutting off foreign intercourse." By speaking thus, after having previously proclaimed the expulsion of the barbarians, the Court brought upon itself the reproach of inconsistency.

In the 2nd month (Mar. 8—Apr. 5) Satsuma proposed to despatch an envoy to Chōshū to demand satisfaction for the merchant-vessel having been fired upon in the end of the previous year, but the Bakufu persuaded him not to do so, promising to obtain redress for him.

During the same month Shimadzu Saburō, father of the prince of Satsuma, was raised to the rank of Sakon'yō no Shōshō, and associated in the direction of affairs at Court. The rank of *Sangi* (Counsellor-of-state) was offered to Aidzu Chiujō, but he refused it.

In the 4th month (May 6—June 3) the office of Guardian to the Shōgun was taken from Shitotsubashi Chiunagon, who was appointed Protector of the Imperial Palace and Commander-in-chief of the Maritime Defences in the Bay of Ōzaka.

In the same month the Bakufu presented a new law containing five articles to the Imperial Court; firstly, the Bakufu would provide two thousand bags of rice towards the expenses of the Shrines at Watarai in Isé: that the Shōgun and *daimiōs* on succeeding their respective predecessors should present themselves at Court and acknowledge the bounty of the Emperor; thirdly, that all the western *daimiōs* should pay court at Kiōto, on their way to Yedo; fourthly, that all the clans should make annual presents of their produce to the Emperor, and fifthly, that playing on musical instruments should be stopped for a certain number of days after the death of a prince of the blood. All these things were done to honour the Court, which consequently gave its consent.

In the fifth month (June 4th—July 3rd) the Imperial Court formally placed the direction of affairs in the hands of the Bakufu, which was also ordered to punish Chōshū and the seven runaway nobles. On the 23rd of June Shimadzu Saburō returned to Kagoshima, whilst the Shōgun made his way back to Yedo.

During the same month certain retainers of the Prince of Mito, named Fujita Koshirō, and Tamaru Inanoyemon with others, took up arms in Hitachi and Shimotsuké, with the avowed object of expelling the barbarians.

To go back some years;—In the period called *Tempō* (1830—43) the ex-Chiunagon of Mito had selected Fujita Tōko, a certain Toda, a certain Imai and others from among his retainers, and with their aid had inaugurated great reforms in the administration of the clan. At that time Yūki Toraji, a *Karō*<sup>43</sup> of the clan, a man of crafty and intriguing nature, and who had obtained great influence with the ex-Chiunagon, had a greater voice in the Government of the clan than any other, and was extremely averse from changes in the system of administration. He consequently was highly annoyed at the recent elevation to power of Fujita and his associates, and exerted himself to obstruct their reforms. Having been dismissed for this by the ex-Chiunagon, he secretly informed the Bakufu that military preparations were being made in the clan. Some time previously the ex-Chiunagon and Fujita had proposed to abolish Buddhism, thereby incurring the hostility of the bonzes, who circulated a report that the ex-Chiunagon was forming ambitious schemes. The Bakufu therefore placed the ex-Chiunagon and Fujita in domi-

liary confinement, and Yūki regained his share in the administration of the clan. From this moment Yūki and Fujita headed two opposite parties, that of the former being called the Wicked Party (*Kantō*), while that of the latter was known as the Righteous Party (*Seigitō*). Subsequently the ex-Chiunagon was pardoned, and associated in the councils of the Shōgunate, upon which he punished Yūki a second time, and restored Fujita to his former position. From this time onwards the Righteous and Wicked Parties constantly quarrelled with each other, hardly a day passing away quietly. Fujita and the ex-Chiunagon having shortly afterwards died in quick succession, the power fell into the hands of Ichikawa Sanzayemon and Asaina Yatarō of the Wicked Party. Fujita Tōko's son Koshirō, Tamaru Inanoyemon, Tanaka Genzō and their friends were extremely angry, and under the pretence of carrying out the views of the ex-Chiunagon, loudly professed the combined policy of 'honouring the sovereign and sweeping out the barbarians,' hoping thereby to get the upper hand of the Wicked Party.

To resume the thread of our narrative; Fujita and his associates took the field with three hundred men, carrying with them the monumental tablet of the ex-Chiunagon, and coming to Ōhirayama by way of Utsunomiya, ordered the towns-people of Tochigi to supply them with the funds which they required in order to carry out their design of expelling the barbarians. The towns-people, unwilling to submit quietly to this demand, reported the outbreak to the Bakufu, which gave orders to the clans in the vicinity to chastise the rioters. The troops of Arima Hiōgo no kami<sup>44</sup> hastened to the scene of disorder, and fought with them in seven encounters, in which neither side was victorious. The rioters then set fire to the town of Tochigi, and the inhabitants took to flight. In the 6th month (July 4th—August 1st) they arrived at Tsukuba yama in the province of Hitachi, where they constructed a stockade to protect themselves from attack. Ichikawa and others of the Wicked Party, having asked leave of the Prince to attack the rioters, the Bakufu, to whom he referred their request, concerted measures with them, and joining forces they attacked the rebels at Tsukuba yama. The latter were however so ferocious in their resistance that they bore all before them, and the news brought from Yedo day after day to Shitotsubashi Chiunagon, the Military Governor of Kiōto (prince of Aidzu) and the Ministers of state was most disheartening.

The Chōshū people had several times addressed letters to the Imperial Court, in which they endeavoured to explain their conduct since the middle of the previous year, but the Court had refused to receive them. During the same month (July 4th—August 1st) Fukubara Echigo, a Chōshū *Karō*, arrived at Ōzaka by sea, and proceeded to Fushimi, whence he addressed a letter to the Court, which ran somewhat as follows: "Since the Prince and his Son obeyed His Majesty's desire that the barbarians should be expelled, they have passed their days and nights in ceaseless anxiety lest they should fail in carrying out his sacred will, and the whole clan is unable to understand why the Court should attribute guilt to Sanjō and his companions. It therefore humbly prays that the seven nobles may be restored to their functions, and that the Saishō and his Son may be permitted to re-enter the capital." Having sent in this letter he endeavoured to get up a fresh agitation at Court for the expulsion of the barbarians. The Bakufu ordered him to send away the part of his men, and to wait where he was for further orders. A short time afterwards the *Karō* Kunishi and Masuda also arrived at the head of several hundred men, Kunishi encamping at the Temple of Tenrinji at Saga in the vicinity of Kiōto, and Masuda taking up his quarters at Tennōji in Yamazaki.

Kiōto at this moment was full of the troops of various clans, who guarded the Nine Gates leading to the Imperial Palace. The In no Miya, Shitotsubashi Chiunagon, Aidzu Shōshō and the rest declared that the appearance of the Chōshū men with troops was nothing but an attempt to coerce the Court, and in their rage asked the Emperor's permission to attack them. Shitotsubashi, Satsuma, Echizen, Aidzu, Kuwana, Ōgaki, Hikoné and others ordered their troops to be in readiness to take the field, and the inhabitants of Kiōto, seeing that a conflict was imminent, packed up their property and sought safety in flight.

(42) The Court Noble Sanjō Chiunagon, now (1873) Prime Minister.

(43) The principal retainers of *daimiō* were called *karō*, or 'old men of the family.' It was a hereditary office.

The Chōshiu forces at Saga, Yamazaki and Fushimi, hearing what was in store for them, resolved to anticipate their enemies. Having laid their plans for a sudden attack, which was to result in removing the Aidzu clan and the other evil advisers of the Emperor from his side, they marched straight on Kiōto on the 20th of August, before the day broke. The Saga troops entered first, the Commander-in-chief Kunishi advancing against the Nakadachiuri Gate, and the Colonel Kijima against the Shimodachiuri and Hamaguri Gates. Shitotsubashi's troops engaged the front files of Kunishi's force, but were put to flight, and the latter reached the Hamaguri Gate, through which Kijima's men had already forced their way into the Palace enclosure. Here they vigorously attacked the Aidzu troops, and had nearly defeated them, when the Satsuma forces arrived on the spot, and took them in flank. The Chōshiu men were shaken, and forced out of the Hamaguri Gate, on which Kijima rallied his men and renewed the fight with such desperation that he retrieved this temporary check. Kunishi's men then endeavoured to combine their efforts with those of Kijima's men, but one Niré, a Satsuma Colonel, falling on his rear with two hundred men, called his attention in another direction, and the Shitotsubashi troops, plucking up courage, returned to the fight. The Chōshiu men were thus caught between two fires, and were at last put to flight.

The Chōshiu force at Yamazaki, consisting of five hundred men under the command of Kuzaka Giské, Iriyé Kuichi and Maki Idzumi no kami, arrived later than the Saga division, and seized the palace of Takadzukasa, where the troops of Echizen, Hikoné and Kuwana attacked them without success. They then advanced, and were just about to enter the Imperial Garden when the Satsuma and Aidzu troops arrived in hot haste, and assisted the three former clans in defending it. The bullets of the contending forces fell as thick as hail, and the fight lasted during four hours, at the end of which the Takadzukasa palace was burnt and the Chōshiu forces were defeated with great slaughter. Kuzaka and his colleagues were killed, while the survivors took to flight.

In the defeat of the Saga division, Kijima, one of its best officers, received a bullet wound. He fell from his horse and expired. Kunishi barely escaped with his life.

The Fushimi division had started thence in the middle of the night to attack the capital. The Hikoné troops attempted to bar their passage, but were attacked and forced to retreat. Profiting by this success the Chōshiu men advanced in a body with drums beating, but falling into an ambush of matchlock men which the Ōgaki colonel Ohara Nihei had planted by the side of the road, were put to flight with many killed and wounded. Their commander Fukubara Echigo barely escaped with his life.

In this way the three divisions were prevented from effecting a junction in the city, the greater part of which was consumed by the conflagration which accompanied the conflict. Many of the residences of the *kugés* and *daimiōs* were burnt, and an unusual number of men were killed and wounded on both sides, so that the roads were strewn with dead bodies. When the Yamazaki division of the Chōshiu force started, the commander Masuda was left behind with a hundred men to act as a reserve, and upon the main body being defeated, Maki Idzumi no kami escaped back to inform Masuda and his men of the result. He made Masuda take to flight, preferring himself to die there. Later on when the Satsuma troops who were sent in pursuit arrived at Saga they did not find a single Chōshiu soldier, and returned to Kiōto after having burnt the quarters which had been occupied by the Chōshiu troops.

On the following day the Aidzu and Kuwana troops attacked Yamazaki. Maki Idzumi no kami and the fifty men with him fought desperately for a while, and then perished by their own hands, after having set fire to their quarters. On the 29th of August the Bakufu expressed its thanks to all the clans which had contributed to the victory, and obtained an increase of rank from the Mikado for the various *daimiōs* who had headed them. Adzumi Gorō, Hirano Jirō and others who had been imprisoned for their share in the outbreaks at Gojō in Yamato and Ikuno in Tamba were decapitated, and their heads were exposed in public.

(44) Fukiagé in Shimotanké; 10,000 *koku*.

During the same month Ikeda Chikugo no kami and the other members of his Embassy returned from Europe. They had been sent in the previous year on a mission to the various countries bearing the order for the closing of the ports, and arriving first in France proceeded to explain the object with which they were sent. The French rejected their proposals and refused an answer. The eyes of Ikeda and his companions were opened by the high state of material and moral prosperity which surrounded them, and they returned, without proceeding any further on their mission, to report the failure of their attempts at persuasion. The Bakufu reprimanded them for having disgraced their functions, and depriving them of their private incomes, placed them in domiciliary confinement.

In the 8th month (September), the Bakufu begged the Imperial Court to deprive the Mōri family and its branches of their titles, in consequence of the attack made by the Chōshiu<sup>45</sup> clan upon the Palace, and issued an order to all the other clans to march to the chastisement of the two provinces of Nagato and Suwō. Owari Dai-nagon was appointed commander-in-chief, while to the troops of Satsuma and twenty other clans were allotted the points against which they were to move. With the object also of making preparations for the Shōgun to take the field in person, the *hatamoto* (vassals of the Shōgun-ate, not being *daimiōs*) were brigaded, and orders were given to lay in stores of provisions along the line of march.

Before this the foreign representatives at Yokohama had been holding daily councils of war with the object of despatching their ships against Chōshiu, and on hearing of the orders issued by the Bakufu, determined to be first in the field. They therefore attacked Akamagasaki (or Shimonoséki) in Chōshiu with eighteen vessels of war on the 5th September, and fired against the shore. The shore replied by firing at the ships. Cannon balls flew about everywhere, and the smoke of the guns covered the surface of the sea, until sunset caused both parties to withdraw.

On the following day the ships returned and opened a heavy fire on the batteries, from which the gunners were compelled to withdraw. The foreigners then landed, and occupying the hills on the 7th harassed our troops. Our men fought with enthusiastic bravery in several encounters, with varied success, but their ammunition being exhausted they had no resource left but to propose a cessation of hostilities. The foreigners found fault with their conduct in the previous year, but the Chōshiu army produced certified copies of the orders which they had received from the Imperial Court and from the Shōgun, upon which peace was restored. The foreigners then came to Yokohama and made demands on the Bakufu, saying: "We expect to get an indemnity of three million dollars for this business. We will be guided by your decision whether we shall go back to Chōshiu and take it, or whether the Japanese Government will undertake to receive it and give it to us." The Bakufu replied: "Our Government will take it from Chōshiu and give it to the nationalities interested." This settlement having been arrived at, the foreigners pressed every day for payment of the indemnity, and the Bakufu was at its wit's end.

At the same time the troops of the Bakufu and of Ichikawa were daily attacking Tsukubayama. Fujita and his friends fought with fierce desperation, but from the want of discipline among the men and the contradictory orders given, many chances were thrown away, while the forces of the Bakufu attacked them vigorously and rendered their position less hopeful every day.

Ichikawa and his party gradually acquired greater power, owing to the support given to them by the Bakufu. They hated the Righteous Party, whose members they either placed in confinement or dismissed from office. The Righteous Party, unable to endure this persecution, determined to proceed to Yedo and complain to their prince. With this object three hundred men quitted their homes and reached Koganei in Shimōsa, where entry into Yedo was refused to them by the Bakufu, which ordered their prince to pacify them. At this moment Takéda Iga happened to be in Yedo, and begged

(45) Chōshiu is the Chinese name for Nagato, by which both that province and the *daimiō* of Hagi in Nagato are usually designated.

leave to undertake the service of pacifying the two parties, and the Prince, knowing that Takéda had been regarded with much favour by the ex-Chiunagon, on account of his belonging to the Righteous Party, requested permission from the Bakufu to send him. The Bakufu therefore despatched Matsudaira Ôi no kami, the head of a cadet family of Mito, and attached Takéda Iga to him. Ôi no kami, Takéda and his companions arrived in Mito at the head of the Koganei men on the 10th September, and were about to enter the Castle, where Ichikawa and his friends refused to admit them, on the ground that they belonged to the other Party, and having posted their troops all about the neighbourhood, waited to see how Takéda would act. Takéda tried to repulse them in order to proceed on his way, whereupon the matchlockmen of the Wicked Party opened fire upon him in concert, throwing his men into confusion; and following up their advantage, forced him to retreat. He was compelled therefore to carry off Ôi no kami and flee to Iso-nohama, where after holding a council of war, he attacked the Wicked Party at Iwafuné yama on the 12th. Kawakami, the commander of the Wicked Party, was killed, together with ten of his men, and the remainder of the force retreated from Iwafuné yama to the port of Naka.

(To be continued.)

#### ASIATIC SOCIETY OF JAPAN.

A regular meeting of the Society was held in the Public Hall, on Saturday, the 22nd March.

The chair was taken at 8.30 P.M., by the President, R. G. Watson, Esq., and the minutes of the last meeting were read.

The Secretary reported that a considerable number of books has been presented to the Library by Dr. Hadlow and Mr. Watson; and that Messrs. R. Vickers Boyle, W. G. Aston, Clifford Bate, and Dr. Nathan Brown had been elected Resident members.

The Secretary also asked to be relieved by the appointment of a Recording Secretary, expressing at the same time his willingness to attend to the correspondence for the present, if it should be desired. This matter was referred to the Council for their consideration.

With reference to providing a suitable place for the Library and Museum, it was stated that the Chamber of Commerce could not conveniently grant the use of their Room. The hope was expressed that some provision might soon be made; but no action was taken on the subject.

Mr. Satow then read an elaborate and carefully-prepared Paper on the Geography of Japan, illustrated by several large-sized Maps, projected by the Japanese, and published many years since.

The President, in tendering the thanks of the Society to Mr. Satow, remarked that we were under great obligation to him, for that such a paper would be highly appreciated by the Royal Geographical Society, and might perhaps claim its medal. Recently some of the members of the Japanese Embassy in England had become members of the Geographical Society, and the suggestion had been made that a Branch should be established here in Japan; but if we could secure such contributions as that read this evening, such a Branch would be superfluous. He referred, also, to the prevalent ignorance of geography which was to be found even in intelligent circles, and urged the importance of making ourselves acquainted with the countries in which we might reside or travel.

In the course of the subsequent discussion, it was stated that the length of the chief river in Japan was about 170 miles; and that Lieut. Ward, when surveying in the *Acton* some years since, had found that the Japanese had constructed some of their maps with considerable accuracy, though two of those exhibited by Mr. Satow showed very great divergence from each other. The method of naming seas and straits by the Japanese and by foreign navigators was very diverse, and gave rise to a good deal of misunderstanding.

Books presented by Dr. HADLOW R. N.

#### CHAMBER OF COMMERCE.

IN accordance with the resolution passed at the Annual Meeting when a Special Committee was appointed to take into consideration the question of the supply of telegrams to the Chamber, that Committee reported to a general meeting on Thursday.

The minutes of the last meeting were read and adopted.

Before the special business was entered into, Messrs. Sitwell, Schoyer & Co., were admitted as members of the Chamber on the proposition of Messrs. Jackson, and Wilkin and Robison.

The Secretary then read the following minutes of the meetings of the Special Committee.

"That the following form be recommended for adoption by the Committee."

Condition of Silk market.

Hanks, 1 and 2.

Good all round, 1, 2 and 3.

All round common, 2, 3 and 4.

Other, 1 and 2.

Hamatski, average parcels.

Japanese sorts—Coshu, good

do. medium

Sodai, good

do. medium

Etchesen, medium

Mashta, medium

Monthly report of Japan Silk.

Monthly deliveries of Japan Silk.

Condition of Cotton goods market.

Cotton Yarn, medium prices of good No. 20.

" Grey Shirtings, 8½ Eagle Chop. " 30.

" " 7 lb.

To be only wired when any special transaction takes place.

\* To be wired only when any disproportionate difference occurs.

Fortnightly export of Cotton Yarn, by steamers.  
 " " " by sailing vessels.  
 " " Grey Cottons, by steamers.  
 Japan Copper, quotations.  
 " condition of market.  
 Discount, Bank of England rate.  
 " France rate.  
 Exchange on Paris and London.  
 Japan Tea in New York—Price of common to good common.  
 " medium to good medium.  
 " fine to finest.  
 " condition of market.

N.B.—The quotation for Yarn to be the medium price for good spinnings such as Henderson's Crown chop or Balfour's Lion chop, not any one particular chop.

The Secretary was authorized to write to Messrs. How Brothers with a view to ascertaining if reliable telegrams concerning tea could be obtained and probable expense &c. The question of expense being entered into it was ascertained that the probable expense would not exceed \$30 per head.

This report being sent to the general committee the following alterations were made in the form.

Hanks 1 and 2, (meaning best parcels.)  
 Hanks Inferior (when word to spare.)  
 Oahu No. 1, (meaning extra best.)  
 Oahu Nos. 1, 2 and 3, (meaning good average.)  
 Condition of Lyons silk market instead of the monthly import of Japan Silk.  
 Cotton Yarn Nos. 20 and 30 to be always wired.  
 Grey Shirtings 8½ and 7 lbs., to be always wired.  
 Japan Copper. Quotation and condition of market (only when word to spare.)  
 Discount Bank of France rate to be left out.  
 Japan Tea in New York Price of good medium new.  
 " " " old.  
 " Condition of market.

The Chairman explained that negotiations were in progress between the Yokohama and Kobe Chambers with a view to the latter joining in the expense and benefits of the telegrams, but they had not yet arrived at any definite result.

Mr. Kingdon suggested that the telegrams should be obtained through Reuter's agency, but this did not meet with the approbation of the meeting, and after some conversation as to the desirability of obtaining reliable and full information respecting the tea market in New York.

Mr. Thomas proposed and Mr. Pistorius seconded a motion to the effect that the Committee should be authorized to incur an expense not exceeding \$30 per member per annum in order to obtain better telegraphic information.—Carried.

Mr. Wilkin proposed and Mr. D'Ifanger seconded a motion that the form of telegram suggested by the Special Committee should be adopted, with such alterations as were made by the General Committee.—Carried.

The meeting then terminated.

### THE KIOTO EXHIBITION.

(From the *Hogo News' Special Correspondent*.)

16th March, 1878.

Before I proceed to tell you all about the Kioto Exhibition of 1878; it were, perhaps, as well that I should give you a few hints as to the best way of getting there from Osaka. If you have much baggage the best thing is to hire a 20 or 30 koku cargo boat, or to engage a section of one of the passenger sailing boats. But this is a slow, tiresome and uninteresting mode of travel at best. As for the steamers, they will not do, being slow without being sure. The best way to perform the journey between this and Osaka is to ride on horseback, and next to that to go by jinrikisha. Supposing you determine upon the latter course, take my advice, and engage a man at Osaka to take you to Mori-gutchi, some 3½ ri or so from the Foreign Consession; for this you will have to pay 1½ or 2 bus. At Mori-gutchi change man and carriage, by which you gain in two ways,—by the freshness of your steed and by the more reasonable rate of charges which prevails in the rural districts. If you want any refreshment let me recommend the last tea-house, almost the last house, on the right hand side of the road as you leave the village. From Mori-gutchi you pass through Sada to Hira-katta, say 3 ri, fare 1½ bus. At Hira-katta, you had better change again, as it is a large place, and at Hashi-moto you may not always find a disengaged jinrikisha. The

distance between the last named towns is under 3 ri, say 1½ bus again. If you want to stay awhile you will meet with capital accommodation, somewhat qualified by the more than ordinary obtuseness of mine hostess, at the first tea-house, and almost the first house, on the left hand side as you enter the town of Hashi-moto. Just above Hashi-moto you will cross the river by ferry, and in less than one hour reach Yodo, the distance being but little over a ri, but when I travelled it last by jinrikisha the newly made portion of the road was very heavy from recent rain. If time is an object, take an extra jman and travel tandem. When jinrikisha men meet on the road they will often exchange passengers, so that each may journey homewards, which, while being unobjectionable to you is a great advantage to them. Passing the interesting castle built by Hideyoshi (Taiko-sama) and crossing the bridge of Yodo, the first bridge from Osaka, another 3½ ri or so will land you in Kioto. From Hashi-moto to Kioto, say 6 ri, fare 3 bus. When the roads are in good order you ought to travel, with frequent changes, at the rate of 5 miles an hour. The total distance from Osaka to Kioto I made 33 to 35 miles by this road. Previously I had always passed through Fushimi, but at Hashi-moto, I was told to recross the river at Yodo, as by going that way I should save a ri. I saw no signs of the passenger coaches on the road, but this I attribute to the fact that the road near Osaka was under repair, and instead of passing through the suburban village of Kita-machi, we were compelled to make a long detour by the river, passing opposite to the Mint. Here there was no occasion to wonder at the stoppage of the coach, for by somebody's gross carelessness, the telegraph poles were in several instances set up right in the middle of the narrow road. In one place, about two miles from the Mint, a pole is erected in the middle of the road where it is considerably less than 10 feet wide. It is one of the national failings to sit, work and feed in the middle of a doorway, or rest a load in the centre of the street, but surely the foreign superintendent of the line, knowing this, might have corrected this natural tendency to obstructiveness. Since arriving here I have heard that a foreigner travelling from Osaka in a buggy had the greatest difficulty, even when leading his pony, to pass certain portions of the road, but the only wonder to me is that he got past at all.

The guides and guards, so numerous last year, have all been done away with, and even police are scarce, being much less frequently met with in Kioto than in Osaka. As for passports, neither my companion nor myself have yet been asked to shew ours, which was fortunate, seeing that, unwilling to gratify Mr. Gower's caprice by performing the whole journey from Kobe to Kioto, little short of sixty miles, in one day, he had in order to be in time for the opening, started without his passport. It was near midnight, but bright moonlight when we arrived at the guard-house, a short distance from the remains of the ancient city earth-wall. Tired of riding, we had dismounted, and the guard-house being a little off the road, we were passing it unnoticed, when out jumps a guard armed with an ugly looking pronged stick studded with spikelets, which he thrust before us. Not understanding all he said, I asked him what he wanted, when out rushed another fellow with a dark lantern, who on casting the light on our faces uttered but the mystic *Ijinsan*—Foreigner—and in an instant the man-prodder was drawn back and, with a profusion of polite phrases, we were permitted to wend our peaceful way. I then noticed that our backs had been towards the moon, throwing our faces into shade, and then the mystery was explained. The man had taken us for Japanese, and though both of us are old residents, that was the first time that mistake had been made with regard to either of us, I fancy.

Eight o'clock on the morning of Thursday, the 1st March, was the hour appointed for the opening of the Exhibition, and somewhere about that time it was opened, without more ado than if it were the five hundredth occasion instead of the first. I reached there shortly afterwards, but found, as was the case last year, that I had lost nothing by the delay. In 1872, it will be remembered, the Exhibition was held in three temples situated in different parts of the city. Admission was by passes, foreigners paying 1 rio for a set of three and natives

1½ bus,—neither having the option of purchasing admission to one or two only of three. This year the Exhibition, though contained in several buildings, is practically in one, as all are situated within the hitherto tabooed precincts of the Imperial Palace. A single payment suffices, foreigners and natives being alike charged five sen only, with the result which might have been expected. Instead of the native visitors being counted by tens, they are already this year to be counted by thousands. On the opening day there was one of those slight falls of snow which, in the incomparable climate of Mid-Japan, the dwellers on the plains seldom experience more than twice or thrice a year. Yet despite the disagreeable weather, the visitors on the first day were 1,200. Friday was a finer day, though still cold, yet long before the closing hour, the number of visitors for that day had already reached 2,000, when I last enquired. I never saw twenty visitors together at one time last year,—now they are to be seen by hundreds, and as a foreigner is still somewhat of a *rara avis* to the Kio-toites, I found the numbers somewhat inconvenient in the more narrow passage ways of the Exhibition.

On entering, there will be found near the entrance a small Pottery. Three or four women and a couple of men are engaged in moulding, glazing and ornamenting saucers and basins of coarse grey earthenware. There was a single potter's wheel, but the women were fashioning saucers without its aid, and in a way which was novel to me. Taking up a dab of clay, the workwoman flattened it with her fingers into a rude disc; then bending her left arm, which was covered with calico, till her hand rested on her shoulder, she held the flattened piece of clay in her right hand, and striking it several times against her left elbow, while at the same time giving the clay a half turn, she quickly succeeded in making a rude vessel, half basin half cup. I suppose that only moderately young women could thus dispense with the wheel, and only a rounded elbow would answer. One of the men brushed on the glaze, and another, armed with a hair pencil, dashed in an odd spray or two in a very rough style. The sides of the building were open, so that every process was to be seen from the outside, and appeared to afford much interest to the native onlookers. There were a couple of small portable kilns, in which the vessels were to be seen baking.

Crossing a large courtyard we arrived at the entrance of a building resembling a small temple; here we found a crowd busy exchanging their clogs and sandals for Japanese imitations of Chinese slippers, for the temporary use of which they pay a tempo per pair. As was the case last year, plenty of carpenters were still at work; indeed, on expressing my belief that any one of the three buildings of last year contained as much or more than the present Exhibition, one of the officials informed me that there were a great many articles yet to arrive. Now with all due deference to their Honours the Commissioners, I must confess that I think they have made a great mistake in opening the Exhibition of 1873 more than a month earlier than its predecessor. It is evident that they are not ready, and had they postponed it for six weeks, not only would the Exhibition itself have given more satisfaction, but the woodland scenery which gives so great a charm to the environs of Kioto would have been in all its glory, and the visitor who could have left the city dissatisfied with his excursion would indeed have been hard to please. For my part I shall return at once, treating the present as merely a business visit, and postponing my visit of pleasure till the merry month of May, and I decidedly recommend those of my readers who can choose their own time to follow my example.

However, to return to the Exhibition. The articles were arranged on long tables, or suspended from the walls, in a similar fashion to that of last year. In the first room the most attractive object, to my fancy, was a many-leaved screen, each leaf of which was ornamented with a large panel of black lacquer, profusely, but in the most graceful fashion, festooned with sprays and branches of bamboo, willow, wisteria and other trees and flowers, all in mother-of-pearl, the flashing iridescence of which has a very beautiful effect. In another room were some novelties in the shape of pointed diadems and crowns of gold, and one of silver, all decorated

with large beads of coral. In strange contrast to those were some of the grotesquely ugly miniature head dresses of black gauze work formerly worn by the high and mighty of the land. A few kotos and biwas of indisputable age, an odd relic or two, a Chinese glass hall lantern of good design, some pretty tortoise-shell fans, and a case of ivory and steel girdle ornaments, were next arrived at. Amongst the novelties were two oil paintings, both modern. One a cheap German picture, with a good fire-light effect, the subject being a boy reading by the light of a fire, the other, more interesting, being a Japanese scene, a procession crossing a bridge. It is treated in a cold, hard manner, grey in various shades being the predominating colour, the coldness being slightly relieved by the purple and crimson banners carried by some of the figures. A line of telegraph passing over head enables the spectator to fix the date pretty accurately. Near these was a circular slab of mosaic work, probably an Italian production. There were a few specimens of lacquer work, some of which were very fine. The next room, or rather compartment, contained a selection of native-made needles, some combs, copper tea kettles, &c., and a collection of shells. We now passed into a gallery which ran along three sides of an upstairs room, from which the sliding windows had been removed. The sole protection for the crowd of sightseers from falling into the court yard beneath was a wooden railing, perhaps 18 inches high. If the authorities don't intend to keep a surgeon on the premises they had better put up a new rail, at least three feet above the floor level. In this department, the chief novelty was a handsome orrery; there were a few swords, some arrow heads and a suit or two of armour, but neither in quantity nor quality ought to compare to either Kenninji or Chioin of last year. A half dozen or so rolls of common oil cloth, such as is used for table covers in England, and a lot of fresh fir branches, dove-tailed ready to fasten to the stumps of a similar tree, completed this part of the Exhibition. We now descend into the garden, our Japanese fellow-visitors reassuming their accustomed foot coverings. Passing along the bank of one of those charming lakes for which Kioto deserves to be famed, and through a garden which in a few short weeks promises to be truly lovely, I note some buildings similar to that we have left, and which I suppose will be used for the exhibits yet to arrive. We now enter upon what I afterwards discovered to be the principal building of the Exhibition.

The building we have now entered is a much larger one than the first one, and consists chiefly of two galleries, one only of which appears to be finished. In one of the first rooms which we pass through is a number of curios, amongst the more noteworthy of which is a luncheon-box formed out of the water-worn and worm-eaten end of a "stick" of timber. It is only on closer examination that one discovers that the block has been divided in several places, hollowed out and the inner surfaces coated with fine black lacquer. This is just one of the kind of things a Japanese admires,—the contrast of a rough natural surface with the delicate carving or polishing of art. Near to this is a quaint old fashioned tobacco *bon*, in the shape of a miniature hand-cart drawn by a coolie.

Leaving this we come to the Textile Departments, where are exhibited various kinds of crapes, satins, brocades and here and there an old piece of tapestry, the whole making but an indifferent show compared with that of Chioin last year. Close to this last room is the Weaving Department, one of the chief and most interesting of the novelties of this year's exhibition. Here are to be seen two silk-weaving looms and a spinning frame, all of which are brand-new and, as usual, with the exception of a few nails, have not a particle of metal about them,—nothing but wood, bamboo, thread and cordage. Just as it is at the weavers' own houses, the whole family are made use of in some way or other. A couple of rosy-cheeked and sprucely dressed little girls are assisting a young woman at the spinning frame, and every now and again the youngest trips up to the little windlass, and with a few revolutions of its spokes winds up to the ceiling the bamboo basket full of stones, which constitutes the rude motive power of the machine. The eldest of the group appears to have all her attention taken up with splicing broken threads. Now and then a stone is

taken out or added to the basket, seemingly in order to regulate the speed. As for the looms, it would taken up too much of your space were I to attempt to describe their ingenious and to me most complicated mechanism. Retracing for a few yards our steps, and turning to the right, we arrive at the MSS. and Water-colour Drawing Department. Here there are a few interesting objects. One, for instance, is a folding book in which is depicted, in the most horribly graphic manner, the devilish doings of a band of robbers, their final arrest and fearful fate. Here, too, are some albums containing a number of dried specimens of some of the many beautiful leaves indigenous to Japan. There is also not far from this a small collection of native made papers of different qualities. Turning back a little we soon reach the gallery which is at present the principal feature of the Exhibition. This gallery is of considerable length, and opens on the left side to an ancient dark looking inner garden, in which I perceive a tub of water occupied by half a dozen of my misanthropical looking acquaintances of last year, the salamanders. The gallery is divided into a number of rooms, or compartments, in which are to be found a most heterogeneous assemblage of articles, ancient and modern, foreign and native, valuable and valueless. Of the first there are musical instruments, arrow barbs of copper, steel and flint, the two huge carved and gilt candles, the very identical pair I believe which I saw at Hongwanji last year, and if so, now 101 years old, I suppose. Some mirrors, malachite ornaments, large gourds and a figure of a snake with a human head. The few articles marked in English are in most instances very dear, a pair of pretty ivory filigree work tazzas at 15 yen are amongst the cheapest. But further on, in a collection of old pottery of pre-artistic days, a shapeless and cracked old grey coloured cup is marked 20 yen. Unless, however, there's some remarkable history attached to it, 20 iron zenì would be much nearer its value. The collection of cloisonné or enamelled ware is very meagre. One article, in shape like a soup plate, is valued at 6 yen. I have bought as good at less than half that price, if I am not mistaken. Another queer old curio is an old and dirty foreign-fashioned carriage lamp, marked 3½ yen, which ought to be the price per dozen at furthest. Close by is the Natural History Department, consisting in the main of a fine pair of antlers, a bird of paradise skin, a snake's ditto and, best of all, some magnificent specimens of the tail feathers of the argus pheasant. There are also a few of the ordinary bronze and silver groups of birds and foliage. New inventions are not over and above common in Japan, and in all the Exhibition I have discovered but one, and that was a cast-iron culinary utensil "for cooking beef and birds"—a kind of sauce-pan, half stew-pan half frying-pan, with a receptacle for sauce or gravy and a spout—price 1½ bus. Here I turned off into a small gallery to the left of the main one, where I met with the first of the foreign exhibits in the shape of a collection of agricultural implements, carpenter's tools, stoves, etc., all from San Francisco. Amongst other labour-saving contrivances, were musters of a new patent saw, yecept the "American champion one-man saw." This differs from ordinary saws in having deep and broad splits cut between every few teeth at right angles to the tool's edge. Churns, broadcast and drill sowers, corn shellers, grubbers, road scrapers, hay cutters, lawn mowers, etc., were too numerous to particularise. All these were sent by Messrs. Baker & Hamilton of San Francisco. The stoves are for kitchen use, and were forwarded by Messrs. Locke & Montague of the same city. Returning to the main gallery I soon arrive at the tea room, where I sip a few thimblefuls of tea of delicate aroma and no less delicate hue. Near here are to be found the Numismatic collections. A set of 75 very fine old coins and tokens, most of which must be over two inches in diameter, are priced at 50 yen; there are several smaller lots, nearly everyone of which is also to be had "at a price." One small lot is 5 yen, another of 12 pieces is only 3 yen. Curiosity prompts me to have one or two of the long inscriptions attached to the latter translated, when to my surprise I am told that the owner modestly claims for them an existence of upwards of a thousand years. Certainly, it may be even longer than that since the copper of which they are made was first run out of Dame Nature's furnace, but as for the zenì, unless the looks of some

much belied them, one hundred years would be much nearer the mark. It's worth knowing by coin collectors in these regions, that although, for instance, the Chinese era "Ken gen" may correspond with A. D. 758-760 it by no means follows that a coin bearing the characters "Ken-gen" is eleven hundred and thirteen years old (I wish it were but so, as I have several such). Chinese Mint masters, for sundry and divers superstitious reasons apparently, cast their cash in moulds bearing long bygone dates. Here, too, is to be found the only foreign exhibit that I have seen, excepting the Californian articles before and afterwards to be described, namely, a glass case containing three hundred coins and tokens from all parts of the world, but chiefly of Chinese, Japanese and British origin. Amongst the more uncommon of these are three old U. S. cents, two of which are embellished with busts of Washington, a 14th century Nuremberg coin, a groat of Queen Elizabeth, a liard of Louis XIII and a coin of the first black Emperor, Faustin I. of Hayti. The case was lent by Mr. F. Major, of Osaka. We have now reached what I may term the Foreign Department, and the remainder of the gallery is taken up by specimens of the restless energy and ingenuity of the dwellers in the Golden State. First we come to Messrs. F. B. Taylor & Co.'s display chiefly of a number of very common looking kerosene lamps, some lamp chimneys, and a collection of bottles of almost every conceivable shape, size, and shade. Some Howe's scales are also shown, sent by the San Francisco agent, Mr. V. S. W. Parkhurst, but a number of these, as well as some other Californian exhibits, are still unpacked. I should mention that all these American goods are under the charge of Mr. Brown, who appears to be at once zealous for his principals and obliging to his visitors. Next comes an assortment of sweetmeats, from old fashioned goodies to new fangled "*dragées*," as the French term them, but "cream candies" as the United States folk call them. \$0.75 per pound for the last named, laid down here, may be cheap for all I know to the contrary. Next door is the upholstering establishment, around which the Japanese crowd greatly. The chief contents are a drawing room suite of black walnut and figured amber satin, and a bedroom suit of the same wood, the price of the two suites being \$1,400. I admired the bedstead much, and the fleecy white lamb-wool blankets more, but as for the lounges and chairs, they were just a little too ornamental, I fancy; the bronze and gilt medallions with which they were decked some would say were also *de trop*. Next is a collection of Californian wines, some peculiar to her vineyards, as Sonoma and Angelica, whilst others are in avowed imitation of well-known European vintages. Prices range from \$4 to \$9 per dozen case.

The Japanese once more take to their sandals, and to my surprise I find that we have "done" the Kioto Exhibition of 1873. Stay,—there are three or four small outhouses yet unvisited; in the first is a small and ordinary collection of fans; in the second a ditto of bronzes; in the third a few pot plants and shrubs, including a double daisy and a common heartsease; and lastly, some really handsome specimens of San Francisco carriage building, far beyond anything I have yet seen in the Far East, at once rich and elegant, and as far as eye could tell, faultless. They come from the Kimball Manufacturing Company's Works. By the way, for the Commissioners to require visitors to leave always by the West gate is objectionable for many reasons, and a mistake which I hope to see rectified when I return. At my proposed visit of May next I fully expect, from what I have heard, to find the Exhibition greatly extended and improved,—to be in fact somewhat more on a par with its very interesting predecessor of 1872.

### Correspondence.

TO THE EDITOR OF THE "*Japan Weekly Mail*."

SIR,—At page 173 of your last weekly issue, I notice that Yoshida Shōin is said to have been a Nagasaki man. The word *Nagasaki* is probably either a clerical error on the part of the translator, or a mistake in the original for *Nagato*,—Yoshida Shōin being well known to have been a member of the Chōsiu clan.

His opinions have exercised such a powerful influence upon those of the foremost men of that period of the history of Japan which is treated of in the *Kinsé Shiriaku*, and in which the Chôshiu clan has taken so prominent a lead, that it would be a pity if the link were lost.

Yours obediently,

Yokohama, 18th March, 1873.

F.

[We thank our correspondent for his correction. The error was, as he supposes, a clerical slip on the part of the translator, and has been removed from the text of last Saturday. Ed. J. W. M.]

The intelligence conveyed in the following letter is in a high degree gratifying.

Monsieur le Rédacteur,

Nous recevons d'Osaka par le télégraphe à la date du 31 Mars, la nouvelle de la mise en liberté des prisonniers Chrétiens de la province d'Owari. Nous avons lieu d'espérer que tous les autres Chrétiens déportés en 1868 et 1870 d'autres provinces, ont également recouvré leur liberté.

Le Gouvernement Japonais en les rendant enfin à leurs foyers a fait un acte qui l'honore et lui mérite la sympathie du monde Chrétien.

Nous sommes heureux de profiter de cette occasion pour témoigner notre reconnaissance aux Représentants étrangers qui par leur zèle et leur dévouement ont amené cet heureux résultat. La presse, à Yokohama, s'est associée à leurs efforts et a contribué à la triomphe de la civilisation de ce pays, elle a droit aussi à nos remerciements.

Veuillez, Monsieur la Rédacteur, agréer l'hommage de mon profond respect,

H. ARMBRUSTER,

Mis. Apos.

Yokohama, 31 March, 1873.

#### TRANSLATION.

TO THE EDITOR OF THE *Japan Mail*.

SIR,—Under date of the 31st March we have received by telegram from Osaka the news of the liberation of the Christian prisoners of the province of Owari. We have grounds for hoping that all the other Christians, deported in 1868 and 1870 from other provinces, have also regained their liberty. In restoring them to their homes the Japanese Government has performed an act which does honour to it and which deserves the sympathy of the Christian world.

We gladly avail ourselves of this opportunity to express our acknowledgements to the Foreign Representatives by whose zeal and devotion this happy result has been achieved. The Press of Yokohama has been associated with these efforts and has contributed to this triumph of the civilization of this country, and to it our thanks are also due.

I am, Sir

Your very obedient Servant,

H. ARMBRUSTER,

Mission Apostolique.

Yokohama, 31st March 1873.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—I have read attentively your leader entitled "Union is Strength," in the last number of the *Japan Weekly Mail*; I like it uncommonly on paper, but it is impracticable, or at all events, useless. You will never get ten foreign houses, I do not mean to combine together, but to meet, and talk over business like true business-men, for any length of time. The 'cute ones, in American parlance, would take the others in, that is to say, they would worm out of others all the information they wanted and give them in return absolutely *nil*, just the amount of what you say it would need to start your society; or they would emit views and advices completely at variance with what is really in their minds; the rest of the houses would be a drag on the car. I can smilingly look at your attempts to reform the trade of Japan. It may be a huge stable of Augeas that would require the efforts

of Hercules to accomplish the task. The more you preach to it it will not be converted; their own views, they think, are good enough, and they care not to alter them. How can you possibly expect to reconcile the contradictory impressions of this motley community? If a merchant makes up his mind to buy silk now at 28s., which may be worth 24s. at home, or if an importer of shirtings sends orders by next mail to buy at \$2.75, when the market price here is \$2.60, they have the right to do as they please without telling you their reasons for so doing, nor will they bear their neighbours to chaff or reprove them for the way in which they conduct their business. It is the diversity of opinions which creates competition; on the other hand, competition is the soul and life of trade. What, if it is now, as it has been for some time past, a losing concern? It will right itself some day or other.

As for the Japanese guilds, they are held out as a bugbear fit only to frighten children with. Have we not the power to hold on to our imports if the prices offered for them do not suit? Or to keep out of the export markets should the rates asked by the natives appear to us unreasonable? The remedy, I say, is in our own hands; why, then, should we go out of our usual way to meet and combine? Really, I do not think that the society you propose would confer any benefit on the foreign trading community; it is not a mere little talk, by the way, that will set us on a more prosperous or successful course. I, for one, at least, will have nothing to do with it.

Yours truly,

UNBELIEVER.

Yokohama, April 5th, 1873.

[Our correspondent's letter somewhat resembles one of the old oracles. The reader will find in it what he brings to it, though there can be little doubt about his real opinion.—Ed. J. W. M.]

## Law Report.

### INQUEST.

On Thursday afternoon an inquest was held at the British Consulate, before R. Robertson, Esq., Coroner, on view of the body of Peter Anderson, steward of the *Dilpusund*. The jury were Messrs. Booth, C. D. Moss, and Stransome.

John Dray, master of the *Dilpusund*, identified the body. Deceased was refused permission to go ashore on Tuesday afternoon. He seemed rather excited. About five o'clock he left the ship in a sampan, and did not return. Witness heard that a man had been found drowned, dressed in clothes similar to those deceased wore, came on shore and recognized the body. Deceased had been with him nearly two years. He was a steady, sober man, and unlikely to commit suicide.

George Rattray, seaman, deposed that he was keeping watch on the poop on Tuesday to see no boats came alongside. He saw deceased in a sampan alongside, and asked him where he was going? Deceased replied "ashore."

James Braund, P. C., saw deceased's body floating in the canal, and removed it to the police station.

Eushiraba Nasaburo, said that near the O'mijibashi the body was seen in the water. He gave information of the fact to the foreign police. No house was near the spot.

Dr. Buckle deposed that he had examined the body, and there were no external marks of violence. On opening the body the usual appearances of death by drowning were observed.

The Jury returned an open verdict to the effect that deceased was found drowned; but how he came to his death there was no evidence to show.

### NAVAL COURT OF ENQUIRY.

#### BEFORE

Mr. Consul Robertson

and Captain Gaby of the P. O. Str. *Malacca* and Lieut. E. S.

Nuthall of H. M. S. *Rinaldo*.

Tuesday, April 1st.

This was an enquiry into the loss of the British brig *Wanja* lost while on the way from Hakodate to Yokohama laden with ice.

G. S. Kennett, master of the *Wanja*; He left Hakodate on the 28th February at 10 a.m., wind about south west with snow squalls, the ship when he left making about 1½ inches per hour, and after beating out of Hakodate Bay at 3 p.m., with a heavy sea swell from

the eastward, sounded the pumps and found the ship was making nine inches per hour. A strong wind was then blowing from the W. S. W. with strong squalls, the ship pitching heavily. The pumps were kept constantly going. At 8 p.m. the gale increasing, the ship was making 12 inches of water per hour, the ship straining much. He then took in the maintop-gallant-sail and upper top-sail. At midnight the gale was still increasing, the ship making 17 inches per hour, and they then stowed the foresail. At 4 a.m. the gale was still heavy. At 8 a.m. the gale had moderated, the ship still making the same water, and the pumps constantly going. At noon it was more moderate, latitude  $40^{\circ} 10'$  min. He should then, when he found out the condition of the vessel, have run for Nambu or Miaku if he could, but could not haul the vessel to fetch either, the wind being W. S. W. At 4 p.m. the ship was making 22 inches per hour with a head sea, the gale, however, moderating. All that night there was moderate weather and they made sail. At noon on March 2nd Kin-ko-san bore W. by N., distant 25 miles, the wind having shifted to the eastward; course steered S. by W. Moderate weather up to noon March 3rd, wind E. S. S. At 4 p.m. the wind increased to a storm and a heavy sea from S. They shortened sail and ship broke off to S. W. At 6 p.m. gale increased, wind S. They then wore ship. At 8 p.m. there was a strong gale with rain and a heavy cross sea, the ship labouring and straining much, making 27 inches of water. Hove the ship to under lower foretopsail and maintopmast staysails; was labouring heavily and shipping great quantities of water. At 10 p.m. one of the passengers on board went down to the sail cabin and reported that the vessel was making water in the stern. He found it was so. He took the mate and they found that some of the plankings were started. They then thought that for the preservation of the ship and themselves they ought to lighten the ship by the stern. They then commenced to throw ice overboard from under the cabin leaving nine hands at the pumps. From 20 to 25 tons of ice were thrown overboard from the after part of the ship and the men reported that the ship had left off leaking. He found on going on deck that that the ship was so much by the head that the water could not get to the pumps, but all ran forward. They went forward and then threw over 200 bags of rice. On sounding the pumps he found 32 inches of water. All the time a gale was blowing and the ship taking great quantities of water. On the 4th March the gale moderated, the wind shifting to the west, and set the foretopsail and reefed foresail. At 10 a.m. they set all sail; course steered S. W. At noon Inaboya bore W. S. W., distant 48 miles, ship going four knots per hour. At 10 p.m. altered her course to S. W. by S. He kept the vessel away about 5 min. when she struck. He could not see any land. The rudder and wheel went on her first striking. He then told the mate the vessel was on shore, but directly after the vessel ceased striking and sailed before the wind. She struck again directly and for an hour or an hour and a quarter kept beating till she became fast, the sea breaking over the vessel, and as no good could be done they got out to save their lives. The long boat was stove in getting her out but he sent some of the crew ashore. They then got a small whale boat in order to leave the ship, but she was stove. Three men, however, got in and he and the mate followed, all leaving the ship. The boat sank before they reached the shore; but all were saved. They stayed 12 days trying to save things, one Japanese being drowned in going off in a boat. He left the village on the 14th, arrived on the 18th, and reported at the Consulate on the 19th. They were well treated.

To the Court: He could not get to Hakodate when he found the ship was leaking because of the current. When the ship struck he was on the look out. He never had his clothes off from the time he left Hakodate till he went on shore. He had no certificate of survey, but Captains Porter and Will surveyed the ship. He did not cast the lead because he was steering a course which should have taken him 8 miles from Inaboya. He thought she was seaworthy when the ship left, but on seeing the stern which was washed ashore he found it was very badly fastened to the framework. He did not like to come, but had promised to go in the ship and so went.

To Mr. Bayne: Three hours after leaving he sounded the pumps. The owners knew she was making  $1\frac{1}{2}$  inches while lying at anchor.

To the Court: The *Wanja* had been condemned twice; once by Capt. Porter's survey. She had been ashore.

J. G. Isaacson, mate: They left on the 28th, and had strong N. W. winds to the 3rd March when they had a gale. They hove to. Witness here corroborated the Captain's statement as to the loss of the vessel.

Enosko, boatswain: He corroborated the circumstances before related.

Capt. Kennett, recalled: He left on Feb. 28th, and took an

observation on March 2nd; but after that could not get an observation. He did not beach the ship; but got near the shore in order to save life. She was making 27 inches of water before she struck.

#### JUDGMENT.

The Court is of opinion that G. S. Kennett, master of the late brig *Wanja* off No. 64093 Port of Registry, Hongkong (wrecked at Yanagi-gawa, Sendai, east coast of Japan) acted according to the best of his judgment in keeping his vessel as close to the land as possible, considering the state of his ship, she having been unseaworthy when commencing her voyage.

#### IN H. B. M.'s PROVINCIAL COURT.

Before Mr. Acting-Assistant Judge HANNEN,  
Thursday, April 3, 1873.

HYDER ALI versus AH CHEONG.

This was a claim for \$20.

Hyder Ali: He lent defendant \$20 to make purchases with in Hongkong, defendant saying he would pay plaintiff in Yokohama. Ah Cheong subsequently went to Hongkong and there deserted without paying. This was two years and three months ago, and it was only now that defendant had made his appearance on the *Malaoca*. Payment had never been made.

Ah Cheong: He and plaintiff had gone into a speculation in oranges with him, and of \$18 advanced \$16 had been lost by the oranges rotting. Only half of the loss he had to bear.

Baboo: Defendant asked for a loan of \$20 in his presence.

Ah Cheong, in the witness box, maintained his tale of the joint speculation.

Verdict for defendant.

#### IN H. B. M.'s CONSULAR COURT.

Before Mr. Consul ROBERTSON.

G. Thompson, a seaman of the *Laurel*, pleaded guilty to a charge of desertion, but in explanation said that three weeks since the Captain refused to let him go ashore, beat him and put him in an empty room without bedding. He deserted one Sunday at about 11.30 and went into the country to avoid arrest.

His Honour said the prisoner ought to have gone to the Consulate when he came ashore and not waited till the ship had left. He should sentence him to six weeks hard labour, and if the ship returned during that time he would be put on board.

#### Notes of the Fortnight.

##### RETURN OF S. H. PARKES.

SIR Harry Parkes arrived in Yokohama on the night of the 26th instant, and officially notified his resumption of his duties as Her Majesty's Minister on the following day.

We cordially welcome Sir Harry and Lady Parkes back to Japan, and are sure that in doing so we faithfully represent the sentiment of the resident foreigners of all nationalities in this country.

##### RETURN OF M. VON BRANDT.

WE are sure M. von Brandt will not attribute to any intentional discourtesy the omission in our last issue of a purposed mention of his return to Japan as Minister Resident for the German Empire. From the charge of negligence we shall hardly escape with absolution, but we would deprecate any inferences from it which would impugn our satisfaction at his return.

##### THE NATIVE CHRISTIANS.

THE liberation of the Christian prisoners of the Owari Province, as announced by Père Armbruster in a letter which will be found elsewhere, and which appeared in our daily issue of the 1st instant, is highly satisfactory and gratifying, and shows that the Government, even in the face of some clamour, is both willing and able to act upon its own liberal convictions.

##### OUTBREAK IN ETCHIZEN.

A Japanese newspaper published in Yedo announces a second outbreak in Etchizen, the first having recently been quelled. It is stated that the insurgents advanced upon the city of Fukuwi, and, in an address to the Government of the province, demanded

1st.—That the edicts against Christianity should not be

rescinded, and that the Christian religion should not be tolerated.

2nd.—That the Buddhist religion, priesthood and temples should not be interfered with; and that the Shinto precepts should not be publicly taught.

3rd.—They did not wish to change the calendar, to cut off their queues, or to have foreign education, books or customs introduced among them.

Our Japanese contemporary also states that the whole affair had its origin in a dislike to the Christian religion, and a desire to secure the national preference for Buddhism. The farmers of the province seem to have been the leading insurgents, and fears were at one time entertained for the safety of certain foreigners who reside in the city towards which the rioters advanced.

According to the latest information, however, the danger had passed, the insurgents having for the most part been taken prisoners, among them being the ringleaders of the disturbance.

#### THE ALLEGED TROUBLE IN SATSUMA.

It having been reported that a rebellion had broken out in the province of Satsuma we made inquiries which led to our publishing the following denial.

Letters from Kagoshima, dated the 12th inst., are to hand, and report entire quiet in the territory which has been represented here as almost in rebellion. Shimadzu Saburo's approaching visit to Yedo seemed to be the main topic of conversation, but the date of his departure was not fixed.

This, however, not appearing sufficient to those who first announced the rebellion we wrote as follows.

The remarks in our last issue upon the alleged disquiet in Satsuma are hardly as clear as they might have been made by a little more fullness of detail. But we cannot undertake to answer categorically misstatements made elsewhere.

The report that Shimadzu Saburo had left Yedo with a considerable number of men disaffected towards foreigners is singularly ill-founded, inasmuch as he has not been in Yedo for a great length of time—we think, indeed, since 1863. He was long surrounded by a knot of men of the Jo-i party, and undoubtedly cherished opinions very adverse to the movements of the country in the direction of European progress. But his mind has latterly been much influenced by men of the more modern school, and those who by personal intimacy with him have every right to pronounce an opinion, believe that his visit to Yedo will confirm in him the far more favourable views in regard to the present policy of the Government which he has begun to entertain.

We stated on Saturday that news dated the 12th inst. had been received during the week from Kagoshima announcing perfect quiet throughout the territory. The reports of the alleged disturbances were published here on Monday last, and it is not probable that they could have been founded on any information which left Kagoshima after the 12th.

To this we added:

Recent news from the South enables us entirely to confirm our recent contradiction of the reports of an alleged rising in Satsuma. Shimadzu Saburo has left Kagoshima for Yedo in the *Keicho Maru*, with two hundred followers, including ten representatives of the chief families of the province. There is much probability that he will join the Government, and that in conjunction with Sanjio, at present Daijo Daijin, the offices of Sa Daijin and U-Daijin will be occupied by these two leaders.

Later accounts received since the above paragraph was in type, state that Shimadzu Saburo may probably not be in Yedo before the 10th. His arrival cannot be predicted to a day, as it is possible he may yet choose to come up by land from Nagasaki or Osaka.

#### THE JAPANESE BUDGET.

THE following balance sheet of the revenue and expenditure of the Government of Japan has been published unofficially, and is, we believe, extracted from a pamphlet in explanation of the Japanese section of the Vienna Exhibition:—

REVENUE.			
Land Tax	...	...	\$59,363,625.00
Customs Duties	...	...	1,191,171.16
Indirect Contributions	...	...	3,947,542.00
Miscellaneous	...	...	1,329,024.00
			<u>\$65,831,362.16</u>

EXPENDITURE.			
Imperial Household	...	...	\$ 450,000.00
Salaries of Ministers, &c.	...	...	3,786,177.00
Disbursed by them	...	...	10,831,735.75
Public Works	...	...	4,500,000.00
Army	...	...	7,717,643.00
Navy	...	...	1,638,504.00
Federal Commutations	...	...	23,862,675.00
Sundries	...	...	7,001,075.00
			<u>\$59,737,809.00</u>
Liabilities to Foreigners	...	...	\$ 2,683,764.89
General Total	...	...	<u>\$62,371,574.74</u>

RECAPITULATION.			
Revenue	...	...	\$65,831,362.16
Disbursements	...	...	\$62,371,574.64
Surplus	...	...	<u>\$ 3,459,787.52</u>

We have republished this statement because it seems to bear some analogy to, while it also widely differs from, the estimate of the revenue and expenditure of Japan published in an article in the September number of *Blackwood*. This article, the authorship of which was a matter of some little speculation both here and at home, and which betrayed a lamentable ignorance of the first principles of political economy, appeared ominously near the time at which General Williams was casting about in much perplexity for the money he was instructed to borrow for the Government, and which was ultimately obtained through the instrumentality of the Oriental Bank. The same clear vision which turned to America for a loan, in all probability inspired the article in *Blackwood* with the ridiculous matter on which we commented at the time of its appearance. And it may not be out of place here to say that rumours of excellent foundation connect a piece of almost unheard of and most expensive blundering with certain negotiations made previously to the issue of the loan by the Oriental Bank. We have never been able to understand the whole of this consummately ridiculous expedition, though we earnestly hope that on the return of the Commissioners the Government will extort a strict account of it and the money it indirectly cost. The obvious course open to the Government when it wanted to borrow was neglected; and this course was ultimately forced on the Commissioners by necessities which must from the first have been patent to every intelligent observer, though not before an amount of helpless incapacity had been exhibited which is as culpable as the loss of money it caused is lamentable.

#### JAPANESE ENGLISH.

We are destined to be perpetually holding up Mr. House's pupils as illustrations of some important arguments. We last adduced their papers as evidence that Mr. Mori's precious scheme for a simplification of the English language in order to adapt it to the needs and capacities of the Japanese, was proved to be absurd by the great mastery of English which those papers showed. They were written by lads none of whom had studied it for two years, and yet they exhibited an astonishing facility in its use. Among their chief features were their modesty and moderation, the absence from them of all extravagant expression, their good sense and good breeding. We would now adduce them as evidence of the folly of sending Japanese youths abroad for their education, until their minds are in some sense formed, and they have acquired a moderately good acquaintance with our language obtained from acknowledged models of style, for we are in terrible dread that we shall have a race of young Japanese growing up using the vocabulary and style of the American press, and we absolutely protest against this. We have before us the transcript of a speech lately delivered in America by a

young Japanese whose name we think it better to withhold, and which seems to us to present a strong contrast to these excellent papers. He has hardly opened his mouth before we come upon the words "great and glorious." Then we have "mammoth workshops" and "gigantic strides," "magnificent system," "grand guarantee," then a little Blackstone and Buckle, with much watery, transcendental nonsense about man's rights, and the Creator, and Heaven knows what. In a world which abounds with dukes and duchesses it may be all very well for the ideal Lothair to give cabmen sovereigns habitually, but like the value of money, the value of words is destroyed when they are lavished abroad in this extravagant manner. One of these days, if these young students pursue their studies, extend their travels, and preserve their perceptions, they will probably stumble on something that requires a strong expression of admiration and demands a superlative to reflect it, and then what coin have they left? If you rave about "Claribel," or grow ecstatic over the songs of the personal pronouns, what remains for you to say after Beethoven's C minor symphony, or in presence of Titian's Assumption,—before the Coliseum or Cologne Cathedral?

And while on this subject, we should be glad to know on what grounds the title of Excellency is usurped by or applied to Japanese who go to Europe or America for some more or less important object, but not accredited as Ambassadors? The title is a very exalted one, and though given sometimes by courtesy to a Minister Plenipotentiary, does not belong even to him. In strict observance it can only be applied to an Ambassador. But if a young Japanese goes from here to order bank-notes, contract a loan, or buy a few steam-engines, he is immediately dubbed Excellency, to the bewilderment of all who think that titles have some meaning in them. We all know how watermen and cabmen conjure extra sixpences out of boys by addressing them as "Cap'en," but there is no reason why our ceremonial here should be complicated by similar blandishments. One morning—or evening—a year or so ago the papers announced the arrival of seventeen Princes in one steamer—to ordinary intelligences,

a load would sink a navy.

The plague burst out in America on the arrival of the Mission, and some of the young ladies attached to it, of antecedents which the word humble did not accurately represent, were styled Princesses for four thousand miles, besides loop lines. This, perhaps, in some inscrutable manner, accounts for the same chroniclers talking about Alexis and Arthur *tout simplement*.—There was nothing left.

#### FIRE IN YOKOHAMA.

ON Saturday March 22nd a fire—probably the largest that has taken place here since 1866—broke out in the native town and swept away all that quarter lying to the rear of the market, and known as Aioucho. From information we have gathered it would seem that the fire broke out from the upsetting of a paraffin lamp, and the flames quickly communicating with the adjoining buildings spread far and wide, impelled by a strong breeze which seemed to spring up and increase with the progress of the fire. The engines of all the fire brigades were quickly on the spot, but the canals having recently been filled up but little water could be obtained, and after emptying all the available wells and drains the engines had to be removed to a safe place, leaving the flames to exhaust themselves. This did not take place till the small hours, the fire being stopped only by a failure in the supply of inflammable material.

The official report states that 1,509 houses were burnt, covering nearly 44 acres of ground and rendering 5,672 persons houseless, the alleged loss of 26 lives being somewhat problematical. The Acting-Governor has caused the destitute to be relieved with plentiful supplies of rice, and the land is being quickly prepared for the rebuilding of the houses. At the same time, as those whose houses have been burnt must be dependent upon the relief of others for some days, it has been suggested that the new Yoshiwara buildings should be placed at their disposal. We do not learn, however, that this has been done. The rebuilding of the burnt district has already commenced, and has occasioned so great a demand for car-

penters that foreigners having buildings in hand cannot find a sufficiency of men to carry on the work. A handsome sum has been subscribed by a section of the foreign residents to assist the sufferers by accident.

#### THE RAILWAY.

We trust that the railway authorities will consult the convenience of the public by issuing return tickets for the various stations along the line as early as possible. A railway line in the hands of a Government has obligations beyond those imposed by its commercial basis, nor has it ever been found that a solicitous regard for the public convenience has militated against commercial success in the management of railways.

We believe that preparations are about to be made to lay another line of rails on the road, a measure always contemplated by the late Engineer-in-Chief, but for which entire provision was not made during his administration, owing to the necessity for proceeding at first experimentally in the undertaking.

#### THE RACE CLUB.

WE are wholly unable to estimate the social value of a place on the Race-Club Committee. Looking at the world from an un-racing point of view, and having no acquaintance or fellowship with the sporting section of it, we have no means of ascertaining the exact nature of the feelings with which a new member takes his seat for the first time. The ancients supposed that the spirits of the dead produced some influence upon the destinies of the living, and in our own day we see that, through the gracious medium of upholstery, revelations are vouchsafed from departed spirits to enquiring relatives or acquaintances who linger in what Mrs. Gamp calls "this mortal wale of tears." It is conceivable that men holding the rank of Committee-men of the Race Club experience some sense of translation into a higher sphere. The post comes for them, as it did for old Honest, Ready-to-halt, Feeble-mind and the others of Christiana's company; they part from their friends, and join a society towards which their souls have incessantly yearned. They sit in new company, enter upon new duties, become judges where they were previously suppliants, and hold office instead of being in opposition. We all remember Mr. Beales' reward for bringing the park palings down. He was county-courted—not as a poor suitor or defendant, but as Judge, with power to fine, distrain, to bind and to loose. The park palings since that translation have been immovable in their granite beds, and the voice of Beales is heard no more. It is possible that he is approachable by means of a medium and a three-legged stool or tripod table. Odger may peradventure conjure him from the heights to which he has ascended, or Potter may commune with him in secret. But the Hole-in-the-Wall knoweth him no more.

And now we have had our little local translation. The head of the opposition, the prototype of those reflections by Sicinius which lay hidden in our parable, has taken office. He has been called by a *plébiscite* to one of the seats above the thunder. He has put on purple and smells to nard, eating and drinking ambrosia and nectar. He has not displaced a Ministry, however,—to use an earthly metaphor—and formed his own Cabinet from among his followers. He has gone plump over to the enemy, sans conditions. He is county-courted.

Fare thee well, Diogenes! Put out thy lantern, for thou hast found honesty at last in the very abode where thou hast ever denied its existence. And if thou hast still concern in the poor world which thou hast deserted for a higher sphere, tell us, we pray thee, by means of what favourite piece of furniture thou art best approachable; who is thy delegated medium; what is the order of thine alphabet? We pray the holy Saints it be not inverted. Or, stay one moment, we beseech thee. Light thy lantern again and leave it with us, for it is we now who are hopelessly bewildered in the everlasting search.

#### THE LOSS OF THE WANJA.

By the arrival of the captain and the crew of the brig *Wanja*, information is received of the total loss of that vessel near the entrance of the Tori river on the 3rd instant. The *Wanja* left Hakodate on February 27th, loaded with ice for this port;

and, after getting out clear of the strait of Tsugaru, began to make water. Worse weather coming on, the leak began to increase, and the captain would have put in to port on the Nambu coast; but the wind prevented him from doing so. After getting down to Cape Inaboye, the vessel was making as much as 27 inches per hour; and when some distance from shore struck on a rock. The crew all managed to get on shore, just as they stood, and the vessel very soon after went to pieces. All that washed on shore from the wreck was taken possession of by the local officials, but there was very little saved. One of the Japanese sailors in going off to the wreck to try and recover some of his clothes, was unfortunately lost.

An official enquiry having been held into the loss of the vessel, a judgment which stated that she was unseaworthy when she left Hakodate was rendered, and we wrote as follows: From the evidence given at the Naval Court of Enquiry it would appear that the immediate cause of the loss of the *Wanja* was striking on a rock. The judgment rendered by the Court characterizes her condition when she left Hakodate as "unseaworthy," while the evidence shows that she was leaking a little even while in port. This latter may be of comparatively little moment, but her unseaworthiness is certain, and as she was granted a certificate of survey, the question arises as whom far the surveyers were warranted in the course they took. In the interests of all concerned it would be well if some more efficient means could be taken to ensure surveys which would not be of such a character as to allow a Naval Court to affirm that a ship upon which such survey has been held was "unseaworthy at the commencement of the voyage."

#### NEW JAPANESE PAPER.

AN illustrated Japanese newspaper called the *Tai Sei Shim-bun*, or "Great Western News," has been established in London. It is to be edited by a resident native of Japan, assisted by Professor Summers, of King's College.

The prospectus announcing it is as follows:

PROSPECTUS. *Tai Sei Shim-bun* or 'GREAT WESTERN NEWS.' NATIVE JAPANESE NEWSPAPER. Edited by a Japanese resident in London. Office: 3, George Yard, Lombard Street, London, E.C.

The immense advance which Japan is making in material progress renders the present moment opportune for the establishment of a newspaper in the metropolis of the West, to serve as a means of communicating further knowledge of Western arts and policy among the millions of Japanese who are now desirous of learning all they can of foreign nations.

It is proposed, therefore, to immediately publish a newspaper, which shall clearly reflect the opinions of Japanese who have seen the world and learnt European languages for the benefit of their countrymen in their Fatherland. It will be the object of the Editors to represent fairly the condition of the European nations in their political, moral and religious aspects, and to select for commendation such arts and inventions as they have become acquainted with in their experience.

The paper will be illustrated, so as to convey the most vivid ideas of the objects explained, and to simplify description.

Advertisements to a limited extent will be received in any European language. These will be translated carefully into Japanese under the superintendence of Professor Summers of King's College, who will act as Co-Editor.

A circulation of 1,000 copies will be guaranteed for the first three months, after which probably a larger number will be required. A portion of this number will be circulated among the 700 Japanese residents in Europe and America, and the remainder will be forwarded to Nagasaki, Osaka, Yokohama, and Yedo, for circulation in the Japanese Empire.

The first number will be ready for distribution about the 15th of January. It is therefore requested that advertisements for insertion be transmitted as early as possible to ensure insertion in the first issue.

Terms for advertising may be obtained on application to the Publisher at the office of the *Tai Sei Shim-bun*.

#### THE TELEGRAPH.

It is satisfactory to learn from a letter addressed by Mr. Cargill to the *Japan Gazette*, in answer to some complaint made in its columns of an attempted extortion by one of the Telegraph Officials, that the Government deals promptly and effectually with such cases. The official was examined, convicted on his own confession, and dismissed. We observe also that there are now porters at the various stations to assist passengers with their lighter unpaid-for luggage. Their ab-

sence was a source of much annoyance and complaint, though as soon as the want was made known to the Railway authorities, the grievance was redressed.

It is also highly satisfactory to observe the marked increase in the passenger traffic on the railway. It fell during the months of extreme cold, but is now mounting again higher than ever. As soon as the double line of rails is laid down, we hope one or two express trains up and down stopping only at Shinagawa on the way, will be despatched at convenient hours. Meanwhile the issue of return tickets is urgently demanded.

#### THE ASIATIC SOCIETY.

SOME indisposition on the part of the community to give a hearty support to the Asiatic Society is said to exist owing to a feeling that it has much of cliquism and exclusiveness about it. We can imagine no charge more entirely without foundation. A certain number of gentlemen moved in the matter of the formation of the Society, as must be done in all such cases, but their desire is certainly to see it heartily supported by the Residents, and made as useful, as practical, and as entertaining—within legitimate limits—as possible. Nothing can be further from their wish, or that of any one of them, to place any restrictions upon the constitution of the Society which could alienate from it the goodwill and cooperation of the community.

#### MUSIC.

WE shall easily be excused for saying a few words upon a matter which, as occasion has offered, has received perhaps more attention in this journal than might have been expected in view of the necessity imposed upon us of devoting nearly all our care to questions of a graver nature. We allude to the subject of Music.

We have before us a short and modest prospectus written by Mr. Marsh, a gentleman who has recently come amongst us as Professor of Music, and whose large experience in his profession we would gladly see turned to some good account here. He intimates his intention of remaining in Japan if he sees sufficient inducement to do so, and we should be pleased to think that these few lines would tend to arouse some attention to the advantages derivable from the presence amongst us of one who is qualified to give solid instruction in music. Mr. Marsh, in his little manifesto, writes of his art as we rejoice to see it written of, though we are not certain that he is quite right in the metaphysics of his art. "The emotions it inspires," he says "are all of an agreeable and elevating kind—Devotion, Fortitude, Compassion, Regret, Benevolence and Tranquility. Music has no expression for Impiety, Cowardice, Hatred or Discontent, and assists in developing that spirit of dependence upon ourselves and independence of others which should be the first consideration for the formation of "useful habits." We shall not add one word which might weaken the force of these excellent remarks, and would only commend them strongly to any of the younger members of our community, or those who have charge of them, as an incentive to the study of this delightful art.

As regards the Japanese, it must be long before their ears can be attuned to our gamut and therefore to the enjoyment of our music, which at present is unintelligible and must be extremely distasteful to them—as much so as theirs is to us. If we could imagine a man so truly devoted to this art as to be capable of abandoning all prospects of wealth and comfort during his life, and who, like the devoted Missionaries of the Romish Church, would give up all idea of worldly advancement for the good of others, we could propose no mission to him which would tend to add so much to the sum of human pleasures as the teaching of the foreign gamut to the people of this country. Any such idea would be for the present wholly Quixotic. The progressions and concords of our music have few analogies in that of the Japanese. They have some rudimentary acquaintance with the concord of the third, nearly always minor, however, and of course they know the octave, they also know something of the fifth. But of the augmentation or diminishing of these chords, or their combination with others, they have not the faintest apprehension. We

hope, however, that all these matters will be treated with more fulness elsewhere very shortly, and that some attempt will be made to explore a subject which, so far as we know, has never yet received the attention which its interest claims. Meanwhile we must remain satisfied with having invited attention to Mr. Marsh's letter. Let us add one word. Could not Mr. Marsh do something towards getting up a Church Choir for us? We can promise him the organ accompaniment, if he will only organize, lead and train the choir itself. And if we may venture a word in regard to the leading idea with which all this should be undertaken, let it be that the choir is to lead, not to supersede, the singing of the congregation.

#### MISCELLANEOUS.

THAT Sir Harry Parkes is an accomplished Chinese scholar is sufficiently well known, but he has had too much heavy work on his hands of late years, while in Japan, to allow of his paying much attention to the Japanese language. It is therefore extremely gratifying to find that while at home he has turned to account such leisure moments as he has been able to steal from his well-occupied time, to study Japanese sufficiently to warrant the following paragraph from the *Athenaeum*—a literary journal usually extremely well informed.

We understand that Sir Harry Parkes is translating into Japanese Mr. R. H. Horne's 'Ode to the Mikado.' A copy of the translation will be presented to the Mikado.

A MAN was recently discovered struggling in the water near the Kanda Bashi in Yedo, and on being rescued by a policeman said he was compelled to commit suicide by his brother who, it appeared, was placidly contemplating the scene from the bridge. His reverie was rudely interrupted by the policeman who arrested him.

THE Lighthouse tender *Thabor* which returned a few days since from the South, has been on a short cruise. In addition to the officials of the Lighthouse Department, who went to inspect the Lighthouses erected under French supervision, Mr. Sanjio Mr. Okuma and Mr. Yamao took part in this cruise.

THE President of the Peruvian Republic has sent to H.M. the Mikado a number of valuable presents, including a collection of works of art in gold and silver.

A Japanese newspaper has been started at Shidzuoka in Tsuruga.

ARRANGEMENTS have been made for establishing two lines of steamers, under Japanese control; one between Yedo and Shidzuoka, and the other between Kisaradzu and the capital. Kisaradzu is a town in the province of Kadsusa.

DISTURBANCES are reported from the Shirakawa and Hamada kens, but neither appears to have assumed any formidable proportions.

A friendly match at bowls has been played between the members of the German and Y. U. Club, two double games at each Club. The Germans were victorious, both on their own and the Y. U. Club alleys, and defeated their opponents by—we are afraid to say how many points.

Mr. Kingdon has been elected to fill the vacancy on the Committee of the Race Club caused by the resignation of Mr. Shepard. Mr. Jackson was the only formidable opponent, receiving 22 votes against Mr. Kingdon's 25.

THE great increase in foreign built, but Japanese owned ships, has led to the establishment of a native Marine Insurance Company called the Hōnincha. Mr. Kimura Mompei is the leading spirit in the enterprise, and, having secured the good offices of the Kaitakushi, (Agricultural Department), over which General Capron has control, has insured a steamer formerly known as the *Zadkin*.

A number of relics, in the shape of bows and arrows, swords, mirrors and armour, have been discovered buried in a field by

a farmer of the Shirakawa ken. He is said to have been directed to the spot by a dream.

FOLLOWING the example of the Yedo merchants, their confrères in many other of the principal towns of Japan, have made arrangements for the early establishment of local banks, together with a system of letters of credit.

ACCORDING to current report in Yedo, the moats which surround the castle are to be drained. The present season, when the hot weather is close at hand, would seem, however, very unfavourable for the commencement of such a work, which, by exposing the fetid mud and slime at the bottom of the moats, cannot fail to engender sickness.

H. M. Chargé d'Affaires has issued a Notification, which will be found elsewhere, making the Regulations and schedule of penalties issued by the Japanese Government as binding upon its subjects, binding also upon British subjects, and we presume that the same course will be adopted by the other foreign Representatives.

In the Regulation appended to the Notification these words occur:—"upon conviction thereof before any British Consular or other Court," &c. This wording is doubtless intended to cover any question which might arise in regard to the Courts respectively presided over by Mr. Hannen and Mr. Robertson.

A foot race of 130 yards for \$40 a side, took place on the 1st, April between Corpl. Barrett and Sergt. Gardiner, R.M. They had previously ran a 100 yards race when the latter won. On the present occasion the Sergt. led at starting but was soon passed, Barrett winning easily. Another race has been arranged for the 24th May between Corpls. Barrett and Dunn. distance 1 mile.

By latest news from Hakodate, dated March 24th, we hear of a fire which destroyed the Gankiro and a large portion of the native town. No further particulars are given.

We have reason to think that we have done a little injustice to some of the gentlemen who have been concerned in the education of the youths whose papers were read at the Asiatic Society, by attributing the remarkable intelligence and knowledge of our language which those papers exhibited to the instruction of Mr. House exclusively. Mr. House, however, was one out of four teachers of the higher classes, all of whom have been concerned in producing these gratifying results, and it is but just that the praise to which such good instruction is entitled should be fairly apportioned among all who have been concerned in it.

A new number of the *Japan Punch*—by far the best we have seen for very many months—has been issued at the moment of our going to press.

#### TEA AND SILK SHIPPERS.

The following is the list of tea and silk shipments per the P. M. S. S. *China*:—

## NAGASAKI.

## CURE FOR HYDROPHOBIA.

*Nagasaki Shimbun or Budget of News.*

Last summer, a dog belonging to the foreign eating house called the "Fukuya," contracted some disease or other and bit a girl about 14 or 15 years of age in the neighbourhood. The proprietor of the Fukuya, not a little startled by the affair, lost no time in sending to the hospital and requesting medical assistance, but the girl's father thought fit to call in a physician of the town, and although he cured the wound to a certain degree, the pain commenced again to a certain degree again about 30 or 40 days from the time the leg was first bitten and became quite intolerable. News of this having reached the Fukuya, a relative of the proprietor who had studied foreign medicine was summoned and the patient shewn to him. When he had inquired into her condition and learned that she refused to take not only medical draughts but even hot or cold water, he, to try her, offered her some of the latter, but it caused her to shrink up in the greatest terror. She ate, however, a little sweet potato and gruel. The physician then told the father that the girl had got the disease called "hydrophobia," and, as it was out of the power of a physician of his experience to treat so serious a malady, he had better either send her to the hospital or call in a physician in whom he could place confidence. The proprietor of the Fukuya told the father to send for whatever assistance he wished for the girl, and it being his desire to send her to the hospital, steps were at once taken for that purpose, and the patient sent. Her illness, however, gradually became more serious, and at last, after two or three days, medical treatment being of no avail, she died. No small grief was caused to the Fukuya by the affair, and on account of it they refrained from doing any business for the space of three days or so. During this time, however, the Russian Admiral, accompanied by six or seven officers, came there and wanted a dinner to be provided for them. They were told in reply that no business was then being done by the Fukuya, and, as they made a number of inquiries as to the reason of the stoppage, the above facts were related to them, and the Russians expressed much admiration at the kindly feelings displayed by the Fukuya in the matter. They asked, however, what had become of the dog, and on being told that the proprietor, dreading lest the same injury should be done by it to some other person, had caused

it to be killed without delay, they said that that was a proceeding to be regretted and that in their own country accidents of that kind were very numerous. Dogs being, however, very valuable there they were seldom put to death, but there was a strange method of curing the wounds caused by their bites which they (the Russians) would now teach them. This method was to cut off a little of the hair of the dog that had given the bite, to burn it to a crispness in the fire, and then, after puncturing the bitten part with a needle, the burnt hair was sprinkled over it, and the wound bound up with a linen bandage. The result was that no ill effects were afterwards experienced from it. This method of treatment was much availed of in Russia, and its efficacy had a great reputation there. The method has not been seen tried here, but as the Russians were so kind as to give the above explanation of it and as it will probably be found efficacious, publicity is herewith given to it in accordance with the benevolent desires of the proprietor of the Fukuya to make it known to all.

The following notification has been issued:—

The custom of marriage is very prevalent among men, and all persons high and low have forms of ceremony suited to their rank for its celebration. Although, however, when contracting a marriage alliance which is to continue during the lives of the parties to it, the knot is generally tied with the assistance of middle men called in by both parties, we have heard that some bad customs of stealing or abducting women have hitherto been prevalent in Nagasaki. A travelling chair having been got in readiness and made to wait at the side of the road, the girl is seized and forced into it. Such conduct is precisely on a par with the kidnapping of women (prevalent in some other countries.) It always leads to quarrelling and in the end causes a complete separation between parent and child. Although in this time of enlightenment every one ought to see of himself how vile a custom this is and ought to take steps to effect its cessation, yet strange though it is, it has existed and still continues to do so. Should, however, any one be in future guilty of such outrageous conduct he shall be strictly dealt with. In order that there be no misunderstanding, orders have been given by the Kencho to the chief officers of the different streets that this is to be notified to all persons without exception down to the very lowest.—(*Nagasaki Express.*)

The line of small steamers established for the purpose of running between Tokitz and Omura, announced in our issue of the 8th ultimo, has been discontinued on account of the limited trade carried on between the two places. The number of passengers is also found to be very small, and the proprietors of the vessels, after due consideration, came to the conclusion that the line could scarcely pay expenses.—(*Nagasaki Gazette.*)

Advices received by the P. M. steamer *Ariel*, appear to have set the Chinese pig operators on the alert. They have been making an active search after pigs both in the native town and foreign settlements, and the price of these animals has risen considerably. This, together with the freight demanded per *Oregonian* to Yokohama, viz: \$60 per ton, has unfortunately prevented any considerable numbers from being shipped away.—(*Nagasaki Gazette.*)

## HIOGO.

We understand that His Excellency Oye Tak, the late Governor of Kanagawa, arrived here on Monday evening last, having performed the journey overland.—(*Hiogo News, March 19th.*)

In our issue of the 8th instant we mentioned, as an item of news from Nagasaki, that the Governors of several districts were starting for Yedo, and we now hear, just before going to press, that His Excellency the Governor of Osaka also will leave on the 26th instant for the same destination, to be present at a great assemblage which has been called together of all the ex-Daimios and the Governors of the different Fu and Ken. It is rumored that important territorial changes are in contemplation, that protests will be made against the

recent sumptuary edicts, and that the ex-Daimios of Satsuma and Tosa are amongst the malcontents.—(*Hiogo News*.)

An obnoxious order has been issued to servants, male and female, in the employ of foreigners at Osaka directing them to give detailed information to the Fu of the whereabouts and doings of their masters.—*H. & O. Herald*.

An assault of a serious nature has been committed on Lieut. Scott of H. M.'s *Teaser* on the night of Thursday, the 25th instant, the particulars of the affair are shrouded somewhat in mystery.—*Ibid*.

From Osaka we hear that a large fire broke out, about 01 o'clock on the night of Saturday last, commencing in the Tenjin-bashi-machi and sweeping away with the exception of a few fire proof godowns, an entire block of buildings covering an area of a quarter of a mile.—*Ibid*.

## Shipping Intelligence.

### ARRIVALS.

March 21, *Lord of the Isles*, British bark, Petrie, 317, from Taiwanfoo, March 4th, Sugar, to Walsh Hall & Co.  
 March 22nd, *Cyprenes*, British steamer, Stephens, 1,400, from Shanghai, General, to Van Oordt & Co.  
 March 23, *Thabor*, Japanese steamer, Brown, from South Coast, Lighthouse Department.  
 March 23, *Volga*, French steamer, Flambeau, 960, from Hongkong, Mails and General, Messageries Maritimes Cie.  
 March 23, *Relief*, American steamer, Corning, 795, from Hakodate, General, P.M.S.S. Co.  
 March 26, *Arctic*, Hawaiian barque, Tripp, 330, from Honolulu, October 7th, to The Captain.  
 March 26, *Chance*, German barque, Allrich, 325, from Hiogo, General cargo, to Van Oordt & Co.  
 Mar. 27, *Malacca*, British steamer, Gaby, 1,037, from Hongkong, Mails and General, to P. & O. Co.  
 March 27th, *Ariel*, American steamer, Newell, 1,736, from Kobe, General, to P. M. S. S. Co.  
 March 27th, *Jurgen*, German barque, Ulderup, 280, from Takow Sugar, to Order.  
 Mar. 28, *Eastern Star*, British barque, Lankester, 342, from London, General, to Gilman & Co.  
 Mar. 28, *Flinthire*, British steamer, Sturrock, 1,243, from Kobe, Ballast, to Walsh Hall & Co.  
 March 29, *Japan*, American steamer, Howard, from San Francisco, March 1st, Mails and General, to P. M. S. S. Co.  
 March 31st, *Costa Rica*, American steamer, Williams, 1,917, from Nagasaki and Hiogo, Coal, to P. M. S. S. Co.  
 March 31st, *Alexandra*, British barque, Aubin, 306, from Nagasaki, Coal, to P. M. S. S. Co.  
 March 31st, *Paracca*, British barque, Liston, 264, from Nagasaki, Coal, to P. M. S. S. Co.  
 April 4, *Golden Age*, American steamer, Coy, 1,840, from Shanghai, March 27th, General, to P. M. S. S. Co.  
 April 5, *Iroquois*, U. S. Sloop, H. A. Adams, 1,000, from Kobe.  
 April 5, *Menzaleh*, French steamer, Mourrut, 1,008, from Hongkong, Mails and General, to M. M. Co.  
 April 7th, *Relief*, American steamer, Corning, 795, from Hakodate, Ice and General, to P.M.S.S. Co.

### DEPARTURES.

March 21, *New York*, American steamer, Furber, 2,119, for Shanghai and Ports, General, despatched by P. M. S. S. Co.  
 Mar. 21, *Dessa*, British steamer, Thompson, 843, for Kobe, General, despatched by Gilman & Co.  
 March 24, *Colorado*, American steamer, Warsaw, 3836, for San Francisco, Mails and General, P.M.S.S. Co.  
 March 23, *Burnside*, American barque, Pendergrass, 464, for Melbourne, Rice, Walsh, Hall and Co.  
 March 25, *Bombay*, British steamer, Davies, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.  
 March 26th, *Harrington*, British barque, McKensie, 571, for Kobe, with Part of Original cargo, despatched by Strachan & Thomas.  
 March 27th, *Relief*, American steamer, Corning, 795, for Hakodate, General, despatched by P. M. S. S. Co.  
 March 27th, *Uchi-nada*, American steamer, Preble, 250, for Kobe despatched by J. D. Carroll & Co.  
 Mar. 28, *Dilpusund*, British barque, Dray, 624, for Nagasaki Ballast, despatched by P. M. S. S. Co.  
 March 29th, *Trevelan Family*, British schooner, Sutton, 198, for Newchwang, Ballast, despatched by the Captain.  
 March 30th, *Oregonian*, American steamer, Dearborn, 1,914, for Shanghai, General, despatched by P. M. S. S. Co.  
 March 30th, *Cyprenes*, British steamer, Stephen, 1,400, for Nagasaki, Ballast, despatched by Van Oordt & Co.  
 March 30th, *Japan*, American steamer, Freeman, 3,900, for Hongkong, Mails and General, despatched by P. M. S. S. Co.  
 April 1, *Volga*, French steamer, Flambeau, 960, for Hongkong, Mails and General, despatched by M. M. Co.  
 April 2, *Laurel*, British barque, Davies, 628, for Nagasaki, Ballast, despatched by P. M. S. S. Co.

April 2, *Emma*, German barque, Grau, 334, for Amoy, Rice, despatched by Walsh Hall & Co.

April 3, *Flinthire*, British steamer, Sturrock, 1,243, for Amoy, Rice, despatched by Walsh, Hall & Co.

April 3, *Ariel*, American steamer, Newell, 1,736, for Hakodate, General, despatched by P. M. S. S. Co.

April 5, *Costa Rica*, American steamer, Williams, 1,917, for Shanghai &c., General, despatched by P. M. S. S. Co.

### PASSENGERS.

Per P. M. S. S. steamer *New York*, for Hiogo.—Mr. Vernede, Miss Grace Lee, and 2 Japanese in the cabin, and 37 in the steerage. For Nagasaki.—33 in the steerage. For Shanghai.—Mr. and Mrs. King, Messrs. Arthur Lucas, Howe, and Dalglish, in the cabin, and 5 in the steerage.

Per P. & O. str. *Bombay*, for Hongkong.—286 bales of Silk.

Per M. M. steamer *Volga* :—

Silk.....313 Bales.  
 Waste Silk.....21 Bales.  
 Sundries.....668 Pcks.

Per *Golden Age* from Shanghai :—

### REPORTS.

The *Lord of the Isles* after leaving Taiwanfoo experienced changeable winds and weather until the 16th inst., on the afternoon of which day a heavy gale came on, with wind and sea increasing and

very violent squalls. At 2 P.M. on the 17th, a severe gust struck the vessel which caused her to plunge heavily into the sea; the foremast went by the deck, carrying the mainmast with it, and, owing to the heavy sea running at the time, the deck was constantly covered with water, so that for the safety of the vessel, nearly all the gear, rigging, etc., had to be cut away, after which the wind easing considerably, the ship was put under jury staysails forward, and a course was shaped for this port towards the evening. Fujiyama was sighted at 5.30 P.M. on the 17th, and the vessel anchored here at 12.15 the 21st.

The *Eastern Star* left London dock Oct. 24th, and passed the Downs on the 28th; had strong westerly gales down channel and were 14 days in getting out of it. Crossed the equator Dec. 4th in 28° west longitude, and met with fresh S.E. trades which they carried as far as 26° south; thence to the Cape had generally fine weather, passed meridian of the Cape Dec. 20th; had the usual strong westerly gales in running the longitude down in 42° south; passed St Pauls January 16th, and sighted Sandalwood February 6th. In coming up through Ombay and Pitts Passage had light winds and calms; passed Gilloh on the 28th, thence to 22° N. had strong N. E. trades; afterwards into port met with heavy northerly and N.W. gales. A heavy sea coming on to the deck a considerable quantity of water got into the hold through the main-hatch, combings being started off, and some of the cargo underneath it was damaged.

The *Alexandra* reports variable winds and pleasant weather.

The *Golden Age* reports fine weather throughout.

The French steamer *Menzalah* reports a strong N. E. Monsoon on the China coast; fine weather during the remainder of the passage.

HUDSON, MALCOLM & Co.

Yokohama, December 1st, 1872.

12ms.

# Yokohama Market Report.

## QUOTATIONS OF ARTICLES OF IMPORT.

### IMPORTS

In cotton goods, we have to note an easier tendency in Yarns. Shirtings are inactive. Small sales of Velvets have been made at lower rates. In other goods there is very little business passing.

There is no change to report in the Woollen market which remains dull; sales are difficult to effect even at the low quotations mentioned. Mousselines de laine (plain) of rather inferior quality have been sold as low as 15 cents per yard. Quotations for cloth may still be considered merely nominal.

Metals are unchanged, though a somewhat better feeling is to be remarked.

GOODS.	PRICES.	REMARK.

# THE Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. IV.—No. 15.]

YOKOHAMA, SATURDAY, APRIL 12, 1873.

[PRICE \$24 PER ANNUM.]

## DIED.

On the 10th instant, at No. 131 A., EMMA FRANCES COLLINS, aged 6 years.

## Notes of the Week.

On Wednesday morning Her Majesty The Empress announced her intention of visiting Mokosima, and left the Castle at half-past nine a.m. The procession consisted of one hundred Lancers, Her Majesty's State carriage, one hundred Imperial Guards, three carriages of Court Ladies in attendance, several carriages containing high officials in European costume, and was closed by about two hundred foot soldiers. The streets through which the procession passed were closed by the police. At the Riongoku bridge the Empress alighted and embarked with her suite on board the Imperial steam yacht which towed two large barges fitted up for the purpose. The party arrived at Hashiba about noon and proceeded to the Hosokawa yashiki at Hashiba, opposite Mokosima. When the news was made known that Her Majesty purposed visiting Hosokawa and probably Mokosima, thousands of the populace repaired to the latter spot in carriages, boats and *jirikishas*. At 3 p.m. large crowds were gathered at the Okawa bashi, where policemen were stationed to keep the required space clear. At about 5 p.m. Her Majesty re-embarked on board the Imperial yacht, and, landing at Riongoku, returned thence to the Castle.

A MEETING, called by Colonel Shepard, U. S. Consul, was held on Monday last at the U. S. Consulate for the purpose of considering the advisability of establishing a newspaper which should be the organ of the Americans in Japan.

The idea of a class or nationality organ here is greatly to be deprecated, and if the views of one of the speakers may be taken as any criterion of the nature of the proposed attempt, viz.: to "make the place hot and lively"—a formula which may be presumed to embody his ideas of the functions of journalism—nothing could be imagined so ill-calculated to advance the interests of this settlement or those of the best class of Americans resident here.

Personally we can have not the slightest objection to see one of the daily papers at present in torpid existence converted into an American organ. But another paper in this settlement would be an unmitigated evil, and delay indefinitely any prospect of getting the press of Yokohama into such a state as under more favourable conditions it might assume. Journalism in the States is, however, with few exceptions, moulded by views so utterly repugnant to honourable or educated men, and the probability of our seeing these views at work in Japan is so inexpressibly repelling, that we have too much respect for the American party here to desire to see it identified with any such action. The appeal to universal suffrage is fatal to a good press, and we can expect no American here who will be strong enough to make any other appeal or assume any other platform.

LETTERS dated the 1st April have been received from Kagoshima stating that Shimadzu Saburô was to leave on the 6th, so that with fair weather he might be in Yedo on the 10th. Katsui, (late) Awa no kami, who went to fetch him in the *Keichô Maru*, will bring him and his following. Saigô Kinoshinokuré arrived in Yedo on Sunday morning last, having left

on the 1st inst. The reports of a rebellion in Satsuma are, therefore, all unfounded, as also the rumour that Saigô's son had been assassinated.

## REFORMED ENGLISH VERSUS QUEENS ENGLISH.

We invite attention to the letter and notifications which follow, and in which we have suppressed only the names.

They are, apparently, a manifestation of a new development in Japanese ambition, and exhibit the striking success which Mr. MORI's plea for a recast of our language has met with among his countrymen.

The intentions are, so far as we may judge, excellent; but it will be observed that, in the present phase of Japanese English, grammar, spelling, and intelligence must be supplied by the reader.

## TRANSLATION.

Tokio, 4th, of 4th Month.

6th Year Maiji.

I beg to communicate you that, the people of Tokio have frequently been injured from mad dog on being bitten, in consequence, the notification has been held and shall be managed; I have the honor to inform you that you and those who keeps the house-dog among your subjects residing in Tokio will be remembered the subjects mentioned in annexed one and put to dogs the name card of the owner.

I request you herewith that you will kindly notify to your subjects the new established one.

With respect and consideration.

## NEW SETTLED RULES FOR DOMESTIC DOG.

1.—Any body who has a domestic dog shall put on his dog a neck-ring, together with a small wooden card which bears the name and dwelling-place of the master. And any dog which has not this card shall be killed as belonging to no-body.

2.—Any one shall kill his dog when he finds the dog to be mad.

3.—Rasothu and Bannin (each police) or any body may kill a mad dog wheresoever they will find it; and the expense of doing so shall be paid by the person to whom the dog belongs.

4.—All vicious dogs shall always be burdened with iron chain or others that they may not bite other domestic animals.

5.—Some proper compensation shall be paid by the person whose dog will bite other domestic animals which belong to another person.

6.—Any domestic dog shall be kill immediately when the dog will bite and kill a man; and no person to whom the dog belongs shall avoid the crime of his negligence, and the person shall pay proper compensation.

## NOTIFICATION.

The annexed regulations shall be published from 6th inst., that; the mad dog is to be infections the disease to others and on biting man, consesdie finally for the poison and in modern time there are many dogs which have no his owner making injurees to man by which, Rosotsu, Bannin, (each police) and also any one catch and being killed.

The dead body shall be put away by Yakunin of city or village at place.

## CONCRETE BUILDINGS FOR JAPAN.

The increase in the cost of skilled labour in England has been the means of attracting greater attention to a method of constructing walls, the advantage of which had not been thoroughly recognised up to a recent period,—the application, that is to say, of the concrete system to house building. Bricks have risen so largely in price, in consequence of the advance in wages and fuel; and stone—never a cheaply obtained material—is so little available for ordinary purposes, that the builders

have been compelled to turn their attention to other accessible materials, and to look around them for a means of combining them.

In the pressure of demand for cheaply built houses it was happily imagined that if the mode of building foundations in concrete were applied to the construction of the entire edifice, an efficient and comfortable substitute for the usual brick or stone would be available at a far less cost. A company was formed in London to promote the extension of the system, and, further, to undertake the construction of warehouses, shops, and private dwellings; and so marked has been the success of its operations, that both in England and in our Colonial dependencies building in concrete has come largely into repute.

Perhaps the chief advantage of this method is found to arise from its simplicity. With the supervision of one skilled workman only the exterior and inner walls of an ordinary dwelling house may be run up by labourers of ordinary intelligence and aptitude without any risk of failure from their inefficiency or waste. So easy is the process that "scamping" work is not likely to be resorted to since it carries with it no adequate advantage; and the exterior smoothness of the finished work may be accepted as a fair test of the honesty of the general performance.

The materials in use are Portland cement, lime, and gravel or loose rubble which are used in certain combinations according to the nature of the work. A frame work, the interval between the two sides of which represents the thickness of the wall to be built, is adjusted in proper fashion, and its space filled up with the different component parts above named which are found to adhere together rapidly, and, upon withdrawal of the frame work, to present a smooth-faced and homogeneous mass of the solidity and firmness of ordinary conglomerate or pudding stone. The more complete exclusion of damp, and a more perfectly smooth outer surface are secured by a finishing coat of plaster. The complete execution of building work in this manner may be accomplished, it is stated, at a price not much exceeding half the cost of ordinary brick work.

It cannot be doubted that the introduction of 'Concrete' building to Japan would be a vast boon to those who build with a view to some reproductive result. There is little durability in the elements of Japanese built houses; sappy timber; crumbling stone; half burnt bricks; and lime which does everything but adhere—furnish an alarming list of possible *matériel* and need only the *coup de grace* of a smart earthquake to destroy their very inefficient combination. In such case we cannot help thinking that the simplicity, cheapness, comfort, and durability of "Concrete" may fairly recommend this process to the notice of those who intend to build, and to build with some profit to themselves; and we shall be glad to think that in drawing attention to this subject we have been of some service to them. We may add—in anticipation of any objections to the great cost of cement in this country—that concrete building has been adopted in British Colonies as distant from the Mother Country as Japan, and in which its cost is fully as high as with us.

We must, however, abandon the consideration of the effect of earthquakes to practical authorities more competent to deal with the subject.

We observe an increase of £444,625 in the Civil Service estimates, and trust that a part of it is destined for the student interpreters and the younger officers of Her Majesty's Consular service in this country, who are shamefully underpaid. Mr. Hammond recently said "I wish it to be distinctly understood that I consider the Consular service generally insufficiently paid," and an opinion of this kind coming from so high an authority can hardly fail to bear fruit.

We have drawn attention elsewhere to a subject on which we hope some united action will be taken:—We allude to the high premiums charged by the Life Insurance offices in England for permission to reside in this country. The number of insurers interested in the question must be very considerable, and we urgently ask them to give us their assistance in our attempt to secure a reduction of the present rates.

THE first three telegrams published in our issue of yesterday morning were incorrectly headed "Reuter's Telegrams." They reached us from private sources.

ON Good Friday business was very generally suspended, and a full service was held in Christ Church.

The following distances have been ascertained by pedometrical measurement, and are worth recording for the information of pedestrians and future reference.

From the Club to Kanasawa, via Kanasawa valley, 11 miles and 830 yards; via the Beach 10 miles and 1,100 yards.

From the Club to Macpherson's Hill, 5 miles and 483 yards, via the Valley; and 5 miles and 530 yards, via the Beach.

#### IMPERIAL GOVERNMENT RAILWAY.

April 9th, 1873.

YOKOHAMA STATION.

Statement of Passenger Traffic for the week ending Sunday April 6th, 1873.

Passengers.....31,839. Amount.....\$9,528.47

Average per mile per week \$529.36.

18 Miles Open.

#### BUSINESS OF THE WEEK.

(For the week ending April 12th, 1873.)

During the week scarcely any business whatever has been transacted in Cotton Goods, and sales are of the most trifling nature. We do not alter quotations though, in nearly every instance, they are quite nominal.

In Woollens no business is doing; prices unchanged but quite nominal.

The *Eastern Star* has brought 150 tons Nailrod and 50 tons Bar Iron. Prices continue nominal, and but little business doing in the article.

We have no change to report in the Sugar market.

The quotations are as follows:—

	Stocks.	Settlements.	Prices.
	pls.	pls.

TEA.—Business in tea has been confined to the purchase of about 250 piculs at rates rather easier than those ruling by last opportunity.

Nothing definite is known as to the prospects of the tea crop, as the present is the critical moment of its future out turn; but unless we have a relapse into frost we may hope for a full average crop. The Yokohama dealers, however, assert that, from the high ideas of price held by the Hill producers, first arrivals must open high.

SILK.—In consequence of the very discouraging news received this week our market is dull, and prices for all sorts are decidedly giving way.

Purchases since the 4th instant, are about 120 piculs of Hanks and 20 of Oshiu. The holidays have interfered with the inspection and, pending final settlements, we leave our last quotations unaltered.

Arrivals amount to 160 Bales.

#### LIFE ASSURANCE IN JAPAN.

WE need not, we apprehend, offer any apology for the introduction of the subject which heads this paper, and to the brief discussion of which we propose to address ourselves. To most of us, we incline to think, it is one which must appeal with significant force. To *Pater-familias*, as representing a safe but costly investment, and some unsatisfactory figures in his annual budget; while to "Celebs" it presents only one out of a number of other sets-off which he arrays against the sweets and flowers of the possible Elysium his fancy constructs for him amid the haze of the future.

Sooner or later, however, we must all own the importance of the measure and give it a leading place in our social economy. It may or may not be the best means, abstractly considered, to secure the end we have in view; it may foster improvidence and thriftlessness and discourage a wise and far seeing parsimony; or it may breed indifference to the uncertainty of fortune and to the horrors of an old age of penury. It is not even difficult to prove that Life Assurance often involves bad financing and the questionable investment of money, albeit in the strongest of offices. But it is a system based upon a just and well-founded conviction of man's moral feebleness and imperfection, and it supplies an adequate and acceptable panacea for the imperfectibility of the nature it has to deal with. It is in vain to proclaim the necessity for frugality and thrift while our instincts are in opposition to the precept, and while the world offers so much temptation to the generous and even profuse—stamping the lavish man "a good fellow," and excusing even extravagance as generosity run to seed. Our nature drives us into disobedience of the economic law; and as the physician has been called into being by the necessity for remedying the excesses of our physical extravagance, so in like manner has our moral weakness invited that counter action which the principle of Life Assurance has devised for us—and well devised to

—Make assurance double sure  
And take a bond of Fate.

That the principles upon which the larger number of existing offices are conducted are equitable, may, we imagine, be taken for granted. The spirit of competition has invaded this once lucrative business, and has levelled to a just system of charges the exorbitant rates of fifty or sixty years since; while all have conceded to insurers a large participation in the profits they have themselves created. Many offices working on the Co-operative (or mutual) principle disburse in various modes the accumulations that have arisen in a certain series of years; and it is satisfactory to observe that these available accumulations—whether arising from a more judicious selection of business, a higher life rate, or the more profitable investment of the associated funds,—become, from series to series, progressively larger in all well-conducted Institutions. This circumstance may possibly furnish a ground of enquiry as to whether a lower scale of premium should not be devised—an enquiry, however, into which we cannot enter.

We content ourselves by inviting attention to the light in which, despite this evidence of prosperity, the Anglo-Japanese are viewed by the Assurance Companies of England, with, so far as we can learn, only one exception. Let us take as an illustration a merchant whose business conducts him to our settlement. His London office apprizes him that before leaving Europe he must pay a special premium of 3 per cent as cover against the risk of foreign residence; and that, during such residence, his ordinary annual premium will be increased by the same amount—an increase, be it understood, which does not participate

in the distribution of profits. Being of an enquiring mind our representative man requests information, and learns that on similar terms he may reside in Madras, Calcutta, Saigon, or Hongkong or many other spots which he had, in imagination, avoided as "dangerous," and which are well known to bear no climatic or other similarity to Yokohama. He remonstrates timidly or indignantly, points out the personal immunity from danger and the excellent health he is told to expect in Japan, and only collapses when told that it "is the method of the office" to "lump" (*sic*) these places together in one unwholesome and not over-desirable "risk."

Now we have nothing to say against any of the first places above-named, although they certainly bear the reputation of being responsible for a good many of the widows one may meet at Cheltenham or at Brighton. This may be pure scandal and we shall not discuss it. But we who dwell in one of the most perfect climates this chequered globe can offer may, with perfect justice, protest against connecting or, to use the elegant official phrase, "lumping" this Island with continental countries of utterly differing physical conditions. If Japan be so inconsiderable as not to deserve the construction of a special rate, let it, at least, be arranged on the same scheme as countries with which it possesses geographical or physical affinity, say, for instance, Australia or California. To bracket it with Hongkong or Saigon is an injustice which would occur to no one who had acquired experience of those places, and evinces a monstrous and inexcusable ignorance.

It is unfortunate that, owing to various causes, so small an amount of statistical information should have been accumulated as to afford us but little material for reference. Our attention, however, has been drawn to two papers which affect the question—one the published "British Consular Trade Report" of the neighbouring capital of Yedo for the year 1871; and the other a statement prepared by Dr. HADLOW (late of the Royal Naval Hospital), which promises to form the basis of a future collection of the vital statistics of this settlement. Mr. DOHMEN, British Vice-Consul, in his report dated February 15th, 1872, thus writes of Yedo. 'Security to life and property in this city, where scarcely two years ago, no foreigner dared to visit his neighbour unless escorted by a strong guard of native soldiers, is now as efficient as in any other large city in Europe or America; and I may here mention that, since my arrival in September last, I have almost daily taken walks, unattended, through every part of the town without my presence among the people exciting the least curiosity or ill feeling. This improved state of security has enabled the Government to remove all the guard houses which had been erected in the native town and around the foreign settlement, and a police force of 3,000 men has been substituted for these guard houses.' And this, it must be remembered, is written of Yedo—a purely Japanese town. Referring to such statistics of health as Dr. Hadlow's notes furnish us with, we find that the total number of male adult deaths from all causes amounted to 23 in the year 1872, an average of rather more than 25 per thousand. This statement, however, includes a large number of deaths from accidental causes not chargeable to climate. Though, even with this deduction, the ratio still be high, it presents a great improvement upon former years and encourages the expectation that, from the better sanitary condition of the foreign settlement, yet further amendment may be looked for. It must be admitted that there is nothing to be greatly dreaded in the temperature of

even the hottest summer days, in which the thermometer may possibly range as high as 90 degrees; and it is known that such extremes of heat are rare and of short duration. The summer is certainly neither so long nor so warm as that of South Australia, Queensland, or South Africa, while the reviving influence of a temperate autumn and spring, and of a cold winter, counteract its enervating effects and brace up the relaxed fibres.

We have already referred to the physical condition of Australia as more analogous to that of Japan than of the countries with which it has been associated by a "rule of thumb" process, and in this we do no injustice to the former country. We are strengthened in this supposition by a reference to the statistics of the colony of Victoria for the year 1870, from which we learn that in Melbourne proper, in which the Hospital is situated, the mortality rate was rather over thirty-three per thousand—a high ratio as compared with ours. It must, however, be admitted that the mortality among the suburban population was by no means so great, and that the ratio is, in that case, considerably lower.

We have said that full statistics of Yokohama reaching some distance back are not available for reference. The European settlement, it must be remembered is, even now only thirteen years old, and the early residents who came here to accumulate wealth rapidly and then to depart, were indisposed, and naturally so, to gather such information as might be of use to us. Their ample incomes enabled them to provide for insurance without feeling the pinch. The less fortunate exotics of to-day are, on the other hand, compelled to consider expenditure from another point of view. The reflection that the "web of life is of a mingled yarn, good and ill together," is every now and then presented to them with circumstantial force—never greater perhaps than at the present moment.

It is of comparatively small importance to those who may insure their lives while in this country that the rate of insurance should be so high as to be prohibitory. There are many other methods of investment open to them, and no injustice, at least, is done them of which they can fairly complain. But the case of the insurer who opened a policy some dozen years ago in England, and has since shifted his residence to Japan, must be considered from a widely different point of view. He has, by accumulated payments, created a fund which he must either altogether sacrifice by refusing to contribute the extra premium demanded, or diminish the value of by paying an enormous and disproportionate consideration for its maintenance. This we admit to be a justifiable and necessary expedient in countries of extreme temperature or of disturbed political condition, but that the climate or actual circumstances of Japan present the risks which insurers are here called upon to cover—that these so called risks are other than imaginary and old fashioned—we do not hesitate to affirm; and we earnestly call upon the insurance offices of England to remove the pressure of an unfair and irrational system which oppresses those who have legitimate claims upon them for just administration, and which can only have the effect of restricting or wholly preventing the extension of their business.

We have said that, so far as we could learn, only one office undertook its Japan insurances at English rates. And as this office possesses a large and favourable reputation for excellent management, it may be assumed that in striking out this line it has acted with discretion and judgment. Its long connexion with this country forbids the supposition that it can have been betrayed by inexperience into seeking hazardous operations. That

which has been done by one Association—no doubt with sufficient reasons—may, we presume, be imitated by others. Either the Office in question conducts its business on better principles—a position not likely to be conceded by its competitors; or it has viewed the claims of its old members who may have transferred themselves to this country from Europe, with candour, fairness, and consideration.

#### THE GEOGRAPHY OF JAPAN.

By E. M. SATOW, Esq. Read before the Asiatic Society of Japan, March, 22nd, 1873.

Dr. Cornwell's School Geography, a book which had reached its 47th edition in 1870, and may therefore be supposed to have a large circulation, informs us that 'Japan consists of Nippon, Kiusiu, Sikoku, the dependencies of Jesso, the South Kouriles, and the south part of 'Saghalian.'

To say nothing of the incorrect spelling of the names in this sentence, it contains one error which every writer on Japan appears to have committed, and which demands immediate attention. This error consists in restricting the application of the name Nippon, or Nihon, to the largest island of the Japanese group, whereas it denotes in reality the whole of the empire. Amongst the numerous peculiarities of Japanese geography none is perhaps more curious and more difficult to understand at first sight than this, although when the manner in which the country is divided is clearly pointed out, the necessity for giving a separate name to the main island seems less absolute than would be imagined.

A native manuscript entitled *Kōkoku chiri riaku*, or 'A Short Geography of the Empire,' says: "From the most ancient times until lately Japan did not consist of more than sixty-eight provinces, namely, the five home provinces, the seven circuits, and the two islands, but in the winter of the year before last (1868) it was re-divided into eighty-four provinces, namely, five home provinces and eight circuits."

The *Go-kinai*, or five home provinces, are Yamashiro, Yamato, Kawachi, Idzumi and Setsu. The seven circuits are the Tōkaidō, Tōzandō, Hokurikudō, Sanindō, San'yōdō, Nankaidō, and Saikaidō. The first division of Japan into provinces was made by Seimu Tennō, A.D. 131-190, in whose time the jurisdiction of the Mikado did not extend further north than a line drawn from Sendai Bay to somewhere about Niigata, the rest of the island, namely, the subsequent province of Déwa and part of Mutsu, being still occupied by the barbarous tribes of whom the Ainos are probably the remaining descendants. What in 1868 constituted sixty-six and a half provinces was divided by him into only thirty-two. In the third century the Empress called Jingō Kō-gō, after returning from her victories in Corea, divided the country into five home provinces and seven circuits, in imitation of the Korean arrangement. In the reign of Mommu Tennō (696-707) some of the provinces were sub-divided, so as to increase the whole number to sixty-six. The boundaries then fixed by him were re-surveyed in the reign of Shōmu Tennō (723-756) by Kibi Daijin and the Buddhist priests Giōgi and Taishō, to whom the task was confided by that Mikado. They are said to have buried charcoal in the earth at points on the boundaries, that being the most imperishable mark which they were able to devise.\*

The old division is as follows:—

The *Go-kinai*, or Five Home Provinces are:—

<i>Yamashiro</i> *	or	<i>Jōshiu.</i>
<i>Yamato</i>	"	<i>Washiu.</i>
<i>Kawachi</i>	"	<i>Kashiu.</i>
<i>Idzumi</i>	"	<i>Senshiu.</i>
and <i>Setsu</i>	"	<i>Sesshiu.</i>

The Tōkaidō, or Eastern-Sea Circuit, comprises fifteen provinces, namely:—

<i>Iga</i>	or	<i>Ishiu.</i>
<i>Isé</i>	"	<i>Seishiu.</i>

\* *Chikata hanrei-roku*, Vol. I, p.p. 20, 21.

† *Kōchō enkaku isshu*.

‡ The names given in italics are those most in use.

<i>Shima</i>	"	<i>Shishiu.</i>
<i>Owari</i>	"	<i>Bishiu.</i>
<i>Mikawa</i>	"	<i>Sanshiu.</i>
<i>Tōtōmi</i>	"	<i>Enshiu.</i>
<i>Suruga</i>	"	<i>Sunshiu.</i>
<i>Idzu</i>	"	<i>Denshiu.</i>
<i>Kai</i>	"	<i>Kōshiu.</i>
<i>Sagami</i>	"	<i>Sōshiu.</i>
<i>Musashi</i>	"	<i>Bushiu.</i>
<i>Awa</i>	"	<i>Bōshiu.</i>
<i>Kadzusa</i>	"	<i>Sōshiu.</i>
<i>Shimōsa</i>	"	<i>Sōshiu.</i>
and <i>Hitachi.</i>	"	<i>Jōshiu.</i>

The Tōzandō or Eastern-mountain Circuit, comprises eight provinces, namely:—

<i>Ōmi</i>	or	<i>Gōshiu.</i>
<i>Mino</i>	"	<i>Nōshiu.</i>
<i>Hida</i>	"	<i>Hishiu.</i>
<i>Shinano</i>	"	<i>Shinshiu.</i>
<i>Kōdzuké</i>	"	<i>Jōshiu.</i>
<i>Shimotsuké</i>	"	<i>Yashiu.</i>
<i>Mutsu</i>	"	<i>Ōshiu.</i>
and <i>Déwa</i>	"	<i>Ushiu.</i>

The Hokurikudō, or Northern-land Circuit, comprises seven provinces, namely:—

<i>Wakasa</i>	or	<i>Jakushiu.</i>
<i>Echizen</i>	"	<i>Esshiu.</i>
<i>Kaga</i>	"	<i>Kashiu.</i>
<i>Noto</i>	"	<i>Nōshiu.</i>
<i>Etchuu</i>	"	<i>Esshiu.</i>
<i>Echigo</i>	"	<i>Esshiu.</i>
and <i>Sado (Island)</i>	"	<i>Sashiu.</i>

The Sanindō, or Mountain-back Circuit, comprises eight provinces, namely:—

<i>Tamba</i>	or	<i>Tanshiu.</i>
<i>Tango</i>	"	<i>Tanshiu.</i>
<i>Tajima</i>	"	<i>Tanshiu.</i>
<i>Inaba</i>	"	<i>Inshiu.</i>
<i>Hōki</i>	"	<i>Hakushiu.</i>
<i>Idzumo</i>	"	<i>Ushiu.</i>
<i>Iwami</i>	"	<i>Sōshiu.</i>
and <i>Oki (group of islands).</i>		

The San'yōdō, or Mountain-front Circuit, comprises eight provinces, namely:—

<i>Harima</i>	or	<i>Banshiu.</i>
<i>Mimasaka</i>	"	<i>Seishiu.</i>
<i>Bizen</i>	"	<i>Bishiu.</i>
<i>Bitchiu</i>	"	<i>Bishiu.</i>
<i>Bingo</i>	"	<i>Bishiu.</i>
<i>Aki</i>	"	<i>Geishiu.</i>
<i>Suwō</i>	"	<i>Bōshiu.</i>
and <i>Nagato</i>	"	<i>Chōshiu.</i>

The Nankaidō, or Southern-sea Circuit, comprises six provinces, namely:—

<i>Kii</i>	or	<i>Kishiu.</i>
<i>Awaji (island)</i>	"	<i>Tanshiu.</i>
<i>Awa</i>	"	<i>Ashiu.</i>
<i>Sanuki</i>	"	<i>Sanshiu.</i>
<i>Iyo</i>	"	<i>Yoshiu.</i>
and <i>Tosa</i>	"	<i>Toshu.</i>

The Saikaidō, or Western-sea Circuit, comprises nine provinces, namely:—

<i>Chikuzen</i>	or	<i>Chikushiu.</i>
<i>Chikugo</i>	"	<i>Chikushiu.</i>
<i>Buzen</i>	"	<i>Hōshiu.</i>
<i>Bungo</i>	"	<i>Hōshiu.</i>
<i>Hizen</i>	"	<i>Hishiu.</i>
<i>Higo</i>	"	<i>Hishiu.</i>
<i>Hiuga</i>	"	<i>Nisshiu.</i>
<i>Ōsumi</i>	"	<i>Gūshiu.</i>
and <i>Satsuma</i>	"	<i>Sasshiu.</i>

The two islands are:—

<i>Tsushima</i>	"	<i>Taishiu.</i>
and <i>Iki</i>	"	<i>Ishiu.</i>

It will be seen from a comparison of this list of geographical divisions that the main island contains the *Go-kinai*, Tōkaidō, San'yōdō and one province of the Nankaidō. To

use the names of these divisions is just as convenient for a Japanese as to use a collective name like that which foreign geographers have misapplied to the whole island would be. The explanation of the anomaly is, therefore, that it has never been felt. The smaller of the two adjacent islands, namely Shikoku, (or the Four Provinces) contains the rest of the Nankaidō; while the Saikaidō exactly corresponds to the third island, Kiushiu, or the nine Provinces. Europeans frequently confuse this island with the Province of Kishiu, on account of the resemblance of the two names. The fact that the names of these divisions are all derived from Chinese words confirms the statement that the system has emanated from Corea, in which country the Chinese language seems almost universally to have furnished the names of places. Every province, except the eleven of the Hokkaidō, and the seven into which Ōshiu and Déwa have been recently divided, has two names, one generally of pure native derivation, the other composed of the Chinese word *shiu*, a province, added to the Chinese pronunciation of one of the characters with which the native name is written. In many cases the pedantic Chinese name has completely superseded the original Japanese name in the mouth of the people, in a few both are used concurrently, while in some the original name is retained. For instance, Kōshiu, Shinashiu and Jōshiu have replaced Kai, Shinano and Kōdzuké. Isé and Seishiu, Sagami and Sōshiu, Tosa and Toshu are used concurrently, while Yamashiro, Yamato and several more have been retained. In such cases as Higo and Hizen, where the Chinese form is the same for both, it is not adopted in speaking, though it sometimes is in books, to the great confusion of the careful reader. Higo and Hizen were formerly one province, called Hi no Kuni, or 'the province of Fire.' Echizen, Etchui and Echigo are three of the modern divisions of Koshi no Kuni, of which the present provinces of Kaga, Noto, Uzen and Ugo also formed a part. *Echi* being the pronunciation of the Chinese character with which *Koshi* is written, the division nearest to the capital was called Echizen, or 'front of Koshi,' the next Etchui, or 'middle of Koshi,' the furthest Echigo, or 'back of Koshi.' Kaga and Noto originally formed part of Echizen. Déwa in like manner was part of Echigo. Chikuzen and Chikugo are the two divisions of the ancient province of Tsukushi, a name which was applied in the most remote times to the whole of Kiushiu. Buzen and Bungo also constituted one province under the name of Toyo. Tamba and Tango were formed out of one province called Taniwa, Tamba being a corruption of Taniwa and Tango simply 'back of Taniwa.' Kadzusa and Shimōsa are contractions of Kami-tsu-fusa and Shimo-tsu-fusa, 'upper and lower Fusa,' while Kōdzuké and Shimo-tsu-ké are Kami-tsu-ké and Shimo-tsu-ké, 'upper and lower Ké,' *tsu* being the archaic generic particle 'of.' The whole subject of the derivation of the names of the provinces of Japan is well treated in the '*Shokoku-meigi-kō*' of Saitō Hikomaro, a pupil of the elder Motoōri.

Another division of Japan was made by taking the ancient barrier of Ōsaka on the frontier of Ōmi and Yamashiro as a central point, the region lying on the east, which consisted of thirty-three provinces, being called the Kantō, or East of the Barrier, and the remaining thirty-three being called Kausei, or West of the Barrier. This distinction is no longer maintained, the term Kantō (or, Kuantō) being applied at the present day to the eight provinces of Musashi, Sagami, Kōdzuké, Shimotsuké, Kadzusa, Shimōsa, Awa and Hitachi. Sometimes the four provinces of Idzu, Kai, Déwa and Mutsu are also included in the term.

*Chiu-goku*, or Central Provinces, is a name in common use for the Sanindō and Sanyōdō taken together. *Sai-hoku*, or Western Provinces, is an ordinary synonym for Kiushiu, which in books is frequently called Chinsei.

For the purposes of taxation the country was again divided into Kantō suji and Kamigata Suji, of which the former comprised the twelve provinces just named, while the latter included the rest of Japan. In common language the term Kamigata is applied vaguely to Kiōto and the country round.

The islands of Iki and Tsushima are not included in any of the Seven Circuits, but form a division by themselves.

The province of Mutsu or Ōshiu formerly extended beyond the northern shore of the main island, and included the territories of the *daimiō* of Matsumaë, while the name, Yezo, miscalled Yesso by most Europeans, was given not to the whole island, but to that part inhabited by the barbarous tribes.

In 1868, after the rebellious *daimiō*s of Ōshiu and Déwa had submitted to the Mikado, those two provinces, which far exceeded in extent any others in the country, were subdivided, Déwa into Uzen and Ugo, Ōshiu into Iwaki, Iwashiro, Rikuzen, Rikuchiu and Michinoku, for obvious political reasons. At the same time the island containing the Matsumaë territory, the settlements of the Aino, and the Southern Kuriles were named Hokkaidō, or Northern Sea Circuit, and divided into eleven provinces, namely Oshima, Shiribeshi, Ishikari, Teshiwo, Kitami, Ifuri, Hitaka, Tokachi, Kushiro, Nemuro and Chishima, the last comprising those of the Kurile islands which belong to Japan.

The Japanese word *kuni*, which I have rendered by province, seems literally to mean 'country', and province must be taken in the sense in which it was used in the maps of France previous to the revolution of 1789. The word *kōri*, which is used by the Japanese for the subdivisions of a province, would be best translated 'department.' The number of departments in a province varies according to its size. In the old system there were altogether 629 departments, but the addition of the Hokkaidō has raised the number to 715.

For purposes of administration all Japan except the Hokkaidō was again divided in 1872 into three *Fu* and seventy-two *ken*, without regard to the boundaries of the provinces. *Fu* might well be translated city, and *ken* prefecture. The three *Fu* are Yedo, Ōzaka and Kiōto, but it would be impossible to give the names of the prefectures, as a process of amalgamation is going on just now which will considerably diminish their number. The names, also, of some of the prefectures have been changed since the list was first published by the government.

The whole number of islands in the Japanese group, exclusive of the four main islands is stated to be over three thousand. Many of these are so small as hardly to deserve the title, while others are large enough to constitute provinces by themselves. Beginning from Yedo and going westwards the first island of importance is that called Idzu no Ōshima, or, the big island of Idzu, by natives, and Vries' or Barnevel's island Europeans. It is the most northerly of a chain which extends as far south as the 27th degree of north latitude. Next to Vries come Rishima, then Nijijima, Shikinéjima, Kantsu-jima, Miyakéjima and Mikura-jima. All these lie north of the Kuroshio, or as we call it, the Japan current. South of the Kuroshio, at a distance from Mikura-jima estimated variously by Japanese at 66, 102 and 171½ miles, lies the island of Hachijō, or Fatsio as it is spelt in our charts. Fifty miles further south is Awo-ga-shima, which, to judge by its delineation in the Japanese book of charts, is an extinct volcano. An interval of 341 miles separates Hachijō from the Bonin group, which consist of two large islands separated from each other by 50 miles of sea, and a host of islets. Europeans have corrupted the proper name Munin jima, which means 'Noman's islands,' into Bonin. Ogasawara jima is another name given to the group by Japanese. The next island proceeding westward is another Ōshima lying at the south of Kii, and separated from it by a narrow strait. South of Kiushiu extends another long chain, which may be said to begin with Tané-ga-shima opposite to the province of Ōsumi and to end with Hate-ruma, the most southerly of the Yayéyama group, which lies close to the 24th parallel of north latitude. Yayéyama is called Paehusan in Keith Johnston's Royal Atlas, but that is not the name given to it by the natives. The ordinary maps of Japan do not include any of the islands south of Yaku no Shima.

Due west of the province of Satsuma lies the group called Koshigi jima, and north of this, close to Higo, the islands of Amakusa and Togi. Off Hizen, in a line stretching in a south-westerly direction, are Hirado, known to the early navigators as Firando, and the Gotō, or Five islands, namely, Fukuyé, Kuga, Naru, Wakamatsu and Nakatsushima. This group contains innumera-

ble smaller islands besides these five. North again of these are situated Iki and Tsushima, each of which constitutes a province by itself. By them lay, in former times, the ordinary route from Japan to Korea. On the north-west coast lies the Oki group, consisting of one large and three small islands, which is a province of the Sanin-dō, and Sado, which also constitutes a province by itself.

The Inland Sea contains countless islands. The most note-worthy amongst these are Ōshima, or Yayoshima off Suwō, Itsukushima or Miyajima, east and west Nomi-jima off Geishiu, and Shōdzu shima off Bizen.

Besides the five small islands on the west of the Hokkaidō, the Japanese claim Kunashiri and Etorofu, the largest of the Kurile islands.

Promontories of course abound along the Japanese coast. Beginning with the extreme north of the main island we have Riuhū zaki and Fujishi zaki in the Tsugaru Straits. Passing down the east coast we come next to Kuwa-ga-saki in Rikuchiu, close to the harbour of Miyako, Misaki near the port of Kesen in Rikuchiu, Kin-kazan, near Matsushima in Rikuzen, and Inuboyé no saki, wrongly called Inaboyé no saki in our charts, just below the mouth of the Toné gawa. Su saki in Awa, and Miura no misaki, called Cape Sagami by us, mark the entrance to the Bay of Yedo. Next come Cape Idzu, Mimaé no misaki in Tôtômi, Irako zaki in Owari, Mugi zaki in Shima, Idzumo-zaki and Shiwo no misaki, both at the extreme south of Kishiu. Hii no misaki further up the west coast of Kishiu is an important landmark for the seaman. Muroto zaki and Ashizuri no misaki are the chief promontories on the southern coast of Shikoku, both being situated in Tosa. Tsutsuzaki in Hinga and Sata no misaki, or Cape Chichakoff, in Ōsumi are well known names, especially the latter. South of Nagasaki lies Nomo ga saki, and Shijiki zaki at the south-west end of the island of Ii-rado. After rounding Misaki on the west coast of Nagato, the next cape of any importance is Suzu no misaki in Noto. From this point up to the Straits of Tsugaru the coast is almost straight, with the exception of the large projecting head-land between the harbours of Akita and Noshiro in Ugo. This is hardly small and sharp enough, according to Japanese ideas, to be distinguished as a promontory.

The chief promontories on the coast of the Hokkaidō are, Noshamu misaki, Erimo misaki, Esan misaki, Yagoshi no misaki, Okamui zaki, and Shirushi misaki.

There is another peculiarity of Japanese geography which deserves to be noticed. Although the Japanese possess a fine map of the coast line of Japan and an elaborate set of charts for the use of junks, and are generally acquainted with the seas in the immediate neighbourhood of their own country, they do not give any names to the bays which abound along the coast, nor to the straits which separate them from other countries or divide their own. The bays of Yedo, Ōzaka and Owari are not known by those titles. The straits of Tsugaru, (often mis-called Saugur in our maps) of Shimonoséki, of Akashi, of Idzumi, etc., have received their appellations from European navigators, as much as those of Van Diemen, Colnet, Von Krusenstern and La Perouse. The term *séto* is applied by them only to narrow channels. On the other hand they make use of the terms *oki*, offing, and *nada*, sea, very freely. Thus, in going from Yokohama to Nagasaki they traverse the Sagami Nada, Tôtômi or Enshiu Nada, Tenriu Nada, Bingo Nada, Suwō Nada, Genkai Nada, Iibiki Nada, and Matsura Nada. Suwō Nada has often been supposed to be the proper equivalent for what we have naturally called the Inland Sea, but it simply means the sea adjacent to the province of Suwō. Séto-uchi (inside of the channels), which has been adopted in our later charts, is the correct name. I am reminded by the mention of the Inland Sea, that many of the names in our charts are either so badly spelt as to be unrecognizable when pronounced by a foreigner, or are altogether wrong. For instance, the large island off Bizen, called Shōdzu shima, is spelt Sozu, and Mutsuré in the western entrance of Shimonoséki Straits, on which a lighthouse has been recently erected, is mis-called Rockuren. The town of Marugamé in Sanuki is called Mura kamé in many of the charts published by the English Admiralty. It is no wonder, therefore, that native pilots are often accused of being ignorant of the

names of places which it is their special business to know. The blame lies, not with the surveying officers who have prepared the charts, but with the native interpreters attached to them, who are often unable to read the names on Japanese maps. The mistake of Rockuren for Mutsuré evidently arose in this manner. The native name for the Shimonoséki strait is Hayato no séki, for the Idzumi strait, Kada no Séto, and for the Tsugaru strait, Mim'maya no oki, from a port of that name in Tsugaru.

The number of harbours and trading ports called *ô-minato*, or large harbours, by the Japanese, is fifty-six. A great many of these are no doubt inaccessible to European vessels of even moderate size.

Beginning with the Hokkaidō we find Matsumaé and Hakodaté in Ōshima. Across the Tsugaru straits lie Fukaura, Ajisawa, Mim'maya, Awomori, Sai and Okuto in Michinoku. Passing down the east coast we come to Miyako in Rikuchiu, Kesen, Ishinomaki, Sabusawa and Sendai in Rikuzen, Hiragata close to the boundary of Iwaki and Hitachi, Naka-no-minato in Hitachi, Chōshiga-ura at the mouth of the Tonégawa, Uchi-ura in Awa, Futsutsu, Kisaradzu, Giōtoku, Tōkiō, Yokohama and Uruga in the Bay of Yedo, Ō-ajiro, Shimoda and Kora in Idzu, Shimidzu in Suruga, Arai in Tôtômi, Kamézaki in Mikawa Bay, Ono and Miya in Owari, Toba and Matoya Shima, both magnificent harbours, Sasara, Nié and Kowa in Isé, Nishiki, Kuki, Hayéda, Nikijima, Katsura, Uragami, Ōshima harbour, Nibu-no-fukuro, Tsuna-shirazu, Yura-no-uchi and Ōzaki in Kishiu, Kishi-no-wada and Ishidzu in Idzumi, Ōzaka, Amagasaki, Kōbē and Hiōgo in Setsu, Hino in Baushiu, Shimotsui in Bitchiu, Tomono-tsu in Bingo, Miyadzu, Soné, Murodzumi and Mitajiri in Suwō, Shimo-no-séki, Hinjiu, Senzaki or Setozaki, Hagi and Sui in Nagato, Hamada and Yunotsu in Iwami Kidzaki, Urin, Sagiura, Katsu, Kumotsu and Miwoga-séki in Idzumi, Moroiso and Kazumi in Tajima, Iné and Miyadzu in Tango, Obama in Wakasa, Tsuruga in Echizen, Miyanokoshi in Kaga (a very bad port), Fukura, Wajima, Mawai and Nanao in Noto, Iwamachi, Niigata and Senuami in Echigo, Nezu-no-séki and Sakata in Uzen, Shiwo-koshi, Honjō, Akita, Toga and Noshiro in Ugo. Mitarai harbour, between two islands near Geishiu, is a favourite port of call for the junks which trade in the Inland Sea. In Awaji is situated the port of Yura. In Awa we find Tachié, Hiwasa, Asagawa, Tomo-no-ura and Shishikui. In Tosa Murotsu, Urato, Nagahama, Inoshiri, Kuré, Yotsu, Sagadzu, Misaki, Shimo-Kawaguchi and Suwōgata. Mitsukuyé and Nagahama in Iyo, and Takamatsu in Sanuki complete the list of ports in Shikoku. Bungo has Kushimi, Kumagé, Nadaté and Fukacé. Hinga possesses only one port, that of Takanabé; Ōsumi likewise only one, namely, Ōdomari. Passing westwards we come to Kagoshima, Yamagawadzu, Ichiku and Kiō-domari in Satsuma, Hinaku in Hiogo, Sarashimi in Chikugo, Motéki, Nagasaki, Nakatsu, Nagoya and Ayamé in Hizen, Shijiki in Hirado, Fukuoka and Kanégasaki in Chikuzen. Tsushima has a port called Takéura, Iki also one, Katsumoto, Sado one called Ogi. Besides these there are numbers of smaller ports and harbours of refuge which can only be discovered by making an accurate survey of the whole coast.

An inspection of any native map shows that the greater proportion of the surface of the four main islands of which Japan is composed is covered with hills, which rise in many places to mountains of considerable height. The most extensive plains are those of the Kantō, of Echigo and the north of Oshiu. The provinces of Mikawa, Mino and Owari, also, are very flat. Half-way between Yedo and Kiōto lies the table-land of Shinano, elevated at least 2,500 feet above the level of the sea, and surrounded and intersected by lofty ranges of mountains, of which those on the boundary of Iiida are certainly the highest. From the eastern edge of this province there is a sudden drop of 1,800 feet on to the Yedo plain, while on the north the ground slopes gradually away down to the province of Echigo. Another lofty range divides the former provinces of Mutsu and Déwa, running from Aidzu directly north as far as Tsugaru. The province of Kai is almost surrounded by mountains, amongst which the Yatsugataké, or Eight Peaks, Komagataké and Jizōgataka are the most conspicuous.

The list of mountains which are considered the most worthy of notice by the Japanese naturally begins with Fujisan, mispronounced Fusi-yama by Europeans. Next come Gassan in Uzen, Mōkō in Shinano, the Nikkō range in Shimotsuké, O-miné in Yamato. Hakusan in Kaga, Tatéyama in Etchu, Kirishima yama in Hiuga, Asayama in Higo, Tsukuba san in Hitachi, Onsega-také in Hizen, Asamayama in Shinano, Chōkaisen in Ugo and Iwaki in Michi noku. There are several active volcanos in Japan, of which Asama yama and Asoyama are the best known to foreigners. It is a curious fact that the Japanese nevertheless possess no word for volcano.

Owing to the comparative narrowness of the main island of Japan and the small size of the other three, none of the numerous rivers are of great length. The longest and widest is probably the Tonégawa. The Shinanogawa and Kisogawa, both of which take their rise in Shinano, come next. In addition to these may be mentioned the Oi gawa, Fuji gawa and Tenriu gawa on the south, the Sakata gawa in Uzen, the Abukuma gawa in Oshiu and the Ishikari in Yezo, or as we ought now to say, in the Hokkaidō. Almost every one of these rivers takes its name either from a province, a department or a place on its course. Many Japanese rivers change their name several times between the source and the mouth. The Shinano gawa during the upper part of its course is called the Chikuma gawa after the department of that name. The Banu gawa, which flows into the sea between Fujisawa and Odawara, is called the Kadzura gawa from its source in the Yamanaka lake at the base of Fuji down to the town of Atsugi. The Yodogawa, at the mouth of which is situated the city of Ōzaka, is called the Seta gawa at the point where it leaves the lake of Omi, and the Uji gawa between the towns of Uji and Fushimi. Above Hashimoto it receives the waters of the Kidzu gawa, absorbing its name as well, which re-appears below the city of Ōzaka. The Yodō gawa disappears at Ōzaka, and the other mouths are called Nakatsugawa, Aji kawa and Shiruashi gawa. The Sumita gawa which flows through Yedo is called the Ara kawa near its source, and the Toda gawa at the point where it intersects the Nakasendō. What foreigners have been accustomed to call the Logo or Logos ever since the opening of Japan, is the Tama gawa, and that part only which runs, by Kawasaki is called Rokugō, which word we have corrupted into Logo. Not even those rivers whose reputation is most widely spread, such as the Toné gawa and Kiso gawa retain the same name throughout.

The Tonégawa rises on Monjiuzan behind Fujiwara in the department of Toné in the province of Kōdzuké. From its source to Chōshi point, where it falls into the Pacific Ocean, it measures more than 70 *ri*, or 171½ miles. It is nicknamed Bandō Tarō, which may be rendered 'the eldest son of the region west of the pass.' The first town of any importance on its banks is Numata, formerly the seat of a small *daimiō*. A little way below this town the Adzuma gawa flows into it on the right. Just above the town of Maebashi, important as a silk producing centre, it separates into a network of streams, which unite again near the point where the Karasu gawa falls in. After receiving the waters of the Watarasé gawa, which drains the province of Shimotsuké, it separates into two branches opposite the town of Kurihari on the Oshiu-kaidō. The Southern branch is called the Gongendō gawa, and passing by Sékiyado, becomes the Yedo gawa, falling into the Yedo Bay at Horiyé. The main stream is here called the Akahori gawa. In passing Sékiyado it throws off a branch which usually falls into the Yedo gawa, but during floods its current becomes reversed, thus earning for it the name of Sakasa gawa, or 'upside-down river.' After receiving the waters of the Kinugawa, whose source is at the boundary of Shimotsuké and Iwashiro, and the Kokai gawa, which rises near Utsunomiya, besides the surplus water of numerous meres, such as the Aga numa, Imba numa and Naga numa in Shimōsa, and those of Ō-ura, Kasumi-ura and Sakaura in Hitachi, and attaining a breadth of 1,740 yards, or nearly an English mile, it enters the sea at Chōshi. At Chōshi it narrows down considerably, and passes between some sharp rocks on the Shimōsa side and a long sandy spit which forms part of Hitachi. In stormy weather the bar is completely impassable, even for the strongly built native boats. This part of the coast has been fatal to at least four foreign vessels since the opening of the

country to commerce, the last victim being the "Wanja," whose loss was reported about a fortnight ago.

The Shinano gawa rises in the department of Saku in the southeast corner of Shinano. It flows in a north-westerly direction and then due north past the towns of Komuro, Uyédá and Matsushiro. During this part of its course it is called the Chikuma gawa, probably after the department of that name, though it does not pass by it. A little below Matsushiro it is joined by the Sai gawa, which rises on Koma-ga-také. After passing the town of Iiyama it enters the province of Echigo, which it traverses in a north-easterly direction, and falls into the sea at Niigata.

The Kisogawa rises likewise in Shinshiu. It flows westward down the valley of Kise, being joined by several small streams of no great importance. Entering Mino at Ochiai, it shortly afterwards unites with the Hida gawa, which rises in the north of the province of Hida. At the point where it intersects the Nakasendō it is called the Otagawa, after a town on its right bank. From Inuyama it forms the boundary between Mino and Owari. Near this town, and at several other points further on, it throws off branches which traverse Owari, and fall into the sea. On the right it is joined by the Sumonata gawa which drains the western part of Mino, and shortly before reaching its mouth near Kuwana splits into several branches. The Tenriu gawa flows out of the lake of Suwa in Shinano, runs past the town of Iida almost parallel to the Kiso gawa, and traversing the province of Tōtōmi falls at last into the Tenriu nada. It has no tributaries of any importance.

The Oi gawa rises in the south-west of Kai and traverses the province of Tōtōmi, intersecting the Tōkaidō between Kanaya and Shimada. It is more remarkable for the breadth of its bed, which near the mouth is 2½ miles wide, and for the swiftness of its current, than for the length of its course.

The Fuji kawa rises in the north of Kai on the group of mountains called Yatsu-ga-také, and receives several tributaries of varying volume. During the lower part of its course it traverses the centre of Suruga. It is famous for being one of the swiftest streams in all Japan.

The Sakata gawa rises in the range of mountains which separates Uzen from Rikuzen, and flowing due west between the departments of Mogami and Akumi on the north and Murayama and Tagawa on the south, enters the Sea of Japan at the town of Sakata.

The Abukuma gawa rises near the town of Shirakawa in Iwaki, flows northwards close to the eastern boundary of Iwashiro, passing not far from the towns of Miharu, Nihom-matsu, Fukushima and Shiraiishi, traverses the upper end of Iwaki, and then, making a turn to the right, becomes the boundary between that province and Rikuzen, falling at last into the Pacific Ocean near the town of Watari.

There are numerous lakes in Japan, some of which, such as those of Hakoné, Suwa and Chiuzenji near Nikkō lie far above the level of the sea. Only one, the Biwa lake in Omi, is worthy of notice on account of its size. It measures about 50 miles in length, or four miles more than the lake of Geneva, while its greatest breadth is about twenty miles or more than twice that of the lake of Geneva. At Katada, about ten miles from its southern end, it suddenly contracts to a breadth of one mile and a half, after which it expands again slightly.

The Inawashiro lake in Iwashiro, seven *ri* from which on the south side was formerly situated the castle of the Princes of Aidzu, is stated by natives of that part of the country not to exceed ten miles in length, but it certainly is drawn much larger on the maps. Out of it flows the Aka gawa, which was formerly a tributary of the Shinano gawa but now falls into the sea some miles north of Niigata.

For a country in which the only vehicle used in travelling was until lately the palanquin, Japan possesses a very good system of high-roads. Amongst these the Tōkaidō is best known to foreigners. Its existence probably dates from the time when the country was divided into circuits, though it has of course been much improved since it was first constructed. It is the only road in the country which is named after the circuit which it traverses. Whether it begins at the Nihom bashi in Yedo and ends

at the Sanjō bashi in Kiōto or vice versā is a point which would be difficult to determine. A great many writers have stated that all the roads in the Empire start from the Nihom bashi, but this evidently cannot be true of roads on the west of Kiōto. The length of the Tōkaidō, according to an estimate lately prepared for the Japanese Post Office, is 125 *ri*, 13 *chō*, or nearly 307 miles. The other road between the two capitals, called either Nakasendō or Kiso-kaidō, which traverses half the Tōzandō and the province of Musashi, is said to be 135 *ri*, 32 *chō*, or a little over 323 miles, in length. The longest high-road is the Ōshū kaidō between Yedo and Awamori on the Tsugaru Straits. It traverses Musashi, Shimotsuké, Iwashiro, Rikuzen, Rikuchū and Michioku, and its length is given as 181 *ri*, 6 *chō*, or nearly 444 miles.

Two roads from Yedo to Niigata exist, the one by way of Takasaki in Jōshū, over the Mikuni pass into Echigo, the other by Oiwaké, Zenkōji, Takata and Kashiwazaki. The former, which is said to be impassable in winter, measures 91 *ri*, 29 *chō*, or about 225 miles, the latter 108 *ri*, 17 *chō*, or about 264 miles. Neither possesses a name, and for a considerable distance each is identical with the Nakasendō. Another road which possesses great interest for the traveller in search of mountain scenery is the Kōshū kaidō. It unites Yedo and the town of Kōfu, distant from each other 31 *ri*, 14 *chō*, or 77 miles, and a continuation of it from Kōfu joins the Nakasendō at Shimo-no-suwa, 13 *ri*, 6 *chō*, or about 32 miles further. The book of itineraries called *Gokai-dōchiu-saikenki* contains the itineraries of thirty-seven roads, all of which lie on the east of Kiōto. There are of course high-roads on the west of Kiōto, but they are of less importance because there is little traffic in the Sanindō, and that of the Sanyōdō is conducted in junks which ply on the Inland Sea. I have heard Europeans call the road which passes through Kōbē westwards to Shimonoséki 'Tōkaidō,' but this is an error. It is not even called Sanyōdō after the circuit which it traverses.

In a work on general geography lately published by the Education Department (entitled *Yochi shiraku*) the area of Japan is stated to be 24,760 square *ri*, or, taking the linear *ri* as equal to 2.45 English miles, about 148,742 miles. This is about one fourth more than the area of the United Kingdom, which contains 121,115 square miles. The Japanese estimate cannot be looked upon as exact, since it is founded on maps which are far from correct. The population is generally asserted to be about 30,000,000, the authority being a census made in 1804, which was founded to a great extent on the reports furnished by the officers of the *daimiōs*, and is therefore not accepted as authentic. It is doubtful whether Japan, in spite of her greater area, has a larger population than the British Isles.

The notion that *miako*, which means Imperial Capital, is the name of the old metropolis, has by this time been exploded. The real name of that city was Kiōto, until the year 1869, when it was changed to Saikiō, or 'western capital,' in order to distinguish it from Tōkiō, the new name given to Yedo. Tōkei is merely another pronunciation of Tōkiō, but it is certainly to be wished that the Japanese would adhere to one of the two, to the complete exclusion of the other. The population of Tōkiō is variously stated but is probably not much over 800,000. Saikiō had about 370,000 inhabitants in 1870. Next in importance after these two cities comes Ōzaka with a population of 414,000 souls. Foreigners generally both spell and pronounce the name of this city wrongly. Nagoya, the capital of Owari, is next in size, followed closely by Hirosima in Geishū, Saga in Iizen, Kagoshima in Satsuma, Kanazawa in Kaga, the double town of Hakata and Fukuoka in Chikuzen, and Himéji in Banshin. Most of these towns are said to have over 100,000 inhabitants. Kumamoto in Higo, Kurumé in Chikugo, Fukui in Echizen and Gifu in Mino rank in the second class, but I am unable to say what is the population of each. Of the ports open to foreign trade, Ōzaka being excluded, Nagasaki is said to have the largest population, but Yokohama bids fair to surpass it before long. Hokodate and Niigata, have I believe, about 30,000 inhabitants each.

The work on Geography to which I alluded at the commencement of this paper contains numerous other errors besides that of supposing Nippon to be the name of the main island of the group. Considering that

the country had been open to foreign trade for at least eleven years when the edition from which I quote was published it is a little strange that the author should not know better than to assert that there are few domestic animals in Japan. Cows, horses, dogs, cats and poultry may certainly be included in this category, and the experience of every one who has resided here even for a short time must have convinced him that all these species of domestic animals abound. Another statement is that the country is deficient in timber, which may perhaps be correct of the neighbourhood of Nagasaki, but certainly does not apply to the rest of Japan. The facts that all the houses are constructed of wood, and that the maritime inhabitants possess countless junks and fishing-boats are a sufficient contradiction.

It is also incorrect to state that "the imports, mainly Cotton and Woollen goods, are paid for largely in Copper, in bars."

Ilakodaté is spelt Ho-Kodadi. Japan is far enough from London to excuse the author for being ignorant of the fact that the Tycoon is no longer Emperor of Japan, but even supposing the news of the Mikado's restoration to have taken two years to reach England, that is no reason for calling the Tycoon a Kouba, and stating that he was assisted by a council of the great feudal princes.

The word *Kubō*, which the common people apply to the Tycoon, was no official title. The opinion of one or two of the great *daimiōs* may now and then have been asked for or offered, but no such institution as a council composed of the eighteen *Kokushi daimiōs* existed at any time.

The great earthquake at Yedo, which is said by Dr. Cornwell to have occurred in 1860, took place five years earlier, and the number of persons who lost their lives on that occasion, which is stated by him at 200,000, is certainly immensely exaggerated. Even the Japanese, who have a passion for large figures, allow that not more than 104,000 were killed.

In order to give his readers a general idea of the manners and customs of the people, the author states: "One of their amusements, which they share with the Chinese, is strange to us—that of flying immense kites; not by the boys, who only look on and admire, but by the men." Certainly, if the men do now and then indulge in this pastime, the little boys cannot be said to abstain from it. Any one can convince himself of their ardent devotion to the sport by taking a walk through Yedo in the month of January. Yedo is called 'a handsome city of park-like appearance, with a population of 1,500,000 inhabitants.' Yedo can never have corresponded to such a description, even in its most flourishing days, and there is no reason to suppose that its population ever exceeded a million or twelve hundred thousand at the outside. A "colossal idol" is spoken of as still existing at 'Miyako,' by which the great bronze Buddha destroyed by an earthquake in 1625 is evidently intended.

The rectification of these misstatements does not properly come within the scope of my paper, in which I profess to speak only of the physical geography of Japan, but so much that is erroneous has been written about this country that no opportunity should be lost of correcting mistakes or inaccuracies of whatever kind even when they appear in a mere school book. A great deal has yet to be done to complete our knowledge of these islands, which is at present limited to the information which we can gain from native books and maps, from our own incomplete surveys of the coast, and from the notes of the few travellers who have passed along the high-roads of the interior.

The authorities for the statements in this paper are the following books:—

## KINSE SHIRIAKU.

### VOLUME II.

(Continued.)

Takéda and his friends crossed the river on the 16th and advanced against Naka, which they took and occupied after exchanging a few shots with the enemy. Ichikawa revenged himself by denouncing Takéda and his friends as criminals, and complained to the Bakufu, after which he arrested and threw into prison the wives and children of Takéda's followers who were in the town. He then attacked Takéda himself but the troops of the latter fought with great courage, and the losses were equal on either side.

Fujita and his followers at Tsukuba yama became aware of what had taken place, and proposed to unite their efforts with those of Takéda Iga in order to chastise the wicked party. There were a number of *rônins* from various provinces among them, who declared as they had taken up arms simply in order to expel the barbarians, they saw no reason why they should concern themselves about the private feuds of the two parties, and they fled from Tsukuba yama in a body. This afforded an opportunity to the Bakufu to kill more than half of them, and Fujita, finding that so many of his men had deserted, joined Takéda at Naka in the same month with the three hundred men who still remained to him.

When Fujita and his friends first commenced operations, Takéda had regretted the rash and hasty manner in which it had been done, and had hoped to arrange matters. When, therefore, Ichikawa expelled the righteous party from the Castle, he proceeded to Mito under the nominal leadership of Matsudaira Ôi no kami, with the object of attempting a solution of the difficulties which had arisen, but Ichikawa resisted him by arms and prevented his entering the Castle. He had consequently occupied the port of Naka and fought every day with Ichikawa, until the latter endeavoured to split up his force by luring away Ôi no kami with fine words. Ôi no kami was about to go and join him, when Takéda remonstrated, saying: "The enemy refuses to admit us, and invites your Lordship alone. His intentions cannot be trusted, and I secretly entertain fears for your Lordship's safety." Ôi no kami refused to give way to the efforts made to detain him, and proceeded to the town of Mito with a small number of men. Ichikawa reproached him, saying: "Your Lordship received orders to effect a pacification, and behold! you are in league with rebels." He then made the prince commit suicide, by orders received from the Shôgun, and continued to plot against Takéda. When Takéda heard of what had occurred, he became indignant and said: "The traitorous scoundrel has done as I feared." It was then that he accepted the adherence of Fujita with whom he acted in concert, thus justifying the accusations of Ichikawa and his friends. Upon this the Bakufu despatched the Drilled Troops, under the command of the Vice-Minister Tanuma Gamba no kami, to chastise Takéda and his companions, and they also ordered the clans of the vicinity, as well as Ichikawa, Asaina and their friends, to render him active aid.

In the 10th month (October 31st—November 28th) the troops under Takéda and Fujita issued repeatedly from their fastnesses and attacked the forces of the Bakufu. The soldiers of Torii Tamba no kami fought well, and seriously impeded the operations of Takéda, whom the Bakufu's army had now completely surrounded. To add to his difficulties, the provisions began to run short, and some of his men had secret communication with his enemies. The

Bakufu therefore made an attack in force, and Takéda, resolving to proceed to Kiôto and make a complaint there, fell upon the besieging force with five hundred men, which were all that remained to him, broke his way through and reached Serata in Kôdzuké. On the night of the 11th December he profited by the darkness to cross the Toné gawa, and found his way on to the Nakasendô. The Bakufu despatched other troops in pursuit and issued orders to all the clans dwelling along that road to chastise him. As he entered the town of Takasaki in the province of Kôdzuké, the local troops turned out to attack him, but were unsuccessful. He then reached the province of Shinano, where he made a vigorous attack on the troops of Matsudaira Tamba no kami and Suwa Inaba no kami, who held the Wada pass, and putting them to flight eventually got into Mino. Having crossed the Kiso gawa at Ôta, he bivouacked at Kanô, and was preparing to march west and enter Kiôto, when the troops of Hikoné and Ôgaki took up a strong position to his front and barred the road. This forced him to change his route, and in the 12th month [1865] (Dec. 29—Jan. 26) he crossed over the Imaibôshi pass into the neighbourhood of Ôno in Echizen. The Kaga troops occupied a stockade at Kaidzu in the province of Ômi, and Takéda Iga despatched a messenger thither to say that he and his companions had been slandered by Ichikawa and others of the Yûki party, their fellow clansmen, and that having incurred the displeasure of the Bakufu, they wished to find shelter with Shitotsubashi, a relation of their prince, and lay the whole matter before him. This message was also embodied in a letter, asking for permission to pass through Kaidzu, but the Kaga troops refused.

Shitotsubashi Chiunagon, who was at Kiôto, had heard of the approach of Takéda and his followers, and having applied to the Imperial Court for leave to chastise them, marched at the head of some soldiers in the direction of Kaidzu, accompanied by the troops of Odawara, Kuwana, Aidzu, Chikuzen and several other clans. Takéda Iga addressed a letter to him, appealing for pity and consideration, but the Chiunagon would not listen, and wished on the contrary to attack him in force, so as to crush him completely; no resource remained but to seek shelter in Kaga, where it was refused to them. Takéda then addressed a letter, saying: "We are informed that your clan refuses to admit men who have earned the name of 'rebels, and we bow to your decision. We have repeatedly resisted the forces of the Bakufu on account of certain private disputes in our single clan; we have broken the august laws of the Empire and cannot atone for our offences. We do not hope to preserve our lives, and for that reason we submit to you in a body; but although we do not expect to live, there is one thing which still compels us to spend our breath in talking; it is the vile name of 'rebels' which has been applied to us. This is what we cannot bear with equanimity. We humbly pray you to take these our humble sentiments into consideration." In this way they asked that the stigma of rebellion might be removed. The Kaga clan forwarded the letter to the Bakufu, which placed Takéda and his followers in the custody of the local clans. Shitotsubashi then returned to Kiôto. The Bakufu confiscated the lands of Matsudaira Ôi no Kami and imprisoned his family in one of his *yashiki*. In the following month Takéda and the rest were all decapitated. Four years later the Takéda Party succeeded in taking the lives of Ichikawa and his associates, which event at last put an end to the dissension of the Righteous and Wicked Parties.

In the autumn of this year certain *rônins* assassinated Sakuma Shôzan in a street at Kiôto. Shôzan had in the year 1854 been condemned to confinement by the authorities of his own clan for complicity in the crime for which Yoshida Shôin was punished, but having been subsequently pardoned, was at this moment residing in the capital. He was constantly employed on business between the Court and the Bakufu, and was a strenuous advocate for the opening of the country to foreigners. He was constantly to be seen mounted on horseback with a saddle and bridle of foreign make,

(46.) The author did not foresee that the feud would break out again in the end of 1872.

and the hatred which he thus excited in the breasts of those whose object was to expel the barbarians was the cause of the event just mentioned. Common report attributed his murder to some Higo men.

In the same month the ex-Dainagon of Owari, commander-in-chief of the forces sent to chastise Chōshū, took up his quarters at Hiroshima in the west of Geishū. He demanded explanations from the House of Mōri, and met with an offer of complete submission. Some time before this, those *samurai* of the clan who had abstained from taking part in the attack on Kiōto had taken council together, and had either condemned to domiciliary confinement or to imprisonment Masuda, Fukubara, Kunishi and all those who had shared in the government of the clan at the time of the attack. They had also confined the prince and his son in a temple, thereby offending the general body of their fellow-clansmen, who stigmatized the authors of these measures as the Vulgar View Party (*Zokuron-tō*). The Vulgar View Party retorted by arresting their traducers and effectually put a stop to the expression of such opinions.

Such being the condition of affairs when the invading army appeared on the frontier, the Vulgar View Party destroyed the fences and gates of the batteries placed at the most important strategical points, and barred the doors of every house in the town. They then invited in the officials of the Bakufu, decapitated the three *Karō* and thirteen other prisoners, and delivered up their heads as an atonement for the offences they had been guilty of. These proceedings struck fear into the inhabitants of the town.

Owari, the Commander-in-chief, having received the report of the Bakufu officials, proceeded to pronounce sentence on the five *Kugēs* remaining out of the seven who had originally taken refuge in Chōshū. Of the other two, one had died there, while another had removed to a neighbouring province. The five were placed in the custody of Satsuma, Chikuzen and Higo, and they were forced to give guarantees of sincere contrition for the satisfaction of the Bakufu. In the 1st month of the 1st year of Kei-ō (Jan. 27—Feb. 25) the army was withdrawn to Osaka, and rumours became current that the expedition against Chōshū being over, the Shōgun would proceed in person to that city in order to determine the culprit's punishment.

During the same month Takasugi Shinsaku took up arms in the territory of the clan, which again became the theatre of commotion. When the Vulgar View Party originally placed the three *Karō* in confinement they had also tried to arrest Shinsaku, who escaped by a miracle and fled to Chikuzen. On hearing that the three *karō* and other members of his party had been put to death, his indignation was extreme. Having returned to Shimonoski with the intention of ousting the Vulgar View Party, and restoring the previous state of things, he despatched messengers to all parts to summon troops to his aid. So far back as 1863, when the House of Mōri began to plan the expulsion of the barbarians, Shinsaku had arrived at the conclusion that the luxurious *samurai* class was of no practical value in the field, and he obtained permission from the authorities of the clan to organize troops on a new system. This consisted in breaking through the prejudice which existed in favour of birth, in selecting strong able-bodied men from the common people as well from the *samurai* class, and in fixing the pay of the battalions which he thus formed at a high rate. The strictest discipline was enforced, and even the most ruffianly vagabonds willingly obeyed him. His troops were bold and valiant in flight, and went by the name of *Kiheitai*, or the "Irregular Troops." In the execution of these measures he was aided chiefly by Iriyō Kuichi and Kuzaka Gissuké, and the old abuses were rapidly reformed. The whole clan caught the infection, and large numbers enrolling themselves, raised Shinsaku, Kuzaka and Iriyō to the command. Kuzaka and Iriyō, however, had fallen at Kiōto, and when Shinsaku fled to Chikūzen the men dispersed into hiding. No sooner did they hear of his proclamation than five hundred men came flocking to join him. Having taken counsel with Ōta Ichinoshin, Yamagata Kiōsuké and others, Shinsaku attacked the government offices at Shimonoski, seized all the ammunition he could find, and ordered the rich merchants of the town

to supply him with money. Having collected a large quantity of provisions and arms, he next prepared to attack the castle of Hagi at the head of his troops.

The Vulgar View Party were terribly alarmed, and reported the outbreak of the insurrection to the Bakufu, and carrying the prince and his son into the castle, sent orders throughout the two provinces for the speedy chastisement of the rebels. The common people were also forbidden to sell food or clothing to the Irregular Troops, and finally a *Karō* named Awaya took command of the forces and marched to attack them. The Irregular Troops anticipated him, and inflicted a severe defeat upon the Vulgar View party, who thereupon brought more men into the field, and continued the fight for three whole days, but being finally worsted, were compelled to retreat and defend the castle of Hagi. Here they were immediately surrounded by the victorious Irregulars, who were on the point of taking the place by storm, when peace was arranged through the medium of a third party. Takasugi and his friends decapitated the chiefs of the Vulgar View Party and pilloried their heads in the camp. From this moment dissension ceased, and the whole clan worked for one common object. Takasugi and his friends carried off the prince and his son to Yamaguchi in Suwō, where extensive fortifications had been constructed in the year when the expulsion of the barbarians was first resolved upon. The two princes had been originally removed to this stronghold; but after the attack on Kiōto the Vulgar View Party had placed them in a temple at Hagi, and they were now carried back again.

Having thus far been successful, Takasugi and his friends took counsel. It was evident that the objects aimed at by the Bakufu in attempting to punish the clan would not be satisfied by the execution of the three *karō*, and besides it was certain to make a fresh attack as soon as it became acquainted with the recent proceedings. The only course left was to make a determined resistance, and if necessary, by laying down their lives, to soothe the souls of those who had preceded them in death. These ideas being communicated to their followers were received with universal enthusiasm.

In the fight at Kiōto it was the valour of the Satsuma clan which led to the defeat of the Chōshū men, a large number of whom had fallen into its hands. But the Satsuma men now began to regret the course which they had taken on that occasion. In face of passing events, idly to fight amongst themselves, and to wrangle over petty matters was a bad policy for the Japanese. It seemed much better that the Government of the country should be conducted from one centre, and that the nation should be united for the defence of the empire. They therefore treated the prisoners with great kindness, and loading them with presents, sent them back to Chōshū. When the occurrences just related took place, Saigō Kichinoské sent a secret messenger to Chōshū to negotiate a common understanding between the two clans. The Chōshū men deliberated together; they felt that of course victory could not be hoped for in a contest in which all the available forces of the Empire were ranged against an isolated fortress, but that all they could expect was, when their strength was finally exhausted, to perish with their household gods. If in a critical moment like this, when their existence hung but by a hair, they were to enter into relations with another clan, posterity would condemn them as cowards. Some, who acknowledged the justice of these arguments, were yet of opinion that to reject such a magnanimous offer as that of the Satsuma clan might seem ungracious. Besides it was not impossible that with such aid they might be enabled to preserve their own clan from destruction. It happened that a Tosa man, named Sakamoto Riōma, who was in Chōshū at this moment, supported these views, and his advice being followed, the enmity of the two clans was henceforth at an end.

Saigō had spent the time between 1854 and 1859 in Kiōto and Ōzaka. Being much dissatisfied with the course things were taking, and possessing definite views of his own, he gradually formed a party, but when Ii Kamon no kami came into power he returned to his native province. During his residence in Kiōto he had become intimate with a bonze of the monastery called Jōjiu-In, named Gasshō, a man of patriotic views. In the year 1858, when all

the men of spirit in various parts of the country were arrested, Gasshō was also captured, but succeeded in making his escape and fled to Satsuma, where he found concealment in Saigō's house. Having explained to the latter the state of things at Kiōto, he said: "Seeing that matters have to this pass, and that we shall all be killed, rather than die by the hand of some traitor, it is better to jump into the sea and make an end of ourselves." Saigō agreeing, they went secretly by night and threw themselves into the sea. Fortunately it was a moonlight night and a boat was just passing the spot. The boatmen, seeing what had occurred, saved them, and finding both to be perfectly insensible, applied all the remedies in their power. Saigō was recalled to life with great difficulty, but Gasshō was a corpse.\* When the Satsuma authorities heard of this they exiled Saigō to Ōshima, fearing the comments of the Bakufu. Before this Saigō had already been twice banished to Ōshima for some reason or another, and he now changed his name to Ōshima Sanyōmon, in allusion to his having visited that island three times. As a special favour he was afterwards allowed by the authorities of the clan to return home, and at the time when he sent the envoy to Chōshū he appears to have had a great share in the direction of affairs in Satsuma.

The Court and the Bakufu were as yet ignorant that Satsuma and Chōshū had entered into relations, and the former, hearing of the outbreak in Chōshū, sent repeated orders to the Shōgun to proceed to Kiōto. In the 4th month (April 25—May 24) the Shōgun again proclaimed his intention of chastising Chōshū throughout the empire, and the points where the two provinces of Nagato and Suwō were to be attacked were definitely mapped out. The Shōgun was himself to take the field at the head of all his vassals, and the troops were frequently exercised before him on the parade ground which had been formed at Komabagahara (near Yedo).

The ex-Dainagon of Owari had written a letter in the 5th month (May 25—June 22), to the Shōgun, as soon as he had heard of the affair, saying:—"Last year I reported that Chōshū had made atonement by inflicting capital punishment on his chief retainers, and yet your Highness is preparing to take the field in person against him. I confess I see no adequate reason for this course, for if he was justly accused of any crime, the whole Empire would declare that he ought to be chastised, and would march against him. It is not right wantonly to take up arms without manifest cause. Besides the very existence of the Tokugawa family depends on the result, and I pray your Highness therefore to give this matter your profoundest consideration before proceeding to act." The Shōgun was deaf to these remonstrances. Katsu Awa no kami also maintained that there was no just cause for going to war, to the great displeasure of the Shōgun's minister's, who suspected him of being in Chōshū's interest, and dismissed him from office.

In the intercalary 5th month (June 23—July 22) the Shōgun eventually started from Yedo by the Tōkaidō, and had an audience of the Mikado on the day following his arrival at Kiōto. He then proceeded at once to Ōzaka. The troops of the dependent *daimiōs* and the *hatamoto*s advanced by the Tōkaidō about the same time, but their march was greatly impeded by the swollen condition of the rivers consequent upon the heavy rains which had fallen. The port-towns were crowded with troops, and the last who left Yedo did not arrive in Ōzaka until fifty-three days after the Shōgun.

In the 6th month (November 18—December 17)\* the foreign representatives resident at Yokohama prepared to proceed to Ōzaka with the object of presenting a request

to the Shōgun. The Ministers, who were alarmed at the prospect of their presenting themselves in the vicinity of the Imperial capital, endeavoured to dissuade them, but the representatives declined to listen, and finally arrived at Hiōgo, whence they forwarded their letter. Shitotsu-bashi Chiunagon, Aidzu Chūjō, Ogasawara Jijū and others thereupon addressed a joint memorial to the Court, saying: "The foreigners have come up to the Home Provinces to request that your Majesty will signify your consent to the Treaties and to demand the opening of Hiōgo. They say that they have come to arrange these matters directly with Your Majesty, as the Bakufu is unable to settle them. Your servants will do all in their power to create delays, but unless the Imperial consent to the Treaties is given, the foreigners will not quit the Inland Sea. If we were lightly to use force against them, we might be victorious for the moment, but a tiny piece of territory like this could not long withstand the combined armies of the universe. We are not so much concerned for the preservation of the Bakufu as for the security of the throne. If the result be what we must anticipate, your people will be plunged into the depths of misery. Your Majesty's sacred wish of protecting and succouring your subjects will be rendered unavailing, and the Bakufu will be unable to fulfil its mission, which is to govern the country happily. Your servants cannot find heart to obey Your Majesty's order to break off foreign relations, and humbly pray that Your Majesty, deigning to take these things into consideration, will at once give your consent." The Court debated over the matter, and after having carefully weighed the political state, sent the two Tensō Asukai and Nonomiya to communicate His Majesty's consent to the Bakufu on the 31st November, ordering it at the same time to revise the hitherto existing Treaties. At the same time the opening of the port of Hiōgo was prohibited. It is said that this last order was given because the Satsuma clan had shortly before addressed a memorial to the Court remonstrating against the opening of Hiōgo. From the time when the Bakufu first concluded Treaties 1855 the whole country had been constantly discussing the matter with great eagerness, but the Imperial consent was now obtained for the first time.

The Shōgun, who felt severely the weight of domestic and foreign affairs, about this time sent in a memorial to the Mikado praying for leave to resign his office to Shitotsu-bashi Chiunagon, on the ground of ill-health. The Imperial Court expressed great sympathy for him, but refused his request, and urged him to settle the Chōshū affair without delay.

1866. In the 12th month (Jan. 17—Feb. 14) the Bakufu sent orders for a Chōshū *Karō* to come up to Ōzaka, and Shishido Bingo no suké came in obedience to the summons as far as Hiroshima in Geishū, where the Bakufu reproached him with the equivocal appearance which the late conduct of the House of Mōri presented. Bingo no suké gave full explanations, which nevertheless did not remove the suspicions of the Bakufu officials, who arrested him and placed him in the custody of the prince of Geishū. The Bakufu about this time despatched the Drilled Troops and the troops of the various clans to the western frontier of Geishū, with the object of taking measures against Chōshū, and they remained there in their quarters without moving until the beginning of spring.

In the 4th month (May 15—June 12) a report coming to the Chōshū troops quartered in the south of Suwō that the eastern forces were lying inactive in Geishū, a hundred and fifty men, disregarding orders, secretly left Chōshū, and seized Kurashiki in Bitchū, but the Bakufu's men in Geishū, hastening to the spot, attacked the band at Abekawa in the vicinity and put it to flight.

Orders had previously been issued by the Bakufu to all the clans, directing them to bring their troops into the field, but the Satsuma clan now sent in a memorial, protesting against the injustice of the war, and declining to furnish its quota.

The *Samurai* of the Chōshū clan had sent a letter to Geishū saying: "Since the prince and his son gave undoubted proofs of contrition in the winter of the year before last all the clans have been expecting to see the Bakufu behave with leniency towards them, but troops are daily arriving in your territory. This

(47.) This account is not quite correct. Saigō and the bonze were being conveyed across the bay from Kagoshima to Sakurajima in a boat under guard, and profiting by the inattention of their conductors jumped overboard. They were picked up by the boatmen, but the bonze was saved last.

(48.) The dates given are all incorrect. The English, French and Dutch squadrons left Yokohama on Nov. 1, carrying the English, French and Dutch Ministers and the American Charge d'Affaires, and arrived at Hiōgo on the 4th. Negotiations were commenced on the following day, and were terminated on the 21st by a letter from the ministers of the Shōgun, in which they enclosed a copy of the decree announcing the Mikado's general consent to the Treaties. With characteristic duplicity they omitted from this copy the postscript in which the opening of Hiōgo was forbidden and a revision of the Treaties also commanded. As there is no article in the Japanese language the omission of these two conditions made it appear that the Mikado had given his consent to the Treaties as they then stood, which was not his intention.

"causes great anxiety and excitement throughout our clan, and a hundred and fifty men who were encamped in the southern part of the territory secretly deserted on the 16th of May, with arms in their hands, and we do not know what has become of them, except that they went away by sea. It is not impossible that, believing false rumours, they may commit violent acts in a fit of desperation, for which the clan would be held responsible. We beg you, therefore, to arrest them, should they enter the limits of your jurisdiction. Please at the same time to communicate the contents of this letter to the Bakufu." Hereupon the Bakufu at last issued its commands to the House of Mōri, saying: "Although you have shown evidence of a submissive temper by inflicting capital punishment on your *karōs* and their advisers, and by confining yourselves within the walls of a monastery, you must be held responsible for having lost the art of ruling your retainers. Permission has therefore been obtained from the Imperial Court to inflict three additional penalties on you, namely, the forfeiture of one hundred thousand *koku* of land, the perpetual confinement of the chief of the clan and his son, leaving the succession to your eldest grandson, and the extinction of the families of the three *karōs*." A day was fixed for the answer to be sent in. The indignation of the clan knew no bounds. It was resolved to await the attack of the Bakufu and to try the issue of a resort to arms, and they purposely delayed answering in order to gain more time for their preparations.

The Bakufu had established its headquarters at Hiroshima in Geishiu, under the prince of Kishiu, Commander-in-Chief, and Ogasawara Iki no kami, Lieut. General of the forces, who issued their orders to the other divisions from this place. After waiting thirty days, and finding that no answer came, they decided that the judgment had been treated with contempt, and applied to the Imperial Court for leave to attack. The Imperial Court in reply bade them do their duty with all speed.

In the 6th month (July 12—Aug. 9) therefore, the Bakufu at last sent troops to attack Nagato and Suwō on all sides. The drilled troops, in conjunction with the troops of Kishiu, Hikōn, Takata and a naval division, advanced on the Geishiu side. The troops of Tottori, Matsue, Hamada, Fukuyama and some of Kishiu advanced by way of Iwami (or Sekishiu). Those of Higo, Yanagawa and Kokura, with another naval division were to act from Buzen (on the opposite side of the Shimonosēki Strait), while a detachment of the drilled troops and the Matsuyama troops attacked the island of Ōshima.

On the 13th July Ogasawara Iki no kami proceeded to Kokura to direct the operations of the Buzen column.

On the 19th Kōno Toda and some others arrived at Ōshima with a force composed of fifteen hundred infantry and the Matsuyama troops, all embarked in large vessels, and bombarded the shore, setting fire to the villages. The Chōshiu forces not replying, the eastern troops landed, attacked the Chōshiu barracks on the morning of the 23rd, and took them by assault. Takasugi Shinsaku and Yamagata Kiōsuké, commanding in Chōshiu, on hearing of the attack, despatched fighting vessels against the eastern troops, and the losses were about equal on either side.

On the 26th the Chōshiu forces invited an encounter by sending out a small body of men, who being attacked by the eastern troops, took to flight, and led them, flushed with victory, into the midst of an ambuscade. They were speedily routed, and throwing away their arms, took refuge on board the ships. Sakuma Ikkaku, a Matsuyama leader, was killed on this occasion. At midnight the easterners collected their defeated men, and returned to Geishiu. The Chōshiu men laughed scornfully at the cowardice of the eastern troops, and said they were not worth contending with.

(To be continued.)

#### KIYOTO AND ITS ENVIRONS.

(From a Special Correspondent.)

KIYOTO, March 30th, 1873.

I started from Osaka by native boat to pay visit to the second Kyoto Exhibition, and was glad to find that the journey could

be made with comparative comfort, as the wretched mat covered passenger boats of last year have nearly all vanished, and their places taken by others having the sides enclosed by either glass or paper sliding windows, so that some protection is now afforded against inclemency of weather. It is a fact not generally known that nearly all the boatmen engaged in the traffic between Osaka and Kiyoto are Geysiu men, who stay perhaps six months at time at this work, and these being replaced by new arrivals from their own country, return to their original agricultural or other pursuits.

I was told that the natives of this province of Setsu shirk the great labour required by this employment, as it is incessant and allows but few hours for repose and none for amusement; but the hardy Geysiu men cheerfully perform the work, being incited thereto by far better wages than they could earn in their own overpopulated province. The few river Steamers which ply between Osaka and Fushimi cannot now run owing to want of water in the river, but those who do not like travelling by boat will find a capital road all the way between the two cities, and can proceed by foot, horse, carriage or jinrikisha as they choose.

Both at Fushimi and Kiyoto the guards of last year were dispensed with, and my pass was not demanded at various places on the road as before. Indeed it was not until my arrival at Nakamuraiya's Hotel that I was asked to produce it, and then only that the proprietor might send information to the Kiyoto Fu of an arrival. I found, in my peregrinations about the city, that it was pleasant not to be bothered where ever I went with two or three boys dressed in uniform with "Guard" written all over it. In Kyoto, now, foreigners are treated precisely as they are at the open port, and the only policemen seen are those belonging to the Fu, dressed in a neat foreign uniform, and whose office seems to be a sinecure in this very orderly city.

The Exhibition this year is held within the hitherto sacred precincts of Gōsho, the former residence of the Mikado; and this fact alone causes crowds of natives to flock to see a place which up to this time has been strictly closed to them.

The entrance to the Exhibition is by the East Gate, where, on payment of five sen, natives and foreigners are alike furnished with a ticket of admission, the only distinction being that the passes for foreigners are printed in English on foreign paper, whilst those for natives are printed in Japanese characters on paper of the country. These passes have to be given up on leaving the Exhibition, failing which, double the price of admission is demanded.

I should mention that the Exhibition was opened, as announced on the 23th, but without any ceremony whatever. In fact the opening day found nearly all exhibitors unprepared, and carpenter hard at work. During my stay here additions and alterations have been made daily, and the whole now presents a far different appearance to what it did on the 13th.

Immediately to the right on entering, is a small building in which all the processes of making very common earthenware can be seen. A railed off path leads the visitors to the first Exhibition building, the Nai-shi-dohoro, and enables him to catch a glimpse of the Great Hall of Audience called the Shi-sin-den, situated in a spacious court yard to the left, and connected by a corridor with the private apartments within the inner wall. The Nai-shi-do-koro consists of a couple of two-storied buildings connected by passages, wherein the sacred symbols of the Mikado were kept, and at the entrance Japanese visitors are compelled to discard their clogs and sandals, and to put on slippers, for the use of which they were charged two Copper Cash per pair. Visitors walk round the verandahs or along the passages of this building—the exhibited articles being arranged within easy view in the different rooms—and are expected to proceed in one direction only, which is indicated at intervals by notices in native character.

In the first room, which is on the upper floor, a notice in French informs foreign visitors that all articles therein exhibited belong to H. I. M. the Mikado. They consist of sundry musical instruments, two handsome lacquered cabinets, a large bronze dish containing dried fungi, a magnificent lacquered and inlaid screen and a few other ornaments. The next com-

partment contains many very interesting objects, such as the kamuri or black gauze head-dress of Videyoshi, some ancient jewelled crowns in gold and silver which formerly belonged to Emperors of Japan, an embroidered dress with crest in gold which formerly belonged to Tokugawa, a badge of the Rising Sun in gold thread on a white silk ground which was worn by Kasonohi the celebrated general, various old court dresses, and sundry relics of Japanese celebrities. The third room, on the ground floor, contains old lacquered cabinets, writing boxes &c.; Chinese curios in tortoise shell, red lacquer and carved wood. Many of these articles are of exquisite workmanship, and will repay careful examination. A passage thence leads to the fourth room, which is on the upper floor of the second house. The first articles which strike the visitors attention are some drawing instruments and an orrery, made, as the placard attached states, by Mr. Ohno, a Japanese officer of the Imperial Mint. The orrery was made, I hear, by Mr. Ohno to prove that the late change in the Calendar made by the Mikado's Government was a necessary one, and does great credit to his skill. A very handsome fan made of red silk is close by, the handle and frame of which are of gold, the whole being profusely decorated with pearls. This fan belongs to the priests of Mi-yo-ho-ing, the temple in which the large figure of Daibutz is erected. Next are seen fine lacquered dress swords and bows and arrows which must have been for show only, as the latter are decorated with crystal and carried in peculiar lacquered quivers which look for all the world like envelope boxes. In the fifth compartment is the helmet of Hideyoshi and a sword which was used by him, placarded, however, "Taiko's bayonet." A long, straight, double edged sword is peculiar, but the rest of the arms exhibited—swords, spears, bows and arrows &c., are not very interesting. There are two or three Malay creeses among this lot, variously styled in English and Japanese. Descending again to the ground floor the sixth room is reached, wherein are various suits of armour, a ponderous bar of iron weighing about 25 lbs. which is labelled "an old walking stick," and a quiver of arrows which belonged to "Oda, Master and predecessor of Taiko." Passing by some bronzes containing flowers and branches of trees tastefully arranged, and a long table covered with inkstones of all shapes and sizes, the door of exit from Nai-shi-dokoro is reached and the visitor finds himself once more in the court-yard.

The road now to be followed is indicated, as before, by bamboo railings and notices in Japanese, and leads past the river wall into, and across the garden in front of the Mikado's private apartment. The first building to the left is the Ko-go-shio, or Hall of Audience to which only a privileged few were admitted, and the same corridor which extends from Shi-siuden to this hall, connects it with the next range of buildings containing the private apartments, called O-tsune-goten, beyond which the opposite boundary wall is reached. The external appearance of the Palace is not at all striking, and the garden is small and uninteresting, deriving its only charm from the stream of water which runs through it, and which expands into a miniature lake in front of Ko-go-shio. The whole place struck me as being very circumscribed, considering that it was here the sovereign of this country passed nearly all his existence. I could not help thinking what a dreary life he must have led, "cribbed, cabined, confined" in so limited a space.

Passing the inner wall the path skirts a riding course, formerly used, I suppose, by the Court, but where, now, wretched hacks can be hired for a trifle by those who are fond of displaying their horsemanship in public. Leaving the riding course on the right, and crossing a wide open space, the visitor arrives at O Hauna-go-ten, a building lying at the back of Otsu-ne-goten and connected with it by a corridor, being the place where the Mikado's *Kisaki* used to live, but now used for part of the Exhibition.

Immediately on entrance are to be seen some bright Silk piece-goods, silk cord and thread, musters of raw silk from various parts of the country, and dolls beautifully dressed to represent celebrated characters in Japanese history such as the Empress Juigoo, Kwanko, Kusunoki &c. Next comes a stand of curiously carved figures in wood, mostly belonging to temples in or about Kiyoto, which present all the appearance of great age. Among these are several masks which were used

by Kuges at the Court theatrical representations called *Nô*. Turning to the right the visitor passes samples of silk brocades made up as screens, some of which, I believe, were exhibited last year. Opposite, to these are a few specimens of paper, and considering what wonderful varieties of this material Japan produces, the show made can only be considered deplorably meagre.

Passing embroidered crapes suspended from the walls the visitor next arrives at the Silk, Satin, Velvets, Crape and Brocade department, which falls far short of the Exhibition made at Chio-iu last year. The show of tapestry is also very poor and this is particularly to be regretted, as those exhibited in 1872 claimed marked attention and admiration from all who saw them.

O Hama-goten is by no means a suitable place in which to exhibit anything, as the rooms (such as are used), and passages are small and dark, and consequently the display of silk fabrics loses much by this fact.

A long dark gallery, hung on either side with native pictures, leads past some stalls containing a few M. S. S. and illustrated books to a large but still darker room wherein is displayed (?) a very large piece of tapestry—the only admirable one in the Exhibition, which is indeed a *Chef d'Œuvre*. Here can be seen artists busily at work on fans and strips of paper, dashing off, with wonderful rapidity, very effective sketches which can be purchased at a cheap rate.

Returning down the gallery the visitor turns sharp to the left, when attention is at once arrested by three native looms in full work, each on some special pattern, in silk or velvet. At the back of the room girls are employed reeling the silk or doing such other work as may be requisite. Opposite to the looms are two or three men engaged in designing and executing patterns on velvet, which they do with great rapidity and exactness, and, of course, by hand.

A long passage, being the connection between O Hama-goten and servants quarters, is used for the exhibition of cereals, dyes, tobacco, sweetmeats, fancifully arranged in boxes, stone and wooden nidskis, combs, needles, toys, porcelains, &c. I was much surprised to find the show of porcelains so small, as it is the principal manufacture of Kiyoto, and there are two or three kinds peculiar to the place. At the end of the passage there is an ambitious display of designs in plaster, and then a long building, formerly used as servants' quarters, is reached, the verandah of which forms the promenade, having the compartments in which the various articles are exhibited on the right, and a miserable open yard on the left. Here are to be seen geological specimens of no particular value, some good pieces of old "Chinese blue" porcelain, old bronzes, a nondescript collection of articles of no use or beauty but valuable only for their great age, ornaments in silver, a wretched collection of natural history specimens, some furs and handsome feathers. A small room furnished with chairs and tables, and having jars of the celebrated Uji tea arranged on shelves round the wall, comes next in order, and the foreign visitor will probably find that Mr. Minobe, the tea merchant, "on hospitable thoughts intent," will be ready to invite him to a seat and give him a cup of the refreshing beverage.

A collection of old coins completes the Japanese part of the Exhibition; after which comes a heterogeneous collection of California manufactures—embracing glass bottles, kerosine lamps, stoves, agricultural implements, carriages, harness, candles, wines and spirits, and some particularly gaudy suites of bedroom and drawing room furniture. Some few other articles, exhibited by foreigners, occupy the last compartment, and the end is reached. Passing out of the building, through a court yard where in are a few stalls devoted to the show of fans, bronzes, crockery ware and flowers in pots, the visitor leaves the palace grounds by the west gate, some distance from where he entered.

On the whole the display is a creditable one and well worth a visit; but, as daily additions are made, the Exhibition is likely to be seen with much more interest in a month's time than it is now. The buildings in which it is held, however, are by no means suitable for the purpose. They admit of no lounging about, as, owing to the narrowness of the passage

ways, visitors are required to proceed in one direction only. I did not see a seat throughout the Exhibition which I could have made use of. Nine o'clock is the hour for opening, and the doors are supposed to close at four; but it is not until long after that hour that the last visitor leaves, as those who enter the east gate just before four o'clock, have a long way to go before they reach the exit at the west. The Japanese have visited the Exhibition in large numbers already, averaging 2,000 on ordinary days and nearly double that number on holidays—which, in Kiyoto, are frequent enough.

Refreshment stalls, theatrical booths &c., are erected in great numbers outside the Palace, and successfully offer attraction to the crowds visiting the exhibition even now, though the weather is cold and miserable and snow storms are frequent. The roads near Gosho bid fair, by and bye, to rival Epsom downs on the Derby day.

On the way back to Chiōsin is the entrance to the "Bird and Beast Show." This is held in the garden of a palace belonging to the Imperial family, which is well worth seeing even now, and promises to be lovely in about a month's time. The show of birds and beasts is not particularly good. The former consists of domestic fowls, a turkey, accommodated with a spacious cage all to himself, a few guinea fowls, a pretty aviary of small birds and a stand of various cage birds. Rabbits, monkeys, a badger and some deer form the show of beasts. Some foreigners visiting this place one day saw a deer, with both its hind legs badly fractured, exhibited in this state in a cage. They purchased the poor brute from the proprietors for three rios and had it slaughtered for humanity's sake. It is a shame that no supervision is exercised over inhuman exhibitors by the officers in charge of the grounds, and such shocking cruelty prevented. For admission to this place the sum of 1½ sen is paid, and entrance made by a gate at the south and by another at the west of the garden.

Next month, when the weather will be more genial, there will be plenty of amusements offering of various descriptions, calculated to make Kiyoto attractive to pleasure seekers. At present the city and environs have not recovered from the effects of winter, but as the reviving touch of spring is felt, they will quickly resume all those charms of woodland scenery which render a visit to Kiyoto so attractive. I will now proceed to give, for the benefit of such of our readers as may make an excursion to this place, a short account of the most interesting places to be seen in or about Kiyoto, naming them in such order as will best economise time in visiting them.

Should a visit be made to the Exhibition at Gosho about 9 a.m., there will be plenty of time to see everything comfortably and thoroughly; and to call at the Bird and Beast Show on the way back, and yet return to tiffin at Chio-iu hotel about mid-day. Supposing this course to be taken, I would recommend the following trip for the afternoon, which I made myself, as follows. Leaving the hotel, I first went to Chio-iu, a little farther up the hill, which is, perhaps, the largest Buddhist temple in Kiyoto, and certainly carries off the palm for beauty of situation. After a visit to the temple gardens and a sight of the largest bell in this part of the country, I passed out of the South gate of the enclosure, and, proceeding a few hundred yards, came to an avenue of trees which forms the approach to Higashi Ohani, a temple, further up the hill, well worth a visit. Following a road due south I passed through Kodaiji, a temple bearing the evidence of having been an important place at one time, but now much neglected; and passing Yasaka temple and pagoda, I began to ascend the hill towards Kiyo-midzu and found myself at once in the heart of the pottery districts. A walk of a quarter of a mile, past shop after shop filled with all sorts of specimens of ceramic art, brought me to Kiyo-midzu, a temple dedicated to Kuanon and the most popular one in Kiyoto. It is situated well up on the hill side, commanding a lovely view of the valley in which the city lies, and is a most interesting place to visit, especially on a holiday, when the natives flock to it in thousands. I observed some very curious native pictures in the principal building—one, apparently of great age, representing an interview between Japanese and Foreigners (probably Dutchmen) on board some vessel. Leaving Kiyo-midzu I took a path to the left which led me down the

hill again but still in a southerly direction, and passing through the principal cemetery of Kiyoto, and the enclosure of a temple called Nishi Otami, I found myself at the Megani-bashi, (a stone bridge with two circular arches, whence its name,) and on level ground again. Continuing on for a short distance and then turning to the left through the district of coppersmiths, I made my way to the temple of Daibutz, which is perhaps half a mile from Megani-bashi. After what I had seen at Kamakura and Nara, I expected to find an equally fine figure here, but was much disappointed at seeing a wretchedly ugly bust, about 60 feet high, made of wood and covered with tawdry gilding. The whole place is in a delapidated condition and shows signs of neglect for years past. The original figure of this Daibutz was made of bronze and is said to have far surpassed those of Kamakura and Nara in size. It was erected by Hideyoshi, but his son is reported to have broken it up and converted it into cash, in order to furnish means for carrying on his wars. A few fragments of the original figure lie in the court yard, in which can also be seen a large bell, somewhat smaller, however, than the one at Chio-iu. Directly opposite the entrance to Daibutz is a large mound of earth, surmounted by a small stone monument, under which Hideyoshi buried the ears and noses of the Koreans slain by his troops. This mound is called Mimi-zuka. Proceeding still south I arrived at the Temple of Renge hoin, the largest building of which, San-jiu san-gendo, is, as the name denotes, 33 ken long, and contains one thousand idols. From here can be seen Shen-m'u ji, a temple, situated on a hill still farther south, where several Mikado's lie buried. If time will admit a visit can easily be made to this place, but I returned to the hotel by a straight road, passing Kenninji on the way, a temple which was used for part of last years Exhibition.

Supposing a whole day to be devoted to the next trip, I would recommend the following course being followed, viz:—proceeding first by jinrikisha or otherwise to the N. E., passing to the N. W., visiting several places on the way and finally returning through the city to Chio-iu. I myself found that the different places, taken in the following order, would best suit time.

Beginning with Shimo-gamo, a Shintoo temple containing the tomb of Iin' moo Tenno, which is situated to the N. E. and approached by a splendid avenue of trees, I next proceeded by a very good and wide road along the bank of the Kamo-gawa to Kami-gamo, another Shintoo temple somewhat superior to Shimo-gamo, and just as delightfully situated. There is a long, straight and well turfed race-course here, which is much patronized by the Jockey Club of Kiyoto. I next went on to Dai-to-ku-ji, a famous Buddhist temple well worth a visit, and then to Kin-ka ku ji at the N. W. of the city. This place was established by Ashikago Yoshimitsu more than 450 years ago, and, owing to its fine garden, is at present one of the loveliest spots about Kiyoto. Leaving Kin-ka ku ji I next went to Omura Gosho, which is both a temple and a country residence of the Mikado, but has now a very neglected appearance; and thence to Kitano, a temple dedicated to Kwanko, having a very handsome pair of marble lanterns at the entrance of great extent, and particularly rich in votive lanterns in bronze and stone. Walking round the principle building one hundred times in succession is supposed to confer some peculiar grace, and judging by the constant stream of devotees undergoing this penance it must be a highly popular one. From here, a detour can be made through Nishi-jon, the Spitalfields of Kiyoto, but no more can be seen at any of the private weaving establishments than can now be more conveniently seen at the Exhibition. Directing my course past the castle I then returned to the hotel at Chio-iu. This trip will occupy the whole day, so that those making it should take care to provide themselves with refreshments before starting.

The next excursion I made was not so long as the above. From the hotel I went to Yoshida, a Shintoo temple to the north east of the city, and then to Gin-ka-ku-ji, a small edition of Kin-ka ku ji founded by the same Tycoon. It is a nice retired nook right under Dai-mon-ji yama, the hill on which the present Kubo-daishi cut the colossal character

"Dai." Turning my face homewards again I went by a pleasant road to Shini-yoda, a Buddhist temple celebrated for its maples and a fine bronze figure of Buddha about eight feet high, and then proceeded to visit Kurodani, another very fine Buddhist temple. There is a very handsome gateway here from which a good view can be obtained down the valley through which the Kamogawa flows towards Fushimi. In front of the principle building is the tree on which the warrior Kumagai hung his armour when he gave up warfare and became a priest. The armour itself is kept within the temple and shown to the people on special holidays, which, however, only occur about once in three years. From Kurodani I went to Nan-jon ji, a small decayed temple but situated in a fine park, and then back to the hotel.

Nishi Hon gan ji, the large temple to the S.W. of the city where part of the Exhibition of 1872 was held, should certainly be visited, as the various temples within the enclosure are fine stately buildings, and the interior of most of them far handsomer than that of any building, temple or otherwise, to be found in Kiyoto; what is called the permanent Exhibition is held here, but only opened on certain days of the month. The collection of articles consists of pictures, M.S.S., books, screens, fossils, arms and armour, and a medley collection of old curios. Hideyoshi's private garden and the building it contains, with several relics of this great favourite of the Kiyoto people, are shown for a small fee.

Arashiyama on the Katuragawa, and to the west of the city, is a great resort of the natives in spring, who go there to admire the sakura in blossom; but it is at least six miles from Chio-iu. From Marui-yama, immediately behind Chio-iu a lovely view can be obtained which will amply repay the toil of ascending the hill.

Of course I do not pretend to say that the places I have enumerated are the only ones worth visiting, but I venture to think they will be found most interesting to those visitors to Kiyoto who have not unlimited time at their command, and who are not antiquarians or well versed in Japanese history.

A visit to Lake Biwa and back can be made easily in one day, if necessary; but as the road to Otzu is too heavy for jinrikshas, the journey must be made by kango, horse, or on foot, the distance being about seven miles. The lake at Otzu will perhaps be disappointing to some, as the shores there are flat and somewhat uninteresting, but if time will allow, a trip along the western shore should be made. High hills, beautifully wooded, slope boldly down towards the lake, and afford delightful sites for numerous temples. The famous Matz at Kara saki is on this shore, the branches of which run out laterally for about 30 yards, occupying a space altogether of about 180 yards in circumference. A good view of the lake and town of Otzu can be obtained from the temple of Mi-edera. If possible a visit should be made to Seta, about four miles from Otzu hotel, where the Uji-gawa flows out of the lake. The temple of Ishi-yama is within easy walk of Seta, and is very well worth seeing. Those who like walking cannot do better than proceed on foot from Ishi-yama to Uji, but must be prepared for about four hours hard work. At Uji there are very pretty tea houses on either bank of the river, where delicious trout can be obtained. Uji lies in the very heart of the tea district and is within easy reach of Fushimi by boat, from which place a return can be made to Kiyoto by jinriksha, or, if need be, a boat can be engaged for return to Osaka. The Kiyoto Fu have given the monopoly of letting boats for foreigners' use to one house in Fushimi, so that rates are now about 50 per cent. higher than when I passed through first; but I am happy to say that the charges for coolies, jinrikshas, etc. tho' still much higher than they should be, are not quite so extortionate as they were last year.

## Shipping Intelligence.

### ARRIVALS.

April 7th, *Relief*, American steamer. Corning, 795, from Hakodate, Ice and General, to P.M.S.S. Co.

April 12, *Madras*, British steamer, Bernard, 1,185, from Hongkong, Mail and General, to P. & O. Co.

April 12, *Osaka*, British barque, Davidson, 527, from London, General, to Shaw & Co.

April 11, *Europa*, American Ship, McKenzie, 323 tons, from Honolulu, Whaling gear to Captain.

April 11, *New York*, American steamer, Furber, from Shanghai, April 8rd, General, to P. M. S. S. Company.

### DEPARTURES.

April 7, *Relief*, American steamer, Corning, 795, for Kobe, Ice, despatched by M. M. Co.

April 8, *Malacca*, British steamer, Gabry, 1,037, for Hongkong, Mails and General, despatched by P. & O. Co.

April 9, *Jingheus*, German barque, Ulderup, 280, for Kobe, Ballast, despatched by the Captain.

April 9, *Catherine*, Danish barque, Fischer, 314, for Amoy, Rice, despatched by Walsh Hall & Co.

### PASSENGERS.

Per P. M. S. S. *Relief*, from Hakodate.—One Chinese and 44 Japanese.

Per *Costa Rica*, for Hiogo.—Messrs. O. Nanaki, W. H. Havries, M. Mammelstein, Batteque, R. Mitsche, E. Dillon, Oliver Smith, Mrs. E. Smith, and 37 in the steerage. For Nagasaki, E. L. Denton, P. S. Goodison, H. E. Rodriguez y Munoz, F. J. Van der Pot, and one Japanese in the Cabin. 31 in the steerage. For Shanghai, Messrs. F. D'Iffanger, R. Mackellar, R. S. Schwabe, W. H. Macomber, Miss Colburn, Miss Dumont. Messrs. Boles, Kerr and Vogel, and six in the Steerage.

Per British steamer *Madras* from Hongkong. Mrs. Aldrich and inf., Messrs. Cook, Gros, Laiyon, Ord and Thompson, and 21 Chinese on deck.

Per *New York* for Yokohama.—Messrs. W. Gaetze, W. Wulff, H. E. Cargill, B. J. Cooper, A. Venede, H. M. J. Brown, P. O. Cameron, E. Fischer, F. D'Iffanger, M. Beaufort, W. Jaffray, the Governor of Tokio and lady, M. Ginsing and wife, Mrs. Brooks and child. Messrs. Smithers and Chalk, 26 Japanese officers and 173 in the steerage. For San Francisco.—Messrs. F. Gabain, T. J. Delmaine, J. Von der Heyde, H. Melchers, H. Petersen, and W. S. Potter.

### CARGOES.

Per French steamer *Menzaleh*, from Hongkong.—Messrs. Reiss & Co, 126 packages Sundries; Armbruster, 1; Grosser & Co., 12; Chinese, 388; Butterfield and Swire, 126; Weintraub 6; Kniffler & Co. 78; Findlay Richardson & Co., 7; Maron & Co. 10; Fourcade, 28; Ahrens & Co., 46; Societe Anonyme, 65; A. Montfield, 1; Abegg Borel, 1; Schoene, 1; Favre Brandt & Co. 2; Renaul, 34; Joubert, 20; Butzow, 1; A. Favre, 39; Schinne & Frencke, 5; Perregeaux, 1; Degron, 1; Van der Heyde, 2; Maillot, 1; Dell'Oro & Co. 10; S. Evers, 1; Moulson, 1; Groulouse, 1; Lissa Bros. 1; Herman Poel 1; Benjamin, 1; Macpherson and Marshall 110; Davidson, 1; Walsh Hall & Co. 2; Kuchmeister & Lehman, 1; Smith and Westphell, 13; Lenz, 14; Japanese 17; Hecht Lilienthal & Co., 88; Siber and Brenwald 1; Gutschow, 14; A. Meier, 11; Valmale Schoene, 1; Augustino Heard & Co., 10; Major Kinder, 1; A. Berenger, 1; Perquinot, 2; Moulson, 1; W. Carstem, 1; Schoda, 3; Morff, 12; Sigrist, & Pradier, 1; Netherlands Co., 80; Jacquemot, 1; H. Grauer, 4; G. Cland, 1; Scotti, 2; Favre Voight, 19; Cocking and Singleton, 39; S. Marcus, 2; Joseph, 12; Hughes & Co., 20; Mourilyan, 8; G. Glass, 34; Lane Crawford & Co., 1; Robertson, 1; Shaw & Co., 16.

Per British steamer *Malacca*, for Hongkong:—  
Silk..... 172 bales.

## Summary.

THE following have been the mail arrivals and departures since the publication of our last OVERLAND EDITION. Arrivals:—May 26th, P. M. S. S. Co.'s *Colorado*, from San Francisco; M. M. Co.'s *Menzaleh*, from Hongkong; June 3rd, P. & O. Co.'s *Araca*, from Hongkong; June 4th, P. M. S. S. Co.'s *China*, from Hongkong. Departures:—May 27th, P. M. S. S. Co.'s *Colorado*, to Hongkong; May 28th P. & O. Co.'s *Bombay*, to Hongkong; June 4th, M. M. Co.'s *Menzaleh*, to Hongkong; June 5th, P. M. S. S. Co.'s *MacGregor*, to San Francisco; June 7th, P. M. S. S. Co.'s *China*, to San Francisco.

The joint Memorial of Inoué Bunda and Shibusawa Shikégasu has been the theme of much discussion. It has been returned to them by the Government on the grounds that its allegations are unfounded, and a statement has been promised which shall more accurately reflect the financial position of the Empire. The main ground on which the accuracy of the memorial has been impugned is the estimate of the value of the *koku* of rice, the unit of the revenue. This has been placed by the Memorialists at \$2.75, while it has formerly always been estimated at \$4.00; nor does there seem to be sufficient ground for the lower figures.

The Annual Regatta was held, as is usual, on H. M.'s Birthday. Although an excellent programme had been prepared by the Committee, the unfavourable state of the weather interfered very largely with the sports of the day, some portions of which were, by reason of the heavy sea prevailing, postponed to a later day. One or two sailing and rowing matches have since taken place and have afforded much amusement. The interest taken in the races by the Japanese was very noticeable.

The Rinderpest has broken out on the Government Farm superintended by General Capron. Thirty animals have succumbed to it, but it is hoped that the disease has for the present been subdued. It is supposed to have been introduced into the farm by native cattle bearing its undeveloped germs.

The Government propose to introduce a new measure for the reduction and equalisation of the land-tax; and to increase the burden of taxation to be borne by the mercantile class.

The Medical Department of the Japanese Army has been abolished.

In view of the large expense involved in re-building the Castle of Yedo, The Tenno has signified his desire that the work of re-construction should not be proceeded with.

In steaming up the Bay on the 25th instant, the *Colorado* came into collision with the Japanese barque *Saturnus* and received some injury.

The Exhibition at Kiôto continues open, and attracts large crowds of visitors to the ancient capital of the Mikado.

The large Escort which accompanied Shimadzu Saburô has returned to Satsuma. The ancient Chieftain remains in the capital.

Mr. Berthémy formerly French Minister at Peking who has been appointed to the Court of Yedo, is shortly expected to arrive.

The execution of seven Japanese criminals for offences with violence, took place at Yokohama on the 26th instant.

The reception given by the Viceroy of Chihli to Soyéjima, Ambassador to the Court of China, is stated to have been of unusual splendour. A review was subsequently held in his honour.

A cricket match was played on the 30th ult., between an eleven of the *Iron Duke* and the Garrison, and eleven of the Yokohama Cricket Club. It was a drawn match, but arrangements have been made for a return game.

The rabbit-mania is dying out.

A canoe club under the designation "Royal Ulster" has been formed in Yokohama.

The frost of the 26th April is alleged to have inflicted severe injury on the mulberry and tea plants in various districts. The prospects of the crop are, it is stated, prejudiced in consequence.

A number of specimen bank notes have been purloined in transitu from Ozaka to Yedo.

A government proclamation intimates that dancing and music at religious ceremonies are to be allowed, for the future, to all classes. Academies for instruction in dancing have also, it is said, been opened.

The Government has ordered that for the future each *Ken* shall send to the Treasury one-half of the taxes levied.

Mr. Gavin Ness has been admitted to practise in the Provincial Court of Yokohama.

The Kobé papers state that burglaries are becoming more frequent, and that some cases of pocket-picking have been recently reported.

A meeting of the shareholders of the Bluff Gardens was advertised to take place for the purpose of considering the position of the property, but the scant attendance did not permit of business being proceeded with. The gardens are some \$1,200 in debt for ground-rent, and the Japanese Authorities are pressing for its payment.

A serious outrage has been committed upon a foreigner by the Japanese police of Kobé. The matter is now under investigation.

The S. S. *Cyphrenes* called at Yokohama en route for San Francisco with a large number of Chinese labourers.

The Engineer-in-Chief, V. Boyle, Esq., has proceeded to Kobé on business of his department. He travels through the interior.

The Japanese are commencing to use wheaten bread. Several bakeries are established in Yedo.

The country people are engaged in harvesting a portion of their grain crops, and are preparing to plant out the young rice. The weather during the past fortnight has been moderately warm, and copious showers have fallen at night.

The Import business continues dull. Rice has advanced largely in price. The Tea crop promises moderately well; but it is alleged that the Silk crop will not be as large as usual.

THE MEMORIAL OF INOUE KAORU AND  
SHIBUSAWA SHIKÉGASU. No. 2.

IN the few words which closed our article of last week upon the Memorial of INOUE KAORU and SHIBUSAWA SHIKÉKAZU, we touched upon the reasons which had operated in depriving it of some of the weight due to its merits and its source. The policy of the ex-Minister to which alone we referred was formerly made the subject of repeated and earnest remonstrance in these columns. We believe that we demonstrated its fallacy on economical and political grounds, and cannot easily be persuaded that our remarks, which coincided with the almost universal opinion of the best authorities in this community, could have remained unknown to the ex-Finance Minister. In our articles of the 3rd and 24th of February last year we argued the whole question on grounds of Political Economy drawn from the first masters of the science, while in that of the 20th July we showed how much damage was done to the Government by a course not alone economically unsound, but calculated to evoke national jealousies and to alienate from the authors of so mistaken a policy the regard and confidence of foreigners. Have the results of this policy given any contradiction to our remonstrances, or tended to impair such weight as may have attached to them? May not the somewhat sceptical reception accorded to the protestations of disinterested patriotism contained in the Memorial, be accounted for by the fact that the world views but coldly regrets of the sincerity of which it is not entirely satisfied?

The change from a silver to a gold currency was also made during Mr. INOUE's tenure of office, and this, too, has always appeared to us, for reasons which we have before given, to have been a measure taken against the unanimous protests of all those who best understood the interests of this country and were most desirous of furthering them.

But we shall be more just to Mr. INOUE than he has been to himself, and shall endeavour to state in a few words what services he has rendered to this country in his capacity of Finance Minister, so far, at least, as we have been made aware of them. We believe, then, that he has been most resolute in insisting upon the maintenance of a gold reserve to represent the large issues of paper money made since the Restoration, and his fixed determination on this point has done much to preserve and increase the deposits of gold existing at present in the Imperial Treasury. He has insisted on the necessity of redeeming the promises of the Government in respect of the paper currency, wisely holding that no confidence would be reposed in any Administration which neglected this paramount duty. Equally resolute has been his opposition to that tendency in the Cabinet to introduce unnecessary and premature innovations which could only embarrass the finances without advancing the real welfare of the Empire. We believe we are correct in saying that his absence from the Treasury some months ago was the practical protest offered against this tendency, and that his resignation of office would have been the consequence of any further resistance of his views. His opposition to any further issue of paper money has likewise been firm and wise, and for these services the country owes him gratitude.

But we are wholly at a loss to reconcile the facts contained in the Memorial under consideration with the two statements to which we drew attention last week, and which must have been made at least with the cognizance, if not by the orders or under the authority, of the ex-Minister. The statements were given to the world at a

time when it was of the highest importance to the financial reputation of Japan to stand well with European capitalists. She wanted to borrow, and may not have been undesirous to throw around her Mission, then abroad, the *éclat* which would naturally attach to the Representatives of a well-governed, progressive and prosperous Asiatic State. The motive is obvious, and the action which represented that motive was attended with only too much success. But so surely as credit is the most delicate, susceptible, and evanescent of qualities—so surely as it reposes upon confidence, and the veracity and stability of those to whom it is accorded,—so surely will the credit of Japan suffer from the prodigious contradiction presented by the announcements made to the world a few months ago and the statements contained in the Memorial of the ex-Minister and his colleague. Nothing can be more unpleasant and invidious than the duty imposed on us of exposing contradictions of this nature, and of appearing to pry into the delicate secrets of the nation whose shores afford us hospitable shelter. But the relations in which Japan now stands to Europe forbid silence in such a case, and every fact connected with this strange event must be rigidly examined.

What credit then must be given to the alleged facts contained in the Memorial? It is, as has already been shown, utterly at variance with the previous manifesto made under the same authority. It has been put forward under circumstances, and in a manner, which are, to say the least, highly equivocal, and the pretence which has been urged that it was a document written for the closet of the Emperor alone, will assuredly impose on no reasonable being. Is it conceivable that the authors of such a document, intending it for the Imperial eye alone, would leave a copy of it within reach of any subordinates whatever? Is there the smallest probability that it would be addressed to the EMPEROR, who must at once refer it to his Cabinet, and obtain their advice and opinion upon it? Was there ever so lame a defence made of such an act? One hypothesis alone will explain it. The ex-Finance Minister, anxious to show that he disagreed *in toto* with the policy of the Cabinet, wrote this Memorial or caused it to be written from his notes,—for the abundant Chinese quotations and Chinese modes of thought which it contains and exhibits, declare it the work of an accomplished scholar—and, rightly thinking that if published in one of the Japanese newspapers it would attract the attention of foreigners, and thus produce a public discussion of the points he was most desirous to urge, he took these means to accomplish his end. With this hypothesis all the facts connected with the appearance of the Memorial are in harmony. By the other which has been put forward, not a single one of the facts is explainable. That the ex-Minister has in his service, or at his beck, some graduate in casuistry, in faith unfaithful, and falsely true, is not improbable. But he will do well to discard assistance of this kind. Its nature once disclosed, all its power vanishes, and the world henceforward values it at its true rate.

But are the alleged facts contained in the Memorial true? The credit of its origin has already been largely impeached by the fact that its author, not eight months ago, must have placed in the hands of the Loan Commissioners sent to Europe a statement of a wholly different nature. "Previous character" must therefore be adduced here as evidence, and that evidence is very damaging. We may go further and state our belief that the Memorial has been returned to the ex-Minister, on the general ground that the statements it contains are untrue. It is said that the debts have been

exaggerated, the revenue under-estimated, and the expenditure over-rated, and that though the state of the national accounts does not admit at this moment of an accurate balance being struck, the Government will be prepared at no distant date to show that the estimates lately put forward under the names of the ex-Finance Minister and his colleague, have not that foundation in fact which would justify the temporary disturbance of its credit which the allegations contained in the Memorial are calculated to cause. We sincerely trust it may be so, and would once more insist on the fact that nothing will avail the Government of Japan in the eyes of the European nations but a truthful account of its actual financial condition. Much will be pardoned to the difficulties incidental to recovery from revolution, and the dangers arising from rapid transition. The sympathies of the world are largely with the country, and will be extended to it in spite of occasional error and the grotesqueness which attends it. But those sympathies will be withdrawn from it if any such contradictory representations as those which we have now been discussing are allowed to find a place in its policy and all that confidence which the ready subscriptions to its late loan prove to be at its disposal, will be disturbed and dissipated beyond the possibility of revival.

THE MEMORIAL OF INOUYÉ KAORU AND  
SHIBUSAWA SHIKEGASU. (No. 3.)

THE circumstances connected with the publication of the recent Memorial of the Finance Secretaries do not become more clear as the analysis of them proceeds. What are the facts? Somewhat less than a year ago, the Government, desirous of negotiating a Loan, despatched two Commissioners to America for that purpose, one of them an American, so profoundly ignorant of the relative financial conditions of the various States of the world, that he imagined such a loan could be raised in his own country on better terms than in Europe, the other a native of Japan who must not be greatly blamed for having embraced the same ridiculous view. That this blind leadership of the blind should have had its predicted and inevitable result was as certain as that night follows day, and the Commissioners may deem themselves fortunate that they were picked out of the ditch with no worse consequences from their fall than lost reputations for judgment, and some diminution of the pocket money they carried with them. But, in addition to their credentials, they were the bearers of a document purporting to be a financial statement of the affairs of this country, showing an annual surplus revenue of some £800,000. This document was embodied in an article upon Japan in *Blackwood's Magazine*, which, whatever else it did, violated that unity of idea and form inculcated in the first four lines of the *Ars Poetica*, by joining to a very good sketch of the history of this country some of the most ludicrous reflections upon trade it was ever our misfortune to make merry over. But investors took the golden bait without much suspicion, and pressed upon the acceptance of the Japanese about ten millions of money at a rate little above that which Russia, and less than that which Turkey, willingly pays for similar accommodation. A few days after the Loan was issued *The Economist* held up a warning finger to the Public—not for the first time—on the too great readiness it displays to lend money to borrowers of whose actual financial state it knows but little. It pointed out how very indefinite were the purposes for which the money was demanded, how ignorant the world really is of the condition and institutions of this country,

and how cautious capitalists should be in entrusting their savings to it. But the stock was allotted and the Loan rose to a premium. Another statement, very similar to that to which we have just referred, was subsequently published in other quarters, and though the two differed somewhat in minor points, they so far agreed, that both showed a handsome surplus of revenue over expenditure. Both were certainly given to the world “under authority,” and there was little reason to doubt that this meant the authority of the Treasury. INOUYÉ KAORU, if not the actual instigator of the loan, was so far its promoter that the Loan Commissioners acted under his instructions, went to America with his sanction, and, in all human probability, received their general impressions regarding the state of the Finances from him.

Within some ten months of all this, the Finance Minister, during whose tenure of office these statements had been given to the world, tenders his resignation in a Memorial which explodes like a mine under the feet of the Government. He avers that the debt has run up to an amount certainly not contemplated in the statements previously made, and that there is an annual deficit of £2,000,000, resulting entirely from the unsound theory of government pursued by the Administration. How is it possible to explain this prodigious contradiction? There is something here which has eluded all former analysis, and which, we frankly admit, baffles us entirely at this moment.

We now come to the action of the Government on the question. It has returned the Memorial with marks of severe displeasure, not, be it observed, on the ground that it is disloyal, or that its criticisms upon the general policy of the Administration are unsound, but because it is untruthful, and therefore “most reprehensible.” The Government avers, First; that the *koku* of rice in which the revenue is usually calculated, has been valued at 2 *yen* 75 *sen* (\$2.75),—instead of 4 *yen*, (\$4), the usual calculation. Second; that the extraordinary expenses arising from the conversion of the *Han* into *Ken* are temporary only. Third; that the assessment of the debt of the Empire at 140,000,000 *yen* (say £30,000,000) is erroneous. And we believe that the general grounds on which the correctness of this assessment is impugned, is, that the cost of Public Works which has helped to swell the sum is placed to the debit side of the account, while no credit has been taken for the Works themselves, although they are bringing revenue into the Exchequer.

Upon these questions, however, it is useless to speculate at this moment. The Government promises to prove that the damaging allegations made in the Memorial are unworthy of acceptance, and to put forward a clear statement of its financial position. Until this is done it is well at least to suspend our judgment, and to accept, with such weight as legitimately belongs to it, the broad fact that the great discrepancy between the present and the former financial statements arises from a valuation of the *koku* of rice, the unit of the financial currency, so to speak, justified neither by any general experience of the past nor by future probabilities. How far the disastrous results of the rice operations lately undertaken by the Government are reflected in this extremely low value of the *koku* is, meanwhile, a curious and not unprofitable subject for speculation.

We now come to the political philosophy of the Memorial, and waiving all questions as to whether it was right or loyal to give the document to the world—a subject on which, however, we must be permitted to hold a very decided opinion—it is impossible to deny that it hits a

blot and well deserves the most serious attention of the Government. It first shows how the country is preyed upon by an enormous and wholly unnecessary staff of officials, whose past services have to be rewarded or whose present temper has to be conciliated. Accepting this as very largely true, and admitting that the exigencies forced on a new Government by the necessity for obtaining and keeping a certain amount of popularity are responsible for much of this evil, where does the natural corrective lie? We answer unhesitatingly, in the liberation of commerce from all the fetters which hinder its legitimate development, in the removal from those who pursue it of all social or fiscal deterrents, in the application of broad liberal principles to trade, *and the dissociation of men in high places from it.* The axe must be laid to the root of the pernicious system by which the whole commercial machinery of this country is controlled in State Departments. It is idle to dally any longer with this great evil. It is high time for the officials of this country to see that the reward for their labour must be sought in the advancement and welfare of the Empire, and not in the pursuit of their own interests. Is it not whispered that they go into office poor and leave it rich, although their salaries are only such as to enable them to maintain the state legitimately belonging to their rank? How can trade flourish so long as it is their interest to confine within the narrow channels of their own estates the golden stream which should enrich the whole country? What freedom of trade shall we ever see so long as Ministers forget their responsibilities as trustees for the welfare of the people, and think only how they shall manipulate its machinery to their own advantage? Let them look abroad and see to what ruin and shame political and financial corruption are bringing States governed by men who make politics a trade, and seek in office the mere means of their own enrichment. The country is not deficient in the sentiment of patriotism. Its legends and traditions abound with lofty ideas of duty and devotion. It has also worthy examples of statesmen who at such a juncture as this would say with BRUTUS—

What shall one of us,  
That struck the foremost man of all this world,  
Contaminate our fingers with base bribes?  
And sell the mighty space of our large honours  
For so much trash as may be grasped thus?—

By heaven, I had rather coin my heart,  
And drop my blood for drachmas, than to wring  
From the hard hands of peasants their vile trash  
By any indirection.

The time has surely come for some plain-speaking on this subject, and such reproach as we have sometimes earned for alleged over-readiness in this respect we are quite content to bear now.

The Memorialists point out that from ignorance of the conditions of progress the majority of the people "depend" on others and trust to the chances of fortune, or can do "no better than climb on the conspicuous mound and 'catch profit in a net.'" But how are they to do otherwise so long as commercial enterprise is met at every step by restriction and interference? And of what value are these cold reflections without the corollary of liberal recommendations as to the manner in which these evils may be surmounted? SENECA wrote his essay on the "Contempt of Wealth" when in the calm enjoyment of three millions of our money; but the world has never largely profited by his lofty speculations.

We next come to many ingenious reflections upon the forwardness of officials to initiate new measures and thus gain to themselves distinction. And we can easily understand the embarrassment arising from this. But what is

the remedy? How often have we alluded to the lamentable folly of sending young men abroad before they have had sufficient preparation to enable them to understand the wonders they see there? They go to England, France, or America, gain there the most superficial view of our condition, the mere externals of which alone strike them, and return with ideas which, if actually applied to this country, would bring it to ruin in six months. Hence we have the setting at naught of good advice given by wise counsellors, expeditions to America for loans, changes of currency, and a hotch-potch of silly notions worthy of the philosophers of Laputa. But what is the value of all this travel and foreign education, and in what shape should the return to Japan really come for all the money they have cost? At this moment their value is almost *nil*, and it will be fortunate if indeed no harm come of them. But the return to Japan should come in the shape of a keen sense of the enormous disadvantage her people have laboured under by reason of their former isolation. This would teach them some humility, some distrust of themselves, and the necessity for curbing that self-sufficiency which lies at the root of their errors and confirms them in them. Education of a solid kind, both moral and intellectual, is what is required for this country. Let it graft new vigorous shoots of higher value on the old stem; codify laws which express the mind and past history of the people, instead of giving to it a *Code Napoléon* which is foreign to it; give up all ideas of obtaining jurisdiction over foreigners; renounce processes which lead to denationalization and the loss of those feelings and traditions which are the life and heart's blood of a nation; learn that the fruits of civilization which they see abroad are the results of centuries of earnest thought and patient toil, of wise laws and sympathetic obedience, of solid reasoning and the firm application of that reasoning.

We have but touched on the philosophy of the Memorial. It must be examined, and is worth examination, both by the Government and by foreigners, and with this recommendation we must leave it.

But, in conclusion, we are inclined to side with the peasant whose letter will be found elsewhere. We do not like this resignation in the midst of difficulties, this desertion of the standard at the moment of danger. We neither like the act nor the manner of it. It was for a good and faithful soldier to have remained at his post and seen the struggle out. We mistrust this resignation.

In a very wise book the following story may be found. It requires some little adaptation to make it fit all the circumstances, but the ingenuity of our readers must be trusted to for so much of this as it needs.

When his Lordship was newly advanced to the Great Seal, Gondomar came to visit him. My Lord said; *That he was to thank God and the King for the honour; but yet, so he might be rid of the burthen, he could very willingly forbear the honour; and that he formerly had a desire, and the same continued with him still, to lead a private life.* Gondomar answered; *That he would tell him a tale; of a old rat, that would needs leave the world; and acquainted the young rats that he would retire into his hole, and spend his days solitarily; and would enjoy no more comfort: and commanded them upon his high displeasure, not to offer to come in unto him. They forbore two or three days; at last, one that was more hardy than the rest, incited some of his fellows to go in with him, and he would venture to see how his father did; for he might be dead. They went in, and found the old rat sitting in the midst of a rich Parmesan cheese. So he applied the fable after his witty manner.*

#### THE TEA SEASON 1872-73.

BY our issue of this day's date we are able to lay before our readers a few comments on Tea operations at this port for the season just concluded, and which, we fear,

will be remembered with little kindness by most of those who have been actively engaged therein.

Our market opened with great briskness about this period last year, and, although prices ruled high, sufficient enterprise yet existed amongst the principal buyers at this port to produce purchasers for some considerable amount; in fact by the end of May settlements of new crop reached the respectable figure of fully 2,000 piculs, for the bulk of which sellers succeeded in obtaining their own rates, and amongst which were some very desirable parcels, although, as usual, the hurried preparations they had undergone were very perceptible in the style and finish of the leaf. But notwithstanding this their fresh, light water and fragrance in a measure compensated for their shortcomings, and the first shipments as a rule realized satisfactorily in the States, although their high cost—ranging from \$45 to \$72 for good medium to choice parcels—precluded the possibility of much profit on their arrival in the New York market. During the month of June our market was thoroughly flooded with arrivals of new crop teas, and from this circumstance, coupled with the inability to obtain more than a limited amount of steamer freight,—the proportion allotted by the P. M. S. Steamer for Yokohama being about 600 tons—a sharp drop occurred, and a decline of some \$5 per picul ensued. At this time really good-class teas were offering, and had prices paid been some 20 per cent lower, a satisfactory result might have safely been confided in.

At this date the following quotations may be taken as the Market standard.

June 22, 1872.

Medium ...	\$32 to \$35 per pl.	Finest...	\$46 to \$48
Good Medm.	\$36 to \$39	Choice	\$49 to \$53
Fine ...	\$40 to \$45	Choicest	\$55 and up-
			[wards.

Following on the course of our market; the demand continued in the better-class goods, and prices remained well supported during the months of July and August: shippers per sailing vessels to the States now came forward in force, and a steady business, which must have been profitable to sellers, continued.

Our largest monthly settlement was as usual made during the month of September, purchases for that period reaching nearly the high figure of 14,000 piculs, and owing to pressure of stocks the market generally retrograded from \$1 to \$1.50 per picul; but native holders continuing undismayed, this drop was more than recovered in the following month and prices remained firmer than ever.

At this period in former seasons we usually received full supplies of the commoner grades, but this year they were most unaccountably scarce. It was in vain to seek a reason for their absence; some native merchants alleging that this style of leaf had all been converted into fine-class goods, whilst others asserted that orders from Government had been circulated forbidding the harvesting of more than a certain proportion of the leaf produced, owing to a fear that the Tea plantations might suffer from being too greedily and too closely picked; and this latter reason bears the greatest appearance of probability.

Towards the close of October, telegraphic advices from New York reporting a disorganised state of the Tea market there made trade on this side rather dull, but had little or no effect in reducing prices, and for a month settlements were unimportant; but a little more business was done in the latter part of November and December, which raised settlements on our Tea market for the season up to the end of December to nine and half millions of

pounds, being the heaviest amount shipped at corresponding dates since the opening of this port to trade.

The remainder of the season calls for little comment. A few ordinary and common Teas were offered, but they were very inferior and were dear at any price.

Our prices at the close of 1872 were probably at their lowest point during the season; but considerable allowance must be made for the deterioration perceptible in all classes.

The following quotations were current about January 10th, 1873, upon resumption of business after the holidays; the Japanese this year adopting the 1st of January, of our calendar as their New Year's opening, in common with Western nations.

Ordinary to Common	\$20 to 25	Fine ...	\$40 to 44
Good Medium ...	26 to 30	Finest	45 to 48
Medium ...	31 to 34	Choice	50 up-
Good Medium ...	35 to 38		[wards.

At this point our market calls for little further comment. A slow dragging business was carried on for the four months preceding the first announcement of the coming new crop, and purchases were principally confined to Pacific Coast orders.

We will now briefly sum up in figures the shipments for the past season as under.

	To New York and Eastern States.	To San Francisco and Pacific Ports.
Per Str. via San Francisco	3,484,757 lbs.	2,395,270 lbs.
Per Sailing vessel	5,629,864 "	387,008 "
Total	9,114,621 "	2,782,278 "

Thus bringing up our total export from Yokohama for the season of 1872-73 to very close upon 12,000,000 lbs.

The chief point of interest in these figures is the decided advance which San Francisco has made in establishing her claim to be a tea distributing centre, and which it is inevitably her destiny to occupy sooner or later. The increase in her imports for the season 1872-73 is nearly 1,000,000 lbs., against preceding season; and although her import for 1870-71 reached fully 2½ million pounds, yet most of this was *in transitu* for New York direct, the mail service then running monthly steamers only.

In addition to the amount shipped nearly 5,000 piculs of old crop remain unsold, which, had they gone forward, our export for 1872-73 would have raised our shipments nearly to that of 1870-71 which reached a total, to all ports, of 13½ million pounds.

For this coming season we may hazard a few remarks on the prospects of direct shipments through the Suez Canal to New York. It is more than likely that this route will absorb a large proportion of shipments early in the season when a sufficient amount of cargo may afford inducement to some of the Suez liners to try this freight market. The advantages thus offering would be great; there would be no necessity for shifting or breaking-bulk during transit; the packages would arrive clean and in good order; and an uniform passage of some seventy-five to eighty days from date of sailing may be confidently relied on. The freight also will make a material difference on laying down cost, as a first class steamer should be readily obtainable at £5 to £5.10 per ton of 40 cubic feet to New York, taking into account the rates usually obtaining to London in the various Chinese shipping ports. With so evident an advantage, we may expect a fair trial will be afforded for tea shipments to New York direct, the principal difficulty at present existing being the collection of sufficient freight together prior to her arrival in this port to ensure a speedy despatch of the steamer; but this is

of no great moment and though it should be a little later in the season will answer equally well.

In concluding our remarks on the past season we append an approximate statement of the produce of provinces usually offered on the Yokohama market.

Name of Province.	Produce of Season 1872-73.
Yamashiro .....	Piculs 8,000
Isé .....	" 25,000
Surunga } .....	" 45,000
Jushiu } .....	" 8,000
Gôshiu.....	" 8,000
Kishiu } .....	" 10,000
Jiushiu } .....	" 10,000
Tamba } .....	" 10,000
Mino .....	" 9,000
Mito } .....	" 7,000
Shimôsa } .....	" 7,000
Kadusa } .....	" 7,000
Hitachi } .....	" 7,000
Idsu } .....	" 4,500
Atsugi } .....	" 4,500
Sagami } .....	" 4,500
Echizen } .....	" 2,500
Kaga } .....	" 2,500
Small districts not separately returned .....	" 2,000

Total.....Piculs 121,000

Our sister port Kobe adds a total of about 52,000 piculs to the above figures, making the total export from the principal ports of Japan 173,000 piculs or, say nearly 18,000,000 lbs. Tea.

We do not include Nagasaki in these figures, as the bulk of Teas settled on that market go to Shanghai for conversion into low class China greens.

The total export for the season 1872-73 from Kobe shews an increase of about 10 per cent, being in 1872-73 6,537,225 lbs. against in 1871-72 5,152,008 lbs. Although we hold that Yokohama will still maintain its pre-eminence in this Empire as a Tea Exporting Centre, there is still scope for further development in the trade of this port.

We will now touch briefly on the prospects of season 1873-74.

Commencing at an earlier period, and with far higher prices than ever seen before on this market, an uninitiated beholder thoroughly acquainted with the state of the home markets would stand amazed; but in these days of overland shipments and telegraphic instructions but little time is left for reflection; and to be amongst the *first arrivals* on the New York market is the great desideratum struggled for. It is a matter of little or no surprise under these circumstances that our Tea season opened as we quote beneath; and although these rates were not maintained after the departure of the *Quang Se* on the 10th May, yet they have left their traces in the memories of native merchants. The following were opening prices, with classifications as near as it is possible to affix them to "Garden Picked" Teas.

Full fine to finest	... .. \$58 to 62 per picul.
Finest to choice	... .. 63 to 65 "
Choice to choicest	... .. 66 to 75 "

As usual the quality in the cup was excellent, but the leaf had suffered from its too hurried preparation.

Our season so far has been everything that could be desired for picking and curing the crop, and samples now coming in shew that we may expect a full yield. Some little disappointment has been expressed at the non-appearance of more fine to choice parcels, but this absence is to be attributed rather to motives of policy on the part of sellers than to a lack of the staple itself, as the Japanese are well informed as to the disastrous state of the American markets, and prefer running the chance of a favourable turn

to exhibiting their most tempting goods to a dispirited buyer.

In conclusion we must remind our readers that we are suffering in common with most eastern settlements from—as we may style it—the too rapidly developed "acceleration of intercourse"; hence the extreme anxiety to have first parcels on the market, and also the increasing desire to pull the working strings from home by means of the omnipotent "wire."

Telegrams convey but a meagre idea of the actual state of the home markets, and should merely be taken in their abstract sense as furnishing figures for quotations. Thus, the quotation '55 gold for "good medium" in New York', affords but a meagre idea of the actual feeling of that market, as, without some explanation as to terms of sale, or a full understanding that such settlement was made on the regular market terms, the figures are almost valueless and serve rather to mislead than to convey the information which was intended.

## KINSÉ SHIRIAKU.

### VOLUME III.

(Continued.)

At this moment five hundred runaway troops from Sendai joined the rebels, who were considerably strengthened by this reinforcement, and the rebel commanders at the castle of Matsumaë, on hearing of the victories at Kikonai and Futamata, determined to make an attack on Esashi with their whole force. At dusk on the 27th they arrived at the village of Kiyobé, on which the Kasuga approached the shore, and opened fire on their flank. The land forces also advanced, and in conjunction with the fleet inflicted a severe defeat on the rebels, killing a great number of their officers. The survivors all fled to Matsumaë.

At daybreak on the 28th the loyal army, both marine and terrestrial, made a combined attack on Matsumaë. The rebels had occupied the battery at Orido on the highroad, and in defending it their sharpshooters brought down several tens of loyal soldiers, preventing the force from advancing. At the same moment some other loyal troops had proceeded along the hill path, and they also were met by another detachment of rebels; but by fighting fiercely and advancing with determination they routed them, and came out into the highroad on the other side of Orido, thus getting the enemy between two fires. The fleet had already approached the castle of Matsumaë, and was engaged in bombarding castle, batteries and town. The rebels became so short of cannon-balls that they had to defend themselves with 18-pounder guns loaded with 12-pound shot, and these also came to an end at last. The loyal army, both marine and terrestrial, persisted in the attack, until they completely routed the rebels, who at dusk fled to Fukushima. In this way the castle of Matsumaë was taken by the loyal army, while the rebels continued to hold Fukushima, Shiruchi and Kikonai.

At six o'clock on the morning of the 30th the loyal troops profited by a dense fog to surprise the rebel quarters at Kikonai. Great confusion ensued among them, which rendered their defeat more easy; but at this moment the rebels who were at Shiruchi, hearing of the defeat at Kikonai, suddenly appeared in the rear and fell upon the loyal troops. This revived the courage of the rebels, who returned to the encounter, and the loyal troops, completely caught between two assailants from opposite sides, were defeated and put to flight. The rebels then re-occupied Kikonai.

At eight o'clock on the morning of the 5th June another division attacked Futamata, but the rebels made a stout resistance, and nothing could dislodge them. Fresh men constantly came forward to the fight, and the discharge of artillery re-echoed far and wide. When evening came on the result was still undecided, and both parties withdrew their troops.

At daybreak on the 4th June, the ironclad, the *Kasuga*, *Chôyô*, *Yôshun*, and *Teibô*, five vessels in all, advanced upon Hakodate, while the rebels put the *Kuaiten*, *Banriu*

and *Chioda* in motion to oppose them, and an engagement ensued in which the opposing squadrons were separated sometimes by 5 *chô* (600 yards), sometimes by 10 *chô* (1,200 yards). The sea appeared to boil over. At noon the fleet withdrew for a while, and shortly afterwards advanced again. The runaway vessels, knowing that they were no match for the loyal fleet, called in the aid of the battery at Benten, and having ascertained the range of the guns in the battery, made a pretended retreat to the centre of the harbour in order to draw on the loyal vessels. When the latter followed the fugitives with yells, the shot from the battery fell right in amongst them, destroying the bridge and battery of the *Chôyô*, and penetrating her side. This did not dishearten the fleet, which continued to advance close, but the increasing intensity of the fire from the battery and want of knowledge of the depth of water prevented it from going far in, and it finally drew off.

The fight which took place at Futamata on the same day was indecisive. The rebel soldiers fired about a thousand rounds from their muskets, which became in consequence too hot to hold, and they were obliged to provide themselves with buckets of water, in which they cooled their weapons at intervals. On the following day several hundred of them made a charge right over the fort, and drove the loyal forces a hundred paces to the rear. Komai Masagorô, a military inspector, saw this from an elevated spot, and filled with impetuous ardour, rushed down straightway at the head of forty or fifty men, trampling the enemy down. This revived the courage of the loyal troops, who returned to the fight and attacked the rebels vigorously, forcing them to retreat and hold their forts. The number of killed and wounded on both sides in this action exceeded four hundred, and the military inspector Komai met his death from a random bullet fired by one of the rebels.

At daybreak on the 9th June the loyal forces, both marine and terrestrial, advanced in concert upon Yaburai. The land army advanced in two divisions, and was encountered by Ôtori Keiské at the head of 500 men. At the same time a detachment of loyal troops began to climb a steep hill at the side of the road, with the intention of attacking the rebel left wing, but were observed and fired upon from a breastwork which the rebels had constructed half-way up the ascent. Many of them were killed, and they had to take another route. Shortly afterwards the whole loyal army, full of enthusiasm, advanced with determination, and succeeded in routing the rebels, while the iron-clad and other ships, approaching the shore, opened fire on the rebel flank. The 100-pounder guns of the iron-clad bombarded the battery without intermission, and destroyed the guns mounted therein. Completely crushed and dispersed, the rebel army abandoned its positions, and fled to the fort of Kaméda and town of Hakodaté, where the fugitives reassembled. Its loss in officers was very great. Upon this the loyal army advanced, and captured the fort, and arrived soon after at Arikawa.

On the 11th June the loyal army advanced to Nanaï-hama and the village of Ôno. During the night the rebels surprised their camp at Nanaï-hama, defeated them and forced them back on Oiwaké. During the following night the rebels attacked the camp at Ôno, and retired again; the loyal troops had a hard fight of it, and lost an extraordinary number of killed and wounded.

At daybreak on the 13th the fleet again moved up to the harbour of Hakodaté, where it was encountered by the *Kuaiten*, *Banriu* and *Chioda*, which in conjunction with the fort kept up such an incessant fire as caused the sea to rock. A shot from the *Kasuga* hit the *Banriu* in her engines, while those of the ironclad killed several tens of men in the fort. The rebel fire slackened suddenly, but the fleet judged it expedient to retire, as the evening was closing in.

At dawn on the 14th, as the iron-clad and other vessels of the fleet were lying scattered in the neighbourhood of Hakodaté, a runaway vessel came forth, and steered straight for the iron-clad and the *Chôyô*. On perceiving the enemy the ships opened fire, but he continued to advance slowly without returning it, and charged down upon the iron-clad. Recollecting the disaster which had nearly occurred at the port of Miyako, the iron-clad tried to avoid the shock. The *Chôyô* continued to fire vigorously at the runaway vessel's side, but still she abstained from

returning the fire, and passing between the iron-clad and the *Chôyô*, departed. The two vessels were much puzzled, but on approaching near enough to look, found that she had not a man on board, and that her engines were completely destroyed. They consequently took possession of her, to the great amusement of the rebels, who said: "This is what may be called dead *Shokatsu* putting living *Chiudatsu* to flight."<sup>70</sup> The fact was that the *Chioda* had gone ashore close to Benten, having lost her way during the night. The captain, one Morimoto, in despair, at once smashed the machinery and broke in the touch-holes of the guns, and then landed in one of the boats. Enomoto and the others censured him for his precipitate action, which was so prejudicial to the cause, and degraded him to the rank of common seaman, but an officer named Ichikawa was so ashamed of the affair that he committed suicide by way of apology to the rest. When the tide turned, the *Chioda* began to float, and was carried out by the current.

On the 18th the fleet weighed from Arikawa and stood over to the harbour of Hakodaté. The rebels had placed the *Banriu*, which was incapable of steaming, close to the fort, and converted her into a floating battery. The *Kuaiten* was the only vessel which they were able to oppose to the fleet, and a 300-pounder shot which the iron-clad immediately discharged killed several tens of rebel troops, and smashed the excentric, an important part of her machinery, thus rendering her also unable to move. The rebels ran her on to a shoal, and converted her into a floating battery. Some of the shot fired from her struck the bows of the *Kasuga* and killed several of the loyal troops, after which the fleet retired. On this day the fleet came so close to the runaway vessels that the latter were able to defend themselves with small arms. The fleet might certainly have destroyed the rebel nest with the expenditure of a little time, but it was prevented from following up the attack to its result by ignorance of the depth of water.

On the 17th the loyal army encamped at the villages of Nanaï and Ôkawa, and during the night the rebel leader Furuya made a sortie from the fort at Kaméda at the head of 300 men. It happened to be very rainy and windy; the loyal troops had gone to sleep with less precaution than usual, and the rebels took advantage of this circumstance to attack the camp. A great commotion ensued, and the whole camp arose with speed to engage the enemy, but the night was so dark that no man could see a foot before him. Some of the troops shot down their own comrades by mistake, and the rebels departed after trampling them flat. During the same night a rebel soldier, named Ôkawa, came to the village of Nanaï with several hundred men, and profiting by the darkness to set fire to the camp made an attack; but the loyal troops repulsed him after some hard fighting.

On the 18th Ôtori Keiské came again to Nanaï at the head of 800 men, but the loyal troops had previously placed men in ambush at Ôkawa and Okagawa, who upon seeing the rebels approach at once opened fire, and put them to flight. The loyal troops pursued them and re-treated again at nightfall.

The whole of the loyal forces, both marine and terrestrial, now advanced on Hakodaté. On the morning of the 20th the *Kasuga* and *Yôshun* arrived early at the back of the town, while the land forces having been brought up to the village of Samugawa in the *Mannen maru* and in a flotilla of boats, were placed in ambush among the hills. Soon after the ironclad, the *Chôyô* and the *Teibô* closed up to the front of the town. The *Banriu* had been repaired by this time and the rebels launched her at the fleet, supporting her with the fire of the floating battery *Kuaiten* and the forts on shore. At this moment the land troops which had been concealed amongst the hills suddenly charged the rebels, broke their line and put them to flight. The *Kasuga* also advanced to the front and joined the ironclads and her consorts in an unintermitting attack upon the forts and the *Banriu*, almost capturing the latter. But the rebel commander Matsuoaka Hankichi defended himself well, and manœuvred his ship with the greatest swiftness and ease. He ordered a gunner named Nagakura to discharge the 'Napoleon' guns,

(70) An illustration from Chinese history, vide *Jihasshiakiu*, vol. III. p. 89.

and the shells struck the powder room of the *Chôyô*. Black smoke sprang into the air, the roar re-echoed for ten *ri*, and the ship suddenly sank. The rebel troops clapped their hands and shouted repeatedly 'delightful,' while the fleet advanced to save the dead and drowning. Encouraged by the occurrence the rebels returned to the fight, and routing the loyal troops, drove them back to Nanaï-hama, under a cross fire from the *Banriu*. As soon as the ironclad and the *Kasuga* beheld this, they closed at once upon the *Banriu*, and poured in so hot a fire as nearly to blow her to pieces. Shrinking from the combat, in which she was no longer able to defend herself, she took to flight and retreated under the fort. The crew then threw her guns into the sea, destroyed the engines, set fire to her and to the *Kuaiten*, and landed. In this manner the rebels lost all their war-vessels, and the loyal land forces being no longer afraid of being taken in the rear, advanced again in a heroic and determined manner to charge the rebels. They slew the rebel leader Hijikata Saizô and forty or fifty more, and the defeated rebels fled to the forts of Kaméda and to the batteries at Chiyôoka and Benten, leaving the loyal army in possession of the town of Hakodaté. The fighting on this day was very fierce, for both the loyal and rebel armies were desperate; it lasted from six o'clock in the morning until six o'clock in the evening.

On the 21st the fleet advanced to attack the fort at Kaméda, and the ironclad shelled it from a distance of thirty *chô* (3,600 yds.) without hitting it, but after the captain had measured the range every shot told. A great part of the breast-work was knocked to pieces and many of the rebels were killed, while the survivors were much discouraged.

On the 22nd, a loyal soldier named Nagayama went to the battery at Benten and suggested to the rebel troops the advisability of surrendering. Many of them wished to do so, but some held an opposite opinion and opposed the idea. Nagayama went again to the rebel camp and saw Enomoto, to whom he pointed out clearly the advantage of submission and the injury which persistence in treason would entail on them. Enomoto was fully alive to the justice of his reasoning, but was afraid of acting contrary to the inclination of his followers; he therefore merely assented vaguely, and thanked Nagayama for the interest he had taken in them. Nevertheless a great number of rebel soldiers deserted secretly, and came to surrender themselves.

On the 25th the loyal army sent a different messenger to Chiyôoka to talk the rebels over, but instead of obeying the order, they insulted the bearer of it. This excited the anger of the loyal army, which thereupon advanced in three bodies from Nanaï-hama and Kikiôno. Captain Kijima Raizô, attacking Chiyôoka at the head of his troops, was hit in the right leg by a rebel bullet, but disregarding his wound, he continued to cheer on his men. Taruzawa, Kamiyama, Mori, Sudô, Iwami, Shirako and others broke in the gates or jumped over the ditch. The rebel general Nakajima Salunoské, a valiant man with his two sons Tsunetarô and Fusajirô, and Shibata, Asai, Kondô, Fukuishi and others ascended the breastwork and resisted the attack. Taruzawa distinguished himself by engaging Nakajima; seven times they separated and seven times they met again, until after receiving more than ten wounds and being covered with his own blood, he succeeded in lying Nakajima low; but his own life was the price of his victory. During this interval the rest of the loyal troops slew Nakajima's two sons, Shibata and the rest, and having defeated the rebel army completely, captured their encampment.

Shortly before this, when the rebel army was so severely defeated, Enomoto Kamajirô sent a present to the loyal army consisting of two volumes of 'The complete digest of the maritime laws of all nations,' which he had formerly studied when in Holland. The Military Counsellors addressed a letter to Enomoto, in which they said: "We thank you for presenting us with two volumes the like of which are not to be found in Japan, out of regret that they should become the property of the crows. Your generous feeling lays us under a great obligation. Some day or other we will cause a translation of them to be published throughout the empire, and we hope you will have no cause to regret this act." They also sent five tubs of *saké*, and said by way of thanks, "a slight con-

solation offered to the officers and *samurai* for their 'fatigues.'

On the 26th Tajima Keizô, a loyal soldier, persuaded Enomoto and his companions to surrender, and on the following day the rebel leaders, that is to say, Enomoto Kamajirô, Matsudaira Tarô, Arai Ikunoské and Ôtori Keiské actually gave themselves up at the loyal camp, in order that they might suffer punishment in place of the many. Their surrender was followed by that of Nagai Gamba, Matsuoka Hankichi, Sôma Kuznyé and others. When the rebel army made up its mind to surrender, the commanders had sent a messenger to Mororan with orders for the evacuation of that place, and the troops which had been stationed there now came in and surrendered. All the prisoners were subsequently sent to Yedo.

In this campaign the rebels had the advantage of possessing in their naval force men well acquainted with their profession, and the place they had to defend was naturally strong from its position. These two things caused the heavy losses suffered by the loyal army, but on the other hand the iron-clad, which advanced without being at all affected by the shots which struck her, was a source of great annoyance to the rebels.

When Enomoto and his companions first absconded from Shinagawa three Frenchmen shared their flight, in order to assist them in their operations, but when the failure of the operations became evident, Enomoto talked them over and sent them back to Tôkiô. The Government consequently informed the French representative that it could not allow these persons to remain in the country. The French representative punished them, and when Hakodaté was taken, sent them back to their native land. This was done because they had violated the neutrality.

During the same month the ringleaders belonging to the Aidzu and other clans underwent the penalty of the law. Shortly afterwards a *Shôkonsha* (Shrine for welcoming spirits) was erected on Kudanzaka in Banchô (at Yedo) for the celebration of rites in honour of those who fell fighting on the 3rd day of the 1st month (Jan. 27, 1868 at the battle of Fushimi) the 15th of the 5th month (July 4, 1868 at Uyeno in Yedo) and the 23rd of the 9th month (Nov. 7 1868, before Wakamatsu), on account of the great importance of the battle of Fushimi, the fight at Uyeno and the surrender of Aidzu. A telegraph was erected from Tôkiô to Yokohama to facilitate the communication of business.

In the 6th month (July 20—August 17) an Imperial proclamation was issued by which rewards were granted for the military services performed since 1867 and 1868. Pensions and sums of money were granted to the Hiôbukiô no Miya (Ninnaji no Miya) the Dazai no Sotsu Miya (Arisugawa no Miya), to Kujô Sadaijin, Sawa Sammi and twenty-one Court nobles (*kugô*), to the houses of Shimadzu and Môri and the chiefs of eighty-eight other clans, to Saigô Kichinoské, Ômura Masujirô and more than a hundred other individuals. Shortly afterward the offices of Sadaijin, Udaïjin, Dainagon and Sangi were created, and the names of all other offices under Government were reformed. As official titles had been little more than empty appellations since the chronological period called *Daihô* (701-703) it was determined that henceforward the titles should correspond to the reality.

In the spring of this year the clans of Satsuma, Chôshiu, Tosa and Iizen addressed a memorial to the Throne, in which it was argued that the *daimiô*'s fiefs ought not to be looked upon as private property, and leave was asked to restore the registers of the clans to the Sovereign. The other clans followed the example. The Court, however, declined to decide on its own authority, and only accorded its consent after consulting the general opinion. Shortly afterwards the designations of Court nobles (*kugé*) and territorial princes (*shoké*, more commonly called *daimiô*) were abolished and replaced by that of noble families (*kuazoku*). A new constitution was framed by which the three forms of administration called city (*Fu*), clan (*Han*) and district (*Ken*) were combined in one whole, and the former lords of the clans were temporarily appointed Governor of clans (*Chihanji*), the feudal system being thus completely changed. From this moment the governmental power was concentrated in the family of the sovereign, and the Empire was grateful for universal peace.

THE END.

## THE REGATTA.

Although opening with the fairest promise of a fine day Saturday formed no exception to the Regatta-days of past years. Towards noon the heavy clouds assumed a threatening appearance in the rainy quarter, and about half an hour later the showers commenced which continued intermittently for some two or three hours. The sea rose simultaneously and it was at one time feared that the day's amusement would have been seriously interfered with. Some races were indeed from this cause postponed, but with few exceptions the programme was adhered to. The courtesy of the Agent of the P. & O. Company had enabled the Committee to avail themselves of the presence in harbour of the Company's steamer "Bombay," which served as flag-ship, and a large number of the ladies of Yokohama graced it with their presence. We also observed a fair sprinkling of the naval and military officers of the various foreign powers.

An excellent tiffin had been prepared and was offered to the guests present, and the band of the Iron Duke enlivened the scene by performing a selection of popular music. An unusual crowd of natives witnessed the gay scene from the Bund, and evidently entered with keen enjoyment into the sport. The general impression left on the minds of spectators was, we believe, most favourable; and the Committee may be congratulated upon the successful issue of their arrangements notwithstanding the very unpropitious character of the weather.

The following was the programme:—

## YOKOHAMA ANNUAL REGATTA.

May 24th, 1873.

## YACHTS 20 FEET AND OVER.

I.—Start at 9 a.m. Twice round Light ship and shipping. Entrance \$5. 1st Boat, \$50; 2nd \$20.

- 1—Messrs. Whitfield & Dowsons Zephyr.
- 2—Mr. Wake's ... ... Torment.

Four yachts only started, the Hilda having withdrawn. The first round took the boats some  $3\frac{1}{2}$  hours in completing owing to the very light and variable airs prevailing during the forenoon; the Zephyr, in spite of her size, leading considerably on passing the flag-ship for the first time. A smart squall shortly afterwards came down from the N. E., as the boats were working out for the light-ship on their second round, sending all light sails flying and capsizing the Mercury, luckily ballasted with water kegs, and no loss of life ensuing, the Torment bearing down considerably out of her course, and rescuing the crew. The Zephyr then rounded the light-ship in the full brunt of the squall under whole lower canvass and ran away in the strong breeze from anything else in the race, finishing up along the Bund with gaff-topsail set in the teeth of a hard squall, giving us a sight but rarely seen in this bay, as she tore along with her lee gunwale under water, and finishing the race in a style worthy of a home regatta.

## YACHTS UNDER 20 FEET.

2.—Start at 9.15 a.m. Once round Light ship and shipping. Entrance \$3. 1st Boat, \$30; 2nd, \$10.

- 1—Mr. Galwey's ... ... Sea Gull.

Two remarkably pretty model yawls appeared at the starting post for this race; one, an old favorite, the Sea Gull winner of this race for the past four years, and the other a new boat, the Sea Lark, a somewhat larger craft but built from the former's lines: considerable interest was therefore exhibited it being the first time the two had met. Owing to a shift of the wind from the W. to N. E. just as the gun fired, the Sea Gull, having all her square canvas set made a very bad start, and the Sea Lark got away with a considerable lead which she kept all the way out to the Light-ship, which she rounded some 5 minutes ahead. From here a run, dead before the wind, took place, the Sea Gull picking up considerably, Mr. Tripp's boat however unfortunately made an error by passing inside of a square rigged vessel, and although, she passed the powder hulks some considerable time ahead of the Sea Gull, the latter managed to come up with her off Benten, where they overtook and passed the "Torment" and "Mercury" of the first race and a somewhat pretty sight presented itself

as they all beat up tack for tack along the Bund; the Sea Lark however passing the line between the flag ship and the shore two minutes ahead of her smaller opponent, who however, took the prize owing to the Sea Lark being disqualified.

We hear however that Mr. Galwey has placed the prize in the Hon. Sec. hands, and has offered to sail a match of \$30 a side on the owner of the Sea Lark depositing a similar amount; so a more interesting race will probably result the first favourable opportunity.

## OPEN BOATS.

3.—Start at 9.30 a.m. Once round Light ship and shipping. Entrance \$2. 1st Boat, \$20; 2nd, \$10; 3rd save Entrance Fee.

- 1—Mr. Benson's ... ... Courier.
- 2—Sub-Lieut. Clarke's ... ... Foolish Virgin.
- 3—Sub-Lieut. Jauncey's ... ... Little Emily.

This was a good start a large batch of boats coming to the front; the Lame Duck however got ashore off the Creek owing to her having the most leeward berth and was unable to get away with the rest. The "Foolish Virgin" came in first but did not take the first prize having to give the "Courier" time allowance, this latter craft coming in second just managed to save her time by one second and consequently took the 1st prize, "Little Emily" being a good third.

Here finished the sailing races when the usual fatality attendant on the Regatta Meetings for the past 4 years—a heavy squall of wind and rain—came bleak and cold from the N. E., in fact just as the first of the pulling races commenced, bringing a very heavy sea into the bay and rendering the competition for any of the outrigger races almost impossible.

The Canoe sailing, Pair-oared Outriggers, Ladies' Purse, and Canoe Paddling Races were deferred on account of the dirty weather; we hear that they will be competed for at an early date.

## PULLING RACES.

## MEN-OF-WAR'S CUTTERS.

1.—Start at 1 p.m.  $1\frac{1}{2}$  Miles. 1st Boat, \$25; 2nd, \$10; 3rd, save Entrance Fee.

- 1—H.M.S. Iron Duke's... ... Iron Duke.
- 2—U.S.S. Lackawanna's, ... ... Lackawanna.

For the first few strokes an even race took place; the Lackawanna then took the lead as far nearly as the turning boat, when the Iron Duke having the inside place, rounded first and gradually increased her lead, but won by one second only having to allow 20 seconds for the two extra oars she pulled.

## MERCHANT SHIPS' BOATS.

2.—Start at 1.20 p.m. 1 Mile. 1st Boat, \$10; 2nd, save Entrance Fee.

No entries.

We were sorry to observe there were no entries for this, as with the number of merchant sailing and steam vessels in the harbour a fair amount of competition might have been looked for.

## SAYONARA CUP.

3.—Start at 1.40 p.m. Presented. Value \$150; For Four oared Outriggers.  $1\frac{1}{2}$  Miles.

- 1—Amateur Rowing Club.
 

F. Low	...	Stroke.
G. Hamilton	...	No. 3.
J. J. Dare	...	No. 2.
H. O. Jeyes	...	Bow.
A. W. Glennie	...	Cox.
- 2—Gymnastic and Rowing Club.
 

— Richmond	...	Stroke.
G. Estienne	...	No. 3.
H. J. Snow	...	No. 2.
A. Milsom	...	Bow.
—	...	Cox.

For four-oared outriggers.—Presented by W. J. Alt Esq.—At last this race has been pulled off. In spite of the heavy sea running both Clubs sent a boat to the starting post, which they were forced to bale out

continually on their way up, some of the seas breaking completely over them. By an oversight no starter was at the post to send them off; and a start was effected by mutual consent, "The Tub" taking the lead for a short distance. No. 3 having carried away the wire of his outrigger and unshipped his oar, Mr. Low's boat drew ahead and gradually increased her lead in the first half mile, when a heavy sea struck her, burying the windward oars and outriggers, and snapping "Bow's" oar off short, No. 3 recovering his oar by a miracle; they then pulled in the remainder of the distance (three quarters of a mile) with "Bow" as a passenger, winning easily by several lengths, and were swamped on reaching the shore. We hear that No. 2 in "The Tub" sprung his oar. Great credit is due to the winning "Cox," who eased his boat over the heavy seas in a way that showed he was no green hand at the helm.

#### SHORE GIGS AND WHALE BOATS.

4.—Start at 2 p.m.— 2 Miles. 1st Boat, \$15; 2nd, \$10; 3rd, \$5.

- |                   |     |                  |
|-------------------|-----|------------------|
| 1—Mr. Townley's   | ... | Will-o-the Wisp. |
| 2—Mr. Robertson's | ... | Cambria.         |
| 3—Capt. Lane's    | ... | Sappho.          |

The "Will-o-the-wisp" took the lead from the start and won easily.

#### MEN-OF-WAR'S GIGS.

5.—Start at 2.30 p.m. 1½ Miles. 1st Boat, \$10; 2nd, \$5.

- |                       |     |             |
|-----------------------|-----|-------------|
| 1—U.S.S. Lackawanna's | ... | Lackawanna. |
| 2—H.M.S. Iron Duke's  | ... | Iron Duke.  |

The "Lackawanna's" boat won by several lengths thus dividing honors with the "Iron Duke."

#### MILITARY RACE.

7.—Start at 3 p.m. 1 Mile. 1st Boat, \$15; 2nd save Entrance Fee.

- |                   |     |          |
|-------------------|-----|----------|
| 1—Captain Walsh's | ... | Recruit. |
|-------------------|-----|----------|

Won easily by "Recruit," both boats finishing in a most leisurely style, the sea having apparently been too much for them.

#### FOUR-OARED OUTRIGGERS.

8.—Start at 3.30 p.m. 1 Mile. 1st Boat, \$100. Winner of "Sayonara" Cup excluded (Crew and Boat.)

##### 1—Amateur Rowing Club.

- |                   |     |         |
|-------------------|-----|---------|
| T. K. Shaw        | ... | Stroke. |
| F. G. Davidson    | ... | No. 3.  |
| A. H. Dare        | ... | No. 2.  |
| C. P. Hall        | ... | Bow.    |
| Capt. Walsh, R.M. | ... | Cox.    |

##### 2—Gymnastic and Rowing Association.

- |              |     |         |
|--------------|-----|---------|
| — Richmond   | ... | Stroke. |
| G. Estienne  | ... | No. 3.  |
| H. J. Snow   | ... | No. 2.  |
| A. Milsom    | ... | Bow.    |
| W. H. Devine | ... | Cox.    |

After their experience in the race for the "Sayonara Cup," the crew of "the Tub" shewed great pluck in again appearing at the starting post to compete against the second crew of the Amateur Rowing Club (the first crew having won the "Sayonara Cup," being excluded); and although the squall had now blown over there was still a very nasty sea running, which rendered pulling in an outrigger no easy work. At the start both crews went away well, "The Tub" again taking the lead and holding it for the first quarter of a mile, Mr. Shaw's boat pulling very steadily, then gradually gained on them, and drawing ahead clear at the half-mile maintained its lead without quickening; the stroke of The Tub now made several plucky spurts without however being able to range up with his opponent, who maintaining the same steady stroke throughout, won by a good length.

#### ALL SHORE BOATS.

9.—Start at 4 p.m. Except Outriggers and Compradores' Boats. Winner of Race No. 4 excluded. 2 Miles. 1st Boat, \$15; 2nd, \$10; 3rd, \$5.

- |                   |     |          |
|-------------------|-----|----------|
| 1—Mr. Robertson's | ... | Cambria. |
| 2—Capt. Lane's    | ... | Sappho.  |

Won well by the Cambria, the Sappho coming in a good second. The Will-o-the-Wisp being a winner was excluded from this race.

#### BOATS OF ALL DESCRIPTIONS.

11.—Start at 5 p.m. Outriggers and Compradores' Boats excepted. Round Light-ship and back. 1st Boat, \$20; 2nd, \$15; 3rd, \$10; 4th, \$5. No time allowance in this race.

- |                      |     |                  |
|----------------------|-----|------------------|
| 1—Mr. Townley's      | ... | Will-o-the-Wisp. |
| 2—Mr. White's        | ... | Hibernia.        |
| 3—Capt. Lane's       | ... | Sappho.          |
| 4—H.M.S. Iron Duke's | ... | Iron Duke.       |

This was one of the most trying races of the day, the course being round the Light Ship and back. The Will-o-the-Wisp pulled a splendid race, took the lead from the start, and won easily by a considerable distance, the Hibernia being second, and Sappho third. The Iron Duke being a heavily built gig, although with an European crew, had no chance against the very light built shore boats manned by Japanese.

#### May 29th, 1873.

The weather for once having favoured the Regatta Committee, the races that were not competed for on Saturday came off on the 29th, there being smooth water for the outriggers, and a pleasant breeze for the canoes.

Shortly after 10 A.M. the first race commenced.

#### CANOE RACE.

1.—Start at 10.00 a.m. ½ Mile. 1st Boat, 10; no Entrance Fee.

- |                        |     |             |
|------------------------|-----|-------------|
| 1—Lient. Smyth's, R.M. | ... | Splash.     |
| 2—Mr. Davidson's       | ... | Kerei.      |
| 3—Mr. Tripp's          | ... | Pompommaru. |

Three canoes appeared at the post and got away well together. The "Splash" however soon shewed her superiority and won easily, the "Kerei" coming in a good second.

#### PAIR-OARED OUTRIGGERS.

2.—Start at 10.15 a.m. 1 Mile. 1st Boat, \$30; 2nd, \$10.

- |                         |     |                      |
|-------------------------|-----|----------------------|
| 1—Y. A. R. Club,        | ... | Mr. Low's boat.      |
| 2—Y. G. R. Association, | ... | Flirt.               |
| 3—Y. A. R. Club,        | ... | Mr. Hamilton's boat. |

All the boats entered appeared for this race, and started well together, the Flirt and Mr. Low's boat having decidedly secured the best position at the start. For the first half mile these two were almost even the Flirt, if anything, a little ahead. Mr. Hamilton's without a coxswain here dropped astern, and after some very erratic steering, finally brought up alongside the Bund wall, the stroke evidently being too much for bow and pulling him round from the start; and we venture to think that had they availed themselves of the assistance of a coxswain they would have taken a very much more creditable position in the race. The other two boats continued their relative positions till nearing the winning post, when Mr. Low "put on a spurt" and drew away from his opponent, winning a hard rowed race by about one length only.

#### LADIES' PURSE.

3.—Start at 11.00 a.m. Presented by the Ladies of Yokohama, for single sculls. 1 Mile. Open to Subscribers to the Regatta Fund. No Entrance Fee. 1st Boat, "The Purse;" 2nd, \$20.

- |                      |     |          |
|----------------------|-----|----------|
| 1—Mr. Low, Y.A.R.C.  | ... | Anonyma. |
| 2—Mr. Hall, Y.A.R.C. | ... | Suave.   |
| 3—Lient. Smyth, R.M. | ... | Zigzag   |

The Zig Zag, Glance, Suave and Anonyma started;—the two latter being racing boats drew away from the others at the start. We think that it would be as well in future to arrange separate races for these sculling boats, as the Zig Zag and Glance, known as Oxford Tubs, have not the slightest chance against the regular racing outriggers, and were never in the race to-day after the first quarter of a mile. The Anonyma seemed to have it much her own way and, sculling very steadily, gradually headed the Suave and won by several lengths. The

Purse was duly presented to the fortunate winner at the Club, and the fair donor, Miss Jacquemot, made a very appropriate speech on its presentation to Mr. Low, who acknowledged it in fitting terms.

#### CANOES SAILING.

4.—Start at 11.15 a.m. No Entrance Fee. 1st, \$10. Any competitor using a paddle will be disqualified.

1—Lieut. Smyth's, R.M.	... Hadassah.
2—Mr. J. J. Dare's	... Jiggyjiggyamaru.
3—Lieut. Fagan's, R.M.	... Nedzumi.
4—Mr. G. M. Dare's	... Ringleader.

Five very smart-looking craft appeared for this event, and on the gun being fired afforded a very pretty *coup d'œil* as they all made sail to quite a smart southerly breeze. The "Ringleader" with a reef down was the first to get her sail set and led off at a smart pace, closely followed by the "Pompomparu;" the latter, however, lowered her sails and retired from the race soon after starting. The "Hadassah" and "Jiggyjiggyamaru" made rather a bungle in getting up their sails, and were left somewhat behind, but soon picked up with the "Medzumi," and before reaching the spit buoy had gained somewhat on the "Ringleader" who rounded first. In rounding, however, she was struck by a puff of wind of extra force and suddenly appeared "bottom-up"; the "Hadassah" then took the lead and although the "Jiggyjiggyamaru" was at one time overhauling her, eventually reached the winning-post, some distance ahead, and won in very clever style. The winning boat we noticed flew the "Red hand."

Thus has ended another of Yokohama's scanty festivals. It has perhaps been neither better nor worse than its predecessors, and has possibly exhibited no features upon which its promoters can fairly congratulate themselves as being novelties. But it evinces, at least, a growing tendency to indulge in aquatic sports—the true national sports of our amphibious race—and such a tendency should by all means be encouraged and developed. We should like to see more yachts afloat and building, and trust that it is only the "hard times" period we are passing through that prevents a movement in this direction.

The thanks of the Public generally, and of all boating men especially, are we conceive very largely due to the Regatta Committee and to Mr. J. J. Dare for their satisfactory arrangements for the Races.

#### YOKOHAMA RIFLE ASSOCIATION MEETING.

The Meeting of the Rifle Association was held on the 28th inst. at the Butts at the Rifle Range. We append the scores which were made on this occasion.

##### First Day, Wednesday, 28th May.

##### 1.—KITA GATA CUP.

First Prize, \$25; Second Prize, \$10. Seven Shots at 200 yards. Entrance \$2. Any Rifle.

	Points.
Mr. Barnard	19
Mr. Christie	5
Mr. F. Vivanti	14
Mr. A. Vivanti	24
Mr. Townley	8
Pt. Mitchell	18
Pt. Stokes	15
Mr. Nicaido (Jap.)	14
Mr. Abegg	18
Mr. Favre Brandt	18
Mr. Favre Nardin	18
Mr. Murata (Jap.)	21
Mr. Tashi (Jap.)	17
Mr. Benson (retired)	
Mr. Tripp	17
Mr. Cameron	21
Mr. Milson	20
Mr. Cully	2

TIE.—Mr. Cameron, 2; Mr. Murata, 4.

##### 2.—RANGE SWEEPSTAKES.

First prize, two-thirds; second prize, one-third of en-

trance fees. Seven shots at 400 yards. Entrance, \$2. Winners excluded. Any rifle.

	Points
Mr. F. Vivanti	4
Mr. Nicaido (Jap.)	8
Pt. Stokes	8
Mr. Barnard	13
Mr. Jacquemot	17
Mr. Favre Brandt	15
Mr. Abegg	13
Mr. Favre Nardin	14
Mr. Tashi (Jap.)	15
Mr. Cameron	16

##### 3.—FUJIYAMA CUP.

First prize, \$25; second prize, \$10. Seven shots at 400 yards. Entrance \$2. Winners excluded. Any rifle.

	Points.
Private Leefrost	11
Private Mitchell	17
Mr. F. Vivanti	13
Mr. Triulze	14
Mr. Eyton	25
Mr. Walker	5
Mr. Townley	19
Dr. Dalliston	20
Mr. Nicaido (Jap.)	15
Mr. Brooke	14
Mr. Benson	24
Private Stokes	17
Mr. Tashi (Jap.)	16
Sergeant Smith	19
Mr. Favre-Brandt	22
Mr. Milson	22
Mr. Favre Nardin	23
Mr. Tripp	20
Mr. Abegg	17
Mr. Barnard	22

##### 4.—SMALL BORE COMPETITION.

First prize, \$20; second prize, \$10. Seven shots at 600 yards. Entrance, \$2. Any rifle, with any description of sight.

	Points.
Mr. Townley	9
Mr. Jacquemot	3
Dr. Dalliston	16
Mr. Eyton	14
Mr. Brooke	7
Mr. Pistorius	0
Mr. Tashi (Japanese)	7
Capt. Hill, R.M.	13
Mr. Barnard	21
Mr. Vivanti	16
Mr. Benson	21
Mr. Tripp	18
Mr. Milson	20
Mr. Favre Braudt	9
Mr. Favre Nardin	16
Mr. Abegg	16
Mr. Cameron	14
Mr. Nicaido (Jap.)	16
Mr. Murata	12

TIE.—Mr. Barnard, 2; Mr. Benson, 3.

##### Second Day, Thursday, 29th May.

##### 1.—ASSOCIATION CUP.

First Prize, \$30; Second Prize, \$15. Open to Members of the Association only. 400 and 500 yards. 5 shots at each range. Any rifle. Entrance \$2. Winners of First Prizes on First Day excluded.

	Points.
Mr. Barnard	38
Mr. Cameron	38

##### 2.—SILVER MEDAL OF THE NATIONAL RIFLE ASSOCIATION.

Open to Civilian Members of the Association only. 200, 500, and 600 yards. 5 shots at each range. Any Rifle. Entrance Free.

	Points.
Mr. Cameron .....	52
Mr. Barnard .....	51
Dr. Dalliston .....	45

## 3.—THE GAS-PIPE CUP.

First Prize, \$20; Second Prize, \$10. 7 shots at 500 yards. Entrance \$2. Winners excluded. Rifles 577 bore.

	Points.
Mr. Tripp .....	18
Sergeant Smith .....	16

## 4.—CONSOLATION PRIZE.—

\$20. Open to all who have shot at this Meeting and have not taken a prize. 5 shots at 200 yards any Rifle. Entrance \$1.

	Points.
Mr. Favre Nardin .....	19

## LEAVES FROM A POCKET BOOK.

## THE STORY TELLER'S NARRATIVE.

Kumasaka Chohan, Hakamadare Yasusuké and Ishikawa Goyemon, these are Japan's three robber celebrities.

There is no spot on earth nor yet any walk in life entirely without a celebrity; celebrities absolutely, celebrities prospectively, and celebrities retrospectively.

In the hills near the grave of Prince Iyeyasu there lies a little village where, in every cottage, the Penates afford a nook upon their shrine to the wooden image of a bird; a bird that has never once encountered human gaze, but whose voice, dimly issuing from the depths of the mountain forest one spring morning two hundred and fifty years ago, filled the hearts of the villagers with such a vision of sweetness and enchantment that its echo lives still in the memories of their children's children. Did you visit that village you would learn nothing more of its celebrity than I have told you, yet I dare suppose you would fain go and see for yourselves as I would for myself; for indeed, the ear is a good natured thing; it longs to share its pleasures with the eye, and either would be curious enough at the present moment to wish for the presence of even Goyemon himself.

I dare say if you were questioned by a foreigner about your country's celebrities you might be ashamed to talk of Kumasaka and Ishikawa, but let me tell you that none but the blue blood of the old nobility can nurture the brain of such robbers as these men were!

Kumasaka lived to be fifty-five years old. "No great things that," will say your daily devotee, whose prayers for many years and many goods ascend to Shakku with the morning and evening smoke; but the robber is too free with other people's property to be economical of his own; a voluntary airing about the world for thirty-six years, or less it may be, and then an involuntary airing for thirty-six hours on the dead man's pillory at Asakusa;—that is about the truest biography you can give these gentlemen as a general rule. "Excess of years brings shame" says the proverb, and so in truth it is; for, however frail the thews and sinews no decrepitude overtakes the soldier's heart, and so he tries and fails where failure is disgrace while inaction had been natural.

"Am I who have thieved from thirteen years of age till now without once bungling to be baulked to-day at fifty-five?" So said Kumasaka when the fifty thousand riyos of the merchant Bunske were reported to be still reposing safely in their strong box, despite two attempts representing all the energy and conception of the light-fingered craft. He had been on the point of retiring into private life when this news reached him. Talk of your retired grocer, your haberdasher or your brewer! You have played a very good game of chequers with fortune; pushed her fairly up into the corner, and made room to stretch yourself after all your toils. Now for your verandah of knotless satin-wood, your pillars of unbarked pine, and your nephrite incense burners; now for your rockeries of quaint granites and argillites, your ponds of goldfish, and your shrubberies of azaleas. But what is all this? Much

coin, much care, much meat, much malady. Could you ever know such splendid satisfaction as that which the memory of his past career would stir up in the heart of the retired robber? Could any money buy for you such a sweetmeat as that which would be constantly between the lips of one, who having always done what he liked and what everybody else disliked, had strolled away from the arena of his work with a full purse and a laughing lip?

But there never has been and probably never will be a retired robber. "Certainly for forty-two years your unerring craft has made us marvel; but you have not been obliged to follow mistakes. If failure only signified failure, it would be nothing to you that others had failed before you; but where every failure quadruples the danger of attempt, two mishaps almost constitute an impossibility." So urged the followers of Kumasaka, but he was the son of a Kami. His blood warmed at the aspect of difficulties. Spiked walls, double shutters, a cunningly contrived strong-box, and a vigilant owner, placed more than ever on his guard by past experience, had more charms for him than the fifty thousand riyos in gold cobans that were known to be reposing behind all these difficulties. So in the end he went—and was crucified.

Verily if such men laboured for their country, fame would be the smallest of their achievements, but courage in a bad cause is cowardice. "What a beautiful girl! I wish I were a mouse that I might creep into her bosom." "What a lovely face! I would she had an enemy that I might cleave his skull." These are the thoughts of the same mind under different circumstances, the thought of the robber nobleman, and the soldier nobleman.

It is a cold day in the end of March, and Goyemon is sitting behind a brazier smoking. In the alcove beside him you may see his "Bizen" blade. A broad blade it is still, for never a notch has been ground from its edge during three hundred years of constant use, and though without your "soroban" you could scarcely count the number of its victims. In one corner of the room lies a motley heap of masks and gauntlets, for Goyemon is only known to his fellow townsmen as Kinzaburo the fencing-master.

Presently a voice is heard asking permission to enter, and the sliding-door pushed open reveals a figure kneeling on the threshold, the figure of a man twice as old it may be as Goyemon himself.

"Pardon Sir, I have just come back."

"Oh, indeed! come in; come in; come to the fire," says Goyemon; and thus addressed, the old man advancing kneels beside the brazier, then after a pause says with an obeisance.

"I have brought some money, Sir."

"Ah! gold or silver?"

"Gold, Sir."

"Good. How much have you?"

"A thousand riyos, Sir," replies the old man taking from his bosom a parcel and placing it beside the brazier, while the smallest possible shade of self-gratulation might be detected in his humble voice.

"Where did you get it?"

"From the yashiki of Kata Kazoye no Kami, Sir."

This time, as he replies, mentioning the name of a celebrated brave, Yake-ishibo raises his eyes for the first time to his master's face, and the exultation of his heart smoothes away one or two wrinkles from his forehead. But in a second his head is bowed upon the mats as he encounters the blazing eye of Goyemon.

"Fool!" thunders Goyemon, "Miserable fool! have you lived with me so long and do you yet know me so little?"

Verily the old man is at once bewildered and terrified. "A thousand riyos," he may well think, is not a bad night's work." Goyemon indeed has done many a finer stroke; but Goyemon is Goyemon, and he is only Yake-ishibo. Nay let this be how it may, a succession of such performances as that of this evening would be worthy to stand in any company." Notwithstanding his voice falters much as he asks,

"Why, Sir; why do you say that?"

"Why?" replies Goyemon, "why! your question scarcely merits an answer. Whose money have you stolen? The

money of a man who never did an unjust action; who never oppressed a weaker or feared a stranger; who never spends a cash on luxury, or grudges a coin in charity. Are these the men whose money I take? Away you stupid fellow; return the riyos at once." "Return the riyos, Sir, return the riyos? Why how can I possibly do that? If you say it must be done, I will do it, for life is only single after all, but Sir—" "Well you are indeed a bungler! Do you call yourself one of my followers and yet confess that you cannot return a thing you have taken? Here, follow me and I will show you how to do it."

And so Goyemon went and put the money in the very spot the old man had taken it from;—for such a man he was, this Goyemon. Well says the song:—"the heart of a gentleman and the mountain cherry are beautiful wherever they bloom."

Those were the days of Taiko Aideyoshi—"Taikosama, Generalissimo of Japan and Regent of all the Empire within the four seas." We simple people scarcely comprehend the full import of these words. I, when my voice is tired from talking, refresh it almost unconsciously with this cup of tea; and you, when you are tired of hearing me talking, disburse your half dozen cash for a pot of the same beverage with equal supineness. But the tea-drinking of Taikosama was quite another thing. I do not suppose that he drank more, or that his fashion of drinking it was different; but then—the Man, the Man!—Regent and Generalissimo of all Japan!

"Sen-no-rikiu" was entrusted with the preparation of the Regent's tea, and every day he concocted it with water from the urn "Nuregarasu." A groom of the chamber is no doubt a smaller man than, for example, a Master of Horse, or a Comptroller of the Household, but then, as the proverb says, "better the one child in the bosom than the twins on the back." The sound of the firebell from a street to lee-ward matters less to a sleeper than a solitary flea in the small of his back; and Sen-no-rikiu, cunning of speech and careful of opportunity, was a man strong in the capability of exercising his strength; strong in his ready access to the Regent's ear. Thus this tea-drinking gained an additional importance from the hands that made it, no less than from the urn that supplied the water for the making. Beshink you of a tea-urn celebrated in history, celebrated for its cunning workmanship and untimely end—the tea-urn "Nuregarasu," of the finest "Fukugawa bronze;"—its sides embossed with just one thousand figures of the mountain genii, each an artist's study; its handles of pure gold; and its feet resting on a stand of jade and enamel taken from the palace of the Emperor of Corœa. With what a delicate finger would Sen-no-rikiu coax the dust from beneath its rim! With what a deferential flourish would he daily remove its cover of "Uwajima" lacquer!

Taikosama is absent for the night, and Sen-no-rikiu, missing his morning avocation, sleeps late and rises lazily. The tea-urn will not be used to-day, but at any rate it must be tended, and "Sen-no-rikiu," possessed of the accustomed feather-brush and silk rubber, removes the cover of "Uwajima" lacquer, with, it may be, a somewhat more listless flourish than his wont, and prepares to——. Shades of Shakka and Niyorai!—the urn is gone! A conjuncture so extraordinary, so inconceivable, and withal so appalling, fails to reach Sen-no-rikiu's understanding at the first blush, and for the nonce he sits gasping and grasping at the thoughts that present themselves. But presently the horrible fact thrusts itself home, and a volley of clapped hands summons the astonished domestics, to whom the almost incoherent questions and distracted demeanour of Sen-no-rikiu appear as absurd as the idea that "Nuregarasu" could disappear. Soon the whole Yashiki is in commotion. Searching, scrutiny, and surmise occupy every man and every moment. But the shades of evening bring no comfort to Sen-no-rikiu; stupefied and miserable he sits beside his bed, his pipe unused, his *queue* unkempt, while already a strange thrill seems to creep about his epigastric regions, for Taikosama is a stern passionate man, and disembowelment will be the inevitable decree for the loser of Nuregarasu. After a time, however, he lapses into uneasy sleep and troubled dreams; his heart oppressed by a cruel weight of iron urns, and his vision wearied by a never ending vista of white-draped chambers, tall candles, and glittering stil-

letto blades with handles neatly wrapped in "haushi." From these painful presages the first rays of the morning sun recall him, but though awake he dares not raise his head, shrinking from nothing more than his own presence in the absence of "Nuregarasu." But in such circumstances inaction is intolerable. Anon straightening himself he looks around, and if ever a doomed man "met the god Hotoke in the midst of Hell-fire," that man was Sen-no-rikiu at that moment, for there before the alcove, unsoiled, unscarred, serene, and splendid stood the urn Nuregarasu.

About noon Taikosama returns, and Sen-no-rikiu, as he prepares tea, determines that he will sleep with Nuregarasu in his arms for the rest of his life. But though the urn is there now its temporary loss is a grave matter, and Sen-no-rikiu is not entirely without trepidation as he tells Taiko the strange story. Taiko hears him to the end, and then, leaving his tea untouched, rises and desires the wandering Sen to take Nuregarasu and follow him. He leads straight to his sitting room—and what a sitting room it was, that of the Regent and Generalissimo!—Alcoves with their pillars of ivy-roots and shelves of ebony; the ceiling of pictured cedar; the long verandah—its floor a solitary slab of *keiaki* grained like watered silk. And then the garden with its mighty stepping stones, ground and polished like mirrors, and the monster bridge of red granite with the carp looking out from its shadow!

Taiko walks a few steps through the garden, and stopping before a black rock that thrusts its rugged shoulders through a bed of moss, takes Nuregarasu from the hands of Sen-no-rikiu, raises the wonder high above his head, and then, without qualm or pause dashes it down upon the sharpest spike of the "Iso-ishi" at his feet. The marvel of art and patience is a bruised mass of misshapen iron! To Sen-no-rikiu the world seems suddenly to have grown a blank. If Nuregarasu accidentally lost was terrible, how doubly appalling is its wilful destruction! But Taiko seeing his consternation says: "Never trouble yourself Sen-no-rikiu. Nuregarasu is better thus than in the hands of the robber Goyemon, for there is but one man in Japan who would have dared to touch him, and that man is Goyemon; and there was but one man in Japan who ever drank tea from Nuregarasu until yesterday, and that man is Taiko. To-day, Taiko and Goyemon cannot drink from the same urn."

So indeed it was. Goyemon would fain be able to say that he had shared the Regent's tea-pot, and for this he carried off Nuregarasu from the midst of the Palace. But for so small a freak he would not have Sen-no-rikiu come to harm, and so he returned the urn the same night! For such a man he was, this Goyemon!

#### No. 7.—THE STORY TELLER'S NARRATIVE.

##### *Continued.*

But a bag that holds a pottle is a pottle bag whatever its contents, and stealing is stealing whatever be stolen. These simple principles of crooked or straight perverted push the whole world awry, and it was perhaps some such consideration that induced the astute Taiko, when Goyemon at last fell into his hands, to summon the greatest pathologist and the most crafty mechanist in the Empire and commission them to prepare a method of punishment so terrible that no spirit could possibly support its pangs, for if the man's heroism went down with him unshaken to the grave, his memory might beget many imitators but assuredly no revilers.

The head to the earth, the feet to the sky, the limbs wrenched abroad on a rugged beam, and two spears passing slowly upwards till their points clash in the stomach, while the blood pours from the mouth and into the mouth—surely the parricide's penalty might suffice for any crime! Large reward and light punishment is the golden rule of government, but no common crucifixion could touch the vitality of Goyemon's fame: Such a fine professor would dignify the foulest profession.

Civilization too was scantier in those days than now. Men lived more in their own company, and had more opportunity to nurture the fancies they found in their own bosoms, for the land was wider than the tracks that traversed it, and the summer winds blew no dust from mountain roads into the petals of lilies and egg-plants blooming far down in the hearts of the

vallies. A sorry night would the traveller have passed who in those times started with only the stars for his guide to traverse the peaks that look down on the battlements of Ōzaka, for nothing wandered there then but the rivers, the hunter and the hunted. Hill and hollow, cliff and cleft, rock and ravine; such a scene of trackless and tortuous tangle that you might well have marvelled at the self-reliance of one, who seated on the trunk of a fallen pine, quietly suffered the twilight to overtake him one autumn evening in the days of Taikosama. The sword that he carried in his belt was not absolutely at variance with his hunters garb, nor did his features bear the soil of aught but sun and service, yet was there an inexpressible something about the man, that would have hindered your desire to choose him as a walking companion after the stars had risen. He is looking along the path that scarcely asserts its right to such a name amid the rocks and ferns, and the thought that somewhat dilates his eye is one of much astonishment, for up the mountain side a solitary figure is toiling; the figure of a man, it may be some seven or eight and twenty years old, dressed in a merchant's garb, his frame muscular and well-knit, and his fresh, handsome face somewhat marred by weariness.

The new-comer, apparently delighted at the aspect of a fellow-creature, forthwith addresses the man on the log. "Pardon my rudeness, Sir; but I should judge from your appearance that you are a hunter and if so well acquainted, no doubt, with these mountains; for my part, five hours incessant walking up and down the steep has so completely wearied me that I don't feel equal to another half-mile, and if you will show me the way to the nearest house it will indeed be a kindness."

"Well! traveller," replies the figure on the log, "you've come to a quaint place to look for houses! That can hardly be your business in the hills, I fancy?"

"No indeed, that would surely be looking for fish on a mountain top! Business I have none except to get to Ōzaka if I could decipher these strange paths. I've nothing to lose, but I don't much care to spend a night among the hills, for they say the place is infested with robbers." "Robbers!" replies the man on the log with something of a start, "hem! yes; robbers there are they say, but I do not think you need fear them much. However, you look tired without a guide; you are as far from a house as if there wasn't a house at all. What say you, shall I give you a night's lodging?" The position does not admit of much parley, and the man on the log, dropping on to the feet of a gaunt sinewy figure, strikes off the little path into the very bosom of the cliffs, leading the way along a road so marvellously selected that none but a madman would travel twice six feet of it without turning back. Under rocks, over rocks, round rocks, up steep, down ravine, here backwards, there forwards, now to the right, then to the left, half a mile of avenue sinuous enough to puzzle a familiar brings the pair suddenly out before what had been a marvel in the plains and was a miracle among the hills. A very palace; huge, strong, and magnificent, wanting neither gardens nor groves.

The man of the log, anticipating some expression of his companion's wonder, says:—"You will be surprised no doubt to see such a house in such a place, but we pay no taxes up here and the region is lonely, so we must have something to amuse us. Besides, we have to keep out those robbers you speak of." They are now before the gate which is opened after some parley, and the young merchant's guide, leading him to the side vestibule, desires him to wait a moment, while the chief's wishes are consulted. "For every calling" he says in a tone of challenge, must have a Head or it could not be governed. Seeing however, that his companion is more disposed to seat himself on the mats than to dispute his proposition, he passes through the hall, traverses one or two passages, and finally enters a large chamber whose aspect now first suggests an idea of the occupant's employment. An armourer in such a region could scarcely expect to have a lintel well bowed to by customers, but an armoury the house apparently is; for stands of arquebuses and bows, racks of spears and halberds, with piles of chain-shirts and breastplates occupy the whole

apartment, save about one fourth of the central space at the far end, where the floor, raised some six or seven inches higher than the surrounding mats, assumes the form of a lacquered threshold supporting a series of sliding doors, whose frames of embossed lacquer enclose borders of damask silk, and, within, panels cunningly painted to represent the visit of Senkin to the land of the elves.

Into this inner chamber and the presence of the chief, the man of the log passes with much show of ceremony. The chief, a little, keen-eyed man, sits looking into the garden, and the smoke from his pipe almost seems to mingle with the spray of the water-fall that tumbles and jumps without the verandah. Down here in the marts our first care and chief difficulty in fashioning a garden is to produce something of the rough and rugged, to make something of what man never made; but how light would all this labour be were the rocks already climbing upon one another; the ferns already trailing from fissures opened by the earthquake; and the water already losing half its volume in pools where only the eagle can drink! "Sir, says the man of the log," I found one, apparently a merchant, wandering about the hills in the neighbourhood this evening, so I brought him home with me, thinking it just possible he might discover the place if I left him alone; for a lost man often finds what he is not looking for." "You did right," replies the chief, "show him in here." So the man of the log, again acting *chaperon*, his charge presently finds himself bowing before the chief in the inner chamber. The accustomed cup of tea is handed round and sipped in silence, for the host does not seem to be a man of many words, and possibly thinks that the rank of his guest scarcely demands a formal announcement of his own. A little surprised, however, it would seem at the guest's composure, he presently lays his pipe aside, and delivers himself, somewhat strangely, thus.

"Washidsukami, here, has promised you a night's lodging and that you are welcome to; but you may as well know before you go to bed, that those who lodge here once must lodge here always or lodge nowhere again. These, as you know, are the mountains of Toyoka, and I am Matsu-yama Raitaro, so you will understand that if one who lodged here to night went down to the city yonder in the morning, it would scarcely be wise for us who were left behind, to stay here till noon. I am sorry if anything I say causes you concern; but you must take your choice of either entering our company, or going out after breakfast tomorrow morning to the end of the gully there with Shokichi the headman. This Raitaro was a robber of wide but not very fair fame; there were few people in Japan who were not familiar with his name, and fewer still who would pass the mountains of Toyoka after sunset without a prayer to Amida. The young merchant had, it would seem, fallen in with a very evil chance, and the alternative now proposed might well puzzle him unpleasantly; yet, strange to say, he was not one whit moved. His hand never shook as he knocked the ashes from his pipe, nor did his voice falter in the smallest as he replied:—"I was not altogether unprepared for what you have said, Sir; your armoury there is rather too well stocked for hunting purposes alone. I am very much obliged for your kind offer. To tell the truth I have not many encumbrances in the world, for a little jealousy on my elder brother's part has made my father's house uncomfortable for me, and if you will really admit me I shall be most fortunate. But I'm afraid you will find me very useless."

"Upon my word a very proper spoken and hardy-nerved young man" thinks the chief, beginning to look with more interest at his visitor's comely face and strong fore-arm.

"As to your usefulness or otherwise I can say nothing. No man fails entirely if he tries to succeed, but you are only a beginner now and must take a beginner's part. If however you deserve well your promotion will surely come for we have no favouritism here. At any rate I recommend you to devote all your spare time to fencing. I suppose you have never handled a single-stick?"

"Well, Sir, I'm afraid I should make but a poor hand of that sort of thing. I have indeed seen a little single-stick play in our village for the farmers are very fond of it, but it was only the name of the thing."

"Indeed, well, come along, I will put you in charge of the master;" and, with that, the chief leads the way, through the outer room and across a strip of garden, to a long low building with a very business-like aspect, and from within which the sound of stroke and parry, challenge and onset are already issuing. Passing within they find that the evening's fencing has not yet absolutely begun though a couple of lads are assailing each other pretty vigorously on the dais of sand in the middle of the room. It is the robbers' fancy to fence by lamplight, for they seldom see the face of an adversary when the sun is up; and many a good wrist has failed to follow the thrusts learned in that dusky chamber. The feeble rush-lights now flicker and flare on thirty strong men's faces, some scarred some scatheless, some young, some old, but all more or less touched by that cloud, that clings to the brow when the heart is soiled. These thirty faces turn with much curiosity towards the chief and his companion, as, amid many bows and salutations, the two pass up the room to the corner where the fencing-sticks and paraphernalia of the play are piled, and where, a giant in frame and fame, the fencing-master, stands. To him the novice is presented, and received not very cordially; all teaching is irksome, but, above all, the teaching of fencing: for whatever mysteries of the art you may unfold you cannot inspire the spirit that nerves the wrist; you fashion the puppet but fail in the breath. It is accordingly with some show of apology that the master begs one of the two youths that are already masked and gloved to give the visitor a preliminary lesson, and desires the latter to select a stick and prepare for the bout.

The old rule that a "quick return is better than a long parry" is one of the last that a fencer really credits, and when the visitor, instead of selecting a long stick chooses one of the very shortest in the rack, some curious looks are exchanged by the old hands.

A very short business was that first bout; for the visitor's opponent had scarcely time to assume the easy position of a confident victor, when the "pear-splitter" cut resounded on his helmet. Two or three others who follow share the same fate in about the same time, and now the room is all a buzz of excitement. Everybody in the *yashiki*, from the scullion to the gate-porter comes flocking in, and as victory after victory places the new-comer, without pause or parley, before a fresh opponent there seems every chance that his arm must tire or his eye fail. But though he is now *vis-a-vis* of the very grey beards of the science he delivers to each and all unerringly the same terrific cut in the very centre of the helmet—and now the attention of the bystanders is diverted to the corner where the fencing master stands, for he is seen to unfastening his belt, throwing off his coat and donning his gloves with little of his wonted coolness. The very preparations of the master are watched with breathless interest; but the master himself feels that some curious sensation of uneasiness begins to cloud his eye. Never for twenty years has he seen a trick of fence that was not as familiar to him as his wife's face; but to night eight of his best pupils have succumbed to the same stroke, and yet he does not feel sure that he has penetrated the mystery yet. Was the stick passed once or twice outwards after the parry or how was it? Men with such marvellous wrists and sinews do not travel the mountains for nothing; and the heart of the master burns and his muscles stiffen as he thinks that the stranger who is beating his pupils and laughing at his art cannot be anything but a spy—a spy whose signal may perhaps summon destruction to their quiet home in the mountains and give their heads to the gibbet. Nor is the master singular in the thought; the same idea has already suggested itself to several of the band, and a cry of eager encouragement rises from every lip as the master leaps into the ring.

His foot planted on the accustomed spot, and his hand armed with the often-held single-stick, that momentary feeling of uneasiness passes away like a breath from the master's heart, and with eye on fire and wrists of steel he deals out after cut, and thrust after thrust, but none find their way home. The visitor stands quietly on the defensive. Hitherto it has apparently been his object to come to terms with his opponents

as quickly as possible, but now he pauses, he parries, he retreats, and already cries of "*gerai*," "*gerai*," welcome the master's certain victory. But it is only for a moment. Even the master's multifarious methods of attack have their limit, and presently the two figures are standing quiet in the middle of the arena, and their crossed blades are motionless save for a little tremor telling of the taunted muscles that grasp them. Now, it is the visitors' turn to attack:—"will he try the '*nashi-wari*,' and will the master parry it?" The audience, breathless, presses so close to the arena as almost to touch the combatants, but a small space suffices such fencers. A shuffle—a flashing of sticks—and a wild exulting cry; the "*nashi-wari*" is parried—the master knows the foil. But ere the echoes of that cry are faint, they are overtaken by a bitter voice, for the master's right arm is hanging powerless by his side. This time the "*nashi-wari*" was apparently only a feint, a terrible cut from the left upwards, a cut the most difficult, the most daring in all the science has reached the thinner fold of the gauntlet, and numbed the arm that has known no equal for twenty years. No marvel that hot shame and anger wrenched that bitter cry from the robber band, but what other result could be expected, for the comely youth with the strong fore-arm is ISHIKAWA GOYEMON himself!

## Correspondence.

### THE MEMORIAL OF THE EX-FINANCE MINISTERS.

TO THE EDITOR OF THE *Japan Weekly Mail*.

SIR,—A paragraph in the *Japan Herald* of the 23rd instant stated that the translations of the memorial of Inoué Kaoru and his colleague Shibasawa, which appeared in the *Japan Mail* and the *Japan Gazette* are, "as we are assured" incorrect, and that "an authentic copy (which we published in tonight's issue)" has been furnished to that journal.

Without enlarging upon the confusion which seems to have existed in the writer's mind as to the relative value of the words copy and translation, it seems only fair to point out to him that if the first translations of this document which appeared in the Yokohama press contain some mistaken renderings, the third, published in the *Japan Herald* of the 23rd instant, is quite as open to criticism as either of its predecessors.

Three native papers have published the memorial in the original, namely the *Nisshin Shinjishi*, the Yokohama *Mainichi Shimbun*, and the *Shimbunzasshi*. The version given by the *Japan Mail* was avowedly made from the first of these, and it may safely be assumed that the *Japan Gazette*'s version is from the same source. Being printed with moveable types, the *Nisshin Shinjishi* is more subject to printer's errors than the *Shimbunzasshi*, which is printed from blocks. The latter journal, it would appear, has also had the advantage of possessing a more correct manuscript than the other two papers, and it is a safe conjecture than from it the *Japan Herald*'s version has been made.

Let us proceed to point out a few of the errors in the *Japan Herald*'s "authentic copy." The "authentic copy" commences as follows: "Although the rise or decay of a nation originally depends on its character, etc." Now the Chinese word *ki-un* here rendered by 'character' cannot have that meaning. It may be paraphrased in Japanese by *tenchi no aida no ikioi*, but is hardly capable of being rendered into English. The idea is that there is certain connection between the events which succeed each other in the life of a nation; that each event is the effect of some preceding cause, and becomes in its turn the cause of other effects. When a period of history is isolated from what has preceded and what has followed it, the whole train of causes at work during that period is called *toki no ikioi*, or as we might say in English, 'the spirit of the times' or the 'tendency of the age.' But *ki-un* is a more general term, and under it is contemplated the whole series of preceding events and their dependence on each other. These events may have contributed to form the character of a nation, but it is equally certain that the character of the nation has reacted on its history.

Still, the character of a nation and its history are not convertible terms. According to the Chinese theory of *ki-un*, every occurrence has a natural tendency if left to itself to produce a certain effect, but if interfered with it no longer produces that effect. Upon the nature of the interference depends the character of the effect. Therefore, given certain tendencies which a Government can appreciate, and also the knowledge of the change in those tendencies which its acts will produce, it can, if it chooses, direct the course of events. If it possesses this knowledge, and applies it aright, these things will go well. If it is ignorant either of the tendencies or of the effects which its own acts will produce, then things will go badly. This is the meaning of the phrase *Seifu kioso no tōhi*. The *Japan Mail's* translator was therefore not far from a good translation when he made use of the term 'natural causes' for *ki-un*, but in translating *tōhi* by merits or 'demerits' he spoilt it. The *Japan Herald's* translator has failed to give the signification in both cases, by employing 'character' for *ki-un* and 'properly or improperly' for *tōhi*. The nearest rendering of *tōhi* is 'suitability or unsuitability.' The word *ki-un* re-appears again towards the end of the memorial, and here the *Japan Herald* has 'fortune' as the equivalent. Of course the meaning is the same in both places, and if 'character' were right in one, it would be right in the other also.

The second paragraph of the *Japan Herald's* translation is correct, while that of the *Japan Mail* goes very wide of the mark. *Shosēki* is in Japanese *moromoro no waza*, all doings; *cho ni tsuku* is a phrase which means to go on in regular succession. The *Japan Mail's* translator forgot that he had a Chinese idiom to deal with here, and might have discovered the correct rendering by consulting Dr. Legge's excellent edition of the *Sheking*. *Bampō kua ni mukai* is an antithesis to the phrase *shosēki cho ni tsuki*, and literally means the myriad regions are turned towards change (i.e. change for the better, or civilization). *Bampō* is a term used in the *Book of the Analects* in the sense of the people of the whole empire. These two examples show how necessary for the comprehension of Japanese political documents is a thorough knowledge of the Chinese classics, or, at least, the possession of Dr. Legge's edition of them.

The word *Kikō*, rendered 'Law' in the *Japan Mail*, and 'the rightful line of sovereigns' in the *Japan Herald*, is very difficult to translate. *Ki* literally means 'thread of silk,' *Kō*, 'the rope round which a net is formed, and by which it is drawn together.' The combination of these two Chinese words is used metaphorically in the sense of 'rules and laws.' Hence the use of the word Law. In Japan 'the Law' means the authority of the sovereign, which was in abeyance during the existence of the Shōgunate. To translate the phrase by 'the line of rightful sovereigns that remained in abeyance' is to convey the mistaken notion that the Mikados who succeeded each other during the last seven and a half centuries or more were all dethroned sovereigns, whereas every student of Japanese history knows that they were all this time actually recognized as occupying the throne. In this case the *Japan Mail's* version is certainly more correct than that of the *Japan Herald*.

The second half of the third paragraph has been fairly rendered by the *Japan Mail's* translator, but the *Japan Herald's* version is rather freer than necessary. The attribute *masa ni sakan naru no*, actually in a state of high perfection, is transferred from *Seikei* (Government and laws), to which it properly belongs, to *godaisū* (the five continents). This is translated by 'countries of the world.' *Seikei* (Government and laws) is taken to mean the whole of 'the most experienced Governments ruling.' This is contrary to the well-known canon of translation, which requires that the number of words in the original should not be exceeded, whenever excess can be avoided.

In the fourth paragraph the *Japan Herald's* translator has committed an error similar to that of which the *Japan Mail's* translator has been guilty of in the second paragraph. He takes *gi*, discussion, to govern *ritsu*, law, whereas the two form an antithesis. The literal meaning is, as to law (not 'constitution') we have added [to our own laws] *bankoku no kōhō*, and as to discussion we have exhausted every-body's opinion (*yoron*—*moromoro no mikomi*). What the real significance of these phrases is, is not of much importance. It is of course absurd to talk of

combining International Law or the law of nations with hitherto existing laws to form a code, but the expression sounds fine, and has been used simply for that reason. It is merely a rhetorical ornament, like a great deal of the first part of the memorial.

The fifth paragraph contains an addition to the language of the memorial which is perfectly unwarrantable. *Futei no to wo korasu* may mean 'to check revolution,' but certainly does not contain the idea expressed by the phrase 'repel our foes.' The phrase simply states that the government has sufficient forces at its command to preserve internal order, and nothing else.

In the *Japan Mail's* version the progress of Japanese civilization is compared to the swiftness of a race-horse. This is a correct translation of the character *shi* which is used by the *Nisshin Shinjissai*. The *Shimbunzasshi* has a character which is rightly rendered by 'a team of four horses,' but which does not warrant the introduction of a 'chariot.'

In the eleventh paragraph of the "authentic copy" there appears another mistake which was in the first instance committed by the *Japan Gazette*, corrected in the *Japan Mail*, and then re-invented by the *Japan Herald's* translator. The word *kōsō* is compounded of two Chinese roots, *kō*, cultivation of fields, and *sō*, a mulberry tree. Ploughing fields and planting mulberry trees are taken as typical of the work of the husbandman, and the compound is used as a synonym for *ndōjō*, agricultural pursuits. The error consists in making *kō*, which may be used as a verb, to cultivate, to govern *sō*; but that would be incorrect, because in the sense of 'to cultivate,' *kō* can, when used concretely, only mean ploughing fields. *Chokuso* would be the proper word for 'culture of the mulberry.'

All these errors are of little practical importance, for they occur in what is only a sort of overture to the play. When we come to the play itself, the single paragraph which has excited such lively emotions in financial breasts, we find a marked difference between the versions given by the *Japan Herald* and the *Japan Mail*. That the *Japan Gazette* made a hash of the figures is not to be denied. The translation in the *Japan Mail*, however, correctly represents the original as published in the three Japanese newspapers before named. The difference between the "authentic copy" and the "incorrect translation" of the *Japan Mail* is in the end of the paragraph. The latter runs thus: 'In addition to this, the paper money issued by the Government Departments and the former *han*, and the debts due in Japan and foreign countries, when added together, amount to close upon '120,000,000 yen.' The *Japan Herald's* translator has passed over the words *han no chohei oyobi chiuguai*, which correspond to the words in italics, and makes of the whole sentence: 'Adding to this, the debts contracted by the Government departments and the former have been altogether about 120,000,000 yen.' It was undoubtedly an oversight, but must still be counted amongst the "incorrect" passages. On the very face of it this sentence is incomplete. "The Government departments and the former" — The former what? Everyone knows that the Japanese Government and the former *han* have issued vast quantities of paper money, which according to a scheme lately published, are to be converted into a fauted debt, bearing interest at six per cent., and no statement of indebtedness would be complete without some mention of this paper money.

Why go any further than this? Simply for the purpose of doing justice to both translators. In the paragraph which comes next but two to that which contains the statement of indebtedness the *Japan Herald's* version has a sentence which begins with: "Standing or sitting, coming and going, in everything." This is not an English mode of expression, and must therefore be a literal translation from the Japanese. Now the original runs thus: "*Shintai, fugiō*," or word for word, 'advancing-retreating, bending-down-looking-up.' This has been rendered by the *Japan Mail's* translator, rather freely perhaps, into 'in every movement of their being,' but even such an amount of license as this is better than changing the text of the original in order to satisfy a fanciful taste for the pure native idiom. Both translators go wrong again in a passage which follows immediately. *Kenri* and *gimu* are words which have been recently introduced to represent the English words 'right' and 'duty' respec-

tively. The *Japan Herald's* translator has rendered *Kenri* by 'liberty' and '*gimu*' by 'rights,' both incorrectly, while the *Japan Mail* has 'right' for *kenri*, correctly enough, omitting however the important correlative.

In the *Nisshin Shinjishi* the word *minsha ni shô*, certainly an unfamiliar expression, has apparently been printed by mistake for *sato ni shashô*. If this is a mistake, at any rate the *Japan Mail* has given a fair equivalent for it. The *Japan Herald* has had the superior advantage of possessing an authentic copy, and has the almost correct rendering, 'a certificate of birth from the chief temple of their town.' On the other hand, the word *ketsu-zei*, literally 'blood-tax,' which the *Japan Mail* has translated 'conscription,' has been taken by the *Japan Herald's* translator to mean 'poll-tax.' The mistake is pardonable, because the term is one of very late introduction. It occurs in the new military law which was promulgated a few months ago, and is no doubt a translation from some European language. 'Conscription' is the best word for it on the present occasion.

The Japanese have a familiar saying which resumes in a few words the gist of the above observations. It is, *omae no atama no hai wo ô ga ii*. If the writer of the paragraph which has called forth this letter profits by this bit of advice, the critic's labours will be for the future unnecessary.

Your obedient servant,

U.

Yedo, 24th May, 1873.

#### A JAPANESE VIEW OF THE FINANCE QUESTION.

(From the *Nisshin Shinjishi*, of May 23)

I lately found in the newspapers a memorial addressed by Messrs. Inoué and Shibusawa to the Mikado. This document, in discussing the acts of the Government, states that it advances in an inconsiderate manner and neglects the proper sequence. As regards the theory of administration it cares only for appearance, while the resources of the people are in actual fact decaying. The views which are put forth indicate the *ne plus ultra* of devoted interest. It seems to us that it would be impossible to find two men with more patriotism, or more love for the people, and I am profoundly perplexed by the resignation and retirement of these two gentlemen.

It is most true that the theory of administration and the capacity of the people ought to correspond, and it certainly was the duty of these gentlemen to point this out.

However, the document says: "In ancient times the people were regarded with compassionate tenderness. But at present the Government is not only unable to look on the people with compassionate tenderness. On the contrary it restrains them with new laws and burdens them with new taxes. Every one must be registered. They must have certificates from the shrine of the patron deity. For their dwelling they must have title-deeds. The men must be subject to the conscription. Then there are law-expenses, fines for violating petty rules, laws for the price of goods, for their sale, for cattle, horses and servants. Whenever a new decree is put forth the people are stupefied. They are at a loss how to act, and lose all confidence."

To decide upon the laws of taxation is of course no easy thing. It cannot be done in the space of a morning. At the present moment of change it is impossible to avoid a mixture of what is objectionable with what is unobjectionable. As for the temple-certificates, the registration and titled deeds for land, and the like, there is an indisputable justification for the payment of an impost. But in putting them in force for the first time it is impossible to preserve the natural sequence. To say that "they are restrained with laws and burdened with taxes more than in former times," is simply to insult the Government in a gross manner.

As for the observations about registration, title-deeds for land, and national liabilities, these things are the chief duties of the Treasury, and are not things which have suddenly turned up. Mr. Inoué, being the substitute of the Minister of the Treasury, ought diligently to bear the burden. Why did he then hold his tongue about these matters until a few days ago, and now begin to discuss them for the first time? This perplexes me in the highest

degree. Did he imagine up to to-day that these measures were right, and has he learnt now for the first time that they are wrong? In that case he ought to acknowledge his faults and ask pardon of his superiors and inferiors. Has he a right to put all the blame on the Government?

The document also says; "How shall we contrive to maintain our national existence?" And again: "Disasters will befall us from within and without at a moment when we least expect them, and the ruin will be so complete that nothing may avail to prevent it?" And it enumerates distinctly other omens of danger and trouble. If this be known to be the actual state, every native of the country must be overwhelmed with grief. And much more would be the case with two gentlemen of such lofty position and weighty functions, and who possess a practical and minute knowledge of the good or bad character of various measures. Their duty is to labour hard and spend their energies until they drop exhausted at their post. But where is the patriotism of a high officer and his feeling of love for the people, if at such a moment he resigns his office, and throws the burden on other shoulders?

Although the views put forward are plausible enough, there are many violations of fact in this document in my opinion. This is what has caused my doubts and called forth my criticisms. If you (Inoué and Shibusawa) can give a satisfactory explanation, do not grudge the trouble of taking up your pens.

(Signed)

AN INDEPENDANT PEASANT  
OF THE IRUMA *ken*, RESIDENT IN YEDO.

#### THE CEMETERY.

TO THE EDITOR OF THE *Japan Weekly Mail*.

May 28th, 1873.

SIR,—With your permission, I would say a few words in behalf of our Cemetery, in the hope that the Community (whose ear is never deaf to a reasonable appeal, and whose purse is ever tied with the loosest of strings on such occasions), may be induced to do something to preserve it from the state of desolation into which it has fallen. We read with interest of the British Government enquiring concerning the Crimean graveyards. We have almost a Crimean graveyard in our midst. A trifling annual subscription would restore from decay and neglect this spot which is well worthy of preservation as an historical record—if for no other reason. The matter touches every class, and all nationalities. It is really a place of great interest, and would repay a visit on the part of many who, happily, have not hitherto had occasion to enter its enclosure beside a dead friend or relation. Here the story of our influence in Japan may be read as from a book:—from the soldiers' and sailors' graves in the time, not long since, when the Community required protection, and death took its toll of our defenders; through that unsettled period, marked by murders, to the present day, where the record numbers among its entries friends and relations, many of whom were endeared to all, and distinguished by some accomplishment or grace which we were proud of while they yet lived.

It would seem that the Cemetery Committee has ceased to exist, and that the subscriptions last collected have been all expended. The Superintendent, it will be found, is indebted for his salary to the liberality of a single individual. This should not be; and I trust, Sir, you will not lay aside your pen, always wielded in a good cause, until some public movement has been initiated for the purpose of considering how we can best show respect and honour to our dead, in honouring whom we honour ourselves. For my part I am ready to subscribe my share immediately or annually.

I enclose my card and subscribe myself,

Sir, yours respectfully,

NEMO.

#### Law Report.

IN H. B. M.'s CONSULAR COURT.  
Before RUSSELL ROBERTSON, Esq., Consul.  
*Tuesday, 3rd June.*

William Jackson, doer of the *MacGregor*, was charged with drunkenness and violent conduct.

The prisoner was fined \$5 and costs.

The fine was paid.

Original from  
CORNELL UNIVERSITY

## Notes of the Fortnight.

## THE MEMORIAL OF THE LATE MINISTERS.

(From the J. M. D. A.)

We publish below an extract from the Government Gazette of the 18th May, on the subject of the Memorial about which so much has recently been written and spoken.

The Gazette of the 14th contains the acceptance of SHIBUSAWA's resignation of office, but he is not allowed to resign his title of *Shōgoi*.

The Gazette of the 15th contains the acceptance of INOUYÉ's resignation, and he is also ordered to retain his title of *Jinshii*. On the 15th both are ordered to remain *en disponibilité*,—the nearest equivalent for the Japanese expression made use of. This involves a certain amount of pay.

MUTSU MUNÉMITSU has been appointed to the vacancy created by SHIBUSAWA's resignation. INOUYÉ's place is put into commission, and the duties are discharged by WATANABE, *daijō* and MORI, *Shōjō* of the Treasury. OKUMA has been appointed Chief Commissioner of the Treasury.

Our statement that the Memorial was returned on account of the mistakes it contained has been elsewhere impugned, and it was at the same time alleged that it was customary thus to treat Memorials upon such subjects. But nothing can be further from the truth. Documents addressed to the Government are of four kinds.

- 1st. Petitions for something to be granted.
- 2nd. Reports of occurrences.
- 3rd. Applications for instructions.
- 4th. Memorials on political affairs.

It is a common practice for the Government to return the first and third kinds with the answer attached. The second is, of course, never returned; and the return of the Memorial in question is wholly an exceptional proceeding, resorted to for the purpose of marking the high and, as we think, the just displeasure of the Government. This may be enough to show the value of the attempt which has been made to mislead the public on this matter.

In order, however, that the question should be set at rest, we may fairly ask for some examples of cases in which Memorials have been thus treated. If the practice be usual, there can be no difficulty in furnishing such examples.

## GOVERNMENT GAZETTE, No 70.

MAY 18, 1873.

The following answer was returned to the memorial of Inouyé Kaoru, Vice-Minister of the Treasury, and Shibusawa Shigékazu, Attaché of the third class.

Although the views brought forward in your memorial are proper in the points enumerated and the facts hinted at, there are considerable contradictions of the actual truth. As far as the remarks about the necessity of taking as an aim the accordance of the theory of government with the capacity of the people are concerned they are not to be gainsaid; and as His Majesty has lately decreed reformatations in the regulations under which the business of the Council of State (*Dajōkan*) is conducted, you may relieve yourselves of anxiety on that point.

As to your statement that a rough calculation of the expenditure and income for the year shows a deficit of over 10,000,000 *yen*, this result was obtained by calculating the value of the *koku* of rice to be 2 *yen*, 75 *sen*. Part of this has been incurred in preceding years; part consists of extraordinary expenses such as those connected with the conversion of *han* into *ken*; another part consists of occasional expenditure, and which is not expected to recur every year. Moreover, you state that the actual liabilities of the Government amount to 140,000,000 *yen*. There are many serious errors in this calculation.

If the actual facts be considered, neither is there an annual deficit of 10,000,000 *yen*, nor is there such an enormous debt as 140,000,000 *yen*.

To make such statements, therefore, is most reprehensible, and your document is simply returned to you.

WE have good reason for believing that the joint Memorial of Inouyé Kaoru and Shibusawa Shigékazu has been returned to them, on account of the untruthful nature of the statements made in it regarding the national finances.

We observe that the correctness of our translation of this Memorial has been impeached. But it is only necessary to compare it with that which pretends to be more authentic and to supersede it. The result in our own mind has been to create a strong impression that the latter is a mere paraphrase of our translation, made possibly without reference to the original.

## OUT-BREAK OF THE RINDERPEST.

WE much regret to hear that rinderpest has broken out among the stock on the Government farm superintended by General Capron. Upwards of thirty of the animals have died, and grave fears are entertained of further mortality among them. General Capron looked forward with great hope to the success of his experiments in crossing the native and foreign breeds both of horses and cattle, but disease has swept away the young half-breds and with them the hopes and labour of many months. The malady is said to have gained an entrance into the farm through the admission of some native cattle bearing its undeveloped seeds. It has assumed a very malignant form and demands the greatest care from all who are interested in stock, if not actual legislative interference.

WE commented in our last issue upon the outbreak of Rinderpest at the Government Farm near Yedo, and the severe loss suffered by the young half-bred stock. It behoves us, however, to look to our horses also, in case the epizooty (or as the San Francisco people call it, epizootic), should either be introduced or become spontaneously developed in Japan. The vigour of this epidemic is such that it is stated some three to four thousand horses are now suffering from it and disabled in San Francisco. The mortality does not, however, seem to have been great, as only some fifteen fatal cases have been reported.

## SHIMADZU SABURO.

It is pretty generally believed in Yedo that Shimadzu Saburō's escort has returned to Satsuma, and that the ancient chief-tain alone remains in the metropolis.

A PROCLAMATION has just been issued by Government to the effect, that each *ken* is to send into the Treasury for the future half of the taxes levied. For this year these contributions will be received by monthly instalments, commencing on the 1st of June; but for next and every following year a lump sum is demanded.

A GOVERNMENT proclamation sets forth that for the future the habit of dancing and playing at religious ceremonies is not to be confined to one class, but that any one feeling that he has "a call that way" may caper and fiddle to his heart's content; nay more, dancing and deportment academies are advertised in the said document in which instruction will be given to those desirous of joining the classes.

WE believe that among the new measures which will shortly be introduced by the Government is one for the reduction and equalization of the land-tax. This is very satisfactory, as is the proposal that the mercantile classes should take a larger share than formerly of the burden of taxation.

THE medical department of H. I. M.'s Army has been abolished.

ACCORDING to the *Nisshin Shinjishi* H. M. the Tenno has written to the Authorities to declare his intention not to rebuild the castle of Yedo at present.

WE are informed that the Exhibition of objects of art and *virtu* at Kiôto continues to attract great numbers of the native population. People from all parts of Japan are visiting it, and from various sources a very handsome revenue will, it is expected, be received. We believe it is intended to devote the proceeds to the erection of a permanent Exhibition Palace at Kiôto.

THE execution of seven Japanese Criminals, among whom we believe was one woman, took place on the 26th inst. at the Execution Ground.

WHILST on his beat in the suburbs of Yedo, on the morning on the 23rd ultimo, a policeman named Fujimoto Toyutaro arrested on suspicion a countryman whose appearance seemed to warrant his apprehension. On being conveyed to the guard-house the prisoner went along quietly enough until he reached a canal, when, suddenly drawing a short sword from his girdle, he stabbed the policeman to the heart and then, plunging the weapon into his own bosom, jumped into the canal and was drowned.

THE frost reported as having occurred on the 20th April appears to have been of so severe a character that the mulberry and tea plants in Koshiu, Shin-shin, Yetchingo and Rikiu have never recovered from it, and it is feared that the export of tea and silk will be diminished in consequence.

A NUMBER of specimen Bank notes sent from Ôzaka to Yedo were stolen *in transitu* on the 24th of May.

ON the 24th May a portent in the shape of an Obi-shaped cloud accompanied by a flash of lightning and an explosion described as like "the noise of a hundred thunderbolts," was seen to rise into the air, from the bay opposite Funabashii.

ALTHOUGH the taste for rabbits has become somewhat more eclectic it has by no means expired. Fewer, it is true, are introduced from abroad, but only, we suspect, because the present parent stock is found sufficient to keep the demand supplied. We have been informed that the sum of \$5,000 has been offered for an importation of 50 lop-eared Madagascar rabbits of the Duke of Sutherland's breed by an enthusiastic amateur. Surely this is the culmination of the folly!

IT is stated that the reception accorded by the Viceroy of Chihli to H. E. Soyôjima, Ambassador to the Court of China, was of unusual splendour. A magnificent entertainment was offered to him by the Viceroy.

WE are informed that a Review of Chinese disciplined troops in which some 12,000 men took part was held at Tienstsin in the presence of H. E. Soyôjima, Envoy Plenipotentiary of the Japanese Government. Exhibitions of this sort are not without their significance, and frequently assist amazingly the peaceful arrangement of a "difficulty."

THE vicissitudes of Japanese noblemen of the *ancien régime* will some day probably furnish an interesting subject of enquiry. One of the ex-Daimios has, we learn, wisely adapted himself to the progressive order of the day, and having turned his attention to the "Milky Mothers of the herd," is now a producer of potted milk. We are told that his "brand" is in good repute among consumers.

THE *Ozaka Shinbun* moralises upon the profession of the wrestlers, which it compares, much to the advantage of these, with that of actors. The wrestlers, the moralist contends, are as weak in intellect as they are stout in *physique*. There are, it is stated, over two thousand of this fraternity in Japan.

THE Kobé papers complain of the growing laxity of the native criminal population in that settlement. Kleptomania in an exaggerated form has set in. Pickpockets (*kinchakukuri*) exhibit their deftness upon foreign coat-tails, and burglars break into the houses of European settlers with a skill and success which would do honour to a graduate of Portland or Toulon. The settlers seem to experience but a qualified com-

fort from the assurance that the police are "carefully watching the offenders."

THE arrival here during the week of a steamer transporting coolies from Hongkong under the severe and scrupulous Emigration Act, was made the subject of an article in one of the local papers, presumably written in a jocular mood, and recommending the Japanese to treat the vessel as they had done the *Maria Luz*. But the humour was so muddy that the Captain of the vessel addressed a letter to the journal protesting against the gratuitous affront offered him. The analogy between the two cases was of the nature of that which Fluellen saw when he said,—"There is a river in Macedon; and there is a river in Monmouth; and there is salmons in both." "There is figures in all things," as he goes on to say.

M. Berthémy, formerly French Minister at Peking, and subsequently at Washington, has been appointed to the Court of Yedo, and will take M. Outrey's place, relieving Count Turenne, at present Acting as *Chargé d'Affaires*.

THE Audience Question has been definitely and satisfactorily settled between the Cabinet and the Foreign Ministers at Peking. The details of the reception have yet to be arranged.

A correspondent asks us to furnish information as to the quantity of cattle in Japan. This we are unable to state as no statistics exist which bear on the subject, and rumour cannot be relied on; but from all we can learn the existing stock is not by any means large. Apart from the small breeding establishment instituted by the Agricultural Department no means seem to be adopted to increase it. We should be glad to obtain any information on this matter.

THE *Japan Gazette* says that the servant in whose quarters the late fire in the Tenno's Palace originated, and the person who supplied the straw ashes have been punished by fines in lieu of imprisonment.

#### OUR ANNUAL REGATTA.

IF the Regatta of Saturday last was not quite as successful as it was hoped by its promoters to prove, the fickle nature of the Yokohama weather must answer for it. Every means was taken by the Committee to present an ample programme and to secure its smooth execution;—The ear was to be tickled by the agreeable strains of the best available band; and the peristaltic emotions were to be pleasantly exercised upon a substantial tiffin on board the *Bombay*. But music, tiffin, and the flag-decorated *Bombay* could not contend against the depression caused by squalls and showers, while the necessary postponement of some of the sculling races, which usually yield the largest amount of amusement, intensified the disappointment of the public. We are not sure that the Bay of Yedo offers the best yachting ground at any season, but there can be little doubt, we imagine, that if the annual races were held at a more advanced period of the year (August or September) the efforts of boating men would be less likely to be frustrated by the uncertain and precarious weather incidental to the present season.

WE observe that the *Hiogo News* adverts to a paragraph in the *South Australian Chronicle and Weekly Mail*, on the subject of the appointment of Sir Harry Parkes to the vacant Governorship of the Colony of South Australia, the paragraph being apparently based upon a correspondent's letter.

Sir Harry Parkes possesses, the correspondent states, all those qualities that would render him an admirable Colonial Governor, and an "intimate knowledge of the Eastern Countries and Archipelago. South Australia has a huge estate in the Northern Territory, which can only be transformed from the costly 'White Elephant' it now is, into a most valuable property, by inducing large numbers of the inhabitants of the Japanese seas and Archipelago to settle there, and cultivate Eastern products (by the aid of English capital), for which that Northern, tropical and well-watered country is so well adapted. Port Darwin would then become a second Singapore, &c., &c."

Of Sir Harry Parkes' general fitness for the office to which

the letter points there can be, we may assume, no question; but that he possesses that *special aptitude* for the Governorship of Northern Australia which the writer rather transparently hints at, we may very emphatically undertake to contradict.

A meeting of the Shareholders of the Bluff Gardens will be held on the 4th inst. elicit the opinion of that body as to the action which it may be desirable to take in the present attitude of the lessees interests. This is tolerably well known to the outside public. The Shareholders have never received any profit upon their contributions; the enterprising gentleman who initiated the movement, and has since laboured most worthily in its furtherance, has met with nothing but difficulty and, it is said, but little appreciation of his efforts in the main; and to sum up this discouraging *ensemble* the Gardens have now a balance of some \$1,200 against them.

Shut in as is the European population of the Settlement one cannot fail to appreciate the advantages of the breathing space which the Gardens afford. Skill and money have improved their natural advantages, and the most has been made of their scanty acreage. All that could aid in the amusement of the Public has been laid under contribution; and flower shows, and band-promenades have lent their attractions to the spot.

It can scarcely be expected that this can be provided free of expense to those who avail themselves of it, nor, we are sure, can this be desired by the Public. And we trust that on whatever action the Committee of Shareholders may in the present embarrassed position of the property decide, they may be duly assisted by the support and liberality of the foreign settlers of Yokohama.

THERE are few speculations which hold out the promise of being paying that do not profess to have the mission of "filling a void long felt" in some community. An Indo-Egyptian Bank has just been established at Vienna with contemplated branches in China and Japan, and this institution professes to have for its object to "render Germans in the East independant of British Banks." Notwithstanding this we are inclined to believe that Germans, (who are not it seems so badly off for National banking accomodation as it is) will be ungrateful enough to prefer the English establishments so long as they can deal with them on better terms.

THE very low bids elicited at the sale of racing ponies held by Mr. Jaffray on Monday last occasioned universal surprise, allowing even due weight to the consideration that the owners of the chief stables were in the market to sell—not to buy. We learn, however, that a reaction from the torpor of Monday's sale has since taken place, and that several ponies have changed hands during the week at a large advance on the reserve prices of the sale day.

WE learn that a Canoe-Club has been formed, and that its designation will be the "Royal Ulster."

THE subject of establishing a "Registry Office" for Japanese servants has once or twice come before the Public; and the existence of an institution of this nature in Shanghai has been instanced in illustration of its practicability. We cannot tell if the project has prospered here, or if it has been relegated to the retreat of many other well-meaning schemes; but we observe that the Shanghai prototype has found an end, and advertises its dissolution in consequence of want of support.

THE Iron clad, *Iron Duke*, has gone to Yokoska where it will be dry-docked.

MR. Gavin Ness, was formally admitted to practise in the Provincial Court of Yokohama on Thursday.

THE vessel that came into collision with the *Colorado*, the *Saturnus*, a Japanese barque, has fortunately received no injury, the damage, indeed, apparently being on the side of the *Colorado* which lost a portion of her forward guards, and ten feet of her upper-deck bulwarks through the accident. The Captain of the *Saturnus* states that he had his lights up, and that the steamer was "steering wildly." On the other hand the report of the steamer plainly indicates that no lights were visible until

she sounded her whistle, upon which a red light was exhibited. It would appear to be very difficult to fix the responsibility in cases of collisions like that under consideration. The rule of the road is, it is true, plainly laid down for steamers and sailing ships, on a wind, and with a fair wind; but the large number of disastrous exceptions prove that they are either imperfectly understood, or that the penalties attached to their neglect are not severe enough to enforce their observance.

#### THE CRICKET MATCH.

COMBINED *Iron Duke* AND GARRISON ELEVEN v. ELEVEN OF THE YOKOHAMA CRICKET CLUB.

We annex the score of the match played on the 30th ult., on the Ground of the Yokohama Cricket Club. In the combined eleven we were struck with the excellent play of Lieut. Carpenter whose batting and wicket-keeping were both especially good. Mr. Miller's bowling, and that of Private Smith, are also well deserving of note and did good work for their party. The fielding of the combined eleven was, we thought, eminently good, and the "long-stop" of Capt. Hill, and "point" of Mr. Lambert were leading features in their play. On the part of the Yokohama Cricket Club Mr. Wallace did some excellent batting—more especially in his second innings—and was ably supported by Dr. Wheeler, and Messrs. Abell and Dare. We thought the fielding of this side (although very fair) hardly equal to that of their antagonists, but would indicate Mr. Shaw's "long-stop" and the general fielding of Messrs. Abbott and Dare as being deserving of praise. Messrs. Siddall, Fraser, Abbott and Wheeler, did some excellent bowling for their party.

Towards the termination of the match the play became intensely exciting, the Y. C. C. having but four runs to make in order to win, while two wickets remained to go down.

As it is the match is a drawn one; but we understand that a return match has been arranged and will probably be played in about a fortnight.

The ground is reported to be in very fair condition.

#### THE PULLING MATCH.

THE match for \$200 a side arranged to take place between the *Will o' the Wisp* and *The Duke* was rowed on Saturday afternoon, 31st inst., and judging from the large number of spectators assembled on the Bund to witness it, it would appear to have excited a lively interest among all classes.

At a little after two o'clock a very fair start was made, *The Duke* shooting ahead with a lead of about half a length in the first few strokes. This distance she gradually increased, taking the other boats water half way to the *Lightship*, and from that time appears to have had the race to herself.

Rounding the turning point in fifteen and a quarter minutes, the *Will o' the Wisp*, about six lengths astern, appeared to be gaining on her opponent. *The Duke's* crew, however, again quickened their pace and came in about ten lengths ahead. The race was rowed in 30 minutes and 17 seconds.

The water was remarkably smooth, a circumstance, it is said, much in favour of the conquering boat.

The boats resemble each other very closely and are, we believe, from the same workshop. Both crews were in excellent condition, the advantage of weight being apparently with that of the *Will o' the Wisp*.—J. W. M.

WE regret to learn that only four shareholders were present at the meeting advertised to be held yesterday to take into consideration the question of the Bluff Gardens. We annex a copy of the letter addressed by the Japanese Authorities to Mr. C. Brennwald.

[Copy.]

GOVERNMENT OFFICE,  
Kanagawa, May 23rd, 1873.

SIR,—The ground rent of Lot 230, on the Bluff, used as a Public Garden, has not been paid for three years, from March 15th, 1871 to March 15th, 1874; it amounts to \$1,209.24

Not knowing who the members of the Committee are, I shall be greatly obliged to you if you will communicate with them and make them pay the amounts due immediately.

I have the honour to be,

Your most obedient Servant,

(Signed) OYE TAK,  
Kanagawa Ken Gon-no-kami.

To C. BRENNWALD, Esq.,  
Chairman of the Consular Body.

Statement of Passenger Traffic for the week ending Sunday June 1st, 1873.

Passengers..... 29,959.      Amount..... \$8,935.13  
Average per mile per week \$496.40.  
18 Miles Open.

HIOGO.

The following bears on the question of the Extra-Territoriality Jurisdiction.

The legislation of the Japanese is, as most of our readers are doubtless aware, of a very spasmodic and uncertain nature. Rules which are made with the best intent are either never carried out or enforced temporarily with so much rigor to harass and aggravate those who are subjected to them, too often without in the end producing any lasting good result. As an instance of vexatious enforcing of local laws we have to point to a late assault case, which we had abstained from alluding to, as legal measures had been taken, but which, having obtained a certain publicity through other channels, is now to some extent a subject for comment.

The local authorities have made rules for the preservation of cleanliness in the streets, they have published edicts without end, all bearing on the subject, and the police can be seen at all hours of the day ordering the merchants and shopkeepers of Kobe to sweep up a fragment of straw or a few old shoes which may have been dropped in front of their premises. These policemen have such powers given them over their fellow countrymen that there is not much room for wonder when we find them opinionative and overbearing in the highest degree.

One of these gentry, when passing the house of a European in the native town, took it into his head to call out to a foreigner who was looking out of an upper story window, and ordered him to remove some coal dust which had been dropped in the middle of the street by a passing coolie. The foreigner stated he was not the owner of the house, and even if he were he should not do anything of the sort. The man, who was very excited, probably from his authority being disregarded, called in English to the foreigner to come down and be killed, at the same time using one of those oaths that are too frequently the first words learnt by the lower class of native. After a consultation, the three foreigners who were in the room decided upon reporting the insulting conduct of the policeman to his superiors, and went down to the Foreign Office for the purpose. There they were referred to the Saibanasho, thence to the Songaisho, and from there to the Police Office, where they were invited in and provided with seats at the table where complaints are laid. After a short time spent in waiting for an interpreter, a Japanese with a gold band on his cap and a loaded whip in his hand, came in and roughly ordered the foreigners to get off the chairs and stand on the low part of the room where the coolies usually stop. This was objected to by the three, as they had come to lodge a complaint and had been invited to occupy the places they were in. They were without warning struck over the face with the whip, and then surrounded by nearly fifty men with staves, who commenced a most brutal assault. The foreigner who was nearest the door, seeing what was coming, managed to effect his escape by pushing his way out, but the other two were soon overpowered, one being struck senseless by a spiked instrument of torture known to Japanese justice, and left on the ground, while the other was disabled by a blow on the right arm, which nearly broke that member, and he was then fastened up in one of the peculiar styles of Japanese judicial cordings, in which the hands are fastened behind the back and are made to bear down on a bight of the line which encircles the throat. (This we believe to be equal to an intimation to beholders that the person thus roped has committed some such crime as "burglary, with violence.") This line across his throat had nearly brought him to a state of strangulation, when his companion fortunately recovered from his faint, and on seeing the situation of the other asked a man he recognized to loosen the part of the line round the neck, which was done. Upon being told soon after this that an adjournment was going to be made to the Saibanasho, the one who was bound gave his parole not to attempt an escape, and persuaded his persecutors to remove the cords. The two were then marched off. When in a room in the Saibanasho, closely guarded by some of the same body of men who had committed this wanton outrage, they wrote to H.B.M.'s Consul and offered a reward to any one who would take the letter. There was no hesitation on the part of the guards in refusing this request, and had not the third foreigner who was of the party fortunately

made his escape they would probably have been kept in detention till office hours next day. As it was, Mr. Gower and Mr. Wilkinson hastened to the rescue, and carried off their subjects as soon as they possibly could. The depositions have been taken, and it is highly improbable that we shall allude to the matter further till the result of the action which has been taken shall have been made known.

This a most extraordinary case. That an individual policeman should exceed his duty and be insolent is a thing which may happen occasionally anywhere,—it is the conduct of the policemen at the Station which is so remarkable.

The ordinary etiquette of journalism prevents us at present from saying what we should much like to say, even did not common justice forbid us to condemn any man—even these policemen—unheard, but a good deal has been said lately about the Government granting permission to foreigners to travel and reside in the interior in consideration of their submitting to native jurisdiction. Is this the kind of “jurisdiction” to which there is any probability of their having to submit?

As for the removing of dirt, we wish again to direct the attention of these “guardians of public safety” to “pig corner,” within a few yards of the spot where the offending coal dust was lying, where there is to be found a filthy nest of Chinese who pollute the neighbourhood. The place we indicate is notorious, but not the slightest notice of it seems ever to be taken by the authorities. As the “civil servants” of the State hereaway seem to have a considerable stock of energy on hand at present, it is a pity they do not turn their attention in the direction of that fever-breeding den.—*Hiogo News*.

FIVE hundred and forty Enfield rifles in good condition were sold at auction yesterday for a dollar each. They must have been a very bad speculation for the importers though it must be a satisfaction to the peace-loving amongst the community to find that these weapons, which a few years ago would have sold at a very satisfactory profit, are now such a drug in the market.—*Hiogo News*.

THE introduction of Opium into this country is a matter of vast importance, looking to the utter moral degradation which ensues on the use of the drug. The natives as yet have had no extended experience of its effects, and the Government has fully appreciated the fact that it is easier to prevent the introduction of a poison like this into the country than to put a stop to its use when it has become a habit. We learn that a few days ago a Chinaman was seen leaving one of the landing places, as is common enough in the case of Chinese, without his luggage or his person undergoing any inspection such as is frequently enforced on foreigners whose appearance would lead most observers to suppose them trustworthy. Soon afterwards another Celestial overtook him and by a little handling made him disgorge a belt with several small tin boxes of opium attached, which had been appropriated by the smuggler. The very vexatious way foreigners are often interfered with on landing leads to much ill to see an act of this kind go on under the nose of the officials without the least notice being taken of it.—*Ibid*.

We have been favored with the following particulars of the probable loss of the *Genko maru*, better known to foreigners as the *Viborg*. The steamer was chartered in Kagosima, about the end of February by some Loochooans, for a voyage to the Loochoo Islands, for sugar. These men are described as being tall and hardly so well-favored as the Japanese, and they all wear long dark beards. They objected to any foreigner being on board with them, and the owner took Mr. A. Ross, the engineer, to his house in Kagosima, at the same time telling him that the vessel would return in at least twenty days. The ship left with ninety-six passengers and a large quantity of specie on board. After about fifty days, a rumour reached Kagosima that the engines had broken down in a gale about 150 ri from port; that the Japanese engineer in charge not being able to repair the damages, left the ship in a passing junk, presumably for assistance; that the passengers had also left the

vessel soon afterward. Later tidings have been very conflicting; at one time a rumour gained currency that the vessel had been seen on some rocks and had gone to pieces; later again it was asserted that she had been towed into a Loochooan port for repairs. The late news is that she has gone down with all hands. The agents and owners of native vessels show great reluctance to afford information as to their mishaps—like English owners, they don't want either an inspector or a PLIMSOLL.—*Ibid*.

#### TRAVELLING IN JAPAN.

We understand that it is the intention of the Government that comparatively good roads shall be made and maintained between all the cities and towns in Japan to enable wheel carriages to serve as means of transport of produce and other goods in lieu of the jagged horse paths that have hitherto sufficed; also for the convenience of travellers by Jinrickshyas instead of Kangos and Norimons, or, as may occasionally be observed by squatting postures on the highest summit of the veritable pack; There can be little doubt that in the course of a very short time Jinrickshya locomotion will be availed of throughout the country, and, though of course railways cannot be superseded, yet they will not afford facilities to the demands that will arise for efficient means of bye-way communication, consequently comparatively easy travelling will be obtainable in Japan. Every day does the desire to travel increase amongst the people, for many there be who never behold their relatives from year's end to year's end, moreover, journalism will prove a strong stimulus to go out and behold some of the wonders and sights of which they read in wonder and half credulity. When the right to travel freely where you will is yielded to the foreigner, all those places more or less distant from the treaty ports, to which foreigners may resort, either for business purposes or to repose in lavender for a while, will derive special pecuniary advantages by the acquisition of good roads for jinrickshya locomotion, but there should be two very important provisions made in respect of these vehicles,—punishment of incivility by the drawers of the same, and the proper regulation of fares.

At this present time the men employed to draw about these carriages are a most insolent class. If two or three fares happen to be travelling in company, they are annoyed beyond measure by the conversation kept up by these fellows; their language, to those who understand it, is disgusting and their continually screeching at one another and at passers by are beyond forbearance, add to all these the *squeeze* charges which they attempt to impose upon you, and the annoyance resulting therefrom if the same are not complied with, and you have a measure-full quite sufficient to deter any one from indulging in this easy method of transit, excepting on special emergencies.

These men lead an idle vagabond sort of existence and it cannot be expected that if unchecked they will comport themselves as they should, they are ignorant and have abundant opportunities for indulging their passions of drinking, swearing, gambling, and other debaucheries; besides these influences we believe they consider themselves on an equality with the police—and in one sense to a certain extent they are so—that force often being recruited from their ranks! The Kobe local government, however, had better see to the proper surveillance of these Jinrickshya men, that they may be bound to keep civil tongues, that proper charges be controlled, and that any attempt to extort more than the proper fares or refuse to carry any one because he will not submit to a squeeze, be subject to punishment and loss, or suspension of license to ply these carriages; also may trouble ensue such as is likely to flow from the late police outrage.

When will the authorities become duly impressed with their responsibilities?—*Hiogo & Osaka Herald*.

#### NAGASAKI.

It is interesting to notice the gradual development of private enterprise in this country by the adoption of Machinery tending to supersede manual labor. The Government, or the larger Daimios, were until quite recently the only ones who had called

in the services of that docile servant, steam; and this more as a gratification of curiosity than from any other motive. But we are sure the more energetic and enlightened of the native population only require a little leading and they will soon discover the advantages to be derived, if only in a monetary point of view, by introducing machinery more and more into the country.—*Nagasaki Express*.

At the present time three large Rice-cleaning Mills exist in the native city, each driving about 120 beaters which find full employment. Two of these have been established during the past few months. The great bulk of the Rice cleaning is now done at these Mills at prices which, although much under that usually paid to coolies, yield these concerns a very satisfactory profit.—*Ibid*.

An unfortunate accident occurred at the Takashima Collieries shortly after noon yesterday. It appears that while the Europeans were at tiffin, the Japanese workmen were employed in changing the shift in No. 2 shaft, when a portion of the roof between the five feet and ten feet seams gave way. A large quantity of water from the first named seam, which had accumulated owing to it not having been worked for several years past, broke in and swept many of the work-people down the dip drives, and we are sorry to say that five women and a boy have been found buried amongst the timbers and coal which have been carried down by the water. Two more women are reported missing, and it is feared that they have also met with their deaths. The accident, although a very sudden one, has not caused any serious loss to the property. We understand that very little damage has been done, and the water not only has been stopped, but the mine was entirely pumped out in about half an hour or so after the accident and work progresses as before.—*Ibid*.

Probably owing to the low price ruling for rice recently, the native farmers in this vicinity have considerably increased the area of land usually devoted by them to the cultivation of wheat and barley. This season a very marked increase in the quantity of these cereals is noticeable, and the country people have been busy during the past week in gathering in a very plentiful harvest. The appearance of the country is now a very picturesque one, and a walk into the rural districts at the present time, not only shews the scenery to advantage, but amply repays the toil of getting there, and also supplies those who make the journey with materials for contradicting the accuracy of the somewhat gloomy description of the appearance of the scenery of this place, which sometime ago found its way into print from the pen of a visitor at Christmastide.—*Nagasaki Express*.

A SEVERE shock of Earthquake was felt here yesterday evening shortly after seven o'clock, and caused many to give preference to the streets as a place of safety rather than remain indoors. The duration of the vibration from the commencement is generally considered to have been nearly a minute, and appeared to gradually increase. It was succeeded by another shock twenty minutes later, but the second one was less violent. In the opinion of both the natives and foreigners, the shock of last evening was by far the most severe yet felt at this port during the past ten years.—*Ibid*.

#### CHINA.

##### JAPAN AND CHINA.

The following article from the *North China Daily News* points to the results of the diplomatic communication which Japan has lately established with China, and the social and political influence which the first named country may be expected to exercise on the latter.

The ratification of the Japanese-Chinese Treaty is a very important step in the development of China; indeed we should not be surprised if more practical results flowed from it than have resulted from pompous diplomatic operations with Western Powers. The changes which must come on

China will, we believe, be hastened by the assistance of the shrewd restless children of the Rising Sun. We know that when Greek meets Greek the tug of war is to be expected, and we are inclined to believe that when Oriental meets Oriental the diplomatic duello may be looked for. The Japanese have all the zeal of new converts. They have only recently taken to Western customs, and they have not yet found out how extremely inconvenient and foolish many of them are. After long years of seclusion they open their doors, and naturally they think their neighbours should not hesitate to do the same. Already in small things the Chinese have been compelled to treat them as they treat Europeans, as they have given their representatives a foreign and not a native feast; but, in spite of this, Orientals they are, and they will not allow their envoys to assume a subordinate position, or to follow in the line that the British and French Legations pursue. We shall not be surprised if the Japanese, with their fresh and vigorous energy, solve the question of China's isolation, and force the reluctant sister into the comity of nations. For one characteristic of the Japanese mind is a rough and ready logic. They penetrate a fallacy with extraordinary quickness, and apply the *argumentum ad hominem* with amazing celerity. The Japanese would reason thus;—"The Mikado secluded himself from the world for centuries and men thought Society would come to pieces if he showed himself. He has shown himself, and yet Society not only holds together, but further, all the evidences of national activity and greatness are increasing an hundred-fold. The Emperor of China has secluded himself in like manner, but may not the experiment that has been made in the one case be repeated in the other without any dread of a national collapse! What we have done, not only with impunity but with advantage, surely you may do." We have recently pointed out that in a certain sense this is a superficial view of the question, and have hinted at the dangers which a patriotic Chinaman, really attached to the traditions of his country, may naturally apprehend from the granting of the Audience Question. Still these arguments will not affect the Japanese. They are not in a frame of mind to listen to pleas about tradition or reverence for the past. You might as well talk to Mr. Odger about Divine Right, as address appeals, based on the doctrine of the Emperor's celestial origin, to His Excellency Tanésmi Soyé Shima. And what will be the end? It is possible that the Mikado's Government will pursue an eirenic and not a polemic policy, but we are greatly mistaken if the Japanese are not anxious to try their newly acquired powers,—their European drill, their Martini-Henry rifles and their newly bought ironclads. Nothing would be easier for the Japanese than to blockade the China ports, and we are doubtful if, in action, the clumsily managed gunboats carrying the Dragon Flag would hold their own against the warships of the more active, teachable, and versatile people. It would be strange indeed if the opening of China should come through Japan, and if France and England should "stand," one on either hand, while the objects for which they have so long toiled in vain are effected by a semi-civilised power which has sprung into life within the last ten years. It may be a mere dream, but yet it is within the compass of possibility that the desired end may be accomplished by means apparently very inadequate to the purpose.

Some small musters of new silk have come down, but no quantity, and there is nothing doing. Prices talked of by Chinese are at rates equal to about 23s. or 24s. for thirds, and 19s. 6d. for Red Peacocks; but in face of Home rates, and a probable large crop, this seems excessive.—*North-China Herald*.

WE are requested to state that the quotation of North China Insurance Company's shares at Shanghai at Tls. 470 as given in our yesterday's issue is incorrect. The last price quoted in that market was Tls. 400 ex. 1st dividend of Tls. 80. We may add that our information was taken from the market list furnished to the *Shanghai Evening Courier* by Mr. S. Daly.

# Yokohama Market Report.

Per P. M. S. S. China.

YOKOHAMA, June 6th, 1873.

THE European and American arrivals during the past fortnight have been the *Colorado* and *Menzaleh*, with mails from San Francisco and Marseilles respectively, on the 25th ulto.; and the *Avoca* with Brindisi mails on the 3rd inst.

Latest telegrams from London announce that *Silk* is rising in consequence of the reported partial failure of the European crop, and our market is hardening slightly. *Tea* is easier: the *Maogregor*, hence on the 5th inst., took 8,184 packages for the United States and it is said that the *China* will carry about 3,000 packages more. *Copper* unchanged and in limited supply.

THERE has been greater activity in the manufactured-goods market during the past fortnight than has been noticeable for some months past. The low rates in which certain importing houses have been willing to acquiesce have stimulated a desire to speculate on the part of the native merchants and to this the activity is chiefly attributable. We need scarcely comment on the quotations which are appended and which indicate, only too plainly, the overburdened condition of our import market. They show (almost without exception) losses more or less heavy, and reflect the posture of a trade disturbed by the novel agencies of steam and telegraph, and without the power or energy to adjust itself as yet to their operation.

**COTTONS AND COTTON YARNS.**—Have been dealt in to a fair extent during the fortnight but at prices which continue to exhibit a declining tendency. In *Grey Shirtings*, 7 and 8½ lbs. goods have met with attention in several moderately good lines; and *White Shirtings* have secured purchasers at improved rates. A comparatively large business has been done in *Yarns*, chiefly 16s. to 24s., but the quotations reported show a downward movement. In all other goods the market is sluggish and no margin over cost appears possible.

**WOOLLENS AND WOOLLEN MIXTURES.**—Are but little dealt in owing to the weather and the enormous reductions insisted upon by the Native Merchants. Some parcels of *Italian Cloth* and *Orleans* have changed hands but the figures reported are highly unsatisfactory. *Mousselines-de-laine* are saleable; but the market still continues to droop. In all narrow Woollens a heavy sacrifice is demanded by the purchasers and transactions are much restricted. No business has been done in *Broad-Cloths* or *Blankets*.

**IRON AND METALS.**—The Iron Market has been characterised by extreme dullness during the fortnight, and very few settlements are reported as having been made. A slight improvement is noted in *Nail Rod* only. The stocks now held are, piculs 4,800 *flat and round Iron*, and piculs 5,000 *Nail Rod*: 200 boxes of *Tin Plates*.

**SUGAR.**—Has been somewhat more active this week and transactions in *white* exhibit an improvement upon former rates; *browns* are lower. The settlements of the fortnight amount to piculs 15,000 and Stocks are reported at 66,000 piculs.

The Exchange market has hardened in sympathy with improved rates ruling in China, and in consequence of the commencement of exports. It closes firm at quotations indicated.

		Saigon—Cargo ... "	"

## YOKOHAMA MARKET QUOTATIONS.

## EXPORTS.

**SILK.**—Prices during this fortnight have been most irregular; some of the native dealers being anxious to reduce their stock, whilst others are holding for improved rates. The latest telegrams reporting on the issue of the European crop seem to have turned the scale in favor of the latter, and the market is assuming a firmer tone.

Arrivals have been very scanty, and the stock, chiefly composed of common and inferior grades in all descriptions, is reduced to 500 bales.

The Silk crop of this country is reported to be progressing well, and new Silk may possibly be brought to market in small parcels at the end of this month.

Settlements since the 23rd ultimo are 250 bales of Hanks, and 50 of other sorts, making total settlements since the beginning of the season 14,200 bales.

**TEA.**—Business in new crop Teas continues on a moderate scale, (several of our principal buyers keeping aloof with commendable prudence), and most settlements are divided fairly amongst the balance of Tea houses here.

The weather continues fine and supplies are coming in freely, so that we may look for a full stock in course of the current months. The well known obstinacy of the Japanese merchants may probably delay deliveries, but it cannot avert the reduction requisite to assimilate prices to a scale in some degree proportionate to that demanded by the present state of the New York Tea market; and we hope that united action on the part of buyers here will give our friends at home a chance of making up past losses, by shipments being made this season on a cheap and well-authorized basis.

To-day rates are as under, the market being decidedly weak.

Settlements for the week, 1,700 piculs, making total settlements of new crop since the 23rd ultimo about 3,700 piculs.

Stocks of new Teas here, 4,500 piculs.

The *McGregor* took away some 8,184 packages, of which about 6,000 consisted of new crop Teas.

**COPPER.**—There is no stock either in Yokohama or Yedo. *Best Tile* is quoted at \$22 per picul nominal, and *Sheet* \$20. The parcels spoken of are very limited.

Per P. & O. steamer *Bombay*, for Hongkong:—

Silk..... 64 bales.

Per *Menzaleh*, for Hongkong:—

Silk..... 164 bales.

Treasure ..... \$100,000

## REPORTS.

The P. M. S. S. *Colorado* reports at 3.30 p.m. of the 25th instant, was coming up the bay, Kansao-Saki Light bearing N. W. by N., and distant three-quarters of a mile, saw a vessel three (3) points on the starboard bow, showing no lights. The *Colorado's* whistle was sounded three times loudly, whereupon the approaching vessel exhibited a red light. Our engine was immediately stopped, reversed, and the ship backed. At 9.35 she ran into us, with all sail set, striking us on the starboard side, forward of the foregigging, starting our bulwarks, and, apparently, carrying away her jibboom and head gear. Having stopped the ship, we waited to ascertain the extent of damage done, and to see if the unknown vessel would make any signals; as none were made, we proceeded on our course at 9.50; arriving at the Company's buoy, at 11.30 p.m. The vessel was apparently barque-rigged.

The British barque *Eastern Star* reports having experienced strong N. E. winds throughout the passage.

The British barque *Dilpusund* is reported to have run aground on the Saratoga Spit on the 31st ult., with a pilot in charge, the Chief Officer having been sent up here, the assistance of the P. & O. and P. M. S. Co.'s tugs was procured, and it is expected that the vessel will be got off without any difficulty, as she must have grounded when the tide was low. She reports light easterly winds throughout the passage.

The *Eliza Shaw* reports having passed the North Foreland for the second time on the 15th January, and having worked down channel, were off The Start on the 24th. Crossed the equator in 26 degrees W. on the 18th February, experiencing very light N. E. and scarcely any S. E. trades; were in the meridian of the Cape March 20th, and passed Java Head April 22nd. Came up through the Sunda Channel May 19th, thence to port met with a succession of N. E. and E. S. E. winds with thick dirty weather.

The *Avoca* had light S. S. wind up to Van Dieman Straits, thence moderate S. W. winds to Rock Island with fine weather; from there strong S. W. and W. winds with heavy rain into port. Passed the P. M. S. S. Co.'s ship *China* off the Lannocks.

The *Laurel* reports experienced strong S. E. winds, with heavy rain and squally weather, from Van Dieman Strait in to port.

## MISCELLANEOUS.

## SEVENTY YEARS OF SUCCESS

Have proved beyond question that

## ROWLANDS' MACASSAR OIL

In the best and safest Restorer and Beautifier of the Human Hair.

Perfectly from any poisonous or mineral admixture, its certain good effects are lasting, even to the latest period of life, it prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from scurf and dandruff, making it beautifully soft, pliable and glossy. Great caution is necessary to ask for ROWLANDS' MACASSAR OIL, and avoid all others, this being the only genuine. Price 3s. 6d., 7s., 10s. 6d., equal to four small, and 21s. per bottle.

## CAUTION.

Each Bottle has a GLASS STOPPER, instead of the Cork as formerly. All with CORK are SPURIOUS IMITATIONS. This Notice is deemed necessary, as the Proprietors have received intimation that a large quantity of Counterfeit, of the most pernicious quality, has lately been sent from France and Germany to India and the Colonies under their names.

## ROWLANDS' ODONTO,

Or PEARL DENTIFRICE, preserves and beautifies the Teeth strengthens the Gums, and gives a pleasing fragrance to the Breath. It eradicates Tartar from the Teeth, removes spots of incipient decay and polishes and preserve the enamel, to which it imparts a PEARL-LIKE WHITENESS.

## ROWLANDS' KALYDOR.

An Oriental Botanical Preparation. This Royally-patronised and Ladies' esteemed Specific realises a Healthy Purity of Complexion and a Softness and Delicacy of Skin. Soothing, cooling, and purifying, it eradicates all Cutaneous Eruptions and Discolourations. Price 4s. 6d. and 8s. 6d. per bottle. Sold by all Chemists and Perfumers, and at all Bazaars throughout China and Japan.

## ROWLANDS' ESSENCE OF TYRE

never fails to produce immediately a perfect change in Red or Grey Hair, Whiskers, Eyebrows, &c., to a beautiful glossy and permanent Brown or Black, which colour remains so durable that neither washing or perspiration can remove it. Price 4s., 7s. 6d. and 10s. 6d. per bottle.

All these articles have been used and justly appreciated by all the Sovereigns and Courts of Europe, the Pope of Rome, and the aristocracy of the world, during the last seventy years, being of inestimable value to those who have once used them. They are sold by all Chemists, Perfumers and Bazaars throughout India, the Colonies and South America.

"Ask for ROWLANDS' ARTICLES."

## DIED.

On the 14th June, at Yokohama, in his 23rd year, JOHN ASPINALL WYLIE, fourth son of Henry Johnstone Wylie, of Oxtou, Cheshire.

On the 20th instant, at No. 83, Main Street, Yokohama, JOSEPH CURNOW, aged 35.

## Notes of the Week.

*(From the Japan Mail Daily Advertiser.)*

A FIRE broke out on the morning of the 15th inst., at about  $\frac{1}{4}$  past two o'clock on the premises No. 32 Water Street. Mr. Prince, Manager of the *Japan Mail*, who resides in the house, was aroused by the noise of the crackling of flames and the smell and smoke of fire, and having discovered the site of the fire at once summoned assistance, but it was a considerable time before the engines arrived, and then it was obvious the fire had obtained too firm a hold upon the building to allow of its being extinguished.

The occupiers of the different parts of the building hurriedly removed such portions of their property as time allowed of; and those occupying the neighbouring houses made arrangements for quitting their dwellings should the flames extend. Fortunately, however, owing to the light air which prevailed the fire was concentrated within the walls of the front building No. 32, and the efforts of the firemen succeeded in preventing its spreading to the adjoining godowns attached to it, or to the other buildings in the same row. After an hour and a half it was apparent that these were safe and that the progress of the fire was arrested.

The origin of the fire is at present unknown. It is certain only that it must have broken out in one of two rooms; the front one in the occupation of Mr. Prince and the back one used by Mr. W. G. Howell, but it is impossible to say in which of these two. Mr. Prince states that he was guided to the latter by the glare of the flames beneath the door but did not enter the room; and a gentleman who arrived about the same time tells us that observing, on entering the room below occupied by Mr. Cheshire that the fire had its seat in one of the upper rooms, he proceeded up-stairs, entered the door of Mr. Howell's room, and observed a dull flame issuing from the party wall which divided it from the front apartment. He was about to save some portion of Mr. Howell's library, when the draft which the open door had admitted fanned up the flames violently and he was compelled to retire. The front room furnished as a sitting room is little used by Mr. Prince, and he cannot call to mind having entered it on Saturday. Mr. Howell quit- ted his apartment at about seven o'clock after having extin- guished a small lamp which he had in use.

The chief loser by the fire is the proprietor of the *Japan Mail*, who suffers the loss of a stock of paper, furniture, &c., and a valuable library of books, together insured for \$7,000; some books, the printing of which had just been completed and which were ready for the binder, and the papers of the Asiatic Society, the latter being all uninsured. The books of the establishment were fortunately rescued.

In addition to this Mr. Cheshire has, it is feared, lost the

greatest part of his property insured for \$500.—Mr. Prince has lost all his furniture, prints, jewellery, &c. insured for \$3,000: Captain Scott, insured for \$1,500, has only saved a portion of his effects, and estimates his loss from uninsured property at \$2,000.

The building on No. 32, passed into the hands of Mr. W. J. Alt, some little time since, and we are informed that the portion which has been burnt down was insured for a sufficient sum in the Lancashire Insurance Office. The heaviest loss, apart from this, will fall upon the Imperial Fire Office which had an aggregate risk of some \$10,000 on the property contain- ed in the premises of the *Japan Mail* and the furniture and effects of Mr. Prince.

It is only right to add that to the energy and promptitude of the different fire companies the limitation of the area of the fire is largely due, and that their conduct on the occasion is deserving of the highest praise.

## IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

17th June, 1873.

Statement of Passenger Traffic for the week ending Sunday 15th June, 1873.

Passengers.....	28,683	Amount.....	\$8,598.63
Average per mile per week, \$477.71.		18 Miles Open.	

A VERY plausible reason has been assigned for the custom of wearing swords, which of late, has again been adopted by the Japanese. It is said that animosity to foreigners is thereby exhibited; but the fencing masters throughout the country, fearing lest their occupation should be gone, have made a vig- orous effort to maintain their position, with a result, so far successful, that the fencing schools and public fencing exhibi- tions have become very popular and the people have resumed their swords, long since laid aside. One result of this is that swords which once could be bought for \$10, now cannot be purchased under \$40 or \$50.

A SOMEWHAT singular ceremony was to be observed on Sunday last in Yedo in connection with the erection of a new house built upon the banks of one of the canals near the foreign settlement. The house was but partially built and the workmen had evidently left to form part of a procession which approached the house by the canal. In one boat were several priests gorgeously attired in their ceremonial robes, in another were young girls with musical instruments; while in those which followed were the carpenters in gala attire. The priests at once proceeded to bless the house, the spectators set up a tremendous shout, and all landed and adjourned to a neighbour- ing tea house.

THE Government would appear to be anxious to ensure a thorough knowledge by the public of the new laws. Each day a small pamphlet containing some portion of the new Code, is issued and sold to the people for a small sum. The public, however, do not seem to respond to the enthusiasm of their rulers for comparatively few copies are sold, though as there are 480 numbers to be issued interest may yet be awakened in the minds of the unenlightened.

WORKMEN at Tokai are employed destroying the gates which form the entrances to the Castle, and day by day may be seen fresh evidences of the destroying spirit, which is

effacing from the city all that can awaken a memory of the eventful past.

WE have already learnt of the promotion of Shimadzu Saburo to the post of Councillor of war to the Mikado; but the means adopted to rid Yedo of the presence of his followers seems to have remained unnoticed. It is said that the followers and dependents of Shimadzu Saburo numbered some 1,200 men and these let loose upon Yedo proved a source of serious danger. Their master having been promoted it was hinted to him that the country being at peace his followers should return to their own province, and to this request he at once acceded. The Government officials, however, were determined that these men, many of whom were rather *rôbins* than true Satsuma men, should never reach their Southern province and, taking advantage of the recent law of conscription, whereby every male adult must serve in the army for a certain period, orders were despatched to the Hizen officials directing them to stop the Satsuma men and cause them to enter the army. The 1,200 are now learning their drill in various regiments whither they have been drafted by tens or twenties. Thus a troublesome body of men has been dispersed and rendered incapable of harm.

It is stated that the Government has abandoned its intention of excavating a harbour at Ôzaka, and that the works will be discontinued.

WE understand that early in August a Pedestrian Match against time will take place on the Bund, a young American gentleman having backed himself to walk a mile in ten minutes. This is not an altogether unprecedented feat, but there are many persons inclined to believe that our respected fellow-citizen will not be able to accomplish it; he is however in active training, and will start to win.

It is officially announced that the moats round the Castle in Tokei are, with the exception of the inner one, to be filled up level with the road, and not simply dug over and cleansed as was at first contemplated. This, in conjunction with the destruction of the gates alluded to a few days since, will quite change the appearance of Yedo.

THE latest news with reference to the Nanko announces the entire reorganization of the College. Already a Polytechnic School has been formed; but it will not be in full working order until after the holidays which begin in August. On their termination the new school, on the opposite side of the road to that now occupied will be used, the present building being turned over to a primary school, in which the educational sections of the Gaimusho and other Government departments will be included. We hear also that Mr. Verbeck has been superseded, and only English teachers are, we believe, to be employed in the new Polytechnic School.

THE serious apprehensions as to the rice harvest to which the long-continued drought has given rise are now, it is to be hoped, set at rest by the continued showers of rain. Reports have been received to the effect that in many districts the prospects of the crop are already seriously impaired. We trust; however, that such districts are exceptional.

Two cases of little importance were heard on June 19th, before N. J. Hannen, Esq., Assistant Judge in H. B. M.'s Provincial Court. In the case of Kent v. Verne, defendant moved for a postponement from the 21st inst. to a later day. The Judge ordered an affidavit to be filed with the Registrar.

The Kioto Exhibition was closed finally on the 14th instant.

It may be doubted whether any but those who know something of the manner in which the emotions are intensified and the imagination is kindled by music, can appreciate the full meaning of the events of this week. Japan has been in the position in which Mendelssohn paints the Israelites in the

opening of the "Elijah." "The deeps afford no water! The streams are dried up! The suckling's tongue cleaves to his mouth. The children ask for bread, and there is no one to break it to them." "Zion spreadeth her hands for aid, but there is neither help nor comfort."

From hour to hour the change of the sky has been ardently looked for or keenly watched. The fields were parched; and the young rice, ready for transplanting, was thirsty and drooping. The farmer thought of himself and family; but the statesmen of the country must have brooded anxiously over the calamities which a scanty harvest would bring on it. And as Mendelssohn closes the first part of his sublime work with the almost unparalleled chorus "Thanks be to God, who laveth the thirsty land," so might Japan now pour out her gratitude for the rain which has recently set in, every succeeding day of which is worth millions to the country, and is a fresh guarantee of prosperity and peace. All our misgivings are not yet over, for we are now in the early day of the long-desired blessing which may even yet be scantily dispensed; but there is "a sound of an abundance of rain," and the music of the overpowering chorus rings in our ears as we write.

The political revival of the once world-renowned monarchy of Persia exhibits in another direction the effect which Western civilization is at length producing on Eastern peoples. The Shah, we are told, has held a great court at Teheran to celebrate his departure for a grand tour in Europe, and availing himself of the large assemblage of his people there, has announced to them the views which have guided him in undertaking this important journey. "He desired," he said, "to develop his relations with the sovereigns of Europe, to improve the commercial intercourse of Persia with other countries, and to inform himself by personal experience of the institutions which it might be desirable to engraft on the domestic administration of his realm." An event so remarkable, continues *The Times*, from which we quote, "is almost enough to justify Mr. Eastwick's recent prediction that 'Persia is the coming state,' and that, of all countries in the world, the most likely to emerge into prominence and power 'is this sole survivor of the great monarchies of antiquity.'" A census of this country taken in the reign of our King William III. placed its population at 200,000,000, a statement justly pronounced monstrous by all recent travellers. At this moment the whole population of Persia does not exceed 3,500,000, a sum, which considering its enormous territory, allows abundant room for expansion. The Shah, we learn, has "adopted the policy best calculated to produce such a national regeneration. He has entered into engagements for the construction of railways, roads and tramways throughout his dominions, and he has taken measures for the exploration and working of all the mines within the borders of the State. More could not be done in America itself than will be forthwith done in this most ancient kingdom." It is right to add that the Shah is reported to possess the requisite means. His jewels alone are valued at several millions of pounds sterling. There is no public debt, and all that is wanted appears to be population. But granted roads, railways, and a beneficent government, population will as surely flow into Persia from neighbouring states as water will seek its level. The object of the Shah's journey is to secure to his kingdom those advantages which appear to have conferred the greatest happiness and material comfort on European peoples, and it is to be hoped that his patriotic views may be amply realised.

Of the importance to England especially of the projected tour it is unnecessary to speak. It appears to us, however, that the results of the Shah's journey must afford interesting matter for the contemplation of Japanese statesmen. Without the smallest parallel in point of circumstances, Persia and Japan manifest at almost the same time a like desire for a rapprochement with the West. If Persia has been somewhat slow in acknowledging in neighbouring British India the advantages of an enlightened Western rule and Western freedom, Japan was assuredly for ages no less reluctant to break her long seclusion and seek a position in the comity of nations. The progress of these two Eastern peoples, striving under a differing stimulus to raise themselves to the level of Western develop-

ment, will afford an interesting spectacle to the philosopher. But it will be well that both should remember that to succeed in their much desired regeneration it will not be alone sufficient to make roads and railways, or raise their standard of material comfort to a higher level. Their development must depend upon higher sentiments than these, and can only be evoked under the beneficent action of a loftier code of morals than is at present known to them.

OUR intention of reviewing Baron Hübner's pleasant work lately issued from the press entitled *Promenade autour du Monde* has been frustrated by a variety of circumstances, the last of which has placed it beyond our power to approach the task for another week or two. We must be excused meanwhile for giving the following extract from a letter, published in the Appendix to the book, bearing upon the future of Japan and the mutual relations of the Japanese and foreigners. After expressing some misgivings in regard to the policy of the Government and its financial results the writer of the letter goes on to say:—"The most prominent men in the government even appear to think themselves strong and wise enough to put aside the extraterritoriality principle, and I should not be astonished if, at the revision of the treaties, they came to propose the placing of Europeans under their jurisdiction, offering us in exchange the liberty of travel in the interior. This idea is also cherished by the Europeans in the service of the Japanese and by a bad little journal\* edited by an European lawyer. Who will undertake to put these presumptuous reformers right?"

We give prominence to this extract, endorsed as it is by Baron Hübner, because it is probable that the proposition it embodies will form the basis and regulate the outline of the Japanese programme of revision, and we should be sorry for them to cherish meanwhile an idea which cannot meet with acceptance at the hands of the European Powers. Baron Hübner is a man of large and tried experience, of statesman-like views—as his book amply proves—and his opinion on a question of this nature is extremely valuable.

We publish the Hiogo Trade Report and Returns this week, but are prevented from commenting upon them more fully than in this note. They show a healthy and increasing trade, and justify some of the sanguine hopes with which the Residents in the pretty settlement of the Inland Sea regard its future.

It should be noted that the Tea exported from Hiogo and fired here, figures twice; first in the Hiogo Returns, and subsequently in the Export Returns here. This might lead to some misapprehensions if left unexplained.

We cannot approve of the impeachment of Mr. De Long which has appeared in the *Tribune*. Some of its counts seem to us absurd, and all of them over-stated. Personal animus is far too apparent in them, and the tone which pervades them does no credit to American journalism. We shall not analyse the whole article, nor the bad defence of Mr. De Long which was published elsewhere during the week. But as the mind of the people of the United States is justly sensitive on the subject of the coolie traffic, and as Mr. De Long's action in the case of the *Maria Luz* seemed opposed to this, we think it right to state our conviction that he regards this trade with as much abhorrence as the most sensitive American, and that the course he took was guided by a conscientious view of his instructions from Washington, his duties as the representative of Peru, and his appreciation of the legal difficulties which surrounded the case. Of this no shadow of a doubt exists in our mind. Nothing can excuse the perversion of the facts of this case to serve the cause of private ill-feeling. We disagreed with Mr. De Long's course of action, and have on several occasions been at decided issue with him. But we cannot tolerate that he should be held up to public odium for faults of which he is guiltless, and while we have no words too strong to characterize the manner in which he has been defended in the *Gazette*, we are forced equally to condemn the attack made on him in the *Tribune*, which we regard as unjust, and wholly

\* We may frankly admit that we do not understand this reference,

unworthy of the judicial attitude which serious journalism should present.

SOME surprise is expressed that the British Admiralty should have ordered large supplies of Coal from Sydney to the Southern ports of Japan while the productions of the adjacent Coal Mines are within their easy reach at a much lower cost. But as all the large Steam Companies pursue, to some extent, the same course, and as Sydney Coal is used in Hongkong and Shanghai although the produce of Nagasaki Mines may be had at one-half its price in those markets, the *Nagasaki Express* may be sure that there are very excellent grounds for the arrangement that has been made.

Japan Coal is sulphurous, destructive to fire bars, and very bulky; the last a reason amply sufficient to condemn it for steamers' use on any but coasting voyages. We believe that even now the Coal Depot of the P. & O. Company at King George's Sound in Australia is supplied with Coal from Cardiff, although Sydney is within a tenth of the distance of the former port.

WE hear daily of the evidences of collapse of the late mania to possess rabbits, and of the new development of taste in the direction of poultry. This, at least, is intelligible on the ground of utility altho' we confess we should prefer to see the introduction of a better breed than the Shanghai. The Japanese should know that these birds are greedy consumers of food, indifferent layers except in winter, and possess no qualification for the table. They were popular enough in England for many years, but are now quite out of favour. If eggs be a desideratum there can be no breed more desirable than the prolific black Spanish or the Crève-cœur, while for table use the old Surrey hen, the Dorking, or the French Houdan are still unsurpassed. Amateurs may not be aware that fresh eggs, guaranteed to be suitable for incubation, may be obtained from London in patent, hermetically closed jars at a moderate price.

The *ovophage* who grows matutinally over the microscopic products of the indigenous fowl, or condemns its absence of succulence in the *roti*, will, we are sure, be delighted to learn that the first step in a better direction has been taken.

A Correspondent of the *Hiogo News* speculating as to the expiring rabbit mania hazards the theory that the Dutch imbibed that love of gambling speculation which exhibited itself in the Tulipomania from the people of this country. No more unfortunate theory could be broached, nor could cause and effect be more successfully jumbled together. The Tulipomania was apparently concomitant with the Mississippi scheme; and the Japanese can scarcely have been in a position to gamble in foreign products while their country was virtually closed to all access from without, and the Dutch were debarred from all contact from within.

#### BRITISH CONSULAR TRADE REPORT FOR KANAGAWA FOR 1872.

WE have so recently given full analyses of the Import and Tea trades for the year 1872, that we shall spare our readers any lengthy reflections upon that part of Mr. ROBERTSON's Report, published last week, which refers to them; and the close of the Silk season which also demands its own review at our hands, is so near, that we shall plead a like reason for passing over this subject also without comment. Mr. ROBERTSON has gone fully—almost too fully, indeed—into these matters, and though his details will be useful for future reference, we should have gladly seen his Report modelled more upon those admirable statements now regularly made by all our Legations abroad and published by the Foreign Office, which treat of the internal as well as the external trades of the countries in which they are respectively placed. It may easily be, however, that the internal trade of this country comes but little under the cognizance of our Con-

suls, and that their regular duties occupy them, at least in the more busy open ports, too fully to admit of time being spared for the pursuit of such enquiries. Yet we are disposed to think that investigations of a somewhat more extended nature in connection with trade might fairly come within the range of our Consuls' enquiries. There is hardly anything in Mr. ROBERTSON'S Report which the files of this Journal, or the statistics of the Chamber of Commerce, would not supply. But the easy access to the archives of the Consulate and to Japanese officials which the position of the Consul gives him, might be made available for acquiring a great deal of information on the economic history and state of this country during the past fifteen years which would be extremely interesting and valuable. Take, for instance, the history of prices during this period. This has shewn, we believe, an advance of a very remarkable kind, due, of course, to the gradual adjustment of values brought about by an external trade in articles produced alike by this and other countries, but at a different cost. And this advance has extended to land as well as to the produce of land. It is not alone the price of silk which has advanced, it is the price of land on which the mulberry is planted, and this has probably led to the plantation of leaner lands, which, almost valueless before the beginning of an external trade, are now returning good rents to their proprietors, whether the Crown or private individuals. Again, the displacement of the native cotton by our machine-made yarns and cloths, and the effect this has had upon the price of native cotton manufactures, are matters full of interest. The lands formerly planted with cotton, a crop which, we should imagine, no longer pays the cultivator in the neighbourhood of the open ports, must now be devoted to other purposes, while the value of the native cotton manufactures must surely have undergone a great change. These and cognate enquiries hardly extend beyond the boundaries of a possible Consular Report, and though we all know that it is far easier to put questions than answer them, there can be no objection to the extension of our horizon of enquiry.

Turning to Mr. ROBERTSON'S account of "Railways," we share his regret at the absence of full information in regard to the cost of the only section yet open. It is only natural that first experiments should be expensive, and that in a country where contracts are given out on no principle which foreigners can understand, and involve arrangements they cannot check or even recognize the necessity for, much money must be consumed which they would say was thrown away. But it is equally certain that were some of the estimates of our English railways placed before a Japanese, and the schedule of compensations, parliamentary and law expenses, together with all the multifarious costs incidental to railway construction, submitted to him, he would feel something of the same sort of surprise as that which is experienced here on the same subject. But, say what we may, it is certain that railway construction ought to be cheap in this country, and every fresh mile that is laid should bring its lessons of warning against a recurrence of mistakes, or of confirmation of proceedings which have been so far been successful. Mr. ROBERTSON happily adduces Sir PHILIP FRANCIS'S experience in Turkey to prove that the experiment of dispensing with foreign assistance in the working of intricate machinery is often a very expensive mistake, and we hope the Japanese will take the lesson to heart. The tendency in this direction is natural, but we trust Mr. ENOUE MASARU will have firmness enough to resist any pressure of this nature from higher authority, should it

be attempted—a contingency, however, which we dread but little under Mr. YAMAO'S administration of the Public Works Department.

This vexatious cause prevents the proper working of the Telegraphs. The administration also is taken out of the hands of those who do understand it, and entrusted to those who do not. The consequence is that we have broken instruments, delayed messages, the removal of officers who know their work, and perpetual changes in the *personnel* of every station. What wonder that foreigners alternately laugh and grow irritated over such capricious management, and altogether doubt whether the Japanese are ripe for the vast changes they are introducing into the country?

The establishment of a Postal Service throughout Japan is at once a sign and cause of intellectual advance. The rates of postage are yet far too high, but Sir ROWLAND HILL is only just dead, and we are not too old to recollect the franking of letters by Members of Parliament. An uniform and low rate of postage, remunerative to the carrier of the letters, can only exist among a people of high average cultivation, and in a country abundantly populated and furnished with good roads.

Mr. ROBERTSON does not forget to speak of the newspapers which have sprung up throughout the country, and have, in a recent instance, been put to a formidable use in the publication of a Memorial extremely damaging to the Government,—which, however, if it is wise, will beware of any severe measures against those who made that document public. We are not, of course, to expect an entirely Free Press in a country only just settling down after revolution, and unaccustomed to a force at once so formidable and so beneficent. But, within wide limits, the Press here may be allowed to go on its own way, and the people can hardly fail to derive much moral and intellectual benefit from it.

The year which Mr. ROBERTSON reviews has been a disastrous one for trade. We trust his next Report will show an increase of operations, attended with far happier results.

#### THE FINANCIAL STATEMENT (NO. 2.)

IT was not to be supposed that the Financial Statement issued by the Government would escape without severe criticism, and the *Japan Herald* has taken a not unfair view of it, from the unfriendly side. The matter is far too important to permit of any other kind of argument or treatment than that which will approve itself to clear-headed men of business, and thus we shall endeavour to show where and why we think the criticism faulty, and neither so just nor so sound—if we may venture to say so—as our own.

That the present Finance Commissioner, OKUMA SHIGENOBU, should have desired to make the best of the present financial position, is probable enough. But against this it may fairly be urged that ENOUE KAORU manifestly desired to make the worst of it. It is idle to conceal the fact that party spirit has of late run very high in Yedo, and it is conceivable that ENOUE, worsted in the struggle, and determined upon resignation, was bent upon inflicting as severe a wound as possible upon his antagonists before he left. Like a Parthian, he discharged his arrow as he flew, his aim was good, the shaft was poisoned, and the wound has rankled cruelly. But if we come to analyze the criticism on his successor's work, we may object that it is hardly as serious as the occasion demands. His moderation in showing only a surplus of two millions of dollars is ridiculed, because it would have been, as is said, as easy by a stroke of the pen to have made it twenty

millions. Certainly, on the hypothesis of the statement being fictitious; certainly not, if it is, as far as it can be, made in good faith. We find no cause for laughter in items carried out with an accuracy which seems an affectation or a cloke for deception. If the expenditure of one year for any given purpose is to be estimated from that of the preceding year, we see no reason why this should not be exactly stated. To accuse the present Commissioner of Finance of a petty trick like this seems to us unreasonable and unworthy. It is complained that "lump sums" are given in these estimates, where details are necessary. But no Chancellor of the Exchequer gives details of what his Excise or Customs revenues will bring, unless he has special grounds for doing so in relation to articles the consumption of which may, for exceptional reasons, be expected to increase or diminish. As regards the estimated value of the *koku* of rice on which so much depends, we have taken some pains to learn that it has been assessed at \$2.96, certainly not a high figure, though it may exceed the average rate produced by the surplus grain which was exported. It must not be forgotten, however, that the manner in which this export was conducted violated all sound economical laws. It was essentially a hole-and-corner arrangement, utterly unworthy of a Government, and laughable as a scheme of financial policy. It is easy to persuade men who know little of the vigorous play of an unfettered commerce that deviations from general rules are advisable under such and such circumstances. But the wise statesman is he who throws himself upon broad principles the truth of which the experience of the world has verified, and who trusts to these; and had this been done in the case of last year's export of rice, Japan would have been largely the gainer. The fruits of an opposite policy are precisely those which might have been and were predicted. They did little for the Treasury and nothing for the husbandman. A wiser minister would have benefited both.

As regards the foreign debt, we see no grounds in OKUMA's statement for inferring that the pensions to the *Samurai* and *Daimios* are to be reduced in order to pay this. On the contrary, these pensions are assessed at a large sum—over \$12,000,000—and the last raised loan will be employed as far as possible in reducing the principal of the debts for which those pensions are the interest. It is quite true that thirteen millions of dollars, the amount of the loan, would not go far towards extinguishing the principal of a debt the interest of which is twelve millions of dollars, and we are quite sure that the country will not be ultimately the gainer by an unjust treatment of these claims. But we must not suppose that in a country where twelve per cent. is the normal rate of interest the same sum would be required to extinguish a debt on which interest was being paid, as would be required in England. A seven or ten years purchase at the outside would amply represent the fee-simple of such pensions, and these terms would probably not appear hard to those who held them. The rice lent to individuals, and the return of which is annually an asset with the Government is, we rather think, a matter of current account, and is not open to the objection adduced against it by the *Herald*.

As regards the paper issues, the *Herald* would appear to be greatly at fault, owing to an entire misapprehension of the effect which would be produced by the employment of the twenty millions of *riyos* in the treasury in the manner of which it speaks. It is said that one hundred millions of paper cannot be redeemed with twenty millions of gold; and this is, of course, true. But admitting for a moment that the aggregate amount of the paper issues

reaches one hundred millions of *riyos*, a proclamation to the effect that such paper, if sent to the treasury, would be paid in gold, would simply have this effect;—it would bring in a few millions of *riyos* of the paper currency, and when people saw they could get gold for their notes without difficulty, they would cease to apply for it. The whole floating currency of a country cannot be withdrawn from circulation in this way. Paper is far more convenient than gold, and we may rely that if the measure we hint at were adopted, the effect of it would be that which we predict.

The notes lately printed by the Treasury are not, as is alleged, intended to be added to the paper circulation of the country. They will simply replace the notes formerly issued by the *Daimios*, which will be called in and exchanged for the new paper, the main advantage to the holders of the old paper being that they will receive a bond to the payment of which the Government is pledged, and, which, instead of being limited to a local circulation, will be current throughout the whole country.

As regards the foreign debt which OKUMA states at five and a-half millions, we must presume that this represents only the first loan, the second loan requiring some twelve and a-half millions to be added to the estimate. We can only presume that this sum is not put down in this part of the account because the money sent from London to represent it is at present untouched. It is idle to suppose that a debt of this amount, just contracted in the face of the world, is ignored because it does not figure in the provisional statement of the debt which stands at the foot of the Financial Statement. The figures connected with the internal and external debt are shortly to be given to the Public, and when this is done it will be time to impeach them if they are manifestly incorrect.

We agree with the *Herald* in as far as it states that no entirely accurate statement can be given in regard to the expenditure and income of the country at this moment. It is obvious that the task of getting in all the accounts of the old *Han* must be a long one. But we certainly think that a fair, probable and moderate estimate of them has been made, and the fact that the Government has committed itself to this Statement as a point of departure, weighs much with us. This view of the question is not touched by the writer in the *Herald*. To us it appears to afford a larger guarantee for the substantial accuracy of the Statement than anything else.

#### THE GENERAL HOSPITAL.

IT is astonishing how much good may be done by a little wholesome criticism and a consequent good searching enquiry. It is not eighteen months ago that many of us were seriously afraid that we should have to abandon the General Hospital altogether. It was deeply in debt and negligently administered. It was in disfavour. It had notoriously become the haunt of a set of worthless dissipated vagabonds who were no sooner cured of the diseases produced by their evil courses and discharged from the Institution, than they again sought its protection until re-established health enabled them to pursue another course of this vicious revolution. Of course, there were also patients of a different character, who had claims on the humanity of the community and were proper recipients of its bounty or attention. But the funds of the Institution were far too largely preyed upon by these "Revolvers," as the Americans happily call them, and there was a strong general feeling that they were too easily admitted, too leniently dealt with, and too easily re-admitted after they had ceased to be proper objects of benevolence.

It is obviously difficult to deal with cases of this kind. The claims of humanity do not lose their force because disease or distress are brought about by vicious acts. But it is a weak dissipation of the benevolent feelings, demoralizing alike to those who indulge and to those who profit by them, which permits of and thus encourages the applications for assistance of men who make a mere trade of their miseries, live and thrive on the bounty of others, and who are not so much incapable of moral restraint and moral endeavour as disinclined to face the labour, privation, frugality and perseverance which these virtues or—as we shall more plainly call them—these duties impose. Yet with a knowledge that all was going wrong in the Institution, and that persistence in the method with which it was administered must end in its bankruptcy and dissolution, so great was the passion for making civil speeches, that it was only upon an amendment to a motion for a general vote of thanks to every one connected with the establishment, from the Committee down to the lowest officer, that a resolution was arrived at to subject the whole Institution to a searching enquiry. And it is only just to say that the proposition for a Commission of Enquiry came, not from those who felt justly dissatisfied with the financial and general state of the Hospital, but from one of the Committee. It was, if we remember rightly, Mr. RUSSELL ROBERTSON who proposed it, and he did so with the knowledge of the working of the Institution which he had derived from his experience as a Committee-man. We all know the result. The Commission reported unfavourably of the management, but dispensed its blame so equitably, and yet with so much regard to the feelings of the paid and honorary officers of the Institution, that the Committee, animated by the same spirit as Mr. ROBERTSON had shewn, accepted the Report and recommendations of the Commission almost without amendment, reformed the machinery of the Hospital, and lent their best endeavours to drag it out of the Slough of Despond into which it had fallen. Mr. KIRBY gave his gratuitous services as Treasurer, which saved \$50 a month, the Community came forward as handsomely with money as it always does on occasions of this kind, and the satisfactory Report read on Thursday last testifies to the result of all this good sense and united endeavour. The debt is reduced from \$2,874 to \$551, the Acting Consular Chaplain testified to the vast change which had been made during the past year in the sanitary condition, comfort, cleanliness and general economy of the Hospital, and we have now an Institution creditable to us as men of humanity and men of business. Not the least among the improvements has been the establishment of a Ladies' Visiting Committee, which is certain to conduce to greater cleanliness, propriety, and the increased comfort of the patients.

As there was no *verbatim* report of the speeches made at the meeting, and the short epitomé of them which appears elsewhere in our columns omits to mention the facts, we think it our duty to state here that a warm tribute of thanks was paid to Mr. KIRBY by the Chairman for his efficient discharge of the onerous, and not altogether agreeable self-imposed task, of keeping the accounts and canvassing for subscriptions for the Hospital, while testimony equally valuable was borne to the services of Mr. HENRY ALLEN, an American gentleman who has identified himself warmly with the interests of the Institution, and to whose kindly and constant care and visits much of its present efficiency is due.

#### THE PAST TEA SEASON.

The *Hioigo News* has the following on the subject of the *resumé* of the Tea season of 1872-73 which we published in one of our recent numbers. The figures 5,537,225 lbs. were obtained from a trustworthy House of business here, possessing a branch at Kobé, and were understood to refer to *Export* not *Coastwise* shipments.

As Tea shipped here from Kobé in native packages will after its preparation here be naturally included among the Yokohama Exports the error is easily intelligible. It would be better, we think, that the amount should be included in the returns of that port only whence it is finally shipped outwards.

#### THE TEA SEASON, 1872-73.

Under this heading we notice in the last issue of the *Japan Weekly Mail*, a retrospect of the past season, and we would call attention to a very apparent and considerable discrepancy in the figures of the Total Export, both from Kobe and the two ports together. An error in the printing of the Total Export of 1,000,000lbs, reduces our export to figures in accordance with our Chamber of Commerce Report of May 18th last, say 5,537,225lbs., of which 948,908lbs. were shipped coastwise (to Yokohama) and 191,878lbs. to China (principally Bancha), so that our actual export to America and Europe would be but 4,396,641lbs., or equal to

about.....	piculs 36,300
to which must be added	
the coastwise shipments	
to Yokohama, say.....	„ 7,100

piculs 43,400

(not inclusive of Bancha), which would be the amount of Tea purchased in Kobe during the past season.

Looking at the figures of the Yokohama Export for the same time, as given in the Yokohama Chamber of Commerce Report, we find a Total Export to America of 11,756,272lbs., or equal to about piculs 97,000, (of which piculs 7100 are coastwise shipments from Kobe), giving a Total Export from Yokohama and Kobe of piculs 133,300, or in exported lbs. say 16,152,913.

Referring to the above figures it is hardly necessary to say that the estimate of piculs 173,000 as the produce brought to the two sister ports is far in excess of what it really was. Adding piculs 10,000, for estimated stock of all kinds on hand at the end of the season, to above settlements, we only arrive at piculs 143,300.

While considering it our duty to point out the above error, in order to correct any false impression which might otherwise get into circulation in connection with the trade of this port, we wish to state that in the views—one and all—of the writer of the article to which we have referred we entirely concur.

#### BRITISH CONSULAR TRADE REPORT FOR HIOGO AND OSAKA FOR 1872.

BRITISH CONSULATE,

Hioigo, April 4th, 1873.

SIR,—I have the honour to forward in duplicate the Returns of the Trade and shipping of the ports of Hioigo and Osaka for the past year.

The Returns of Imports and Exports have been compiled at this Consulate, as in former years, from the “application for Permit” forms received at the Custom House, the Custom House authorities not having yet adopted any proper system of preparing the Returns themselves. There is a marked improvement in the manner in which the application forms have been filled up, the description of the merchandize having been inserted in nearly all cases. The Returns made from them, moreover, would seem to represent more accurately, the actual amount of trade. It will be seen from Table 1 A., that the amount of trade as given in that Return is in excess of the amount given in the Return furnished by the Chamber of Commerce, and, as I explained in my Report for 1871, this is what ought to be expected, as in framing the latter returns no notice is taken of numerous minor consignments and shipments for which permits have to be obtained.

#### IMPORTS.

The value of the Imports in 1872, as will be seen by Table 1 B., was nearly double the value of the Imports in 1871. There has been an increase in nearly all departments except that of arms and ammunition, the de-

mand for which has almost entirely ceased. Large numbers of Rifles in good condition have been sold as low as a dollar each, and during the past year instead of the Import trade of former years, it has been found profitable to export them.

#### EXPORTS.

Show even a larger proportional increase. This has been caused in a great measure by an abnormal export of rice and of copper and bronze, but there is also a steady increase observable in the staple articles of tea and tobacco.

The price of rice was reduced so much by the abundant harvest of 1871, that the Government was induced to abandon the rule which prohibited the export of this article of food, and during the past year not only the rice received in payment of the current taxes, but also large quantities which had accumulated in the granaries of the different provinces, before the direct administration of these had been taken over by the Central Government, have been shipped off to a foreign market, principally to China and England. All these shipments, however, have been made on Government account, and the restriction on the export of rice on private account has in no way been relaxed. It is, I think, to be regretted that the Government while disposing of the produce which belonged to it in the best market that could be found, had not allowed the same liberty of trade to all the people.

A large portion of the bronze exported has been furnished by the Buddhist temples. The discouragement given to that sect by the Government, anxious to favour and foster Shintoism, the ancient national religion, and the appropriation to Imperial purposes of the revenues of many of the temples, have induced the priests to realise as much of their moveable property as possible; and the massive bells which formed such a striking feature of these temples have, with other bronze articles of use or ornament found their way into the hands of foreign merchants. The high prices of copper at home made it profitable to ship the bronze to England and there extract from it the copper which it contained.

As I forwarded in October last a report by Mr. Wilkinson on the tea trade of this district, I need not here go over the same ground again. But, I may observe that the prospect entertained when that report was written, that the trade of the present season would be largely in excess of any previous season, has for so far been realised. But the low prices in America have lately exercised a depressing influence on the market here, and consequently a considerable portion of the increased yield of the present year has not found purchasers. As to the general course of the trade, the returns for the past year confirm the conclusions drawn by Mr. Wilkinson, "that the total exports are increasing," and that of the shipments direct, "an increasing proportion is going to the United States."

The shipments of tobacco show a steady increase, and this leaf promises to become an important article of export. The production which has already reached considerable dimensions is likely to increase so long as the present scale of prices is maintained. The kind brought to Osaka and Hiogo for sale come principally from Bichiu, and Bungo in the island Kiushiu. Small samples have also been brought this year from Tosa and Awa, where the cultivation is being extended. The tobacco is picked and sorted in the warehouse of the foreign merchant. It is then shipped to London, where, during the past year, it has found a ready market. The demand for it has increased, it is said, in consequence of a scarcity of other light tobaccos of a similar sort.

#### SHIPPING.

Shipping shows an increase especially at Osaka, at which port was shipped a large portion of the rice exported on Government account. The extent of this increase may be seen from the following tables:—

##### BRITISH SHIPS ENTERED.

Year.	No. of Vessels.	Tonnage.	Year.	No. of Vessels.	Tonnage.
1872	At Hiogo 92	60,709	1872	At Osaka 35	23,939
1871	" " 62	26,557	1871	" " 6	2,556
Increase in 1872 30		34,152	Increase in 1872 29		21,383

##### FOREIGN SHIPS ENTERED.

Year.	No. of Vessels.	Tonnage.	Year.	No. of Vessels.	Tonnage.
1871	At Hiogo 152	222,760	1872	At Osaka 20	8,419
1872	" " 144	207,876	1871	" " 5	2,254
Decrease in 1872 8		14,884	Increase in 1872 15		6,165

##### RECAPITULATION.

Total increase at Hiogo in 1872	...	Vessels 22 of	19,268 tons.
" " " Osaka	"	44 "	27,548 "

Total increase at Hiogo and Osaka in 1872	"	66 "	46,816 tons.
---	---	------	--------------

As has been shown in table 7, the excess of foreign shipping over British at Hiogo is due to the frequent voyages made by the Pacific Mail steamers. If the number and tonnage of these steamers were deducted British shipping would show a considerable excess over that of all other nations put together.

A large traffic is still kept up by the ferry steamers plying between Hiogo and Osaka, and I am glad to observe that the best of these steamers which are under foreign management, are gradually obtaining a larger share of the trade, and that consequently the number of the more dangerous boats is being reduced. This natural result had been greatly retarded by the action of the Custom House authorities, especially at Osaka, in favouring native steamers. But as the trade has increased they have begun to experience the difficulty of preventing fair competition.

##### AGRICULTURE.

There was in 1872 as in 1871 an abundant harvest. But the action of the Government, already referred to, in monopolising the export of rice, of which such a large portion of the produce consists, has prevented the farmers obtaining, from the increase of production, the advantage which a free market would have given them.

##### PUBLIC WORKS.

In the early part of the past year, the Hiogo authorities published a plan of roads which it was proposed to make on the slope of the hill behind Kobe. The work was shortly afterwards begun, and has since been carried on with considerable energy. In the native town of Kobe, moreover, a large number of houses has been cleared away to make room for a wide street, which is to extend the whole length of the town from east to west.

In consequence of these improvements a large increase has taken place in the value of land and house property. A great number of houses has been built on the hill slope; and the former site of the Ikuta river has been levelled for the purpose of being laid out in streets.

On the foreign settlement at Hiogo consisting of 126 lots, the last five were recently disposed of by the local Japanese authorities, at prices which show that the favorable opinion hitherto entertained as to the value of property on the settlement still continues.

Building has been carried on steadily during the year, and the largest warehouses and stores built by foreigners in Japan have been erected at this port. The streets which are regular, spacious and well drained, have been macadamised; and large wells are being sunk in different parts of the settlement, in order to give a more abundant, and a more convenient supply of water for the extinguishing of fires. New municipal buildings are being erected in a central position. These will consist of a municipal hall, which will contain accommodation for the municipal superintendent, and the foreign police, a prison, and permanent sheds for the fire engines. The streets have hitherto been lighted with kerosine, but arrangements will be made with a company recently organised to light them with gas.

At Osaka also a municipal hall is now in course of construction. The paving and draining of the streets of that settlement have long since been completed, a few dwelling houses and godowns have been erected on the settlement. The pier for ferry steamers has been considerably extended. In the native town iron bridges are

gradually replacing the old wooden structures, and a new iron bridge is being constructed across the main river which will connect the settlement with the town on the right bank.

Large additions have been made to the Imperial Mint buildings for the minting of copper coin and for the manufacture of sulphuric acid; these additional works, however, have not yet been completed.

In 1870, I entertained the hope that the proposed railway would be pushed on with equal rapidity from both ends. But this has not been done, and, while the Yedo and Yokohama section has for several months past been opened to the public, the slow progress on the line between Hiogo and Osaka has given rise to fears that it will not be completed till late in 1874. The line between Osaka and Kioto has been surveyed and, it is said, that a large quantity of material has been prepared, but the order for its construction has not yet been issued, no further steps have been taken with regard to the proposed railway to Tsuruga. This is to be regretted as such a line could scarcely fail to be profitable to the Government; besides adding very much to the prosperity of this port, unless Tsuruga were opened to foreign shipping.

The telegraph between this place and Osaka, Kioto, Yokohama and Yedo, notwithstanding the too frequent interruptions in the working of it, has proved a great convenience. The line, however, from this place to Nagasaki, although it has been in working order for several months past has for some unaccountable reason not yet been thrown open to the public. Two or three days have consequently to be lost in forwarding messages to Nagasaki by steamer, and this place, in common with Yokohama and Yedo, is deprived of the advantage of direct telegraphic communication with the rest of the world.

#### GENERAL REMARKS.

I need not here allude to the unsettled question of land rents referred to in my former reports, beyond stating that this is still the cause which prevents many of the foreign residents from carrying out their long cherished intention of building residences on the hill slopes.

The Osaka authorities following the good example set by the authorities of Kioto, have instituted many public schools, in which instruction is given in English, French, and natural science.

The following table shows the value of the coins struck from the opening of the mint (on the 4th August, 1871) until the end of 1872.

	1871. 4th Aug. 31st Dec.	1872. 1st Jan. 31st Dec.	Total. 4th Aug. 71 31st Dec. 72.

The want of the silver yen which has ceased to be coined since April last, has occasioned much inconvenience. But it is scarcely to be expected that the coinage will be resumed so long as the Government finds it more profitable to export silver in bars to China to be converted into sycee.

In conclusion I beg to draw your attention to the increase in the number of foreign residents given in table 8, as affording another proof of the promising prospects of these ports, which on account of their advantageous situation can scarcely fail to prosper.

I have the honour to be, Sir,

Your most obedient humble servant,

(Signed) ABEL A. J. GOWER.

Sir HARRY S. PARKES, K.C.B.,

H. B. M.'s Envoy Extraordinary,

&c., &c., &c.

(For Tables see page 442.)

#### MEETING OF THE GENERAL HOSPITAL SUBSCRIBERS.

A MEETING of those interested in the General Hospital was called for 2 P.M. yesterday at the Chamber of Commerce, but it was very scantily attended. Sir H. Parkes occupied the Chair and called on the Chairman of Committee to read the Yearly Report which was done by Mr. Wilkin. This entered fully into the proceedings of last year, and bore ample testimony to the reform which has been made in the Institution during that time. It showed a largely reduced debt and a fair proportion of income to expenditure, and testimony was subsequently adduced to show how greatly the general condition of the Hospital had improved since the last meeting of the Subscribers.

A few questions were asked in regard to matters alluded to in the Report of the late Commission and having been replied to,

Mr. W. H. Smith moved the adoption of the Report, a vote of thanks to the Committee, and a request that they would continue in office. Anticipating the seconding of this, the Chairman expressed his pleasure at presiding over a meeting at which so satisfactory a statement had been made, and remarked on the excellent spirit which had been shown by the Committee in adopting so freely the recommendations of the Commission which had criticized their action, closing this part of his remarks with a quotation from the Report of the Commission which he thought of special value. He then shortly treated the question of Charity Patients, and while anxious that the reputation of the Institution for benevolence and good feeling should be properly maintained he showed from the records an undue trespass on its resources at times arising from the too protracted stay of the Charity Patients.

Dr. Done seconded Mr. Smith's motion and the meeting closed in the usual manner.

#### REPORT OF THE YOKOHAMA GENERAL HOSPITAL FOR THE FIFTEEN MONTHS ENDING 31ST MARCH 1873,

Since the General Meeting in April of last year, the working of this Institution has been subjected financially to a more severe test than in any previous period since its formation. For the whole term of 15 months, the total time i. e. estimated by days during which patients of all classes, (but excluding Charity patients), remained in the Hospital only just exceeds three fourths of the similar time during the 12 months of 1871. The Committee have the pleasure to report, nevertheless, that by dint of strict economy, and aided by the liberal support of the friends of the Hospital, not only has no further deficit been incurred, but that the old debts have been almost entirely cleared off, and the accounts show a balance due to the Treasurer of only \$550.01.

During the 12 months ending 31st December, 108 patients were admitted, making with 11 under treatment at the commencement of the year, in all 119. During the three months ending 31st March 1873, 20 were admitted, making with 10 under treatment on 1st January, in all 30. Of these numbers, 23 last year and five this year were charity patients.

The days for the 15 months are as follows:

1st class	216 days	as against the 12 months of year 1871,	240 days or 90 per cent.
2nd "	511 "	"	800 " " 63.85 "
3rd "	2,479 "	"	2,764 " " 89.70 "
4th "	173 "	"	359 " " 48.20 "
Charity	1,592 "	"	2,828 " " 56.30 "
Total	4,971 "	"	6,991 " " 71.10 "

It will be observed that the proportion of charity patients has decreased very considerably, and the Committee may here remark that while never refusing a real by destitute and needy case they have used all means to check unnecessary expenditure under this head, and whenever practicable have procured passages for the sufferers to their own homes, thus benefitting themselves and relieving the hospital.

As usual the list of patients represents almost every nationality on the Globe.

A detailed synopsis from the Surgeon-in-charge accompanies this, and is marked A.

It is not necessary to refer to the decrease of admissions, further, than to say, that it seems to be ascribable mainly or solely to a more healthy condition of the settlement, and to the more limited stay of shipping in the harbour.

The Committee have now to present the Treasurer's Account, marked B, showing a balance in hand of \$144.04, but a

supplemental statement of dependencies, marked C, shows \$550.01 due to the Treasurer. The Committee wish to acknowledge the liberality with which the community responded to the appeal for help; the donations and subscriptions having amounted to \$5,293.38.

The Expenditure after deducting what has been paid for old debts, and adding present liabilities, amounts to \$9,501.25, of which \$5,371.96 belongs to what has been called "Variable expenses," and \$4,129.29 "Established expenses."

These sums divided by the total number of days—say 4,971—give \$1.08 per diem for "Variable expenses," and 83 cents per diem for Established expenses—together \$1.91—an average which compares favourably with that of 1871.

It will be remembered that at the adjourned General Meeting held on April 9th, in last year, a commission consisting of Drs. Done and Buckle, and Messrs. Walsh and Howell, was appointed to examine into, and report upon, the working of the Hospital.

The Commission finished their Report on the 15th July, and on the 31st idem it was presented to, and discussed at, a public meeting.

The Committee owe their special acknowledgments to the Commission for their painstaking efforts, and very careful detailed report and recommendations. The working of the Hospital has been systematized in accordance with their suggestions as far as possible, and the Committee think there is cause for congratulation in the more economical administration of the funds and in the improved condition of the premises. Towards these ends they have had the full co-operation of the Surgeon and the Steward.

And here the Committee must warmly acknowledge the services of Mr. Kirby,—who volunteered to act not only as Treasurer, but to honorarily undertake the duties of accountant; and these, under the system prescribed by the Commission, are sufficiently onerous.

A Ladies' Visiting Committee has been appointed during the past year, who have combined with the grateful duty of visiting the patients such little attentions to them as tend to cheer and encourage, and who have also provided a good deal of new linen at very small cost.

It remains to refer to a proposal emanating from the Sisters of Mercy of the Convent of the Holy Child Jesus, and which has been put by them in two forms:—viz., to procure two of their body from France at a moderate expense, who shall, on arrival, reside in the Hospital and undertake to look after the linen, preparation of food, nursing, dispensing, and general management for such remuneration as would be sufficient to supply them with clothing and necessaries; or, secondly, that they would take over entire charge of the Hospital (subject in either case to the supervision of the Committee) guaranteeing its expenses, but at the same time making use of the Subscription List.

The Committee have felt that any change of this nature was too radical in its character for them to entertain, and it is therefore referred to the General Meeting of subscribers.

In conclusion the Committee beg to tender their resignation. Yokohama, 24th May, 1873.

#### YOKOHAMA GENERAL HOSPITAL. (June 18th, 1873.)

GENTLEMEN,

My task in presenting you with a report, this year, is neither arduous nor unpleasant; there being little or nothing to add to that which I had the honour of laying before you last year. Yokohama has been free from all diseases which can be attributed to defect of climate or want of sanitary measures. Again we have passed a year, not only free from epidemics of contagious or zymotic fevers, but almost free from isolated cases. All the cases of Small-pox treated in the Hospital have been imported hither; and, with only one exception, the same statement holds good with regard to Typhus and Typhoid fevers. I have before noticed the frequency with which Bright's disease, and affections of the heart present themselves here, and the experience of the past year is not improved in this respect: the proportion they bear to the total of admitted cases is very great.

Formerly—we had a considerable number of patients afflicted with the result of a long course of excessive drinking; and another form of debauchery supplied many of our patients. But the books are much less burthened with statistics of this kind than formerly. Many, who were periodical visitors from the former excess have succumbed to their infatuation and their ranks do not seem to be recruited.

The knowledge of these circumstances has constituted the pleasantest part of my present report. But the health of the settlement, equally with the last year, added to the accident that comparatively few ships have visited the port during that time—have caused the number of inmates of our wards to be very few; so that the income of the Hospital, as a self supporting institution, has I fear, been small.

I am happy to add, in conclusion, that keeping in mind the economy necessary to be exercised, the Hospital has never been in a more efficient condition than it is at present, and should, unfortunately, a demand for its utility arise, I think this will be found to be the case: and I give much credit to the present Steward of the institution in that I am able to make this statement.

I have the honour to be,  
Gentlemen,  
Your obedient Servant,  
J. J. R. DALLISTON.

The Committee  
Yokohama,  
General Hospital.

NOTE.—The apparently excessive tonnage of 281 foreign vessels entering and clearing, over 189 British vessels entering and clearing at Hio go is due to 174 Pacific Mail steamers of 372,890 tons entering and clearing; deducting these, the purely foreign merchant shipping return is:—107 ships entered and cleared of 40,829 tons. Excess, therefore, of British over foreign shipping 82 vessels entered and cleared of 82,890 tons.

## Law Report.

### IN H. B. M.'s CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Germain Le Bailli, sailor of the *Eastern Star*, charged with manslaughter.

Dr. D. V. Simmons, M. D., sworn:—Last evening about ½ past 7, I was met by a man enquiring for a doctor, saying the 1st officer of an English barque had been stabbed by one of the men. I told him I was a physician; he requested me to come off immediately. On coming on board I found the man in question lying on deck with his breast exposed, showing a wound on left side of breast at least 14 inches long. I felt his pulse but could find none. From his general appearance I concluded he was dead. The wound would not have caused death by itself.

The whole of the evidence was here read over to the prisoner, who made no remarks on it.

Prisoner's statement:—The second mate has not told the whole truth. He was drunk at the time, and therefore does not know what he was doing. Both of the mates were beating and knocking me about the whole afternoon, and one of them threatened to kill me, and used very abusive language. I took little notice of him, as he was drunk. All the afternoon they drank gin. Towards evening the second mate ordered all the sails to be loosed, and I said, "all right." He said, "I will make you answer better next time." They then beat me again, and I drew a knife and stabbed the first mate, and then threw the knife overboard. At eight o'clock the police took me on shore.

### U. S. CONSULAR COURT.

Before C. O. SHEPHERD, Esq., Consul.

People of the U. S. *vs.* Wm. Curtis *v.* McMurray.

This was a charge of assault to which the prisoner pleaded not guilty.

Mr. Curtis deposed that an altercation arose between himself and the prisoner, whom he had charged with breaking two panes of glass at the *Cliff House*, and which ended in the prisoner striking him.

Mr. Frischling stated that he was present on the occasion. Mr. Curtis betrayed some excitement, and Mr. McMurray requested him to be quiet and to go away. He saw marks of a blow on Mr. McMurray's face, but did not see him struck.

The prisoner alleged that Mr. Curtis had charged him with destroying his property at the *Cliff House* which he denied. Mr. Curtis caught him by the vest and they closed. He did not strike Mr. Curtis' face. He left his house as soon as requested to do so.

The case was dismissed; prisoner to bear the costs.

Cook & McLean, two seamen of P. M. S. S. *New York*, pleaded guilty to a charge of drunkenness.

They were fined one dollar and costs.

## Extracts.

### IMPRISONMENT FOR BREACH OF CONTRACT.

[The *Pall Mall Gazette* has the following upon this subject, to which recent events have imparted special importance. As a resumé of the law in this matter it must prove of interest in all settlements where British interests are largely represented.]

There are few more popular or plausible cries in the present day than that which is directed against the practice of sending workmen to prison, under certain circumstances, for breach of contract. We need not remind our readers of the arguments upon the subject which have been employed by Mr. Harrison. They are obvious enough, and lie on the surface of things. To us, however, they are altogether unsatisfactory. In order to understand the subject thoroughly it is necessary, in the first place, to refer to the law complained of. The matter is now regulated by the 30 and 31 Vic., c. 141, the Master and Servant Act, 1867, and the important sections of the Act are the 4th, 9th, and the 14th. The 4th and 9th sections provide in substance that whenever the employer or employee neglects or refuses to fulfil any contract of service, or when the employed neglects or refuses to commence his service, or absents himself from his service, or when any difference or dispute arises as to the rights or liabilities of either of the parties, or touching any misuse, misdemeanour, misconduct, ill-treatment or injury to the person or property of either of the parties, the party aggrieved may lay an information, upon the hearing of which

the Justice may either direct the fulfilment of the contract or annul it; or he may impose a fine on the party complained against up to £20. He may also direct the party against whom the order to fulfil a contract is made to find security for his doing so, and if he fails to do so commit him to prison for three months. By section 14, if the Justice thinks "that any injury inflicted on the person or property of the party complaining, or the misconduct, misdemeanour or ill-treatment complained of has been of an aggravated character," and has not arisen or been committed in the *bond fide* exercise of a legal right existing, or *bond fide* and reasonably supposed to exist, and that pecuniary compensation will not meet the circumstances of the case, the Justice may inflict three months' hard labour.

These are the provisions complained of. It has been pointed out by many persons that whatever may be their merits or demerits they affect the employer as well as the employed. The point which has not been so much noticed is that they closely resemble other provisions of the law which affect all classes of society alike, and to which no one objects. Sections 4 and 9 simply put Justices in petty sessions and police magistrates in a position with regard to disputes between master and servant closely analogous to that in which the superior courts stand to all persons who enter into a contract or undertaking, which they can be compelled to perform specifically. If a person who has contracted to sell a house to another refuses to do so upon being ordered by the Court of Chancery to perform his contract specifically, he is liable to be imprisoned for contempt. If the Court of Queen's Bench issues a mandamus and it is disregarded, the person to whom it goes is attached. Every court of justice must have power to enforce its orders. It would be idle to issue them if it had not. The 9th section of the Act is simply a means by which in one particular class of cases an easy method is provided of getting orders for specific performance made and enforced. It is closely analogous to the jurisdiction conferred upon all civil courts by the Act for the Abolition of Imprisonment for Debt (32 and 33 Vic., c. 62, sec. 5), which enables any court to commit to prison for six weeks whom it has reason to believe to be able to pay a judgment debt, and to have neglected or refused to pay it. This is distinctly a punishment for contumacy. It is a case in which a person who refuses to fulfil a civil obligation which the law has imposed upon him is punished in order to compel him to fulfil it. There is no difference at all between the two cases. In each instance a person having been directed by competent authority to discharge an obligation is punished for his refusal to discharge it. Not to do this would be to stultify the law. It would render all contracts with a person too poor to pay damages precarious, or rather one-sided. The workman would always be able to get his wages out of his master. The master would have no remedy at all against the workman.

No doubt section 14, which applies to "aggravated misconduct, misdemeanour, or ill-treatment," and which authorises not merely imprisonment but hard labour in such cases, is of a somewhat different character. To say that it is liable to abuse by prejudiced magistrates is only to say that it shares the imperfections which are inseparable from investing any one with any discretion at all in such matters. How any one can doubt that it is needed is to us unintelligible. Innumerable acts, dangerous in the highest degree to life and property, may be caused by breaches of contract with respect to which it would be a mere farce to ask for damages. A sick nurse who has engaged to attend a person remote from other help leaves him in the middle of the night. To take the cases suggested by Mr. HARRISON himself: an engine-driver walks away from his engine or a signalman from his post at a moment's notice. If such an act caused death, as it easily might, it would probably amount to manslaughter, but if it only caused serious danger it ought not to go unpunished. Yet it is a mere breach of contract. In the Indian Penal Code there is a chapter (chapter xix.) on the criminal breach of contracts of service, which applies to the breach of contracts of service during a voyage or journey, breach of contract to attend on and supply the wants of helpless persons, and breach of contract to serve at a distant place to which the servant is conveyed at the master's expense. Provisions so narrowly limited would not be suitable to the vast variety of forms which the contract of service assumes in this country, and when the words of the Act and the remedies open to parties aggrieved are fairly considered, it appears to us that the section can hardly inflict any real hardship. Three things must be shown before a case can be brought within the Act. 1. That either the injury inflicted on the person or property of the complainant, or the misconduct, misdemeanour, or ill-treatment complained of was aggravated. 2. That it was not only wrongful, but was actually known by the party to be so. 3. That pecuniary compensation would not meet the circumstances of the

case. If all these conditions are fulfilled, is not the case one for punishment? A close analogy may be found for the opinion that it is in the Act to which we have already referred for the abolition of imprisonment for debt. Generally speaking, a false representation is merely a civil wrong; but if a man becomes bankrupt, and if within four months of his bankruptcy "he, by any false representation or other fraud has obtained any property on credit, and has not paid for the same," he is liable to two years' imprisonment and hard labour. Here is an instance in which a civil wrong becomes a crime *ex post facto*, the reason being that the fact of bankruptcy deprives the persons wronged of any other remedy against the wrongdoer. Is there any substantial difference between a fraud and a wilful breach of contract inflicting aggravated injury or accompanied by aggravated misconduct which cannot be compensated by damages?

It is frequently said by way of prejudice that there are many heartless and cruel breaches of contract which are left unpunished by law, and that it is inconsistent to permit them to escape while labourers and artisans are brought under the sections referred to. This appears to us to be a mere fallacy. It would of course be impossible, for the most obvious reasons, to make breach of contract generally criminal, and, as a general rule, which, though rough, answers the purposes of legislation, it is usually convenient to say that in the case of breaches of contract for which damages can be recovered, damages are the proper remedy, but it requires no great experience to know that cases do from time to time occur in which a breach of contract is morally as great a crime as robbery. Sometimes, indeed, such breaches are committed for the express purpose of causing bankruptcy and ruin. A man may know that the fulfilment of his contract with B is necessary to enable B to fulfil a contract with C, failure in which will ruin B, and he may break his contract maliciously and advisedly in order that B may be ruined. The only reason for not punishing such acts is the extreme difficulty, not to say the impossibility, of distinguishing such cases from others, and of proving that any particular breach of contract fell within the class in question. The attempt to make such acts criminal would in all probability do more harm than good. This, however, does not affect the policy of dealing with a special class of breaches of contract which can be defined as crimes. Half a loaf is better than no bread in criminal as well as in other matters.

### Shipping Intelligence.

#### ARRIVALS.

June 16, *Mercury*, British 3 masted schooner, Thomas, 364, from Nagasaki, June 8th, Coal, to P. M. S. S. Co.  
June 17, *Salamis*, H. B. M.'s despatch vessel, Hon. A. Littleton, 835 tons, from Shanghai, June 7th.  
June 19, *Otago*, American ship, Thorndike, 853, from Cardiff, January 20th, Coal, to M. M. Co.  
June 19, *Malacca*, British steamer, Gaby, 1,274, from Hongkong, Mails and General, to P. & O. Co.

June 20, *Oregonian*, American steamer, Dearborn, 1,914, from Shanghai and Ports, June 12th, General, to P. M. S. S. Co.  
June 21, *Colorado*, American steamer, Warsaw, 3,686, from Hongkong, Mails and General, to P. M. S. S. Co.

#### DEPARTURES.

June 15, *Eastern Star*, British barque, Lankester, 312, for Hakodate, Ballast, despatched by Van Oordt & Co.  
June 18, *Nil*, French steamer, Samat, 1,006, for Hongkong, Mails and General, despatched by M. M. Co.  
June 17, *Teviot*, British steamer, Nisbett, 1,216, for Kobe, Part Original, despatched by Adamson Bell & Co.  
June 17, *New York*, American steamer, Furber, 2,119, for Shanghai, General, despatched by P. M. S. S. Co.  
June 18, *Courier*, Russian steamer, Lamacheffsky, 498 tons, for Potropaulovski, General, despatched by Walsh Hall & Co.  
June 20, *August Friedrich*, German barque, Nielsen, 387, for Newchwang, Ballast, despatched by Chinese.

#### PASSENGERS.

Per M. M. steamer *Nil*, for Hongkong.—J. O. Carroll, Santel, (Missionary), G. Moritz. For Batavia.—F. Goddeus. For Marseilles.—Neuhoff, Haras, Schokker, Hunnink, Kermarec, Lagrèe, (Lieut. de Vaisseau).  
Per *New York*, for Hogo.—Mr. A. Schultz and servant, Miss Fielding, M. Herdofsky, Messrs. Antisell, and O'Brien, 8 Japanese, in the cabin. 57 in the steerage. For Nagasaki.—Lieut. Com. Crowningshield, U.S.N., Mr. Pereleshine, Mrs. J. B. Gilb and child, 1 Japanese and wife, and 1 Japanese, in the cabin; 24 in steerage. For Shanghai.—Mr. and Mrs. Niobra, and Mr. J. Dowd.  
Per *Malacca*, from Hongkong.—Miss Phillips, Messrs. P. Mazzachi, G. K. Dinsdale, T. Bonar, R. O. Clark, O. Cawley, 1 European, and 18 Chinese on deck.  
Per *Oregonian*, from Shanghai. For Yokohama.—Mrs. H. Dearborn and 3 children, Miss Cargill and sister, Mr. J. R. Richard and wife, Mr. H. S. Wilkinson, Dr. Elliott and servant, Mr. E. C. Kirby, Mr. H. Van Cleek, Miss S. Clark, Messrs. B. Roth, Thomson, D. Joseph, and 105 in the steerage. For San Francisco.—Capt. E. Terry, U.S.N., Rev. W. H. Hall, Messrs. P. R. Chandler, C. E. Pannefather, D. H. Smith, 28 Chinese Students, and 2 guardians, Mr. John Stewart, U.S.N., Miss A. McDonald, Messrs. P. C. Van Buskirk, W. Murray, Wing Ping Wing, Wing Wing Ho, and 25 in the steerage.  
Per *Colorado*, for Yokohama.—Messrs. J. M. Sandforth, E. Reddell.  
For San Francisco.—Mr. A. Drake and three Chinese boys.  
For Europe.—Mr. Wilson, Mrs. Wilson and two children.

#### CARGOES.

Per M. M. steamer *Nil*, for Hongkong:—  
Silk ... .. 82 Bales.  
Waste Silk ... .. 19 Bales.  
Per *Malacca*, from Hongkong:—  
Sugar ... .. 9,678 bags.  
Sundries ... .. 972 packages.  
Mats ... .. 125 bundles.  
Iron ... .. 1,851 bundles.  
Leather ... .. 95 bundles.  
Battans ... .. 60 bundles.  
Per *Oregonian*, from Shanghai:—  
Treasure ... .. \$460,300.

# Yokohama Market Report.

YOKOHAMA, JUNE 21st, 1873.

MAIL ARRIVALS during the past week are confined to the P. & O. steamer *Malacca*, on the 19th inst. This steamer also brings the cargo of the Ocean S. S. *Nestor*, and the *Colorado*, from Hongkong to San Francisco, brings that of the *Glaucus* of the same line. The *Otago* with a cargo of Cardiff Coal for the M. M. Co. is the only sailing vessel from home.

The *Nil* took 82 bales of Silk for Marseilles.

ALTHOUGH these would appear to be no improvement in the rates obtained for most goods there is a much larger enquiry and a greater number of buyers are present in the market. It may therefore be legitimately hoped that we shall soon witness rather more competition, and that the lowest point in prices of most staple articles has at length been reached. The apprehensions as to the rice harvest which the long continued drought justified are happily set at rest by the abundant rain.

COTTON AND COTTON YARNS.—In *Cotton Yarn* there has been but little doing, and prices are easier especially for 28-32—*Shirtings* are neglected though rates are much the same as last quoted. In *Velvets* since the large sale reported 10 days ago, the market has somewhat recovered. *Turkey Reds* are difficult of sale. And in other goods the business has been of a trivial nature.

WOOLLENS AND WOOLLEN MIXTURES.—The market for *Woollens* remains unchanged and most articles continue neglected. Stocks of *Mousselines de Laine* having considerably diminished, the Japanese evince a desire to clear out what little may be still available, and prices have somewhat risen in consequence, viz: to 18 to 19½ cts. for *Unies*. It may be presumed, that the demand of the last two or three days will in a measure again subside as soon as new arrivals shall have come forward.

IRON AND METALS.—The state of our Market is unaltered and prices are maintained. We hear of no sales having been made during the past week.

SUGAR.—Continues in small demand but at somewhat improved rates. The weeks settlements amount to piculs 5,000 leaving a stock on hand of 68,000.

RAW COTTON.—Sales piculs 209; Stocks on hand 1,000.

RICE.—Owing to the long continuance of dry weather the value of native grain had risen fully 50 cents per picul during the past fortnight. The last three days rain which must prove incalculably beneficial to the farmers, has, however, altered the position of the market and rates have declined to the antecedent figure.

## YOKOHAMA MARKET QUOTATIONS.

## EXPORTS.

**SILK.**—Very few transactions have taken place in the Silk Market during the week owing to the very small and inferior stocks of Hawk Silk; Book Silks are in very poor demand. Prices paid were about the same as last week.

About 20 bales of New Silk have come down, but up to this point no actual business has been done. One house is reported as having settled four bales at \$650, but the silk has not yet been inspected. Dealers are asking from \$650 to \$660; they seem, however, to be inclined to sell at about \$620 to \$640. It is not possible to form a correct idea as to the quality of the new crop Silk in general from the sample bales which are now to hand; these we find, however, of a very middling quality, much too full in size, mixed in colour, eased and unclean.

**TEA.**—Native holders of the staple seem doggedly determined on not offering their stocks freely on this market, and business, although of fair importance, is restricted to classes ranging from *Low Fine* downwards. Settlements for the closing week amount to 4,000 piculs, making a total since the departure of the last American mail of some 7,200 piculs. Prices shew little material alteration as stocks are not allowed to accumulate, and arrivals barely meet daily requirements. The outgoing steamers will take from here about 800 tons, equal to some 10,000 packages, principally *New Crop*, but during the past week some amount of old stock, has changed hands. The broken state of the weather for the past few days must somewhat retard supplies coming in, but at present, pending the arrival of the incoming American mail but little anxiety to purchase exists. We append closing rates. Market decidedly lower with a downward inclination.

**COPPER.**—Is now difficult to obtain, being very firmly held at \$22 to \$23 per picul for best refined. *Gun Metal* is quoted at \$15 to 16, and can only be purchased in small parcels.

## SEVENTY YEARS OF SUCCESS

Have proved beyond question that

## ROWLANDS' MACASSAR OIL

In the best and safest Restorer and Beautifier of the Human Hair. Perfectly from any poisonous or mineral admixture, its certain good effects are lasting, even to the latest period of life, it prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from scurf and dandruff, making it beautifully soft, pliable and glossy. Great caution is necessary to ask for ROWLANDS' MACASSAR OIL, and avoid all others, this being the only genuine. Price 3s. 6d., 7s., 10s. 6d., equal to four small, and 21s. per bottle.

## CAUTION.

Each Bottle has a GLASS STOPPER, instead of the Cork as formerly. All with CORK are SPURIOUS IMITATIONS. This Notice is deemed necessary, as the Proprietors have received intimation that a large quantity of Counterfeit, of the most pernicious quality, has lately been sent from France and Germany to India and the Colonies under their names.

## ROWLANDS' ODONTO,

Or PEARL DENTIFRICE, preserves and beautifies the Teeth strengthens the Gums, and gives a pleasing fragrance to the Breath. It eradicates Tartar from the Teeth, removes spots of incipient decay and polishes and preserves the enamel, to which it imparts a PEARL-LIKE WHITENESS.

## ROWLANDS' KALYDOR.

An Oriental Botanical Preparation. This Royally-patronised and Ladies' esteemed Specific realises a Healthy Purity of Complexion and a Softness and Delicacy of Skin. Soothing, cooling, and purifying, it eradicates all Cutaneous Eruptions and Discolourations. Price 4s. 6d. and 8s. 6d. per bottle. Sold by all Chemists and Perfumers, and at all Bazaars throughout China and Japan.

## ROWLANDS' ESSENCE OF TYRE

never fails to produce immediately a perfect change in Red or Grey Hair, Whiskers, Eyebrows, &c., to a beautiful glossy and permanent Brown or Black, which colour remains so durable that neither washing or perspiration can remove it. Price 4s., 7s. 6d. and 10s. 6d. per bottle.

All these articles have been used and justly appreciated by all the Sovereigns and Courts of Europe, the Pope of Rome, and the aristocracy of the world, during the last seventy years, being of inestimable value to those who have once used them. They are sold by all Chemists, Perfumers and Bazaars throughout India, the Colonies and South America.

## DIED.

On the 8th instant, suddenly, at No. 83, Yokohama, Captain THOMAS ROBERTSON, aged 54 years, deeply regretted.

## Summary.

SINCE our last fortnightly summary the following have been the Mail arrivals and departures:—P.M.S. Str. *Great Republic* from San Francisco on 9th instant; M.M. Str. *Nil* from Hongkong on 12th instant, and P. & O. Str. *Malacca* on the 16th instant. The departures have been:—*Avoca* for Hongkong on 9th instant, *Nil* 16th instant, and *Quang Se* for San Francisco to-day.

It is officially announced that the Japanese Government has decided to remove the prohibition which has hitherto existed against the export of rice, and that free trade in this grain will be permitted from 1st August.

There have been fewer disturbances reported from the Interior during the past fortnight, and it is to be hoped that the conciliatory policy of the Government will tend to allay present discontent and to remove all cause for future trouble. In most cases the requests of the country people have been equitably met, and a readjustment of taxation made in conformity with their means and circumstances, and much satisfaction is expressed on all hands.

THERE is every reason to expect that the present rice harvest will be on the average favourable. In this district and its surroundings, and throughout the North the prospects of an excellent crop are reported. Southern journals report that the long delayed rain has in many cases arrived too late, and that a deficient harvest must be anticipated. Cargoes of grain are already being imported to Nagasaki from Amoy.

THE Essashu riots are at an end. The excessive taxes have been remitted and the rioters are pardoned.

THE Mikado and the Empress have visited the Kaitakushi (Agricultural department) Model Farm in State, and have expressed much gratification at all they have witnessed there.

THE celebration of Anniversary day by the American teachers of the Nanko (College) on the fourth of July has occasioned some unpleasantness. The Japanese officials having learnt that a firework fête was in contemplation intimated their desire that this should be postponed or given up. The

foreigners, however, appear to have neglected to obey the request and the assistance of the Police was called in. The U.S. Consul is said to support the views of the American teachers on the ground that they were at liberty to amuse themselves as they pleased in their own compounds.

TELEGRAMS from the South reported an alarming subsidence of land at Hiroshima on the Inland Sea. Later accounts have allayed the apprehension which this news occasioned, and it is now ascertained that four bridges and seven houses only have been destroyed. No lives have been lost.

THE rabbit mania shows some tendency to revive and importations, on a small scale, are being renewed.

THE charge of assault against Capt. Blakiston has been heard at Hakodate, and has resulted in that gentleman being fined, with costs, in the aggregate sum of \$432.50.

THE *Iron Duke* and other Men of war which were for some little time at Yokohama have left for a visit to the North Russian Coast Ports.

It is stated that for the future all Government Edicts will be issued in Japanese characters as well as in Chinese.

INTELLIGENCE from Hiogo of the 16th instant announces that heavy rain was then falling and that the prospects of the rice crop were sensibly improved.

TELEGRAPHIC communication with the South has been interrupted during the past fortnight, but the service has now been resumed.

THE government has been requested to make a reduction in the River Tax which the protracted continuance of dry weather renders necessary.

THE Empress has visited the Silk-reeling Factory at Tomioka with which she has expressed herself highly satisfied.

THE Government announces that it will to some extent be prepared to consult the wishes of the inhabitants of the various *ken* in appointing local officers. They are therefore ordered to transmit the name of the person whose appointment would be most desired.

A considerable difficulty has been of late experienced in obtaining permission to reside or travel in the interior, and we are given to understand that all applications are now systematically refused.

THE statement that the volcano at Vries Island is at present inactive is contradicted. Large volumes of smoke have been observed to rise from it.

DURING their passage to this port the crew of the British ship *Ziba* exhibited gross insubordination. They have been sentenced to various terms of imprisonment.

THE Shosho to whose action the unfavourable state of business has been, in many quarters, to some extent imputed, is said to be contracting its operations.

It is stated that several parcels of Silk which were offered without success to Yokohama merchants have been returned to the interior for home consumption.

The condition of business during the past fortnight exhibits no improvement. In Imports many articles of commerce are out of demand and sales show no profit. Silk is in limited supply, and Tea is brought down in quantities only sufficient to meet the current demand.

The weather during the fortnight has been dry, and has within the past few days become sensibly warmer.

# THE SUNDAY QUESTION IN RELATION TO THE FOREIGN COLLEGE.

THERE seemed at one time a very strong probability that the Government would make the observance of our Sunday general throughout the public departments. Statements to this effect were freely credited, circulated, and published abroad; and the religious world expressed much natural gratification at the announcement. Considering the large number of foreigners in the service of the Government, and the tenacity with which all of us cling to the European custom of making the Sunday a holy-day, or a holiday, as our views may dictate, it might perhaps have been well to ordain that the first day of each week should be set part as a day of rest, and an additional reason for doing so was obviously presented by the recent change from the old Japanese calendar to that of the European nations. But the difficulty of dealing with the question was not small. The Japanese have many holidays, either consecrated by their religion or set apart for purposes of rest and relaxation, and the observance of these, together with Sunday, would manifestly entail a great waste of time in the public offices. It would be impossible to get any respectable class of foreigners to consent to give up their Sunday, and it would be unreasonable that they should claim the Japanese holidays as well, unless they consented to take these instead of that yearly holiday which is granted to all public servants. Even were this the case, they would have a smaller share of working days in the year than might fairly be demanded of them, as a month, or six weeks at the outside, is ample holiday for men who cannot claim that they are ordinarily overworked. But as the foreigners, though numerous in the aggregate, form but a small part of the Civil Staff of the Government, it would be impossible to close the public offices on Sunday on their account alone. It would be equally impossible to keep open the public offices on the Japanese holidays and expect that two or three foreigners should be the only occupants of them on these occasions. On both sides, therefore, there are difficulties. On the one side, that of giving the foreigners far more holidays than they have any right to expect. On the other, keeping them at work in the midst of the vast solitudes of a public office on a native holiday.

But we can understand no good reason why the public offices should not be closed on the first day of every week, and why a corresponding and regularly increasing curtailment of the native holidays, as they affect the public departments, should not simultaneously be made. It would obviously tend to bring about an unification of the holidays of natives and foreigners, and would prevent the now necessitated resort of the latter to the public offices for business on Sundays—in itself not a desirable thing. But instead of advancing further in the good direction in which one or two moves were certainly made, the Government has made a retrograde step, and this in a department where of all others it would be sure to excite the greatest amount of dissatisfaction and resistance. We allude to the Nanko or Foreign College, which has hitherto been closed on Sundays. The change contemplated is to give to the teachers what are called the *ichi-roku* holidays, viz; the 1st, 6th, 11th, 16th, 21st and 26th of each month, and to compel them to teach on Sundays the usual lessons of the week. If we are rightly informed, notice has been given to the masters that on their failure to comply with this order their agreements will not be renewed, and that no fresh engagements will be made with men who will not conform to it.

Now, what will be the consequence of such an order? Every man of any self-respect will at once refuse to renew his engagement on such terms. It matters little what his views of the origin or obligations of the Sunday may be. One may claim for it the divine sanction attaching to an ordinance directly given by THE ALMIGHTY. Another may see in it merely the time-honoured provision of a wise legislator, born of the most gifted race the world has yet seen, whose wonderful genius has laid its impress on the European mind and moulded many of our most cherished customs and observances into their present form. Another may regard it solely as a holiday established by the Church, and consecrated to man's religious necessities or adapted to his needs for relaxation and enjoyment. For the purposes of our present argument we care little which of these views is adopted. We insist only that under one or other of these convictions, every foreigner who retained an atom of pride, self-respect, or love of the institutions under which he received his own education, would at once and indignantly refuse obedience to a mandate which struck at all of them. And to whom must the Japanese resort for substitutes for the teachers they so wantonly insult and expel? The answer is clear. They must apply to men who, for the sake of money, will abandon one of their most cherished customs and privileges, and whose discharge of their work must be divested of any other feeling than that of the obligations arising out of a contract.

Now, no one who has paid any attention to history or who has given any serious attention to the way in which the world's work is carried on, will deny that much of the purest enthusiasm in the work of teaching and the self-sacrifice this involves, have been found in men whose religious sense has been the guide of their lives, the foundation of their morals and the mainspring of their motives. Look abroad in the world and observe the class of men to whose hands, by common consent, the civilized nations have entrusted the education of their youth. We wish to take no narrow view of this question. Orthodoxy has nothing to do with geography, mathematics, grammar and natural philosophy. But we say that if the Japanese require teachers, they must search for them either from those classes and ranks of men in which we look for them ourselves, or resort to a class of men whom we ourselves refuse to employ as teachers. Our conclusions are the results of long national experience. Are the Japanese likely to do well in abandoning this? Can they find any more solid ground to move on than this experience? If so, what is it? If not, why reject it. We insist that the life and example of the teacher are amongst the greatest forces with which he works, and that there is far more guarantee for the quality of these amongst the class of men from which we select our own teachers, than amongst men who, having abandoned their national customs, are likely also to abandon the restraints with which those customs are intimately associated. The Japanese have already had some experience of the evil of placing the education of their youth in the hands of worthless and incompetent men, and it is only lately that their Foreign College has been purged of teachers who were as ignorant of their duties as they were misleading by their example. What guarantee do they expect that the men they may hereafter engage are qualified to instruct their youth and may be relied on to exemplify in their own lives and conduct the standard of the European or Christian gentleman? Are they insensible to the value of this, or do they imagine that the duties and dictates of conscience can be taught and enforced by men the very terms of whose engage-

ments will prove that their consciences have already lost all strength and tenacity of fibre?

Again; do the authors of this most unwise mandate know that they have men at present in their employment whom no inducement would prevail on to accept a renewal of their engagements on the altered terms—men who have learnt the Japanese language, who have endeared themselves to their classes by their kindliness, their patience and their singular aptitude for their task? What wonder that when bidding his pupils farewell on Tuesday last at the close of the public examinations, Dr. BROWN's voice should have faltered with natural emotion at the thought that the kindly intercourse between himself and his pupils was severed, that from that day forward their education must pass into other hands, and that the affectionate regard which had sprung up on both sides must wane by the common law of our nature?

We anxiously beg the Minister of Education, or whoever may be the Head of the department entrusted with the settlement of this question, to re-consider his late decision upon it. It is with no affected interest in this country and people that we make the appeal to him. On a wise solution of it depends in no slight degree the intellectual and moral welfare of thousands of youths many of whom must be destined to play important parts in this country. If well instructed, led by good example, and fortified by high resolve, these youths will render good service to the country in times which must grow more difficult, perhaps more troublous, as the movement of the Empire becomes more rapid, its aspirations more definite, and its social condition more complex. Foreign nations will regard this new mandate with grave disappointment and misgiving on account of its distinctly retrogressive character. It strikes at one of the most cherished observances of Christendom, dismisses for no other fault than their firmness of purpose many men capable of doing them excellent service, and threatens to substitute for these men who, in all probability, will prove as intellectually incapable as they must be morally pliable and therefore worthless.

#### FOREIGN EDUCATION IN JAPAN.

WE observe that in a short epitome, published elsewhere during the week, of the contents of the last number of the *Phoenix*, a little serial treating of Chinese and Japanese subjects published in London, it is stated that there is an interesting collection of letters on the subject of Education in Japan addressed by prominent American public men to Mr. ARINORI MORI, ex-Minister for Japan at Washington. The interest taken by the Americans in this subject is extremely creditable to them, and contrasts favourably with the apathy exhibited towards it in England. But reasonable allowance must be made on our behalf for the grave dread we have of all visionaries who venture to treat upon important subjects, and Mr. MORI has proved himself so unpractical and reckless a visionary in his educational views, that little apology need be offered for our having paid no attention in England to his vagaries. When a man has once seriously made a proposition to carry over the English language bodily to Japan, and there tinker it for easy adaptation to the wants of this people, there is no further necessity for arguing with him. As a nation we are singularly impatient of the rapid sciolism which treats questions on which wise men who know all that has been antecedently said and written on them, have pronounced definitely. The Americans, however, have in them a kindly tolerance which rather encourages this superficial treatment of grave questions.

They love the spirit of enterprize, and rightly believing that the world is yet young, and that the future has a thousand yet unthought-of improvements in its hands, they are less inclined to treat men like Mr. MORI harshly than we are. It is thus, we suspect, that he finds himself addressed by numbers of public men in America on a subject which he has treated with ludicrous incapacity, and though Mr. MORI is a poor peg to hang any grave contribution to a question upon, we are far from saying that these gentlemen have erred in addressing him upon one in which he has earned notoriety, if not fame. We have not been fortunate enough to see the number of the *Phoenix* in which these letters have appeared, and are thus unable to estimate the value of the views or suggestions they embody. But their subject matter is one to which we have given some little attention, and in the few words following we shall endeavour to convey an idea of what seems to us the special difficulty which the Japanese have to contend with in regard to it, limiting our remarks, however, to that section of it which bears on the imparting of Western knowledge—as we must shortly and rather clumsily call it—to the youth of this country.

Now, there are three ways in which this can be done: The first, by employing Europeans who shall teach in an European language the subject matter of the lessons. The next, by employing Japanese who have acquired our knowledge, or such branches of it as they would be required to teach, and who would impart it in their own language. The third, by employing qualified Europeans to teach in the Japanese language the subjects embraced in the college curriculum.

Beginning with the last, in order to dismiss it at once, we may say that this must not be expected and is hardly to be thought of. The difficulties it involves are enormous on account of the intractable nature of the Japanese language, the length of time required for its mastery in any sufficient measure to enable the student to lecture in it, and the entire absence from it, at least at present, of a scientific terminology adequate to the accurate definition indispensable for the pursuit of science. We believe that the accomplished Professor of Mathematics in the Naval College at Yedo gives his instruction in the higher branches of the science in Japanese; but the difficulties of the feat are bewildering, and constitute no sort of ground for the hope that men of equal patience and ability can be found to undertake such tasks.

We have, then, to choose between the two first methods named.

Now, it will be obvious that if the lectures are to be conducted in an European language, the first question which arises relates to the amount of knowledge of that language acquired by the pupils. And here we find boys of ten and eleven years of age as advanced as boys of sixteen or eighteen who have approached the study later in life. But though in one branch of learning their knowledge is equal, their knowledge of other branches is wholly unequal, and the condition of their respective minds absurdly unequal. It is no grave disadvantage to a boy of ten to pursue his study of a foreign language in a book which teaches him nothing but that language. But it is a grievous disadvantage to a boy of nineteen to learn a series of childish phrases, and then to have imparted to him matter which at ten years of age ought to have been thoroughly familiar to him. The mental dynamics rightly attributed to the study of a foreign language are but slightly operative in such sentences as 'I have a large dog and she has a small cat.' It is only when a certain advance has been made in a foreign language, and the

mind begins to work upon it with art comparable to that of the metal-worker, that the mind itself gains strength from the effort. Much as has been said for and against the making of Latin verses as a means of developing the mental powers, we have only to give an instance to show what astonishing ingenuity it may produce. The instance is old, but it serves our purpose. An Eton boy was required to put the following lines of Colley Cibber into Latin verse.—The subject is the well-known "Blind Boy."

My day or night myself I make  
Whene'er I sleep or play,  
And could I ever be awake  
With me 'twere always day.

The translation produced was as follows, and has always seemed to us an astonishing instance of ingenuity.

Namque diem ludi faciunt mihi, somnia noctem,  
Et nisi dormire, nox mihi nulla foret.

Consider the ingenuity requisite for producing the happy inversion of the thought of the original which is found in the pentameter of the translation! Other things being equal, we cannot see why the boy who executed this feat should not have planned Lord DUNDONALD's scheme for burning the French fleet in the Basque Roads, or the same hero's feat when in danger from two great Spanish men-of-war, of running his little vessel, under cover of a fortunate mist, between his huge antagonists, and by discharging both broadsides at once into them, inducing each to hammer into the other almost to their mutual destruction while the shot passed over his own head. When an English boy is set to make Greek iambs upon the Battle of Worcester, his mind soon finds plenty of material to work upon. He is either Roundhead or Cavalier in his sympathies, and soon betrays the side to which he leans. In one case he expatiates upon Liberty and the falseness of the King; in the other he denounces rebellion, dilates upon the hats and feathers of Charles's partisans, praises his love of the fine arts, crams Bright, Bradlaugh and Beales into two crushing lines, and forebodes evil if any one of them should ever gain a vestige of power. All this may appear very absurd, but it is quite certain that a boy's mind is very much and very healthily exercised by the effort requisite to produce such results. But what if a boy of the same age is being taught English in such phrases as the one we cited, which represents not unfairly the average intellectual height of these early books, and then receives instruction in geography, arithmetic, history and other matters suited to the capacity of the children of nine and ten years of age with whom he sits in class, in virtue of their equal knowledge or ignorance of English? Surely this is terrible. Granted the fact that a Japanese youth of eighteen who has not been under a foreign teacher knows nothing of history except that of Japan and China, and nothing whatever of science or the humanities; still his mind is that of a young man, and he could, in all probability, grapple with one of the problems which life presents to young men as well as an European of his own age. To place him in a class with children of ten, not, be it remarked, for learning English alone, but for informing, developing and exercising his mind, is ruinous to it. Yet this happens and must happen as things are at present.

Against the disadvantages attendant on this system—or perhaps rather, the system of which this is one of the concomitant evils—it may be pleaded that the foreign Professor, if well chosen, has a moderately good acquaintance with his own language and the branches of knowledge he is employed to teach. Instruction in French by an Englishman, or in German by a Frenchman, commonly produces lamentable results, and we have always been

convinced that the fine full-flavoured British accent which characterizes our fair countrywomen when speaking French, and which shows at least its own good sense by never deserting them, is the indelible result of those early lessons received either at the maternal knee, or from the English instructor whose testimonials vouched for the Parisian accent of their idealized possessor. Nor is this unimportant. The pronunciation of our language is extraordinarily difficult to a Japanese, and it is remarkable how slowly he makes any improvement in this respect. A German boy in England or an English boy in Germany, reading in the foreign language he has been learning for a year, is not only very intelligible, but is generally very fairly correct. It is quite otherwise with young Japanese. They long remain utterly unintelligible to any one who is not following them with a version of what they are reading, and it is singular to observe how little difference of accent there is between the youngest beginner and a scholar of some advancement. It is well therefore that our language should be taught them by those to whom it is a native tongue. It would also be well that our Western knowledge should be imparted by one whose mind has been entirely formed by it, and not by one in whom it is, as it were, a later intellectual deposit. It is quite true that if we could obtain a large staff of thoroughly qualified Japanese, all the young scholars would enjoy the inestimable advantage of having all this desired knowledge conveyed to them in their own tongue with all the assistance accruing from familiar illustration, apt and well-known allusion, from historical reference and national association. But, at least for many years,—and here we find ourselves facing the first of our alternatives—this will be impossible, at least as a general system. What should be done, as it appears to us, is to institute as many primal schools as possible where English is taught from text-books which not only teach our language, but which convey solid information and are suggestive of thought. We know it will be said that the acquisition of the language is work enough in class. And we agree that it is so for boys of nine or ten. But we are sure that it is otherwise with youths of a more advanced age. The mind may be stimulated and informed at the same time that the new language is imparted. It is quite as easy to teach a boy English in a sentence which informs him that the sun is ninety-three millions of miles from the earth, and that the air we breathe extends to the height above it of forty miles, as in such sentences as those which form the staple reading of the early lessons given to children.

The whole subject is one which demands careful thought, and above all sensible treatment. It is one to which we shall shortly recur, trusting meanwhile that the large number of persons engaged in education in this country will give us the benefit of their experience, either to correct any errors into which we may have fallen or may fall, or to add additional force to any of our arguments which may promote the cause of education in Japan.

#### SUMMARY OF FOREIGN TRADE FOR THE YEAR 1872.

HAVING completed the publication of the Trade Reports and Returns for the year, we have arrived at the Summary of them which will be found elsewhere. To recapitulate its contents here would be useless. Our duty is rather to draw fresh attention to a subject prominently alluded to in this Summary, and to which we have recently ourselves devoted some efforts, in the hope that they would conduce to the abolition of an evil which

is paralysing our trade, ruining our merchants, and acting as adversely to the real interests of this country as to those of the Western countries with which Japan has commercial treaties. We allude to the monopolising action of the guilds, and chiefly to that of the *Shōsha*, of which special mention is made in the Memorandum before us.

Now, it would be idle to argue that the Japanese are not perfectly at liberty to form themselves into any associations they please for the purpose of conducting their trade with us, provided always that the action of such associations does not contravene clear provisions in our treaties. Such action might even be extremely ignorant and short-sighted, detrimental to the interests of trade and the prosperity of the country, false to admitted axioms of Political Economy and vexatious to our merchants. All this, however, would give us no more ground for diplomatic remonstrance than we should have if the Japanese preferred their own manufactures to ours and refused to sell us their silk under three guineas a pound. All we could do under such circumstances would be to lament a course so destructive of our mutual interests, and make every effort to enlighten those who were deceived by any specious arguments on which it might be based. But it is otherwise when a Government, bound by commercial treaties to see that no impediment is placed in the way of a free and unrestricted intercourse between the foreign and native buyer or seller, becomes either an active party to, or the moving power in, an Association which steps in between the two parties and says "You shall neither buy nor sell without my permission or through my intervention." If this is not acting in restraint of trade, we do not know what is. The small trader or country shopkeeper in Japan is not permitted to go to the foreign merchant and deal directly with him. He is compelled to go to a Guild which has previously instructed its active members, who are the working agents, not to buy any given articles over such and such a price; or to sell other articles under a given limit. All freedom, all wholesome competition, all vigour, is destroyed by such a system, and the beneficent stream of trade, instead of overflowing its banks, and bringing fruitfulness, wealth, contentment and happiness with it, is narrowed into a selfish channel, divested of all its benevolent effect, and made subservient alone to individual and exclusively class interests. We earnestly wish we could induce Japanese statesmen to take wider and more liberal views of these questions. Are they so satisfied with the condition of the country that they see no necessity for improving it? What are these disturbances of which each succeeding day brings the news? What is this paralysis of trade of which we are all witnesses, and by which we are all sufferers? How easy it would be to turn all this discontent and complaint and poverty into contentment and satisfaction and wealth. Is it a light thing that the present policy of the Government is bringing it into collision with its subjects, whose blood is shed and whose homes are devastated and impoverished in consequence? What are all these outbreaks but the signs of discontent at an increase of taxes necessitated by a policy at once expensive and unproductive of the benefits which form the real justification for organic changes of policy? The country could well support all these changes and the expense they entail were the commercial policy of the Government made more liberal, less conducive to class interests, and more conducive to the general welfare.

And we cannot but remark here upon a growing spirit among the officials of this country to make the machinery of the State subservient to their own purposes and inter-

ests. They are unfortunately in only too close proximity to countries where no scruple appears to stand between men burdened with the responsibilities of office and the high charge of government, and the perversion of their powers into the channel of their own interests. The deadly canker of bad political example is eating its way into Japanese official life, and rendering more active and virulent than formerly the poison which is always more or less latent in men in power who are unguided by a strong sense of honour or high official tradition. We are afraid we shall soon see political "rings" in this country, using the commercial machinery of these guilds to work markets or exchanges or currencies for their own purposes. The germ of some such combination was sufficiently apparent in an attempt made not three weeks ago to close one of the great public Departments under false pretences. We warn the Government that any combinations of this nature will be severely dealt with if they involve breaches of faith with foreigners, and we should be sorry to see it draw down on itself any animadversions on such grounds.

#### REVIEW.\*

##### BARON DE HÜBNER'S TOUR ROUND THE WORLD.

These two volumes contain the record of a well-ordered and well-employed holiday. The veteran Austrian diplomatist, released for a time from the toils of the public service, devoted the greater part of the year 1871 to a tour in America, Japan and China;—his objects being, as he well expresses it, to see in the Rocky Mountains and the virgin forests of Sierra Nevada, the fight between nature and civilization,—to see in the Empire of the Rising Sun the efforts which some remarkable men are making to start their country on the path of progress, to see in the Middle Kingdom the passive but constant resistance which the spirit of the Chinese opposes to European innovation.

It is obvious that a work of this kind must bear a sketchy and superficial character. Vivid and brilliant as the Baron's pages undoubtedly are, they are first impressions and as such they must be judged. We all recollect the story of another diplomatist, Baron Bulow, who was accredited to the Court of St. James. He declared that after having been six weeks in England he was prepared to write a book on it; and after being a year it seemed to him a hard task; and after two or three years he had given up all idea of making the attempt, and was profoundly penetrated with a sense of the insurmountable difficulty of the subject. Now we are persuaded that if Baron Hübner had resided for two years at Washington, Yedo or Peking, he would not have printed his impressions of Americans, Japanese or Chinamen. He has given us, however, a most readable account of his tour, and if he has not thrown new light on certain well-worn themes, he has shewn us how new places, institutions and persons have impressed a practised student of men and things.

There is one most admirable feature in the Baron's book. We mean his capacity for candid appreciation. He is no pupil of the *nil admirari* school. He sees excellences eagerly, and enjoys them when he does see them with a freshness and intensity one would not have expected from a man long used to the weary round of political life. If he has a fault it is that he errs on the side of exaggeration, and distributes superlatives too freely. His book is written in French and the language seems to have blown this vice into him:—Thus, to quote three instances: the temples of Shiba remind him of Versailles; the figures of the Forty-seven *rōnins* at Yedo recall the Spanish sculptures of the seventeenth century; and the shops in Shanghai awaken memories of Oxford Street and the Strand. It is clear that the Baron was not in a critical mood, but after giving himself a roving commission resolved to enjoy his tour to the uttermost.

One of the charms of these volumes is the way in which the conversations of the writer and his travelling

\* Promenade Autour du Monde 1871 par M. Le Baron de Hübner. Ancien Ambassadeur, Ancien Ministre, Auteur de Sixte-Quint. Paris 1873. (1181 pages.)

companions are reported. In the States he met some of the most prominent men in the country and he gives capital summaries of their views on the questions of the day. The engrossing subject at the time was of course the Alabama Arbitration, and the observations on this topic (vol. 1, p. 45) we specially commend to our readers' notice. There is also much food for thought in the conversation with an American gentleman at Washington given a few pages later on. The following sentence—though it is not perhaps a pleasant one to quote—strikes the key note of some very important reflections.

"Oui, disait le gouverneur, après avoir complaisamment avalé le plat sucré de mes compliments, oui, nous sommes une grande nation, un *glorieux* pays, mais nous sommes malades, nous souffrons des suites d'une enfance précocité et d'une croissance trop accélérée. Comme adolescents, nous avons trop embrassé, et nous nous extenuons par un travail exagéré. Il est possible, il n'est pas probable que nous vivions vieux. L'Union, je le crains, n'a pas d'avenir."

"Yes," said the Governor after having swallowed the sugared compliments I paid him, "yes, we are a great people, a glorious country, but we are ill: we are suffering from the consequences of a precocious infancy and an over-rapid growth. In our youth we undertook too much, and we are wearing ourselves out by overwork. It is possible—it is not probable—that we should attain a great age. The Union has, I fear, no future."

The descriptions of Chicago, the Capital of Mormonism, San Francisco, &c., are all excellent, and the first volume forms an enchanting guide-book for any one purposing to return home by the American route. The Baron's views of the political situation in this country have been freely commented upon in European papers, but we reserve our notice of this portion of the Tour for a separate article. Enough to say that the action of the Daimios is to this acute observer an utterly insoluble problem. He professes himself unable to understand it. As a question of special interest at this moment we append some remarks on the Audience Question.

"L'admission des Envoyés est considérée par les hommes d'Etat Chinois comme une affreuse humiliation, comme un malheur national, parcequ'elle démontrera au peuple que le *fil du ciel* n'est ni le seul, ni le plus puissant souverain de l'Univers. Cela explique ce peu d'insistance que les ministres d'Angleterre et de Russie ont apportée dans les pourparlers sur cette épineuse question; car ils n'ont aucun désir, et personne ne peut avoir le désir de hâter la chute de la dynastie régnante. La Diplomatie Française est plus exigeante; si elle réussit, ce qui me paraît problématique, c'est au Cabinet de Versailles que reviendra l'honneur d'avoir ouvert les portes du palais Impérial, et c'est sur lui que pèsera la responsabilité des conséquences."

"The admission of the Ambassadors to audience is considered by the Chinese statesmen as a frightful humiliation, a national misfortune, since it will prove to the masses that the *Son of Heaven* is neither the sole nor the most powerful sovereign of the Universe. And this explains the reticence of the Ministers of both England and Russia in urging the consideration of this knotty question, since they have no desire to hasten the fall of the ruling dynasty of the Empire. French diplomacy has been more exacting: Should it succeed—and this seems to me to be at least problematical—the honour of having opened the doors of the Imperial Palace may be claimed by the Cabinet of Versailles, upon which also the grave responsibility of this step must rest."

It would have been a proof of an astuteness greater than that which usually falls to the lot of Diplomats if the Baron had foreseen that this knotty point would be finally settled by the Japanese.

In his lighter touches Baron Hübnér is peculiarly happy. He has a vein of genuine and genial humour, and he can sketch a character or describe a ludicrous incident with excellent taste and evident re-joyment at the time of writing. He appears to have had a very pleasant sojourn at Canton, and of course made the acquaintance of the well-known Archdeacon. What can be more graceful than this description: "Après l'avoir vu un quart d'heure vous vous imaginez le connaître depuis votre enfance, et vous regrettez de ne pas avoir quelque terrible secret sur la conscience. Quel soulagement on aurait à le lui confier!"

"After having seen him for a quarter of an hour you can fancy you have been acquainted with him since childhood, and you regret that you have not some terrible secret weighing on your conscience. What consolation might not one experience in confiding it to him!"

And then follows the story of the Phrenologist and the Bonze which is so characteristic that we cannot omit it:—

"Vous n'avez jamais vu de près une tête de Bonze," me dit-il, "cela en vaut pourtant la peine." Le hasard veut qu'en ce moment une douzaine de Bonzes passent tout près de nous. Ils marchent un à un: *taciti, soli, senza compagna*. "La tête de chacun," dit mon guide, "est marquée d'autant de petites taches blanches qu'il a fait de vœux. Ce sont des brûlures. Vous pouvez voir." A ces mots, il saisit la tête d'un des Bonzes, la baisse à la hauteur convenable, et commence ses explications avec le sang-froid d'un professeur s'adressant à son auditoire. Les compagnons de celui dont nous allons examiner le crâne ont jugé prudent de s'esquiver à grands pas. "Voici le vœu de la chasteté." Ici, un mouvement convulsif de la tête de Bonze. "Steady" dit mon guide, et il continue. "Les autres points blancs sont; vœu d'abstinence du vin, vœu de ne pas tuer de porc, vœu de ne pas manger de viande, vœu de respecter dans les étangs des temples la vie des carpes, et ainsi de suite."

De temps à autre la tête, objet de nos études, remue, mais l'Archdeacon la tient ferme, répète son *steady* et poursuit son cours d'anatomie sacrée. A la fin il rend la liberté au bonze qui, plus surpris que fâché après un échange de phrases polies et de *chin chin* s'empresse de rejoindre ses confrères. "Et les vœux des bras," s'écrie l'Archdeacon, "nous les avons oubliés." Il appelle le bonze, qui bénévolement revient sur ses pas, rétrousse la manche de sa tunique et nous laisse voir sur ses bras décharnés une foule de brûlures, indiquant autant de vœux tous plus étranges les uns que les autres."

"You have never," said he, "seen a Bonze's head—it is well worth looking at"—At this moment, by chance, a dozen Bonzes pass close to us—they walk in file: *taciti, soli, senza compagna*. "The head of each Bonze," said my guide, "is marked with the same number of small, white spots as he has made vows. These are burns: you can see for yourself." At these words he seizes the head of one of the bonzes, depresses it to a convenient height, and begins his explanation with the coolness of a professor addressing his audience. [By the way the companions of the Bonze who is under examination have thought it right to depart very quickly.] "This is the vow of chastity"—a convulsive movement is here made by the Bonze. "Steady," says my guide, who continues:—"The other white points are, vow to abstain from wine, vow not to kill pigs, vow not to eat meat, vow to respect the carp that live in the ponds of the temples and so on." From time to time the subject of our studies moves, but the Archdeacon holds him firmly, repeats his *steady*, and continues his study of sacred anatomy. Finally he gives the Bonze his liberty, who rather surprised than angry, after an exchange of polite phrases and *chin-chin*, hastens to follow his companions. "The vows of the arms," cries the Archdeacon, "we have forgotten them." He recalls the Bonze who kindly returns, tucks up the sleeves of his tunic, and exhibits on his fleshless arms a mass of burns signifying a number of vow each one stranger than the other."

We must now say farewell to Baron Hübnér for the present, hoping that he will soon be able to take another holiday, and that he will carry out his intention of visiting India at an early date.

## SUMMARY OF FOREIGN TRADE FOR 1872.

### MEMORANDUM.

THE annexed Tables A, B, C, D give a general view of the Foreign Trade of Japan for the year 1872 in comparison with that of 1871.

The result exhibits a very material increase in the Trade of the year both in Imports and Exports. This increase amounts to nearly eight and a half millions in Imports and more than five millions in Exports, the aggregate increase being thirteen and a half millions as is thus shewn in Table A.

	Imports. \$	Exports. \$	Total. \$
1872.....	26,188,441	24,294,532	50,482,973
1871.....	17,745,605	19,184,805	36,930,410
Increase in 1872	8,442,836	5,109,727	13,552,563

This increase is general both in the Import and Export side at all the Ports. At Kanagawa it amounts to nearly seven millions of dollars; at Hiogo-Ozaka to more than five millions of dollars; at Nagasaki to nearly three quarters of a million, and at Hakodaté to one hundred and thirty one thousand dollars.

Table B shews that in Imports this increase had amounted to millions of dollars in Cotton manufactures, to more than five millions and a half of dollars in Woollens and Woollen and Cotton mixtures, and to nearly a million and a half of dollars in foreign goods of a miscellaneous description. The only decline observable under the general headings of this Table is in Metals and Arms and Ammunition.

In Cottons the demand has been greater for Yarns than for piece goods, in respect to which the importation of Kanagawa for 1872 shews a material diminution as compared with those of 1871. But the increase in the supply of Woollens and Woollen Cotton mixtures at the same port has been very remarkable and has more than quadrupled that of 1871. One item, Flannel, which has found no mention in the returns of previous years, was imported in 1872 to the extent of \$1,284,160 Cloth shews an increase of more than a million of dollars and improvement in quality and value as well as in the quantity of the various foreign textile fabrics may be noticed. The increasing demand for foreign manufactures is clearly attributable to the growing taste of the Japanese for foreign dress.

In nothing, however, this large increase in the importations of foreign goods it must be admitted that these have proved in excess of the demand, and that large stocks of all kinds remain undisposed of—various circumstances have combined to produce the present stagnation of trade which is observable in export as well as in import transactions. A native association of merchants known as the Shôsha, and which has the support of a Government connection and is allowed to issue notes, is believed to have done much to impede operations by maintaining native produce at fictitious values and thus checking sales upon which the ability of the Japanese to purchase foreign goods depends. This result is caused by the Shôsha making large advances in their own paper to the native dealers in Silk and Tea and thus enabling them to hold their produce against the offers of foreign buyers. The extent and character of the privileges granted by the Government to the Shôsha have not yet been clearly ascertained, but the tendency of this association appears to be to create a vast monopoly of the trade, which, if persisted in, must have a very injurious effect upon the true commercial interests of Japan.

Of the Total foreign Imports into Japan for 1872 amounting as shewn in Table A to \$26,188,441 it is known from Home Commercial Tables that one half at least have been shipped from England. The value of our Exports to Japan in 1872 as declared at our own Custom House amounted to £2,963,400 or at the exchange of 4/6 to \$13,335,300; but in addition to direct importations from Great Britain considerable shipments are sent to Japan from China, and thus it may be seen that the importation of British goods into Japan during 1872 has been in excess of Three millions sterling.

The same commercial Tables shew that Japan maintains its character as a special market for Yarns. The consumption of these goods is already greater in Japan than in China. In 1872 England supplied Japan with fourteen million pounds of Yarns, and China with little more than eight million pounds, but in Cotton Piece Goods the latter country took ten times the quantity shipped to Japan. Turning to exports it will be seen that there has been a decrease in Silk—the staple of the Trade of upwards of a million of Dollars, but the transactions in other articles of Export are much larger than those of 1871. The export of Tea has increased to the extent of three quarters of a million dollars, over that of the previous year, Copper to little less than a million, while the four articles of Tobacco, Wax, Camphor, and Dried Fish taken together shew an advance in value on the shipments of 1871 of about another million of Dollars.

Rice appears for the first time on this occasion on the Export side of the Japan Trade the total value of the shipments from Kanagawa and Hiogo-Ozaka being estimated at \$3,122,931. It should be remarked however

that these shipments were not made in the ordinary course of trade as the export of Rice from Japan is prohibited, but solely by and on account of the Japanese Government themselves, and consisted of the surplus of the Rice tax received by them in kind. The mode adopted by the Government for the disposal of this surplus has been generally condemned. Instead of putting the Rice up to public auction and giving due notice of the sales, which would have attracted purchasers and freight from adjacent markets, the Government preferred to become dealers themselves and to favour a particular foreign firm with their brokerage. The out-turn, as was natural under such circumstances, proved less favourable than it would have done if open competition had been allowed. It is to be hoped, however, that the attention attracted to this subject will in the end induce the Japanese Government to free this particular industry from the prohibitions which now weigh upon it. The Japanese farmer has at present no inducement to grow more Rice than can be consumed at home, and large tracts of land are allowed to lie barren in consequence. In time of dearth Japan purchases Rice at high cost from abroad, but debars herself in years of plenty from disposing of the surplus of her harvests. The exportation of Rice, if freely permitted, would do much to turn the balance of foreign exchanges in favour of Japan, and to provide her foreign trade with an abundant supply of cheap tonnage.

One item in the export headings shews a diminution which is not without significance. The export of Coal has fallen from \$470,600 in 1871 to \$324,000 in 1872. This shews how little has been done under the system at present pursued by the Japanese Government to develop the mining interests of the country. Instead of allowing mines to be opened by private enterprise, and thus stimulating the industry of the country, the Government appear to aim at securing to themselves the possession and working of all mineral deposits, and the result thus far of this restrictive policy has been to check the few enterprises which had already been started for the working of coal beds with the assistance of foreign skill and capital.

The large operations in Treasure which as shewn by Table C are seventeen millions and a half of dollars in excess of those of 1871, are chiefly to be accounted for by the Bullion dealings of the Japanese Government. Large sums have been shipped by them both to and from America and to and from China. It is obvious that such shipments could not in all cases have been undertaken for the supply of the Mint. According to Mr. Consul Gower's report this establishment coined nearly twenty nine million dollars worth of coin in 1872 but the slowness with which the new coin is allowed to pass into circulation is another unexplained feature in the Japanese finance of the day.

The returns of shipping exhibit a favourable comparison with those of 1871 which may be mainly accounted for by the demand for Tonnage created by the shipment of Rice above alluded to. The total British tonnage entering all the Japan Ports was 382 ships of 204,077 tons of which 31 vessels of 24,823 tons were Mail steamers. The total foreign tonnage was 520 ships of 756,427 tons which includes 293 entries of American mail steamers of 629,136 tons, and 28 entries of French mail steamers of 27,000 tons. Deducting the mail steamer tonnage the general tonnage of British ships amounted to 351 ships of 179,254 tons, and the general tonnage of Foreign Ships to 199 ships of 100,291 tons.

The progress of Public Works forms an interesting feature in the Reports of H. M.'s Consuls. The first section of the Trunk Railway intended to connect Yedo and Yokohama with Kiôto, Ozaka and Iiiôgo has been opened and already attracts more traffic than it can conveniently carry on a single line of rail. The section connecting Iiiôgo with Ozaka will be opened, it is hoped, in about twelve months. The telegraph wires have been stretched for some months past from Yedo to Nagasaki, but the line which is 830 miles long, is not yet pronounced in working order. When finished it will connect Yedo and Yokohama, Iiiôgo and Ozaka, and Nagasaki with the telegraphic system of the world, and the delay in this useful work, when apparently so close upon completion, is therefore the more to be regretted. It has been found, however, that the jealous desire evinced by inexperienced

Japanese officials to take an early share in the execution and management of such works, and to confine within the narrowest limits the powers and influence of the foreign employés of the Government occasions numerous obstructions and delays, and causes less real advance in works of

solidity and utility than might otherwise have been looked for from so enterprising a people.

H. B. M.'s Legation,  
Yedo, May 1873.

**RUSSIAN DESCENTS IN SAGHALIEN AND  
ITORUP IN THE YEARS 1806 AND 1807.**

By W. G. ASTON.

*Read before the Asiatic Society of Japan,  
7th June, 1873.*

THE following account of Russian descents in Saghalien and Itorup has been prepared from a collection of Japanese manuscripts comprising the private correspondence of officials on duty at Hakodate, together with proclamations and other official documents.

The causes of these Russian descents are to be looked for in the events of the previous four or five years. The Russians had already made several attempts to open trade with Japan. Applications of this kind which were made to the Japanese authorities in Yezo were always referred to Nagasaki, and at last an embassy was sent there bearing a letter from the Czar to the Tycoon in which a Commercial Treaty was asked for. The Russians were delayed

at Nagasaki for several months awaiting the answer of the Japanese Government. It was to the effect that they could by no means deviate from their ancient policy of seclusion, and was accompanied by an order from the Government of Nagasaki to quit that port immediately.

The irritation felt by the Russians at the ill-success of their mission must have been increased by an event which took place about the same time. Fourteen Russians who had ventured to land on the island of Itorup in hopes of being allowed to trade were seized by the Japanese garrison there and thrown into prison, where they remained till the following year when they made their escape.

In the autumn of the year 1806 two small Russian men-of-war arrived at Kushunkotan the principal Japanese settlement in Saghalien. The united crews of these two ships amounted to no more than sixty-four or sixty-five men. On arriving at Kushunkotan, we are informed that they fired poison-smoke-guns, after which a party landed in boats and pillaged the godowns, carrying off the rice and whatever other valuables they could find. They also

carried off seven or eight of the Aino inhabitants and one Japanese soldier, setting fire to the place before they went. The Russians nailed up a plate of copper on the Torii of the temple of Benten with an inscription to the following effect:—

I. It is unjust of the Japanese to prohibit trade with the Russians in Saghalin.

II. If the Japanese should change their minds and wish for trade, they might send a message to Saghalin or Urup.

III. If the Japanese persisted long in refusing justice, the Russians would ravage the northern parts of Japan.

The approach of winter prevented the Russians from carrying their menaces into effect this year. One of the ships retired to Urup for the winter, and the other to Kamschatka.

Meanwhile, the news of the Kushunkotan affair had produced great alarm and excitement. The copper tablet was sent to Yedo, where it seems to have been taken as a declaration of war by Russia. Active preparations were made for repelling any future attacks which might be made. A body of 150 men was despatched at once to Kushunkotan, but arrived too late to be of any service. Two hundred Tsugan soldiers were soon after posted at Soya, a settlement near the northern point of Yezo, and opposite to Kushunkotan. The garrison of Itorup was increased to 200 or 300 men, and by the spring of next year that of Hakodate was raised to about 2,500 men, mostly retainers of the northern Daimios.

Extensive preparations were also made on the main island of Japan. Bodies of troops were stationed at all the seaboard villages in the northern provinces, and the Daimios were urged to increased vigilance in guarding their coasts.

The diary of an official who was travelling northward about this time gives a lively picture of the bustle and excitement along the great northern highway. Couriers were constantly passing backwards and forwards between Yedo and Hakodate, and between the Daimios' yashikis in Yedo and the provinces, carrying dispatches wrapped in oiled cloth covers; and the road was thronged with troops equipped in the old fashion—some with bows and arrows, and others with spears and matchlocks—while occasionally a Daimio or Governor monopolized the way with his train. The transport service necessary for these movements of troops and officials was a grievous burden on the farmers, and many of them, to escape it, preferred to abandon their holdings and conceal themselves among the hills.

Another writer gives the following account of the train of a Governor of Hakodate.

The procession was preceded by a man whose duty it was to clear the way by the well-known "Shitani! Shitani!" the signal for every one to squat by the roadside till the great man had passed.

Next came a body of 12 foot soldiers, in two files of six men each.

Next two war-couch blowers.

Two drummers.

Eight matchlock men.

Two men carrying ammunition.

Two men carrying arrows.

Eight archers.

Three Samurai.

Three men carrying the emblems of the Governor's rank.

Two men with the Governor's private matchlocks.

Two men with the Governor's bows.

Two men carrying the two lances indicating the Governor's rank, with two others as reliefs.

Six foot-soldiers.

Two halberdiers.

The Governor himself on horseback, his horse led by two grooms,

Six Samurai.

Two doctors.

Three men bearing—one, the Governor's sandals, one his umbrella, and one his camp-stool.

Two men bearing the lances of officers in the Governor's train.

Three men with baggage.

Three men with the Governor's tea and luncheon necessities.

Two men to preserve order on the march.

Two grooms with spare horses.

Two men with straw shoes, etc., for horses.

Several subordinate officials with a suite of from two to nine persons brought up the rear, the whole amounting to 123 persons. This body of men seems to have been considered a warlike force, and is spoken of as an army; but of the entire number only thirty-six seem to have been really fighting men.

In the spring of 1807, as soon as the sea was open for navigation, the Russian ship which had wintered in Kamschatka joined her consort which had remained at Urup, and shortly after they appeared in company at one of the Japanese settlements in Itorup.

At this time the Japanese colony of Itorup was in a tolerably flourishing condition. It had been established more than ten years before, and had now a population of more than a thousand Ainos and 350 or 300 Japanese, including five women. Most of the Japanese were, however, soldiers from Nambu and Tsugaru. There is no mention of any trading population, except a *sake*-brewer from Akita who had established a brewery to supply the garrison. The Aino population was engaged in the fishery of *masu*, a species of salmon. Its oil was expressed, and both oil and refuse sent to Hakodate. In the winter the Ainos hunted the bears for their skins.

The climate of Itorup is described as being not very severe in the early part of the winter. In February, however, the sea freezes for fifty or sixty *ri* and remains frozen until May. Snow falls along the sea-shore to a depth of five or six feet, and in the mountains to a depth of thirty feet or more; and the ground freezes to such a depth that it requires weeks of warm weather to thaw it. It is not till the end of July that all traces of frost disappear.

There were two Japanese settlements in Itorup. The chief one was at Shana where the garrison was stationed. A building had been erected at great expense for the officials from Yedo and their troops, which is described by the *sake*-brewer as exactly like a Daimio's Castle. It was surrounded by a stone wall, no doubt an uncommon sight in those parts. There was a minor establishment at a place called Naiho.

It was at Naiho that the Russian ships first made their appearance. The Japanese account states that about 200 men landed, fired muskets and great guns, broke into the guard house and carried off clothes and other valuables, setting fire to the settlement before returning to their ships. They also carried off with them five Japanese whom they had taken prisoners. The remaining inhabitants fled to Shana, where the Russians made their appearance a short time after.

The two principal officers of Shana were absent, and the duty of defending the settlement fell upon a subordinate named Toda Matadayu. He had at his disposal a force of over 200 men armed chiefly with matchlocks, and the Castle was defended by a few small cannon, posted however in such a position that they could be fired in one direction only.

Notwithstanding the advice of his colleagues who reminded him of the behaviour of the Russians at Naiho a few days before, Toda resolved to try to open negotiations with them. He sent the chief interpreter of the settlement with 4 or 5 other Japanese and a number of Ainos to meet a party of 17 (one account says 20) Russians who landed near the Castle. The interpreter and his party were fired into, and one of the Ainos killed. The interpreter was himself shot through the thigh, but the Ainos hoisted him on their shoulders and carried him back to the Castle. There was now a good deal of desultory firing on both sides. The Russians ensconced themselves behind an oil-pressing shed which stood on the beach, and the Japanese did not venture out from their castle. The distance between the combatants was 160 yards, and as both parties were well sheltered little damage was done on either side. The only casualties we hear of were one Russian and two Japanese killed, and a few wounded. In an hour or two from the time they landed, the Russians re-embarked to the great delight of the Japanese garrison, who were overjoyed at their easy victory over the dreaded "red men," as they called the Russians. So secure did they feel on that night that they neglected the most ordinary precautions. Before the appearance of the

Russian ships we hear of watch-fires kept burning, and night-guards posted on all the neighbouring headlands; but everything of the kind seems to have been neglected on this night, when a force landed from the Russian ships. Soon after dusk they were able to approach the Castle before any alarm was given, and the first intimation of their presence was a volley of musketry. There was no time to organize any resistance; every one was seized with a sudden panic and fled to the hills, with the cry "*ware ichi*," or "*saue qui peut*." They did not feel safe till they had reached a hill-top a *ri* distant from the castle. Here they halted, and as everything seemed quiet they ventured down to the sea beach; but as they espied a Russian ship not far from the shore, lying in wait as they thought, to intercept their retreat, they again took to flight and concealed themselves in the woods. That night when all were buried in sleep, they were awakened by a loud cry from Toda. Unable to endure the disgrace of defeat he had committed suicide in the approved Japanese fashion by disembowelling himself. One of his comrades pertinently remarked that it was all very well for Toda to die, but that it was a pity he had not chosen to die honourably in battle rather than die the death of a dog as he had done. After Toda's death his men made the best of their way through the hills and woods of Itorup towards Kunashir. They suffered great hardships on the way, having for three days nothing to eat except such roots and berries as they could find. Some un-hulled rice boiled in one of their helmets was thought a great luxury. From the western end of Itorup they crossed over in boats to Kunashir, and from there they afterwards returned to Hakodate.

The Russians could not at first believe that the Japanese had really abandoned their Castle. They feared an ambush, and waited till morning before entering. They then carried off all the rice, *sake* and *shoyu* they could find, and, what hurt the vanity of the Japanese more than anything else, the ornamental spears and halberds set up at the entrance to the Castle. Their next step was to burn everything,—the Castle, the barracks, the brewery, even the huts of the Ainos. The desolation was complete—nothing was left. They then returned to their ships leaving behind two unfortunate men who had got drunk and had fallen asleep in a shed. Here they were afterwards discovered by the Ainos, who with the help of a Japanese who had not joined the general flight transfixed the poor fellows with spears as they lay asleep. Their heads were afterwards salted and sent to Hakodate along with their clothing and arms.

The news of the Itorup affair spread rapidly throughout Japan. The officials on duty at Hakodate wrote reports of it in their letters to their friends at Yedo. These letters were some times addressed to a large circle of acquaintance and were at any rate eagerly copied and passed from hand to hand. Among persons who had not access to such authentic sources of information, the wildest rumours were rife. One account raised the number of Russians to 500 men; another made them all 11 or 12 feet high; while reports of Russian ships being seen at various points along the coast were daily invented. The Government at last resolved to put down these rumours by a proclamation. This proclamation stated that a variety of rumours had become current in regard to some officials who had been sent on a visit of inspection in connexion with the arrival of some foreign ships off the coast of Yezo and Saghalien, and summarily prohibited any more talk on the subject.

The Government also urged the northern Daimios to redouble their vigilance. Matsumaye seems to have shown some remissness for we find that about this time his territory in Yezo was taken from him, lands being provided in exchange on the main island of Japan and a subsidy granted him to defray the expense of removal. The northern ports were closed to the native junk traffic, and no junk was allowed to put to sea from any port in Oshiu or Dena.

The next appearance of the Russians was off the port of Hakodate. They entered the strait from the west, so they probably came round by the north of Yezo through the Strait of La Perouse or Anjwa. They appear to have merely passed through the Hakodate Strait without making any hostile demonstration. Great preparations had been made by the Hakodate Generals in the way of re-

views, councils of war, watch-fires and the like, but more essential matters seem to have been neglected. Of ammunition in particular the supply was extremely scanty. Economy was the order of the day, and so rigidly were expenses cut down that there was not enough ammunition in the place to hold out for a single day's fighting. The important duty of keeping a look-out for the enemy's ships was entrusted to a merchant named Kimbei, a sort of harbour master for the port of Hakodate. He neglected to attend to it, and the consequence was that the appearance of the Russians took everybody by surprise. Many of the towns-people and of the wives and children of the officials and soldiers took refuge in the hills. As an instance of the unprepared state of the garrison it is stated that the gunners of a cannon in one of the batteries having applied for ammunition for their gun, were told that there was no shot, and were served out twenty pounds weight of lead instead. They accordingly set to work to melt it into balls. There was only enough for two, and when they were made and carried down to the batteries, the Russian ships were already out of sight.

Soon after leaving Hakodate the Russian ships fell in with a war-junk which had left that port some days before with a reinforcement of twenty men for one of the Yezo settlements. It was commanded by Morishige Sachu, an officer who had the chief credit with the Hakodate garrison of the economical administration of affairs. Another officer was associated with him in command, but owing to a quarrel which they had about the best mode of fighting the Russians, Sachu's colleague went ashore leaving him in sole command. On board this junk was a cannon throwing a shot of about five pounds, one jingall, ten matchlocks and about 300 pounds of powder. This was considered a very respectable equipment, and Sachu was much blamed for allowing his guns to remain in the hold and not mounting them in such a way as to be able to fight his junk properly. But Sachu probably followed the wisest course open to him. As soon as the Russians opened fire, he and his men got into their boats and made for the nearest land, leaving their junk to be rifled and burnt by the enemy. The Hakodate officials were so delighted with Sachu's misadventures that it almost consoled them for the national loss which had been sustained. They were all agreed that he should have committed *harakiri*, and that if he had been a true *sumurai* he would have done so.

We next hear of the Russians at Ruitaka a small settlement near the Kushunkotan in Saghalin. Here they burnt and pillaged as usual. There seems to have been no garrison in Saghalin at this time. The Matsumaye men had held it previously, but they had before this retired to Soya.

From Ruitaka the Russians crossed over to Rūshin a small island near the entrance to Soya harbour. Here they found four junks mostly laden with stores for the Soya garrison. These junks they rifled and burnt, carrying off amongst other booty a 10-pounder bronze cannon captured by Taikosama from the Koreans. The officers in charge of the junks reported to their Government that they had been wrecked in a storm. At Rūshin the Russians sent ashore the prisoners taken at Kushunkotan and Itorup. To one of them was entrusted a message to the Japanese Authorities which was taken down in Japanese and ran as follows:—

#### TO THE GOVERNOR OF MATSUMAYE.

The distance between Russia and Japan being but small, our Emperor sent his officers across the sea to request that trade between the two countries might be permitted. If due inquiry had been made and a treaty of commerce concluded, all would have been well, but although our officers went repeatedly to Nagasaki they were sent away without an answer. Then things took an unpleasant turn, and our Emperor commanded us to give you a specimen of his power in return for your refusing to listen to his first request. If you persist in refusing his offers we will take all your northern territory from you and if possible get an answer out of you in that way. The "Red men" can always come to Saghalin and Itorup and chase you about.

If you comply with our wishes, we shall always be good friends with you; if not, we will come again with more ships, and behave in the same way as we have done before this year.

OROSHIYA.

This paper was delivered to the principal Japanese official at Soya who composed a defiant reply which however he had no opportunity of forwarding. He also concocted a scheme for inviting the Russians ashore and massacring them, but this plot was disconcerted by a storm which compelled the Russian ships to put to sea.

At this point the series of papers from which the above account is taken comes to a close. It is to be regretted that they do not contain an account of Golownin's capture which took place a few years later.

## LEAVES FROM A POCKET-BOOK.

### No. 10.—THE STORY-TELLER'S NARRATIVE.

(Continued.)

THERE was not in all the western provinces a wilder spot than the valley of Katase, where the fragments of thirty shattered torrents shed themselves unceasingly upon the sinuous path that crept by their issues below, and nurtured everywhere dank mosses, roofing the homes of the centipede and the clock and hiding the trail of the deadly *manushi*. Huge caverns, eating their way into the hearts of the mountains, breathed upwards a ghastly vapour that never went out to meet the moonlight, but crept heavily behind the rocks and under the white arms of the dying pines as though it shrank from the advent of those mighty blasts that often, leaping the crests of the mountains, wrenched the hollow willows from their scanty beds and changed the hush of the valley into a deafening howl.

The road winding round a huge boulder of rock within forty paces of the entrance to Katasedani led the traveller suddenly up to a stony plateau, looking down from whence on the gloomy passage that lay before him, many a wayfarer would fain have given half the contents of his purse for the presence of even a matted tavern to welcome his halting feet. And never more unhappy was the absence of such shelter than on the evening when Fukuharasama and his retinue saw the sombre shape of the cliff Kokuseki bending over their path in the misty glooming, for the sodden earth was mottled with patches of melting snow, and a rising wind, already thrusting aside the drifting clouds, carried up from the east sheets of icy vapour, and ruthlessly swept away all the pomp of the delegate's procession. No longer did any voices issue from the numbed lips of the criers; the Nambu steed, passive in the hands of a single groom, paced dully on with drooping ears; the forty gentlemen, girding up their loins and knotting their kerchiefs round their heads, splashed through the muck and mist seeking one another's footsteps, and the bearers of the *norimon* staggered and slipped, ankle deep in mud and snow. Fukuharasama, pulling his wadded cloak over his head and shrinking back from the touch of the raw vapours, lay dozing in the corner of his *norimon*. He dreamed that the glowing blush of a hundred charcoal logs was reddening all the air around him, and that the dimpled fingers of Same, the fairest *geisha* in Ozaka were daintily filling his cup with muffled wine, while from the streets below echoed the cries of the olive and chestnut vendors. Presently disturbed by some quicker motion of his bearers, he awoke to find that although the voices of the olive vendors were only the renewed shouts of his own criers, the charcoal glow and mayhap the fumes of the muffled wine were realities—realities as incredible as they were delightful. For just drawn back from the stony plateau sufficiently to escape the vapours that swept outwards from the valley, two rows of stout pine poles laid their heads together in a nook of the cliff, and held up towards the scudding clouds a triple fold of comfortably plaited rice straw. Within, a splendid profusion of charcoal gleamed and crackled in the centre, filling the hut with delightful waves of warmth, and summoning from the huge kettle that seemed to float in their undulations a song kinder at that moment to the delegate's ears than even the musical laugh of Osame herself.

It may well be conjectured that Fukuharasama and his followers, filled as they were with astonishment and gratitude for such an unexpected happiness, were little disposed to cavil at the roughness of the host's greeting or the paucity of his utensils; nay the delegate himself, perhaps because he was loath to hasten his followers by any reflection of their master's waiting without, or perhaps because he desired to realize in

part the fancies of his dream, actually condescended to enter the rough shanty, and graciously signified his readiness to taste the contents of three fat casks that stood carefully swathed in the corner. "Poor wine I'm afraid you'll find it gentlemen," said the gruff old host as he drew out the spigot from the topmost cask, "but poor as it is it would never have been here to-night except for your coming." "Indeed," said the delegate, "did you then expect us?" "Yes, Sir, I knew that you could not fail to pass this way, and a hundred customers or thereabouts in one month is enough to warrant a man in making some preparations." "Yes" repeated the old tapster with much emphasis on his numerals, "one hundred customers in one month is not a bad beginning for an inn at the back of Kokuseki."

"Not a bad beginning by any means, but where do you expect to get the second half of your number seeing that we only give you the first?"

"The first *now*, but the second on your journey back, Sir, for I suppose you'll return to the castle by the same route. That is if you *do* return, gentlemen, for to be sure one never can tell how long business may detain one. Many a man never travels the same road twice, gentlemen, for business is as uncertain as a wife, always going wrong where you least expect it."

The latter part of this speech was delivered rather in the form of a soliloquy than a remark, and although there was nothing at all curious either in this greybeard's speculations as to his visitors return, or in his theories as to the similitude of business and wives, yet the tone of his voice was so mysteriously hypothetical and his whole air so much at variance with his hostship, that even the exit of the steaming wine bottle from the bowels of the black kettle, became in his hands a doubtful event, and was watched with breathless interest by every one of his guests, from the delegate to the grooms.

And what wine it was, to be sure! How strange and yet how grateful its fine flavour in those mountain wilds, and how, as cup after cup slipped down their throats more smoothly than velvet, each and every one of the company found the passage of the inhospitable valley become a more and more remote idea! How ingeniously did they discover new methods of extolling the aptness of the black kettle, and the staunchness of the log shanty, and how the breath of every fresh brew exhaled some new excellence of bouquet or vintage, till at last the sweet face of Osame began again to look out at Tukaharasama from the red heart of the charcoal, and the sound of the drifting sleet grew fainter and fainter in the ears of the forty nodding gentlemen.

But even more inexplicable than the presence of the log hut and its peerless wine was the conduct of the old host at this juncture. He seemed to be suddenly possessed with the liveliest solicitude lest his guests should be benighted in their passage through the valley, and at the same time tacitly put aside as perfectly untenable all idea of their passing the night in his hostelry: he even went so far as to tell Fukuharasama that it were better he turned his *norimon* back to Ozaka than suffered the sunset to see him at the mouth of Katase, and showed such a disinterested unwillingness to tap the second tub of "Saki" that the delegate, little disposed to brook advice from any and still less from the keeper of a mountain inn, swore that if the old man was so anxious about their safety he should guide them through the valley or carry his bill to Ozaka for payment. Strange to say not the slightest opposition was offered to this proposition by the host, but merely remarking that as he had neither neighbours nor visitors he wanted no caretaker, he left the charcoal fire and the two remaining tubs of "Saki" in possession of the house and set out at a sturdy pace in front of the procession.

The wind had by this time gathered a steady force and was ruthlessly pushing the raw air into every corner and crevice of the valley, while heavy drops of rain and sleet sopped down into the half melted snow and dimpled the face of the slimy mud. It was impossible to exclude that bitter vapour. In vain the delegate hid himself away among his cushions and wraps; colder and colder grew the air, and at every breath he

inhaled the wind seemed to rush down his throat and tear at his entrails with an icy grip, till at last he gathered his feet under him and bowing his head upon his knees almost groaned aloud. He would fain have stopped his *norimon*, but what help could there be in such a place, for they were now in the very middle of the valley and so encircled by mist and gloom that a moment's halt would have been intolerable. Stop, however, the *norimon* did, and that in a very unexpected way, for two of the bearers, suddenly reeling, fell forward on the ground, and instead of attempting to rise lay writhing and twisting in the mud. Fukuharasama had scarcely time to observe that more than half of his followers were staggering like drunken men, before he heard a sound of voices coming as it were from the mists overhead, and bitterly then did the delegate curse that halt on the plateau of Kokuseki, for he knew that the wine had been poisoned, and that he had seen Osame's face for the last time in the charcoal pictures. Vain to attempt resistance; for not one of the forty gentlemen was capable of drawing his sword, and so occupied were they by the consciousness of their evil plight that they scarcely recognised their host of the plateau in the leader of the Toyoka bandits who now swarmed down the rocks on either side of the road. Full twenty years of his life had the host shaken off since he set out as the delegate's guide, and the words that he now addressed to his late guests had no touch of age or infirmity.

"Gentlemen," he said, "I am very sorry to see that the wine you had at my poor inn has not agreed with you, and more especially sorry to be obliged under such circumstances to ask you for a loan of your garments. Let me assure you that we have no wish to offer you any personal violence, and that we greatly regret your having found the wine so much to your liking"—he had a most annoying way of referring to that wine—"but we have some imperative business in the village of Iwamura, and without the dresses you now wear we cannot possibly accomplish it. Pray allow my men here to assist you in disrobing." A pleasant night and a pleasant place in truth for such a performance, but even a naked encounter with the icy wind could scarcely enhance the misery of the delegate and his followers at that moment. Passively they suffered themselves to be stripped to their loin cloths, and an hour later the sleet drifted over the faces of fifty naked corpses in the valley of Katase, while five new criers cleared the way for the host of the Kokuseki Inn as he lay back among the cushions in the *norimon* of Fukuharasama.

Meantime the yashiki of Yamaru was busied with preparations for the reception of the delegate. Men who are on the eve of a great fraud are more than commonly careful of circumstance and arrangement; and Kuramoto, knowing the character of the man he had to deal with, and conscious also of the character of his own dealings, spared no pains to place between himself and enquiry every possible obstacle of ceremony and hospitality. Before the vestibule fifty *tsubo* of plaited *Igusa* waited to receive its first impress from the delegate's foot, and from its outer border a triple rim of "Bingo" matting led to the outer gate, beyond which two heaps of freshly dredged sand stood ready to construct a virgin road for the honoured visitor. No sooner did the delegate's *norimon* appear in sight than a hundred hands scattered this sand in a circle, throwing it always inwards lest any grain might be trodden by inferior feet, and over this, through four rows of foreheads bowed to the earth, the delegate passed to the vestibule within.

It might have occurred to one who watched this pageant without being himself concerned in it, that the delegate's face expressed more amusement than gratification as he received the profuse salutations of Kuramoto and the chief officers of Yamaru, and possibly also such an one might have judged that the exact rules of etiquette were as studiously abridged by the visitor as they were exceeded by the visited; but Kuramoto took little note of these things, for his nature being to give everything that cost nothing and to take everything that came for nothing, he was always glad to have a balance of any sort in his favour. So the reception passed off very comfortably, and Kuramoto felt that his part had been completely acted, as, looking up for moment after his last bow at the door of the

delegate's room, he saw Fukuharasama's eyes resting with apparently much satisfaction on a little parcel that lay beside his tea-tray, a little parcel very neatly wrapped in paper of blue and silver, and having a tiny piece of dried "sea-ear" inserted beneath the deftly-tied knot of red twine that encircled it.

"Yakeishibo," said the delegate to one who seemed to be his chief attendant and who never ceased smoking except to fill his pipe, "Yakeishibo, just untie this thing and see what it contains."

Yakeishibo, laughing quietly, and plainly persuaded that the contents of the packet are not perishable, rips it open with one slash of his dirk and displays three comely rouleaux each inscribed with the letters "Hiyak'kin." The two men look at one another for a moment and then the delegate says:—

"Yakeishibo, I must confess that this is the first time I have had the pleasure of performing the duties of the office I hold to-day, and perhaps for that reason I find myself a little puzzled by this package of three hundred *riyo*. How does it appear to you?"

"Good money, Sir, good money; and better now than it ever was when Kuramoto had it" replies Yakeishibo, designedly obtuse.

"Yakeishibo" says the delegate "you may be an excellent judge of coin, but you are certainly a poor actor. Suppose, however, that you were Fukuharasama, would you take this money or would you return it?"

"Would I take it or would I return it, Sir? Well, I should be inclined to think of that after I had spent it."

"Hum! Does it not then occur to you that when a man tries to buy a thing for three or six times its value he may be bidding for the good will of the owner as well as the possession of the article?"

"Yes Sir, it does occur to me, but it occurs to me at the same time that when a man pays his bills with stolen money he cannot well question the items."

"Yakeishibo," says the delegate laughing, "you are the very man to be Fukuharasama's adviser. Just order some supper and let us try what sort of wine they keep at Tamaru. We'll discuss the question of the three hundred *riyo* when we get back to Ioyoka."

So Yakeishibo orders supper, and in doing so finds himself struck by a great many brilliant ideas. He remembers, comically enough, that the delegate has the greatest partiality for eel pasties, sturgeon cutlets, omelettes, tender cuttle fish, seaweed jelly and a host of other delicacies, and moreover that the delegate always likes to sup with his attendants—especially his chief attendant—and see them partake without restraint of the same food as himself. Yakeishibo delivers himself of these reflections more in the garb of fortuitous information than interested suggestion, interspersing his conversation at the same time with sundry wondrous histories of the *Ōzaka cuisines* in general and the castle *Chefs* in particular, so that Kuramoto is constrained to enlist the resources of all the restaurants in Iwamura for the preparation of his visitor's supper, and hopes, as the sounds of revel come louder and louder from the state apartments, that no feeling of indigestion may interfere with the delegates serenity when he breaks the seal of Nakatsukasa's will on the morrow.

The quantity of wine that was consumed that evening in the yashiki of Yamaru has long ago come to be regarded as a pleasant fiction and need not therefore be detailed now, more especially as it appears to have been entirely without effect upon its consumers; for the delegate's handsome face was scarcely flushed as he bid his followers good night and walked into his bedroom after supper. There, lighting his pipe and throwing open the *amado*, he sat looking out into the noble garden that surrounded three sides of the Tamaru yashiki. He seemed to be a great admirer of scenery and at the same time very careless of temperature, for despite the frosty air he watched the moon creep many feet above the camelia shrubbery and heard the cry of the watchman often repeated without the gates before stretching out his hand to close the sliding doors. "A cold spot that valley of Katase," he muttered to himself, his clear eye troubled by a cloud of pity and remorse,—a bitter

\* 100 *riyo*.

"spot in truth and a wild place to lie without a coffin. I wish it could have been otherwise but the man was not worthy of his office. Taiko, Taiko," and now the look of pity changes to one of deadly hate and antagonism, "it was a bloody moon that saw your birth, and it will be a happy hand that gives you to the grave."

Another moment and the "*amado*" had been closed when from behind the camelia shrubbery there came a sound which to an unpractised ear might have been the quick sliding of a sash, but to the delegate was the stroke of a sword upon wood. He knew at once that some one was cutting a passage into the garden within a few yards of his door, and yet he neither shut that door nor changed his position, but merely looking round to see that his own sword was within easy reach, sat perfectly unconcerned in the broad path of the moonbeams. Once and yet once again the stroke was repeated, and then a little mist of snow-flakes was shaken from the camelia leaves as the figure of a man pushed its way through them. A mere boy he seemed of some seventeen or eighteen summers, his face emaciated and deadly pale, but rigid with an inflexible purpose, and in his hand the naked sword whose strokes had cut him a passage. Scarcely has he advanced five steps when he stops astonished, for the delegate's eyes meet his and the delegate is speaking to him in a very gentle, but determined voice.

"Young man I have no doubt that some good reason has induced you to choose this curious way of letting yourself in, but unless you have some further use for your sword you had better put it up, and you will not perhaps think me rude if I say that I should like to know your name before you come any further."

Thus addressed, the lad, quickly sheathing his sword, bows his head to the ground and says: "Sir, my name is Shozayemon Kinya. I have no words to apologise for my rudeness in breaking in thus like a common robber, nor is it the certain forfeit of my life that deters me from seeking admission at the proper entrance, but I conjure you by the suicide of my father and the murder of his master to hear my story and suffer me to fulfil the trust that alone makes my life valuable." "Kinya" says the delegate compassionately, "before you say any more, come in and sit down: you look cold and tired." But these words seem utterly to confound the young man. He looks up at the delegate with a wild glance of uncertain hope, the blood flashes for a second into his pallid face, and staggering in his attempt to rise he had fain rested his hands upon the ground again, when he finds himself supported by a strong arm and almost lifted into the room. He is conscious of being seated on a wadded quilt beside the brazier, of seeing the moonlight and the frost shut out, of hearing the delegate order some one whom he calls Yakeishibo to have food and wine brought immediately, and then the return of the hopes that starvation and misery had expelled from his heart, the comfortable fire breathing on his frozen limbs, the kind strong voice of the delegate bidding him eat and forget the past, and telling him that his story is already known and his father's memory honoured:—all these things breaking down the barriers of his manhood, he drops his head upon his hands and has no power to restrain his happy tears.

That night Kinya slept in the delegate's room and the delegate heard all the story of Nakatsukasa's murder, and how since that day Kinya had lain concealed in the hills scarcely eating or drinking, knowing that Kuramoto had sworn to have him buried before Nakatsukasa's will was opened, and that night, too, the delegate received from Kinya's hands the last letter that the lord of Yamaru had ever written.

But Kuramoto, knowing nothing of these things, slept with Taka's fair head resting on his arm, and cast up the totals of many princely revenues in his dreams.

So when the sun had just climbed the hills and looked in for the second time on the corpses in the valley of Katase, all the households of Yamaru and Kuramoto met in the hall of audience to hear the will of Nakatsukasa. Kuramoto, as he handed the sealed paper to the delegate, said that his master's confidence had already made known to him the provisions of the will, and that he trusted the delegate would confirm them; adding that the presence of a lawful heir in the yashiki of Tamaru that day was the happiest thought of his own life.

The delegate, bowing to the agent, received the will, and reverentially breaking the seal, read the contents in silence, after which, withdrawing his eyes from the paper, he fixed them so long and so steadfastly on Kuramoto's face that a stir of astonishment passed through all the audience.

"Kuramoto" he said, the date of this will show it to have been written within ten days of Nakatsukasa's death:—was it written then and did you witness it?" "Yes," answers the agent, puzzled, but still confident, "I remember that my master, feeling more than usually weak at that time, deemed it wise to make his will and did so in my presence."

Thus answered the delegate, again looking long at Kuramoto's face said deliberately.

"Kuramoto, this will is a forgery."

"A forgery," cried the agent pale to his very lips and speaking like a man out of breath, "how can Nakatsukasa's own writing be a forgery, and who would forge a will leaving a man's property to that man's own and only son?"

"Very true, Kuramoto, but observe that though this will might have been written by Nakatsukasa when he was twenty years of age, it could never have been written by him after the palsy of twenty years sickness, and remember above all that Denkichichi is your own and only son, not Nakatsukasa's."

At these words a frenzy seemed to seize the agent. Springing suddenly to his feet he drew his dirk, and threw himself madly on the delegate, but strange to say at this juncture none of the delegate's followers troubled themselves to assist their master, nay, Yakeishibo was even seen to laugh quietly and put his hand to his tobacco pouch as though he saw that the time for a comfortable smoke was not far distant. Neither did this attack cause the delegate himself much concern. Scarcely rising from his seat he caught Kuramoto's wrist in an iron grip, and wrenched his arm with such terrible force that the agent, crying out in his agony, fell grovelling on the ground.

That evening Kuramoto, Taka and Denkichichi were crucified outside the village, and Kinya, the son of Shozayemon, was declared by the delegate heir to the two estates of Yamaru and Kuramoto.

But four days after the news of these things reached Ōzaka, those fifty corpses were found in the valley of Katase, and the Government, supposing that this murder was the act of Kuramoto's household, arrested thirty men who had most shared the Agent's confidence, and exposed their heads for three days in the market place of Iwamura. So the memories of Shozayemon the faithful, and his master Nakatsukasa, were fully avenged, and many a year passed before men knew that the saviour of the house of Yamaru was none other than ISHIKAWA GOYEMON.

## Law Report.

IN H. B. M.'s PROVINCIAL COURT OF KANAGAWA.

Before Mr. Acting-Assistant Judge HANNEN.

June 30th, 1873.

IN BANKRUPTCY.

EX-PARTE RANGAN *in re* WILKINS.

In this case the debtor agreed with the petitioning creditor, some time previous to the 26th day of September, 1872, that the latter should lend him certain sums of money for the purpose of entering into trade as a storekeeper. Some time previous to the 1st of October 1872, the debtor in partnership with William Black had purchased, of John Wynn and another, their stores fixtures, &c., on the premises of No. 10, Bund. They did not take possession of the said premises, fixtures and stores until the 1st day of October and upon the same day a sum of \$500, was handed by the petitioning creditor to the debtor. I am of opinion, then, that when the said \$500 were handed to the debtor he was a trader within the meaning of the Bankruptcy Act.

A promissory note was given either shortly before or simultaneously with the loan of money, payable six months after date.

It may be assumed for the purposes of this case that the debtor ceased to be a trader before the promissory note became due I do not say that he *did* cease to be a trader, but in the view I take of the case it becomes unnecessary to decide the question.

The promissory note became due and was not paid. On the 18th day of April 1873 the petitioning creditor obtained judgment upon the promissory note for \$541.87.

He then obtained a debtors summons in the prescribed form against the debtor, and the debtor not having complied with the directions in that summons he presented the petition for adjudication against the debtor which is now under consideration. The summons was directed against the debtor as a trader, and the following points were raised by Mr. Dickens on the hearing of the petition.

1st.—That the debtor was not a trader within the meaning of the Bankruptcy Act Section 6.

2nd.—That consequently no act of Bankruptcy had been committed by not complying with the directions of the summons to pay or compound for the debt, within seven days.

3rd.—That the debt was not *justly* due.

4th.—That there was no property and,

5th.—That the petitioning creditor was the only creditor.

The learned Counsel did not much insist upon the last two points, and I think they are untenable.

As to the third point that the debt was not justly due, it is admitted that the debt specified in the debtor summons is a debt at Law, and the 6th Section of the Act says that the debt of the petitioning creditor "must be a liquidated sum due at law or in equity." The third point is therefore in my opinion untenable.

The second point depends upon the first and I therefore come to that as the main and only point in the case. Is the debtor a trader within the meaning of the Bankruptcy Laws and for the purposes of this petition.

I am of opinion that he is. The case of *ex-parte Griffiths* in re *Mortyn* 22 L. J. Bankruptcy p. 50 seems to me to conclude the present case. It is on all fours with the present with these two exceptions.

1st.—That there the judgment had been recovered upon a bond not on a promissory note, and,

2nd.—That it was decided under the Act of 49.

That a promissory note only suspends the remedy on the original debt may be proved by any text book, and in *Drake and Mitchell* 3 East 251, a bill of exchange was given and judgment recovered on it yet it was held not to extinguish a previous debt. The 1st distinction therefore fails and as to the 2nd I entirely agree with what fell from Mr. Dickens as to the Authorities on previous Acts of Parliament. No authority is to be found on the present Act; we must therefore look to those on similar clauses of previous acts for an interpretation of doubtful points.

In the case of *ex-parte Griffiths* in re *Mortyn*, as in this, the debt was incurred during the trading. In that case as in this judgment was obtained for the debt, after the trading had ceased. In that case as in this a debtor summons was issued under section 72 of the Act of 49 which section made it an Act of Bankruptcy for a trader not to pay, secure or compound for a judgment debt within seven days after notice requiring payment. In that case as in this, the points were raised that that petitioners debt was the judgment debt, and was therefore not contracted during the trading, and that the debtor was not a trader at the time of the debtor summons being served. These objections were overruled and Lord J. Knight Bruce held that a trader who after becoming indebted, leaves off "trade is not to be heard to say to the creditors, that the trading has been left off if a question arises whether the trader can or cannot be, as a trader, made a bankrupt

"Second that . . . . . a judgment . . . . . which for many purposes extinguishes though not satisfying the original debt, does not do so against the creditor for the purposes of discharging him from making his debtor a bankrupt on the original debt remaining in every other sense unsatisfied" and he adds "I do not believe any lawyer will be found in the country to dispute either of these two propositions."

L. J. Turner concurred and said. "It is admitted that the word 'trader, may and in my opinion it does, mean a person who has actually traded although he may then have ceased to trade' and further on 'although he may have ceased to trade, yet so long as any debts have not been paid which were incurred during the period of carrying on the trade he must be considered as continuing to be a trader.'"

I am therefore of opinion that the case is concluded by authority the debtor is a trader for the purposes of this petition, he has committed an act of Bankruptcy under subsection 6 of section 6 of the Bankruptcy Act of 1869, and must be adjudicated a bankrupt.

June 30th, 1873.

Yokohama, 2nd July, 1873.

## Notes of the Fortnight.

THE person who writes under the name of Fukuoka, Vice-Minister of Justice, seems to be fond of fighting shadows. After the *Japan Herald* had acknowledged the error, into which it had been led by a mistranslation, of supposing torture to have been re-enacted lately by a Proclamation from the Prime Minister, he stills thinks it worth while to try to convince the already penitent. As the editorial note printed in the *Japan Herald* of the 9th instant, points out, it is comparatively of little importance whether the law about the application of torture to criminals who refuse to confess has been re-enacted. The question is whether the practice is sanctioned or not by Japanese law.

Now the 'new penal code' printed in 1871, and issued to the local authorities throughout Japan does sanction torture, by a paragraph which provides that it is not to be applied to persons under fifteen or over seventy-five years of age, nor to the infirm, and we have no reason to suppose that this code has been superseded by the revised code. The "constitution" of the Judicial Board sanctions torture in a still more direct manner. The usual procedure in a criminal case is to examine the accused and all other persons supposed to know anything about the crime which has been committed, and when sufficient evidence has in the eyes of the judge been obtained of the guilt of the accused, he is tortured as long as he refuses to confess. Torture commences in Japanese criminal procedure at the point where in European procedure the criminal's sentence would be pronounced. We may be quite certain that the principle would admit of the application of torture to a recalcitrant witness in a criminal case. In purely civil cases of course neither defendant nor the witnesses for him are tortured.

We cannot pass over the disingenuous proceeding of the person who calls himself Fukuoka, Vice-Minister of Justice, in heading the document which he has sent to the *Japan Herald* a 'translation.' If Pope's translation of Homer were put back into Greek, and the version so obtained were made to accord perfectly with the original, no one would for a moment think of calling that a translation into Greek of Pope's Homer. It is the same in the case of this letter. If it has been rendered once into Japanese for the approval of the person whose name is affixed to it, it certainly has been done back into the same English in which it was originally composed. For two things are evident, firstly, that no letter written in Japanese, if faithfully translated, could possibly assume such an essentially English form, and secondly that neither Mr. Fukuoka nor any other native is capable of so closely imitating the style and arguments of an Englishman or American.

We are convinced that the composer of this document is a person to whom the Japanese officials, his employers, have not faithfully communicated the contents of their code, and who, being unacquainted with the language in which it is written, is naturally forced to believe whatever they tell him by the mouths of their interpreters. It is only because we believe this that we can acquit him of being an accomplice in what is simply an attempt to throw dust in the eyes of the civilized world.

APART from the more serious grounds for adverse criticism presented by the letter from the Vice-Minister of Justice which appeared in the *Japan Herald* of last Wednesday evening, can anything be conceived more unbecoming in tone, manner and matter? For this it is clear that he must not be held responsible, as he is doubtless unacquainted with our language, our customs, and the tone which alone is becoming on the rare occasions when it is necessary for a Minister to address the Public through the medium of the Press. But Mr. Fukuoka has been betrayed by some foreigner, who appears to have about as much idea as might belong to a cook-maid of the tone which should characterize a letter from a minister, into appending his name to a document intended to be one of a grave and important character. How far it is so may be judged from the following paragraph which it contains.

'You see, Mr. Editor, how far your assertions are from the truth. If, therefore, news of a nature calculated to disparage Japan in the eyes of the world "finds its way into the newspapers," as you ex-

press it, such news is simply an untruth; and in such case it is not his "Council" that the Mikado will have to blame (as you kindly suggest) for the propagation of such falsehoods, but your own journal which will have done its utmost to spread "to the uttermost ends of the earth," (provided always it reaches so far) its mistaken assertion?

He then proceeds to talk about the abolition of corporal punishment, and sneeringly suggests that "liberal England" shall set the example in her Indian possessions, and even in her own land." What is meant by this? The question was whether the practice of torture was sanctioned by Japanese law. If the writer of the letter which Mr. Fukuoka was betrayed into signing intends to say that England, either in India or at home, permits the use of the stick as torture to extract confession from accused persons, he must be an imbecile. The simple fact is that punishment by the lash, long abolished in our prison discipline, was revived, and with the very best effect, in the case of men convicted of garotting. The crime was one tainted with exceptional brutality and cowardice, and it was rightly thought that the lash would be an admirable corrective to it. To infer from this, or have the Japanese infer from it, that English law sanctioned the use of torture, is ridiculous. If he does not mean this, his observation has no earthly relevancy.

Mr. Fukuoka is then made to go round slapping the face of England—again—France, America and Russia. And what is the consequence? The foot-note of the Editor of the Journal exposes his bad logic, rebukes his "impertinencies," and reads him a lesson generally on the revolting practice of torture. And in all this he is perfectly right, while the Vice-Minister, possibly a grave judicial-minded man, anxious for the reputation of his country (though, we are bound to think, singularly lax in the statements by which he seeks to justify it) doubtless thinks he has been harshly used. The whole fault lies with the foreigner who wrote the letter; who headed it "Translation," well knowing that it was nothing of the sort; and who shows such a lamentable ignorance of the manner in which the duty he undertook should be discharged. It is truly deplorable that the Japanese should be made the victims of such employés.

THERE can be little, if any, doubt that the telegram from China sent to the American Minister, and published on Friday afternoon, respecting the Audience granted to Soyeshima at Peking, means that he was received by the Emperor. Later rumours say that all the Foreign Ministers were received at the same time, Soyeshima taking precedence in virtue of his rank. We may fairly presume therefore that the whole question has been settled, and the decision of the Chinese Cabinet upon it, acted on. We have elsewhere made some observations on this subject which may find a more or less general echo. But in view of the long subordination to it of matters of more real importance than the Audience Question, we question whether History, ten years hence, will not record with something of a smile the expenditure of time and effort which this concession—as the Chinese will call it—has cost. Meanwhile it can hardly be doubted that, owing to a very peculiar combination of circumstances, the presence of the Japanese Ambassador,—for as such Soyeshima must have been received—has contributed mainly to the solution of the difficulty.

It is intimated that the Government of Japan has decided to remove the existing prohibition against the export of rice from this country, and to permit free-trade in that grain at an early date.

We give this intelligence as it has reached us without, however, being able to vouch for its accuracy.

If we may believe current report some changes are likely to occur in the organisation of the *Shosha*. It is alleged that the operations of this Guild will for the future be largely contracted.

CAN anything be much more preposterous than the pretence that Mr. De Long, by presenting a Bible to the Mikado, violated the fundamental rule laid down for the guidance of American Ministers abroad that they shall make no presents to the Sovereigns at whose Courts they are resident? We

very much grieve to say it, but the experience of the past few years has proved to us conclusively that no imputation is too mean and too untrue to find its way into the party newspapers of the States. The antagonism which with us assumes the shape of sledge-hammer hitting or mordant satire upon the opinions or acts of a public man, takes, in America, the form of an unmeasured attack upon his character. And what is the consequence? No one believes a word the papers say, and a profession extremely attractive to men fond of that strife of opinion which is indispensable to progress and one of its best promoters, is represented by men who care for nothing provided they can make money by their journals. The Republicans revile the Democrats and the Democrats the Republicans. No one defends himself against charges which no one really believes, and the power which in England is very largely helping to govern it is, in America, wasted upon slander and personal vilification.

The Bible presented to the Mikado was one brought to this country for the purpose many years ago by the purest-minded philanthropist that ever visited Japan—we venture to say so in his absence—and who, thinking the time had come when it might be granted him to place in the Mikado's hand the book he ardently hoped would prove the future guide and light of this Empire, sought the intervention of Mr. De Long for this purpose, obtained the requisite permission, and presented his gift to His Majesty. That this act should be tortured into an illicit gift by Mr. De Long to the Mikado is enough to make one ashamed of one's human nature.

IN reviewing the Nagasaki Trade Report for 1872, we pointed out an apparent discrepancy between the returns of the amount of coal produced and exported during the year, and said that this required explanation—not doubting that it was susceptible of it. We have since been informed that the discrepancy arose from the non-publication of the tables showing the exports to other ports in Japan. Fifty four thousand tons were exported to Shanghai and Chefoo, the only ports out of Japan to which coal is sent from Nagasaki. Twelve thousand tons were exported to Yokohama, and the total of these two gives the export of coal for the year. The balance was shipped at Nagasaki for immediate consumption by the steamers plying to and from that port, or was on the wharf ready for delivery.

A Japanese lately arrived from Saghalien gives the *Nishin Shinjishi* a picture from that island. Kushin Kotan is the name of one of the villages of the Japanese, in which there are about 70 people. The Russians who occupy one half of the island have many soldiers thereon; and these are apt to make themselves from time to time very troublesome by going to the Japanese villages, getting drunk and giving a good deal of annoyance. For instance, on a certain Russian holiday lately, the soldiers entered the above-named village, and behaved very boisterously. They also stole the shoes of an official, and otherwise treated the whole race with contempt. It may well be supposed that there were among the Japanese some who were very eager to retaliate; and these showing fight, the Russians were easily put to flight. About 2 o'clock that night, or morning, a fire broke out in a fire-proof godown, containing nets for catching a kind of fish called *nishin*; and when the Japanese rushed to put out the flames, the Russians threw stones among them, and came up in great numbers to fight, and prevented the Japanese from saving their property.

In a state of great rage at such behaviour, the Japanese proposed to arm themselves with bamboo spears and other rough weapons, and to die rather than submit to such treatment; but the prudent officials pointed out to them that it was the policy of Russia thus to commence a scheme of aggression, by provoking a quarrel, and prevailed on their countrymen to refrain from violence. The difficulty the Japanese have had in peopling Saghalien may be easily understood from the above.—*Japan Gazette*.

A RATHER discreditable scene took place at the Nanko, or Foreign College, on the evening of the 4th July, the particulars of which may be found elsewhere. It may have been rather

narrow and unamiable of the Japanese to protest against the exhibition of fire-works by the Americans employed as teachers in the College, but it would have been far better manners to have respected the protest. The Japanese were, after all, the employers in the case, and the exhibition took place on their property. It is probable that a courteous note on the previous afternoon intimating the intention of the teachers to give vent in this intellectual manner to their national feeling would have met with a compliant response, at whatever uncomplimentary inferences to the sense of those who sent it. As this course was not adopted, the teachers should have respected a remonstrance which the Japanese had, in our opinion, a perfect right to make according to their own municipal laws. And even if we are wrong in this, the question is one of good manners, and of what is most fit and becoming in the relations existing between the teachers and their employers. We do not believe that the same conduct would under similar circumstances pass uncensured in any city in the world. Why, then, in Yedo? Of course, blood was roused, there was ample talk of shooting, and it was fortunate that matters went no further. But such things ought not to occur. They cause ill-blood, and make the Japanese imagine that we are deficient alike in nice feeling and in good sense.

THE charge at first preferred against Captain Blakiston of Hakodate by H. B. M. Consul, of feloniously killing and slaying a Japanese in February last, having been dismissed by the Chief-Judge of H. B. M. Supreme Court for China and Japan, he was tried in the Consular Court of Hakodate on the 28th ultimo, on the lesser charge of assault on two of his servants.

Evidence was adduced to prove that the correction administered had been moderate only, and resident members of various nationalities in Hakodate were called to prove the invariable neglect of the Japanese Authorities to their complaints of the misconduct of native servants and the impossibility of obtaining any redress in such cases.

The Court sentenced Captain Blakiston to a fine in the first case of \$400, of \$100 in the second case, with \$32.50 costs of Court.

It is impossible to express too strong a feeling of regret that any one in Capt. Blakiston's position should have laid himself open to the grievous charge on which he was first arraigned, or even to the lesser charge on which he was convicted, the gravity of which may be inferred from the amount of the fine inflicted. We entirely coincide with H. M. Consul in the view he has taken of the case, and are persuaded that the justice of the decision he has pronounced will approve itself to every right-minded man.

As the new Banking system proposed for this country is avowedly based upon the American model, it is important to know in what light it is regarded by high authorities. Hence the following paragraph from the *Economist* is valuable.

GOVERNMENT INSPECTION IN THE AMERICAN BANKING SYSTEM.—One of the most doubtful features in the National Banking system of the United States when it was established appeared to us to be the system of Government inspection under which the banks were put. This inspection was a necessary corollary from the principles of the Act, which provided a species of guarantee for the National Bank notes issued under it. The Government were entitled to take some means of ascertaining that the guarantee it provided in each case would be made good, by the banks really holding the capital they professed to possess, and complying with the other requirements of the law. But no Government, we said, could really make such an inspection in regard to 1,500 banks scattered all over the country, and even if it could ascertain that the accounts were formally straight, it could really ascertain nothing as to the *quality* of the nominal securities, which is always the vital matter. The failure of the Atlantic Bank in New York has shown that the Government inspection was useless for ascertaining even that everything was formally straight. The Clearing-house Committee have stated that the bank has available assets amounting to 550,000 dol's. while the liabilities are 615,000 dol's—a deficit of 65,000 dol's, to which has to be added a deficiency of 162,000 dol's for securities on special deposit embezzled by the cashier, making a total deficit of 227,000 dol's, in addition to the loss of 800,000 dol's. of capital. The question has accordingly

been asked, why the controller of the currency had failed to become aware of the loss of capital, which amounted to 180,000 dol's. *before* the defalcation? It appears that he had the bank examined twice during the year, but the examination proved of no value. We think, however, that this was without any fault of the controller, who has simply had thrust upon him a duty which it is impossible to fulfil. Time is only revealing the defects of the American national banking system. It calls into existence weak banks, which are able to issue notes with a kind of State guarantee, while its measures respecting the reserve have, as we lately explained, a singularly dangerous influence upon the banking arrangements of the most important banks of all, viz., the New York banks, which practically keep the reserve of the entire country. We are coming to a period in which banking systems are being severely tried, and looking at what is going on in Germany, Austria, and America, it cannot be said that our competitors have anything to boast of in that respect in comparison with ourselves.

A RIOT is reported in Maido *ken*. It is not of so great an extent as that at Fukuoka but it is making some heading and several villages and towns have been threatened. No particulars are given as to the cause of the riot nor of the strength of the rioters.

A GOVERNMENT order with respect to the receipting of bills announces that no receipt will be valid after the 1st October unless sealed, and not even then unless the seal bears the name of the recipient.

AN order has been issued by the Kiobusho to the effect that in electing officers of the different *ken* some attention will be paid to the wishes of the inhabitants of the several *ken*, and these last are instructed to send, on the occurrence of a vacancy, full particulars as to the person they desire should be chosen.

THE following letter has been received from Kokura from a person living in Fukuoka:—

"We learnt the following from a person who went over to Fukuoka *ken* with two officials Takahashi and Onda. We left Kokura on the 18th ultimo and spent the night at Kozanose, and proceeded to Naokata on the following morning. Here we were told that some officers of Fukuoka with 150 *samurai* were in a neighbouring town; but we failed to find them on that day or the next, and so left for Fukuoka. There we met the head officer of the *ken* who has since gone to Hakata to assist in quelling the rebellion, and Takahashi was requested to obtain some *samurai* from a neighbouring *ken*. He therefore attempted to return to Kokura; but was checked by the rioters and compelled to return to Fukuoka. The rebels then commenced the attack upon Fukuoka and Hakata, and succeeded in setting some of the houses on fire. The *samurai*, however, who had been ordered to protect the towns, engaged and defeated the rebels, some twenty of the latter being killed. During the evening Onda made an advance to ascertain the position of the rebels, and during the march discovered the body of Takahashi who had been killed during the engagement."

THREE men in Tokei have been sentenced to long terms of imprisonment for entering a house and violently assaulting the residents.

By an order of the Mombusho students who are supported by the Government will have to provide for themselves during illness, it having been discovered that numbers of students conveniently found themselves sick for a week or so when desirous of having a holiday.

THE following "advice to the Government by an officer of the Kashiwasaki *ken*" is published in one of the Tokei newspapers.

In aid of the Government and the poor people the Government should levy a duty upon the four classes of people in Japan. Thus from the highest 20 sen and from the lowest 1½ sen per month should be levied, and the money devoted to building houses for the poorer classes, by which means they would be assisted and many persons be provided with work. A bill with this object in view has been laid before the Sa-in but has not yet been passed.

THE *Kanagaki Shinbun* (the paper published in *Hirakana*) reports the betrothal in France of a Japanese to a French lady who is said to be possessed of 1,000,000f.

One union of a French lady with a Japanese has already taken place.

AN alarming subsidence of the land at Hiroshima in the Inland Sea has been reported by telegraph. The water was, rising fast upon the town, many lives are said to be lost, and the Telegraph clerks were carrying off the instruments belonging to the office upon which the Sea was gaining rapidly.

THREE of the Men-of-war which have been for some little time in Yokohama waters left yesterday for the Southern ports. After visiting several of the Northern Russian coast ports, the *Iron Duke* will pass a week or two at Hakodate whence she will return to Yokohama. She will remain here until about the end of October, and will then proceed to Shanghai where it is intended that she shall pass the larger portion of the winter.

SO FAR as can be learnt from native sources, the country is more quiet than at the date of our last issue. The Government has apparently acted with vigour in quelling the various disturbances, and shows a disposition to consider any just causes of complaint.

#### IMPERIAL GOVERNMENT RAILWAY.

18 Miles Open.			

#### Japanese Notes.

THE latest despatches from Aomori ken announce a serious disturbance among the *Samurai*. It is reported that 2,000 *Samurai* collected together for the purpose of demanding redress from the Governor of the ken since they could obtain payment neither in cash nor rice. The subordinate officials attempted to quiet them but they would listen to nothing suspecting that the money which should have been devoted to their payment had been embezzled by the officials. They eventually sent the following letter to the Governor.

"We have asked several times for the payment of our incomes which have never been paid when due nor yet in full amount. We request you therefore to pay immediate attention to this demand, or otherwise we will take other measures to secure the redress of our grievances. We know you have sufficient rice or money to pay all in this *ken*, so trust you will do what we now ask you."

This disturbance has been quelled on the promise of the Governor to pay the *Samurai* in rice on a certain day.

ONE of the head police in Tokai (first district) has been dismissed the force and his estate confiscated for extorting a fine of \$1 from a coolie.

OKURA Daisho Hayashi, is about to leave Tokai for Fukuoka with a large body of picked policemen. They will be conveyed in the Japanese man-of-war *Nishin Kan*.

AN officer named Suzioka who had been appointed by the Kiobusho to be the head officer of Kashira no Miya, and who was in Tokai till the outbreak of the rebellion has written a letter to the Government in which he attributes the rebellion to insufficient education, and to remedy this he has since gallantly gone to the disturbed district to teach the rebels.

AN order of the Government announces that officials who are dismissed in the country may have their passage back to Tokai paid by Government.

AN order of the Monbusho announces that any one who wants to establish any hospital, trading company, or other association in Japan must send full particulars to the Government. The Monbusho will then direct the applicants how to act and will give them advice.

THE residents of all the *fu* and *ken* are recommended by Government to read the various orders and edicts published recently in order that riot and rebellion may not spring up.

LETTERS have been received from various *kens* stating that in consequence of the dry weather which has been prevalent of late only one-third of the river tax can be paid, and the Government is therefore requested to make the necessary reduction.

A LETTER from Okagama *ken* states that a rebellion has been imminent for some time past; but it has been fortunately prevented.

THE Empress recently visited the *magnanerie* at Tomioka and distributed many gifts among the workmen present, expressing herself much pleased with the progress of the work.

ON Wednesday the Mikado and the Empress visited the Kaitakushi farms in state. H. I. M. was pleased to express great gratification at the work which is being carried on there.

THE following official letter from the chief official of the Hogo Ken has been received by the Okurasho:

"The people in this *ken* have, as you are aware caused a disturbance some time since; but as we had a few soldiers at hand, the rebellion was easily quelled. Now that another rebellion has broken out in Torio *ken* we have had to send our soldiers thither according to orders. Taking advantage of this position of affairs some of the inhabitants of this *ken* have commenced a riot, to quell which which, we have despatched the very few officers and soldiers now in the *ken*. All communication between the principal cities of the *ken* and those bordering on Torio *ken* is stopped. We will write further soon and give full particulars."

ONE of the officers of Fukuoka *Ken* writes as follows:—

"Since the 16th ulto. there has been much rioting in this *Ken*, and much damage has been done to the Government buildings, and also to the houses of rich persons: the telegraph wires have also been cut. The officers and *samurai* of the *Ken* did then attempt to quell the rebellion but without avail, and the rebels marched upon the towns of Fukuoka and Hakata—the two principal towns of the *Ken* and having cut the telegraph wire, destroyed the telegraph offices and burnt the bank of Onogami they attacked the castle in which are situated the offices of the Kencho. The gates having been closed to keep out the rebels were quickly broken down whereupon the officers and *samurai* of the Kencho who received orders to defend themselves attacked the rioters and killed some twenty of their body. This attack quite broke the force of the rebels who were armed with bamboo spears and they at once dispersed and fled to the mountain villages. This took place on the 24th ultimo. On the following day several companies of soldiers advanced from the headquarters at Kumamoto to attack the rebels who, however, fled without blows being exchanged. The money in the Bank of Onogami was all saved, having been put on board the steamer *Kangei Maru*, which anchored off Fukuoka. The wishes of the rioters are as follows:—

To return to the old system of Daimiates; to reduce the taxes by one half for three years; and not to cut the wood belonging to the Government. The principal rioters are from Buzen, Umoto and Yoshimori Okumamura. Several officials have been killed by the rebels, some are missing and some have destroyed themselves. Among the last was a high officer named Tokigeta, and among the missing an officer named Horikawa."

AN unpleasantness has arisen in the Nanko in consequence of the celebration of July 4th by the American teachers. It appears that the American Professors some time before the 4th subscribed a small sum for providing fireworks to be let off on the evening of the day, but the Japanese officials hearing of this sent round a circular ordering (or requesting) that the fireworks should not be exploded as it was contrary to the rules of Tokai-fu to do so. This, however, had only a partial effect, for several Americans rather than forego their promised amusement, carried out their object in contradiction to the orders of the Japanese officials. On the following day three policemen desired to arrest one of the participants, but on his evincing a determination to resist they retired. Another of the teachers was examined by the Japanese, and during the interview some rather strong language was exchanged. What the result of this affair may be is not yet apparent; but it is said that the U. S. Consul has expressed an opinion favourable to the teachers, who it is maintained, had a right to explode fireworks in their own compounds, the rules of the Tokai fu to the contrary notwithstanding.

### HIOGO.

THE Japanese steamer *Uchinada-maru* arrived this morning from Nagasaki, via the Inland Sea. She called in at Shimonoseki and anchored yesterday afternoon at Miterai, the latter place being within twenty-five miles of Hiroshima. At neither place was there any news of the disaster which has undoubtedly befallen Hiroshima, and as the telegraph line passes through the town, and is in working order to Shimonoseki, there is every reason to hope that the affair has been very much exaggerated.—*Hio-go News*.

It is reported to us by a gentleman who has had much sea-faring experience that when out in a yacht with two friends a day or two ago, between this and Nishinomiya, he saw two sharks. Kobe has been very free from these brutes hitherto, and we shall look with some anxiety to the reports of our bathing fraternity for the next few days. We sincerely hope that this may be only a passing visit and that there is no fear of one of the most healthy recreations of the residents being interfered with.—*Ibid*.

Late on Saturday afternoon some news reached Kobe with most naturally gave rise to considerable excitement. The first form in which it reached our ears was that the large town of Hiroshima, on the Inland Sea, had been washed away by a tidal wave. Information circulated through another channel painted a most disastrous state of affairs, and we are bound to say that, though nearly everything in the shape of details is wanting, the certain seriousness of the situation affords opportunities for surmises which, though at the moment of writing are totally uncorroborated, may turn out to be justified. All the enquiries we have been able to make only enable us to give our readers the perfectly trustworthy information that early on the morning of Saturday last the sea at Hiroshima was rising much beyond its usual limits; that several bridges and houses had been destroyed and people drowned; and that the telegraph clerk stationed at that town had been obliged to abandon his duties, as the water was encroaching on his office. As the town stands on a flat of very low elevation, and as telegraphic communication with the town is still interrupted, much anxiety is naturally manifested to ascertain the extent of the calamity.—*Ibid*.

SINCE we last wrote about the weather and prospects of the harvest, things have taken a most decided turn for the better. We are aware that it is the opinion of many of those who ought to know that there has scarcely as yet been a sufficient rainfall for the rice to develop its best qualities, but at the same time there has been a very seasonable downpour, and if by any chance the rice crop may not be all that might be wished, there is at least the satisfaction of knowing that a heavy rain is falling at present. This of course will be all the better for the rice, and will no doubt raise the spirits of our Japanese readers.—*Hio-go News*.

ALL of us have heard a good deal about the ingenuity of the Chinese in palming off spurious articles as genuine, and it has generally been considered, we believe, that in "putting through" transactions of this nature they were unequalled. We heard, however, on Monday last of a case wherein a Chinaman had been taken in by a Japanese. We were shewn what appeared at the first glance to be a piece of copper sheathing, but which turned out on inspection to be only a piece of sheet iron plated, and we were told that it was one of a number bought at Osaka by a Chinaman for export to Shanghai, under the impression it was genuine copper! That a Japanese should have tried to cheat a Chinaman is nothing surprising, but that he should succeed is worthy of record, and shews that contact with western nations has been sharpening the wits of the natives at a very satisfactory rate, if not perhaps in the most desirable direction.—*Ibid*.

SINCE we published the rather vague but decidedly disquieting news which arrived here from Hiroshima on the 5th inst., plenty of light has been thrown on the matter. From the time that the two telegraph clerks made a bolt of it with their instruments from the office till they were back and at work again, only some two days elapsed, and the whole damage has since turned out to be the destruction of four bridges and seven houses, the importance and stability of the whole eleven being unknown to us. No human life was lost, though the telegram said there was, on the strength, we believe, of some men having been seen in the water in a somewhat critical position at the time the clerks ran away,—which is only another instance of the danger of prophesying "without knowing." There has been no evidence adduced, that we have been able to hear of, to shew that there was a "tidal wave" or an earthquake, or anything of the kind, and it is probable enough that the late heavy rains, taken in conjunction with an exceptionally high tide and a southerly wind, would be sufficient to cause a partial flooding of such a low-lying and peculiarly situated place as Hiroshima. A "scare" on the part of Japanese under such circumstances is only to be looked for, but it is a pity that they did not keep their heads sufficiently to enable them to state nothing more than the actual truth.—*Hio-go News*.

### NAGASAKI.

INFORMATION has just been received that Telegraphic communication between this port and Europe is interrupted by both the Russian overland, and the southern lines. The former line is expected, however, to have its communication re-established, perhaps, as soon as to-morrow. But the cable between Amoy and Hongkong is broken and may not be repaired for a week.—*Nagasaki Gazette*, July 5th.

It would appear very fortunate that the disturbance in Fukuoka did not extend into Higo. This place has been considered one of the most advanced and secure keens in the island, and it has been said that no fears need be felt for the Government or the rice merchants there. But the Japanese steamer *Moutan* which arrived yesterday from Kourame and Higo, brings the singular information that the farmers at Takahase refused to allow a cargo of rice to be taken on the steamer. The cargo had been promised, and the vessel waited two days, but finally had to leave without it, as the merchants feared the farmers so much, that they dared not fulfill their contract.—*Nagasaki Express*.

Rain began on Tuesday afternoon, at the close of the "rainy season" for this year, and has continued, at intervals until today. The fall has at times during the week been quite heavy especially at night. But those who ought to know, say that the storm has come too late—to insure the usual crop of rice, and the price for this article, which is already very high in the native city, will probably be much greater than last year, so that the poorer classes throughout the country will feel the recent drouth very much.—*Nagasaki Gazette*.

WE understand that in future all government edicts will be issued in Kana characters as well as in Chinese. This to be done owing to the lower orders in Japan often being unac-

quainted with the letter and not understanding the meaning of these documents, thus leaving it open for them to plead ignorance of their contents.—*Nagasaki Express*.

DURING the past few months, thousands of tons of rice have been exported from Japan to different parts of the world, but owing to the scarcity of rain this season, the natives feel considerable anxiety regarding their rice crops, and in consequence the price of this article has risen about 35 per cent. within a fortnight. The *Jurgen* arrived this morning with a full cargo of rice from Amoy, where, we hear, a large quantity is in stock for exportation.—*Nagasaki Gazette*.

THE whole of the U.S.S. fleet now in Shanghai, is expected to arrive here in a few days. The *Lackawanna* however, may remain behind.—*Ibid*.

## CHINA.

### TIENTSIN.

"I have little to add to what you have already heard of the audience—except that it took place not in, but in a pavilion adjoining, the Temple where the Tributary ambassadors are habitually received. The Japanese Ambassador was received first, alone, whether in recognition of his rank—he being the only full Ambassador accredited to Peking—or to avoid the point of precedence that would arise out of this fact if all went together, I leave you to surmise. On his withdrawal, the Ministers for Russia, America, England, France and Holland were introduced in the order named—that of seniority; and General Vlangally, as dean of the Ministerial Corps, read a brief congratulatory address, which the Emperor still more briefly but courteously acknowledged, through the medium of Prince Kung. The Ministers then advanced severally and placed their credentials on a table covered with yellow silk, in front of the throne, and the ceremony was over. M. de Geofroy only remaining to have a special audience and present the despatch by M. Thiers on the Tientsin massacre, which he brought with him last year from France, for personal presentation to His Majesty. The affair is said to have been rather gorgeous; a great number of high mandarins being present in full official costume, and an immense number of on-lookers gathered along the approaches to the Temple."—*North-China Daily News*.

WE have given already an account of the audience accorded by the Emperor of China to the foreign Ministers. The following is from another correspondent of the *Courier*.

The Ministers were introduced into the imperial presence by Wen-siang and the Prince of Kung. The Emperor set on a throne covered with yellow satin and standing on a raised dais. A table stood in front of the throne also covered with yellow. The Emperor replied briefly to the address in Manchu, the Prince of Kung translating it into Chinese. The Ministers were escorted to their chairs by the members of the Tsung-li-yamen. Great numbers of officials and some Manchu Princes attendant on the Emperor were present, and the reception was public and polite enough, but no account of it giving the slightest hint of its special peculiarity—the omission of the *kotow*—has appeared in the *Peking Gazette*, which merely announced the day before that an Audience would take place on the 29th June.

There is yet another account of the affair from which we learn that the Ministers were kept waiting at the R. C. Cathedral nearly an hour. The Japanese Ambassador was received first with his own interpreter. This precedence had been accorded to him at the request of the other Ministers. After the latter had been introduced and their joint address had been translated by Herr Bismarck, each Minister advanced and put his credentials on the yellow covered table before the Emperor, who bowed once as each letter of credence was put on the table. After this, the Prince of Kung knelt before the Emperor as he translated into Chinese the reply made by the Emperor in Manchu. Princes and many officials of the first rank were present and the streets adjoining the Reception Hall

were crowded. All the Ministers wore full Court dress, except the American Minister who wore an evening dress, that being the American equivalent of Court costume. Before the Audience took place the *Peking Gazette* contained a short notice to the effect that on such and such a day the Emperor would repair to such and such a temple and give an Audience,—not mentioning to whom. The 3 *Gazettes* that have appeared on the 3 days succeeding the Audience contain,—so far as I can learn from a well informed quarter—nothing at all about the Audience.

The sight was a very grand one. No less than 800 mandarins are said to have been present.

WE observe that the well known ship *Northampton*, Capt. Barclay, arrived last night at Woosung from Sydney. She has brought as passengers Mr. Caine, late H. M. Consul at Hankow, Mrs. Caine and 8 children; and Mr. A. Stripling, Inspector of Police.—*Courier*.

## Shipping Intelligence.

### ARRIVALS.

July 9, *Great Republic*, American steamer, Howard, 4,200, from San Francisco, Mail and general, to P. M. S. S. Co.  
 July 9, *Queen Victoria*, British barque, Quinn, 670, from Cardiff, Coal, to Messageries Maritimes.  
 July 11, *New York*, American steamer, 2,119, from Shanghai, General, to P. M. S. S. Co.  
 July 12, *Fantic*, American corvette, Captain Stanton, 1,440 tons, from Nagasaki, July 5th  
 July 12, *Nil*, French steamer, Samat, 1,010, from Hongkong, July 4th, Mails and General, to M. M. Co.  
 July 14, *Carl*, German brig, Otzen, 215, from Hongkong, June 23rd, General, to Zieger & Co.  
 July 14, *Denbighshire*, British barque, Davies, 483, from London, February 24th, General, to Van Oordt & Co.  
 July 15, *Ziba*, British barque, Bechard, 498, from London, March 21st, General, to Walsh Hall & Co.  
 July 15, *Malacca*, British steamer, Gaby, 1,185, from Hongkong, July 7th, Mails and General, to P. & O. Co.  
 July 18, *Ariel*, American steamer, Newell, 1,736, from Hakodate, July 14th, General to P. M. S. S. Co.  
 July 18, *Lip Tek*, British steamer, Darke, 560, from Hongkong, July 8th, General, to Sitwell, Schoyer & Co.  
 July 19, *Colombo*, British steamer, McNab, 1,253, from Shanghai and London, General, to Kniffler & Co.  
 July 19, *Relief*, American steamer, Corning, 795, from Nagasaki, Coal, to P. M. S. S. Co.  
 July 20, *Costa Rica*, American steamer, Williams, 1,917, from Shanghai, General, to P. M. S. S. Co.  
 July 21, *Quang Se*, British steamer, McLachlan, 1,753, from Hongkong, Mails and General, to P. M. S. S. Co.

### DEPARTURES.

July 7, *Dwarf*, H. M. gunboat, Lt. Comr. Base, 464 tons, for Nagasaki.  
 July 7, *Iron Duke*, H. M. Ironclad, Captain Arthur, 3,738 tons, for Nagasaki.  
 July 7, *Thistle*, H. M. gunboat, Captain Leet, 464 tons, for Nagasaki.  
 July 9, *Japan*, American steamer, Freeman, 4352, for San Francisco, Mail and general, despatched by P. M. S. S. Co.  
 July 9, *Arcoa*, British steamer, Andrews, 1008, for Hongkong, Mail and general, despatched by P. & O. Co.  
 July 10, *Chance*, German barque, Ullrich, 325, for Shanghai, Seaweed, despatched by Captain.  
 July 10, *Great Republic*, American steamer, Howard, 4,300, for Hongkong, Mails and General, despatched by P. M. S. S. Co.  
 July 10, *Condor*, German brig, Bruhn, 262, for Hakodadi, Re-exports, despatched by Chinese.  
 July 11, *Golden Age*, American steamer, Coy, 1,870, for Shanghai and Ports, General, despatched by P. M. S. S. Co.  
 July 12, *Bourayne*, French Corvette, 1,350, Besq, for Vladivostok.  
 July 15, *Tailsing*, British ship, Blomfield, 815, for Kobe, General, despatched by Macpherson & Marshall.  
 July 16, *Thabor*, Japanese steamer, Brown, for Southern Ports, despatched by Light-house Department.  
 July 16, *Sadkia*, Japanese steamer, Wynne, for Hakodadi, General.  
 July 16, *Nil*, French steamer, Samat, 1,010, for Hongkong, Mails and General, despatched by Messageries Maritimes.  
 July 17, *New York*, American steamer, Furber, 2,119, for Shanghai, General, despatched by P. M. S. S. Co.  
 July 20, *Jean Sands*, American ship, Le Favour, for San Francisco, Sugar, despatched by Augustine Heard & Co.

### PASSENGERS.

Per British steamer *Arcoa* for Hongkong.—Messrs. Henry Cooper, J. Murray, Le Cras, and 3 Chinese.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. IV.—No. 38.] YOKOHAMA, SATURDAY, SEPTEMBER 20, 1873. [PRICE \$24 PER ANNUM.

## Notes of the Week.

AT a meeting of the Chamber of Commerce on Wednesday last, called chiefly for the purpose of electing a Chairman in the room of the late Mr. Marshall, and a Vice Chairman, Mr. Wilkin was called to the former, and Mr. Winstanley to the latter, post, by the general consent of the members. Both of these gentlemen have a good acquaintance with the business of the port, both are respected for their character, and esteemed for their personal qualities. It would be a superstition to believe that the Chamber of Commerce is, ever has been, or ever can be, of very much service to trade here. But it is a corporate body with a recognized existence and a "pou sto," and in the absence of self-governing municipal institutions such a body is sometimes of use in throwing public opinion into a focus and projecting it upon the Ministers. Its statistics have been, and are still, very much impeached. But they are collated with care, and their improvement, as the late Chairman said last year, depends upon the accuracy of the members in supplying the details from which they are compiled.

It is a curious commentary on the discussion which has recently taken place here in the columns of the press, that beneath the surface of society in this country, and like specks of gold in the quartz rock, there may be found, dotted here and there, individual men who in their lives, their habitual tone of mind and the general tenor of their conduct and demeanour, display a marked contrast to the ordinary type of their countrymen around them. The lightness of character, the want of fixity of purpose, the devotion to the pleasure of the moment, the fickleness, the absence of a serious conception of life and its duties, of the relations of governments to those whom they guide and control,—qualities which are painfully observable in the Japanese character,—are not observable in these men. Their lives are pure and well regulated; their sense of honour is keen and scrupulous, but not insolent or impetuous; their demeanour is grave, and their manners have a calmness which speaks of a well-balanced mind, of passions under control, of emotions purified and elevated. In their daily avocations they exhibit earnestness and thoroughness. Their work is conscientiously performed. They are obedient, patient and contented. Their sense of duty and responsibility is high, and they present a singularly strong and favourable contrast to the ordinary official of the country. They are ardent students, and generally fair, sometimes good, scholars. They talk with earnestness and good sense upon the condition and prospects of this country. While they do not undervalue the advantages Japan must derive from her material progress, from the introduction of railways, telegraphs and the mechanical appliances of modern life, they are persuaded that she requires moral reformation, and that therein lies the secret of her future higher life. As far as their own example in this respect can avail, they set it, and neither the temptations of pleasure nor the allurements of idleness serve to divert them from their purpose.

These men are Christians.

Any reader of these words may, if he will, verify them for himself. We care little for the speculative aspect of this question, the discussion of which seems to us calculated to do far more harm than good, especially in the form we have seen it assume. We hold, with these men, that a moral reformation is necessary to the welfare of this country, and incline to think that every observant and thoughtful man will agree with us.

Are not the hopes of it to be looked for in the direction we have indicated? We have said that this was a statesman's question. Will any one believe that the power which has produced the effects we have above enumerated is one which a wise statesman, with any real insight, can afford to neglect?

THE fruits of the bad policy of sending Japanese youths abroad for their education, before they have had that preliminary preparation which we have always contended to be necessary, are now beginning to show themselves abundantly. The majority of these youths come back to their own country with the most imperfect understanding of what they have seen elsewhere, a superficial smattering of two or three "ologies" or "isms," a taste for beef and beer, and a prodigious contempt for their own country. They are insolent to their fellows, ambitious of the notice of foreigners, contemptuous towards the learning and traditions of Japan, and profoundly ignorant of ours. Their minds, which might have been of some use if developed at home, bear the same relation to those of their more regularly educated countrymen who have remained in Japan, as gruel does to good solid brain matter. They have not a single well-defined thought or belief except the conviction of the immeasurable superiority over the general average of their fellows. Their language is euphuistic and absurd. If educated in America, they deliver themselves of the feeblest platitudes on the subject of republican institutions; if in England, they are equally profound in praise of monarchy. Of the working or meaning, of the safeguards or dangers, of the underlying principles, of the advantages and disadvantages, of these two widely different systems, they know no more than a child does of conic sections. Any one of these youths would be ready to apply either of these systems, accordingly as he has been educated in the one or the other, to the government of his own country, and doubtless considers the members of the Cabinet very foolish and culpable because they do not ask his advice on the subject. They do not talk of republicanism as the young English statesmen of sixteen do to whom the lofty hopes and ideals of Algernon Sidney have somehow or another descended, and who, in their boyish talks or themes, happily ignorant of wire-pullers, or the equivocal machinery by which republicanism works, ignorant of Grants and Polks and such like incarnations of virtue and wisdom, cry "Give me a Republic, by Jove, Sir, where the best man rules, and take your crowned puppets to govern women, Sir; only don't ask me to be a subject there." Lads who talk like this roar over the recollections of their folly and make strong Tory speeches at "The Union" three years afterwards. But for this very reason there is some hope for them. Their theories get kicked and cuffed about and acquire a working shape. They go to stay in a country house, and, without any argument or discussion, their florid republicanism loses its high tints in a week. The stout old Tory Member at whose table they sit, without a thought of disputing with these fledglings, contrives to send them away with decided conservative leanings, some idea of the practical difficulties of government, and a strong conviction that well is well left alone. But what can you do with a young prig who gets an inapplicable and possibly explosive theory into his head, and is deprived of any chance of having it modified by a county member, or a sound course of reading or discussion? He only reads one set of books, associates with one set of people, and acquires one set of ideas. What hope is there of him? We do not very much mind what conclu-

sions a man comes to, provided he has fairly thought them out. There is an immense amount of practical good sense in the world, and we cannot forget that the National Assembly of France, chosen in the crisis of a revolution in 1848, when doctrines of a very subversive character were afloat, was essentially a conservative body. No Millite or Spencerite would go into the House of Commons and propose a vote to the effect that Religion was a delusion, Monarchy a farce, and Reason the only God. The safety in all these matters consists in the fact that men have generally to get their ideas into the interstices which exist between other men's ideas, and by this means their views are pressed into practical and adaptable forms. They neither occupy too much space nor do their angles give offence to sensitive neighbours. But were they not to go through this process moderately early, such ideas would become what the Americans call hard-shelled, and under these conditions the world of practical, social and political life would resolve itself a preserve of porcupines and crustacean, than which nothing more spinous and unpleasant can be conceived.

We hope that the attention of the Education Department will be called to this question and that the Government will take strong measures about it. A great deal of money has been spent for the support of young men at home, and we are afraid much of it has been mis-spent. The privilege of going abroad should be carefully dispensed to young men, and made the reward of proficiency, earnest study and superior intelligence. Every one who has mixed much with the Japanese must have become acquainted with young men who have done full justice to their advantages, and who have a very intelligent perception of the meaning of things on the other side of the world. But is certain that they are exceptions to the general rule, and show rather what may be expected under wise regulation, than what has for the most part actually been done.

SOME friends of the Rev. Dr. Cumming, the well-known Minister of the National Scottish Church, London, have formed themselves into a Committee for the purpose of presenting him with a testimonial, and subscriptions to it have been invited here.

It is quite possible that there are members of this community who have been members of Dr. Cumming's congregation, and conceivable that they may be willing to join in a testimonial to a man, who, though extravagantly visionary in his apocalyptic views, has worked very hard and done a great deal of good in his generation.

AN official announcement in the *Nisshin Shinjishi* intimates that the allowance hitherto granted to the relations of the Imperial family in Rice will be commuted, and that their pensions henceforward will be issued to them in money. The estimated amount of these allowances is about \$60,000, while the issue of rice formerly made was 2,000 *kokus*.

THE Goods Traffic on the Railway to Yedo has been opened. The tariff has been published and distributed, and, so far as appears at present, it has been accepted by the public as satisfactory. A large and profitable traffic may certainly be relied on.

A fire, originating in the bake-house of Messrs. Nowrojee & Co., occurred on Sunday evening. The engines were on the spot after a little time and the fire was extinguished without having caused any material injury.

THE New schools at Kuise Gakko will be opened on the 1st or 2nd of October. They will be inaugurated by H. I. M. the Mikado.

Average per mile per week		\$495.80.	
18 Miles Open.			

#### THE RETURN OF THE EMBASSY.

THE Embassy has returned—returned from the fierce glare, the incessant activity and turmoil, the harmonies and antagonisms, of European life, to the comparative calm and twilight, the limited horizon, the traditional inactive thought and small complexities of Japanese existence. The change is a vast one; and though the Ambassadors are doubtless relieved at the termination of a long journey, and may feel grateful for the cessation of that bodily and mental whirl to which they have been subjected, but can hardly have grown accustomed to or easy under, they cannot but feel that they have returned to a condition of affairs in which quiet must not mean contentment, and rest must not be the prelude to indolence. They have had a fair opportunity of gaining a superficial acquaintance with the external features of European life, and the exceptional advantages they enjoyed of seeing it in its best phases must assuredly have opened their eyes to a condition of things provocative of surprise, delight and probably of envy. It is a rude fall to return from the beauty of Paris, Vienna or Berlin, and the overpowering wealth and extent of London, to the wooden shanties, the ill-drained streets, the poor equipages and apparel, the poverty, meanness and obscurity, of Yedo, and to think that the curtain which had hitherto concealed all this rich tide of life has again fallen upon those who were sent to get a glimpse of it, in all probability never again to be raised for them.

But what has been the effect of all this?—that is the real question. That it has done little or nothing towards modifying the views of the Treaty Powers in regard to one of the most cherished objects of Japanese ambition, viz; the concession of native jurisdiction over the persons and property of foreigners, is sufficiently well known, and it is more than probable that the Embassy was informed that negotiations of every kind connected with the revision of the treaties would be left entirely in the hands of the accredited agents of the respective Governments. It may not have been agreeable to the chief men of the Embassy to find that the Foreign Ministers of the Western Governments relegated all questions of State to the time when they could be discussed with greatest advantage under the combined deliberative countenance of their Representatives in Yedo. But the Western Governments did well in this, and the Ambassadors had all the greater time and opportunity for studying those results of the European systems which afford such a brilliant contrast to the results of government as administered in this less favoured country.

We sincerely trust that the lessons thus opened before the eyes of the Ambassadors may not have been lost, and that their ambition as statesmen may now be directed towards procuring for the Japanese people some of those advantages which Europeans not vainly think they possess over the Eastern nations. If the statisticians of this country are correct, it contains a population larger than that of Great Britain and Ireland. The requirements of European and American commerce have placed it in more than weekly communication with the most active and energetic races of the world. It is protected by a belt of sea from the attacks of enemies. It has a fertile soil, a perfect climate, and is inhabited by an intelligent race. It has ample stores of coal and iron, and is credited with the possession of boundless mineral wealth. Its works of art have delighted the fastidious critics of Europe, and the examples of these sent to the Austrian Exhibition have extracted encomiums from men as sensitive to artistic congruity and beauty, and as apt to detect violations of it, as

the ear of the cultivated musician is to the harmonies and discords of sound. But the country is poor, a fell and terrible disease is gnawing at the vitals of the population, the stores of coal and iron and minerals are stinted in their out-put by the want of sufficient mechanical knowledge to work them, and an illiberal commercial policy excludes from this work those who could make these stores available for their possessors. Trading corporations, fortified by monopolies repressive of all wholesome competition and all vigorous expansion of trade, have fettered and cramped the commerce of the country. The great highway through the Empire, and its capital, where, if anywhere, signs of its prosperity should be evident, are remarkable only for their meanness and poverty. Ideas of improvement and organic changes, of progress and development, are rife throughout the land, and the country is fermenting with new thought and new ambitions. But we cannot lay our hand upon any one thing and say 'this is a real, solid, convincing piece of evidence that the country as a whole is going forward.'

It may be urged that we must not ask too much from the early struggles of a nation reviewing, recasting, and reforming its institutions, that progress is a tree of marvellously slow growth, and that the mass of society, hitherto inert and little better than intellectually lifeless, is now becoming a congeries of germs and cells which the hand of a great administrator or creative master—as in a political sense we may call him—may combine into some higher form of national life. Then, for Heaven's sake, let us have him,—and our hope is that he may be found among the men who have just returned from Europe, or in that Cabinet which these men may influence, vivify and inspire. Let us see some fruits of this late visit to Europe. It has cost the country an immense sum of money, but this would indeed prove to have been well spent if the Ambassadors have returned with the outline of a large and liberal commercial policy sketched out in their portfolios,—if the haggling about little technicalities, the attorney-like pleadings of a petty, exploded, and by-gone interpretation of treaties, were to give way to a policy characterized by enlightenment rather than astuteness, by statesman-like breadth rather than critical and microscopic subtlety, by concessions which shall do for the entire country what has been done for the open ports. Let any observing Japanese, vested with power, travel from the Hakone Pass into the heart of Yokohama. Along the road he will see the people poor and ill-dressed, ill-housed, ill-fed, indolent, and, as far as may be judged from external appearances, indifferent to the idea of making and saving. Let him then enter Yokohama through the native suburbs, and he will see substantial stone buildings, broad causeways thronged with well-to-do masses of people, ease, contentment, growing wealth, abundant employment, gas, comfort, and a thousand evidences of prosperity and well-being. If all this has been brought to pass in the infancy of this port, under fear and trembling at every relaxation of the bonds of a jealous and half-hearted interpretation of the old treaties, what may not be hoped for this country and people when (or if) broader and more liberal maxims of policy inspire the rulers of Japan, are embraced with ardour and adhered to with tenacity? This is the outcome of the visit to Europe which we are so anxious to see, the compensation which we so earnestly desire for the expense it has entailed on the country. It seems sanguine to hope for it in the present condition of affairs, and folly to expect it. Yet we can hardly bring ourselves to think that the visit should prove fruitless.

#### AND THE OUT-COME OF IT?

THERE exists at this moment among the foreign residents in this country a deep and wide-spread feeling of disappointment at the present condition of its external trade, and a kind of dull numbing despair in regard to its future. Every one is out of spirits and has lost heart. Merchants sell their consignments cheap and buy their produce dear. Storekeepers complain that their sales fall off, their expenses increase, and their profits diminish. Those whose avocations bring them into contact with the Japanese Authorities find them narrow and intractable. Close and disinterested observers see a vast waste of public money upon fruitless enterprizes, and a good many unsound new commercial undertakings into which the native capitalists are ensnared by foreigners whose chief object is to get high salaries for ignorant assistance, and whose energy in spending their employers' money is stimulated by commissions on every dollar or pound which passes through their hands. Suspensions exist, not wholly unsupported by evidence, that the country is none the richer for the trade which it has carried on with the outer world during the past thirteen years. The entire absence of accumulated wealth in it forces itself more and more prominently upon residents and casual travellers. The national character has not improved upon closer acquaintance, and the attractive features it undoubtedly presents to new comers have lost much of the charm upon which they were accustomed to expatiate. The desire for progress and the aspirations of the nation which have been so much vaunted, have shewn little solidity, and exhibit a tendency to dissipate themselves instead of assuming consistency and yielding to the guidance of good judgment or advice. There is motion, indeed, but it is capricious and rudderless; there is new thought, but it is incoherent; there is even much desire for fresh knowledge, but it is wayward, satisfied with superficial acquisitions, deficient in earnestness, and unmarked by tenacity of purpose or steadiness of direction.

Is there sufficient reason for this disappointment and these gloomy conclusions? Are they not rather the effects of a reaction from exaggerated hopes, of the inevitable toning down of a picture too highly coloured at first by vivid imaginations fascinated by novelty and excited by hope? Are not the disappointments and losses caused by an overdone trade and a glutted market mainly responsible for this depression of spirits, and are the Japanese to be blamed for the reduction of profits to a minimum attributable to rapid telegraphic communication, or losses incurred by excessive speculation? Is the aimable enthusiasm which has covered the American newspapers with rose-coloured pictures of the astounding progress of the country to be made a source of reproach to Japan, because those pictures possess little of *vraisemblance* either in tint or outline?

We fear, that while we must absolve the Japanese from the blame of having misled us, and acquit them of all share in producing griefs and anxieties which are of our own making, there is still ground for the disappointment of which we at first spoke and for those misgivings in regard to the future with which we coupled them. After having made every allowance for the perplexity and consequent vacillation in action which arise from opposing counsels, for the mischief done by the advice of ignorant men and the losses entailed by the designs of designing men, for the vast difficulties which attend the transition from one condition of civilization to another, for the costly expedients and compromises demanded by that state of affairs which suc-

ceeds revolution, for the steps which have undoubtedly been made by the nation in an upward direction and the ambition it evinces to play a larger part than hitherto in the family of nations—after having made these allowances, we say, we still think the misgivings of foreigners in regard to the future are not without substantial ground, and glad as we should be to contradict this, could we justly do so, we think the impression now existing is one which shows by the solidity it has gained and by its universal diffusion, that it is a sound conclusion based on a great deal of evidence.

But beyond all question, the main reason which has led foreigners to this conclusion is the narrowness and illiberality of the views held by the Government on the question of the development of the country. While all other nations are realizing the vast benefits derivable from the application of cheap capital to the hitherto closed storehouses of their national resources, Japan opposes resolute bars to this policy, and refuses to benefit herself either by the superior knowledge or the cheaper capital of the foreigner. And yet she can hardly turn her eyes over the map of the world without their lighting upon the names of countries eager to purchase this assistance, willing to pay for it and struggling to obtain it. Look at Russia. Twenty years ago it had but a few miles of railway throughout its vast extent. Now the empire is traversed in all directions by the iron road, every mile of which has been constructed with English capital. The number of steamers on her vast rivers was wholly insignificant; now the water-ways of the empire are covered with them. Money from the same source has vastly increased her manufactures of iron, her machine shops and her factories of all kinds. Everything is done to attract and retain foreigners within her territory, and at every spot on which they settle may be seen the evidences of growing wealth, contentment, prosperity and advance. Look at Persia. A stupendous concession has lately been made to an English subject to construct railways, telegraphs and canals there, to cut down or plant forests, to make roads, to sink mines, to build aqueducts, in fact to infuse new life into a lifeless and decaying Empire. Look at India. Twenty years ago Assam was the only portion of that vast territory which produced tea, and the quantity of this was but a drop in the vast bucket of the English tea trade. But the Government sent Mr. Fortune to China for a few tea plants and a dozen natives who knew how to manipulate the leaf, and the slopes of the Himalays are now covered with tea gardens which pour twenty millions of pounds yearly into London where they find a market the almost limitless extension of which is a mere question of price. Look at Australia and New Zealand—colonies under the British Government, it is true, yet islands the resources of which have to be developed by British capital, which builds their steamers, constructs their railways and opens their mines. See the astounding advances made by these colonies, which take from £18 to £23 of British manufactures alone per head per year, and consider the prosperity, the increased comfort and advance in material welfare, these figures imply. And thus it is nearly all over the world. What might not be made of this Empire under some such a policy! Difficulties? Of course it presents difficulties; but no insuperable, even if any grave, ones. The only real difficulty which at present seems insuperable is that of dissipating the narrow jealousy and illiberality of the majority of the party in power, of rising to the conception of a great policy and carrying it out boldly and freely, of sweeping away like so

many mosquitoes the herd of petty officials which infest and obstruct all the avenues to enterprise in this country, and such of the overpaid and idle foreigners who have very little more *raison d'être* than these officials. We are all growing tired of seeing these glowing accounts in the home journals of a progress which we know to be little more than a phantom, and of an advancement which is little better than a superficial imitation. We are growing weary of hearing a line of eighteen miles called a railway system, and the diffusion of a parcel of poor exploded text-books an educational system. It is time that foreigners living in Japan who have no interest in writing sensational letters to newspapers, should be able to point to something and say. "There, that is what Japan has done and is doing. It is solid, strong, built on good foundations, will not give way under pressure, and on it or near it can be, and are to be, erected edifices of similar strength and durability. This is what we all wish to see, and it is the not seeing of it which causes these disappointments and misgivings."

The Embassy has returned. It was composed of some of the best men in the Empire. We have, in these few words, shown what we think should be their future attitude in regard to this question. Will they assume it?

#### SPECIAL CREATION AND EVOLUTION.

A CORRESPONDENT has sent us the following paper. We are entirely persuaded of his sincerity, and can understand that he has read Mr. Spencer's works with care and been convinced by them. But when he upbraids men who believe in a religion with the irreligiosity of their views, we must bring him face to face with his definition. If it is irreligious to apprehend the existence of a personal God and imagine that we have relations with him, there is an end of the meaning of words. The belief may be absurd and unfounded—though we think it wholly otherwise—but irreligious it most clearly is not. On the other hand the very basis of Mr. Spencer's views, or certainly the conclusion to which they inevitably lead, is that religion is irrational and deluding, inasmuch as it assumes that we can know nothing of "The Unknowable." It is idle under these circumstances for Mr. Spencer's followers to reproach the followers of the old creeds with irreligion, wholly apart from any question whether they or Mr. Spencer are right.

The Deity has been so often eliminated from theories of the Universe that we are not in the least surprised to find the process repeated in the last New Philosophy, though it is possible that our correspondent has not firmly grasped the fact that, whether right or wrong, the only possible outcome of Mr. Spencer's theories is fatalism, materialism and atheism, a conclusion with which we do not for a moment reproach him or his disciple, but which we ask the latter very earnestly to face like a sensible man. If he does not see this, he assuredly mistakes the teachings of his master. The denial of a Personal God involves the denial of man's immortal soul, and the heavens are as brass and iron above us, our hopes of an immortality are a hideous mockery, our highest aspirations and emotions are the results of a huge delusion, and man's superiority over the lower animals is the greatest of his misfortunes, inasmuch as it involves him in a disappointment of his best hopes, and tumbles him, and the universe, with which he now fondly trusts he has some indestructible relations, into a bottomless pit of nihilism. It is no argument against a creed that it is a gloomy one; but let us be sure, at best, that it is true. Let it never be forgotten that the problem of atheism is now, what it has ever been,

a contest of chance against intelligence. Democritus and Lucretius tried it two thousand years ago on very much the same lines of thought as those pursued at present by Mr. Spencer. It led them, as it must lead every one, to the conclusions we have named, and yet the chance theory has, on the whole, made but little advance.

We are not careful to formulate the idea of the Deity, and are too jealous of doing injustice to the cause in which we believe, to discuss the question which underlies Mr. Spencer's theory of evolution. We consider it no superstition or irreligion to believe that there is a divine side of this problem and of man's mind. On the mere doctrine of probabilities we refuse to credit chance with the construction of "this brave o'erhanging firmament, this majestical roof fretted with golden fire," with man's almost infinite faculties and apprehension. Time may work wonders, but we refuse to believe that the tricks of tumbling atoms, though dignified by the name of molecular transposition, will avail to construct a machine like the eye or ear of man, still less one like his brain,—will produce such order as makes the emotions of his heart results of a mere fortuitous concurrence of atoms, or his sense of moral responsibility a baseless figment which has its sole origin in mechanical arrangement. It may be fetishism—and we rather think Mr. Spencer calls it so—to believe in purpose and design, but with the overwhelming evidence of them which we see on all sides, we cannot ignore them, and shall rest content with the theory which seeks to explain the ordering of the Universe by means of them, until it shall be superseded in our mind by one which has something more than mere chance for its basis, and the destruction of hopes which it is alike logical and legitimate to hold, for its consequences.

\* \* \* \* \*

Man is conservative in nothing so strongly as in his religious beliefs: let change go on all around him, let science make the most startling discoveries, let one form of Government be upset and another established, he soon adapts himself to the new invention or the new rule, but attempt to alter or modify his creed and he is at once in arms. From the earliest times of which we have any reliable records, this feeling has ever been the same, and notwithstanding that numerous important changes and modifications have taken place in every form of religion, notwithstanding that new standards of faith have been set up, entirely and essentially different from those that preceded them, still we find the churches of to-day fighting as fiercely for their dogmas as they ever did at any period of history. Strange that in face of all the changes that have taken place, a church should still raise a standard of immutability, should assume that human nature, although hitherto variable, will henceforth remain fixed, that man in the future, more civilized and incalculably more scientific, with different ideas of government, of sociology, of art, will still retain the same religious feelings and beliefs as the man of the present. What should we think to-day of the arguments of a pre-historic member of the people now called Hebrew, in defence of the rite of human sacrifice? And yet the Church-party (the word is used as embracing the adherents of all Churches) assume a position identical with this defender of human sacrifice, when they insist upon any dogma which is repugnant to human reason.

The attitude thus assumed may be described as the irreligion of the so called religious, and it is the duty of every thinking man to contend against to the uttermost. Yet whilst striving with all his endeavour after the truth, he must guard against arrogance, and ever hold in mind the good that religion has done for mankind, and especially the great part that Christianity has played in modern civilization.

To illustrate this irreligious attitude let us take the special creation theory, and look at it from the religious point of view, and then see how it is treated by modern scientific thinkers.

The account of the creation of the living creatures upon the earth given in the Hebrew Scriptures is so anthropomorphic, that, notwithstanding it is the only one which the Christian Religion authorises, there are perhaps few in the present day who pretend to believe in it, and there are many good reasons for believing it to be untrue. The conception was formed in times when mankind were profoundly ignorant. The primitive notions of a people have always been wrong, and have been replaced by ideas which were successively less wrong. This we may instance from the account of the time taken in the creation of the universe, which is now made to represent so many years instead of days, as given in the first chapter of Genesis. Again, it belongs to the same class of beliefs which prompted Kepler to assume guiding spirits to keep the planets in their orbits, which induced people to think of epidemics as punishments inflicted by an angry deity, or by which they regarded a madman as one possessed by a demon. Further, it is not countenanced by a single fact, no one ever saw a special creation! It is significant, as Dr. Hooker remarks, that naturalists who suppose new species to be miraculously originated, habitually suppose the origination to occur in some region remote from human observation; or, again, if we try to think of a special creation, it will be found to be impossible in thought, to be one of those pseudo-ideas admitting of no definite shape. It is a verbal hypothesis which men idly accept as a real or thinkable hypothesis, and is of the same nature as would be one, based on a day's observation of human life, that each man and woman was specially created, an hypothesis not suggested by evidence, but by a lack of evidence; an hypothesis which formulates *absolute ignorance* into a semblance of *positive knowledge*.

On the other hand what can be said of the theory opposed against it, viz., the theory of Evolution? In the first place it is a conception born in times of comparative enlightenment. The belief that all organic forms have arisen in conformity with uniform laws, instead of through breaches of uniform laws, is a belief that has come into existence in the most instructed class, living in these better instructed times, and among those whose pursuits have familiarized them with nature. The interpretation of phenomena as resulting from evolution has been independently showing itself in various fields of enquiry, quite remote from one another.

In astronomy the supposition has arisen that the solar system has been gradually evolved out of diffused matter. Geologists have been step by step advancing towards the conviction, that the earth has reached its present varied structure through a process of evolution.

"The enquiries of biologists have proved the falsity of the once general belief, that the germ of each organism is a minute repetition of the mature organism, differing from it only in bulk; and they have shown, conversely, that every organism, arising out of apparently uniform matter, advances to its ultimate uniformity through insensible changes. Among philosophical politicians, there has been spreading the perception that the progress of society is an evolution; the truth that "constitutions are not made, but grow," is a part of the more general truth that societies are not made but grow. "It is now universally admitted by philologists, that languages, instead of being artificially or supernaturally formed, have been developed. And the histories of religion, of philosophy, of science, of the fine arts, and of the industrial arts, show that these have passed through stages as unobtrusive as those through which the mind of a child passes on its way to maturity." If, then, the recognition of evolution as the law of many diverse orders of phenomena, has been spreading; may we not say that thence arises the probability that evolution will presently be recognised as the law of the phenomena we are considering?—that when men's minds are better furnished with the experiences of nature out of which this conception is built, they will find no difficulty in understanding that if a single cell, under appropriate conditions, becomes a man in the space of a few years, a cell may in the course of untold millions of years, give origin to the human race?

Thus far in all respects the hypothesis of evolution contrasts favourably with the hypothesis of special crea-

tion, and it now remains for us to show how immeasurably higher it is from a truly religious point of view, than the special creation theory. The former teaches at once the greatness and the littleness of the human intellect—its power when dealing with all that comes within the range of experience; its impotence in dealing with all that transcends experience—it shows with a special vividness the utter incomprehensibility of the simplest fact, considered in itself, and thereby teaches the impossibility of fathoming the Unknown Cause. On the other hand the Special Creation theory commits us to the grossest anthropomorphism, to the conception of a Personal God with attributes like unto ourselves, who fashions the universe after the manner of an human artificer; and in this respect alone we cannot but hold that the Evolution theory is by far the nobler belief. Whether in the future it will be proved beyond doubt to be the true conception of the origin of organic matter, it is impossible to foretell, but inasmuch as it seems to reach far nearer to the truth than the Special Creation theory, therefore we should earnestly endeavour to make it known as far as lies in our power, having a care always to display a spirit of toleration, to take unto ourselves, and endeavour to act upon the advice of the greatest living English philosopher, who says—"Doubtless whoever feels the greatness of the error to which his fellows cling and the greatness of the truth which they reject, will find it hard to show a due patience. It is hard for him to listen calmly to the futile arguments used in support of irrational doctrines, and to the misrepresentation of antagonist doctrines. It is hard for him to hear the manifestation of that pride of ignorance which so far exceeds the pride of science. Naturally enough such a one will be indignant when charged with irreligion because he declines to accept the carpenter-theory of creation as the most worthy one. He may think it needless as it is difficult, to conceal his repugnance to a creed which tacitly ascribes to the Unknown a love of adulation such as would be despised in a human being. Convinced as he is that all punishment, as we see it brought out in the order of nature, is but a disguised beneficence, there will perhaps escape from him an angry condemnation of the belief that punishment is a divine vengeance, and that divine vengeance is eternal. He may be tempted to show his contempt when he is told that actions instigated by an unselfish sympathy or by a pure love of rectitude are intrinsically sinful; and that conduct is truly good only when it is due to a faith whose openly-professed motive is otherworldliness. But he must restrain such feelings. Though he may be unable to do this during the excitement of controversy, or when otherwise brought face to face with current superstitions, he must yet qualify his antagonism in calmer moments; so that his mature judgment and resulting conduct may be without bias."

#### LIGHTING.

**I**LLUMINATION by means of Petroleum or Paraffine Oil is a subject which has been exciting considerable interest for some few years back. The results both in point of economy and photogenic power which have been attained by those who have brought out some of the lamps recently introduced shew that it is a material which will sooner or later eclipse all other oils, if it does not eventually supersede coal gas. In England, where natural petroleum does not exist, a kind of bituminous shale has been discovered in various localities, which on being distilled produces an oil of the greatest value. This crude oil is so treated as to separate its different component parts, and from it is produced the petroleum spirit, or what is commonly known as Naptha or Benzoline, and which is the highly inflammable and dangerous compound of the crude oil: the burning oil which may be more or less pure and inflammable according to the purpose for which it is required and the price to be paid for it: the lubricating oil which is the heavy portion of the distillate with all the lighter and combustible material extracted from it: the paraffine, a white fatty substance now largely used

in the manufacture of candles, matches, &c.; and tar which is the refuse from the distilling processes. The extraction of all these highly useful substances from a material, which is simply an aluminous deposit, and resembles ordinary clay stone, with the greatest nicety and precision and so as to form a most lucrative industry, is one of the greatest modern achievements of chemical science and manufacturing skill. The petroleum found in large quantities in America is of nearly the same nature as the crude oil got from the distillation of the shale in England, except that there seems to be generally less paraffine in it, and in some oils none at all. And in consequence of this less trouble is taken in America than in England to extract that valuable substance.

In Japan, in the provinces of Echigo and Shinano, there are found large quantities of petroleum, and it has been seen in the neighbourhood of Niigata, oozing out of the earth and running down a water course to the sea. The Government have recently granted a concession to a native company to work the petroleum springs in these districts, but it will be long before it will be able to produce an oil which will compete with the kerosine imported to this country from America. The company, which has called itself the "Petroleum Oil Company" and has its head quarters at Yedo, has sunk a well in Shinano three feet in diameter and from 400 to 500 feet deep. This well goes through various strata, and probably below the coal measures, but at the bottom comes upon a dark clay through which the petroleum exudes in large quantities. They raise it by means of a rope and buckets and manage to get up in this rude way as much as 16,000 gallons per month. The crude oil is described as of about the same colour as ink and the same density as common oil. The only process to which it is subjected by the native company, at present, is a rude attempt at distillation by boiling the oil in an iron pot which has a pipe leading out of it to carry off and condense the steam. With these means they get about 45 per cent or 7,200 gallons of oil, and 55 per cent or 8,800 gallons of tar per month. The spirit is not extracted from the oil nor is it in any other way purified. The whole of it is sold to natives, in the province of Shinano, to burn in lamps, at the price of 2 boos per sho, or about 47 cents per gallon. The price in Yokohama would be 1 boo per sho or 63 cents per gallon. The tar is thrown away as useless. Specimens of the oil were given to the writer to test, and from the above account of the treatment it received it may easily be discerned that he found it to be utterly useless for illuminating purposes. It seems to be peculiar in so far that it contains very little spirit. It was heated up to 180 deg. Fahr. without giving off any inflammable vapour, whereas, what are considered safe burning oils in England, flash or become dangerous when heated to 130 degrees. Its specific gravity also was found to be 851, water being 1,000, whereas safe oils are generally about as low as 810 or 815. The Japanese oil is, therefore, an extremely heavy and very safe oil, but it is so impure, that in a few minutes the refuse from it clogs the wicks, and a black, tarry, substance keeps constantly running down the burner. Burning it in one of the most approved lamps for Petroleum, it only gives a strength of light equal to 9.5 candles, whereas the American Kerosine usually sold here gave a light equal to 19.76 candles.

It is said, however, that the Petroleum Company have ordered the machinery from America necessary for the proper purification of the crude oil, and have also engaged the services of several Americans to superintend its working. In this case, and if the work of purification is done with integrity and honesty, and the distribution of the machinery is so arranged as to enable the work to be done with economy, there need be little doubt than an excellent and cheap burning oil could be produced.

It is only very lately that any considerable attention was given to the best means of burning petroleum. The common flat wick lamp has, it is true, been for many years in use and still answers its purpose very well, but Paraffine oil has always been looked upon as a species of liquid gunpowder which it was more or less dangerous to have in any ways close proximity, and any improved methods of consuming it did not meet with much attention.

The manufacture of the oil has, however, now attained

Herbert Spencer. "Principles of Biology."  
\* Herbert Spencer. "First Principles."

such perfection and its properties have been so investigated by scientific men that there no longer remains doubt regarding its properties or any prejudice against it, and several competitors have appeared in the field with new methods for consuming it to the best advantage.

It should not be understood, however, that all oil sold as Paraffine or Kerosine is safe; it is indeed, in Yokohama, quite the reverse. The writer had occasion to test several tins of American Kerosine lately, and the result was that in specimens taken from seven different cases marked Devco of New York, two flashed or gave off an inflammable gas at below 90 degrees—three at 91 degrees, and two at a little over 100 degrees—while their specific gravities ranged from 785 to 788. This means that if, from the heat of the weather, from a fire or from other causes, this Kerosine gets heated to the temperatures above mentioned, it gives off a gas which will explode on any light being brought in contact with it. This of course is highly dangerous and should make people most careful as to what Kerosine they purchase. In England a safe oil is considered to be one with a flashing point of about 130 or 140 degrees temperature and a specific gravity of about 815, and a very simple test for all householders who are not sure of the quality of the oil they purchase is to have a small density metre which is easily procurable and only costs five shillings, and to see that no Kerosine they buy has a specific gravity of less than 810. They may then rest assured that they can use the oil they get with perfect security.

Of the various inventors who have brought forward improved lamps for the consumption of Petroleum oil the first who drew active attention to the matter was Captain Doty, an American. He patented a lamp which had for its specific object the burning of mineral oils in light-houses. He has been so far successful that all the light-house authorities in England and the Continent agree that it will give nearly double the amount of light at less than one-half the expense, of the old colza oil lamp but while France, Sweden and other countries have adopted his burner, England refuses on the grounds that his patent is not a valid one and that his invention is not original. Captain Doty has, however, threatened to file an injunction in Chancery to prevent the English Government using mineral oils in light-houses, without acknowledging his patent right, and there the matter has rested for the last three or four years. The Japanese Government last year came to the decision to adopt Captain Doty's lamp in all light-houses and is now engaged in converting the different lights.

Captain Doty's lamp gives a light equal to 20 candles, while the ordinary lamp now in use in the light-houses gives a light equal to 11½ candles, and at the same time Doty's lamp burns at the cost of oil in Japan only 9 cents worth per ten hours, while the common lamp burns 16 cents worth. As there are at present more than 200 burners in the Japanese light-house service the change will save the Government between five and six thousand dollars per annum.

Since Captain Doty introduced his burner several adaptations of it have been put forward, from none of which can such good results be got, but which all claim to be original inventions. Some of these are direct infringements of Doty's patent, while others it would be incorrect to condemn as such—though there is no doubt they are not inventions nor does their construction exhibit any original design. Among others that have followed in the wake of Doty is the loudly heralded lamp of Mr. Silber. This gentleman was fortunate enough to get access to the columns of the *Times* where his improvements on lamps were emblazoned in large type. Since then he has sold his patent rights to a Company dignified by the name of the "Silber Light Company" who in the most energetic way are giving the whole world the benefit of Mr. Silber's improvements, they having even turned their attention to Yokohama where the new lamps may now be had at the moderate price of from twelve to twenty dollars each.

The principles upon which all Kerosine lamps are made, and always have been, is to give a free access of air to the flame, and by means of a cap or tube to cause an impingement of air upon both the outside and inside of the flame, so as to ensure a plentiful supply of oxygen. If the supply of oxygen is in excess, bending the tube or cap outwards

from the flame will naturally decrease it; on the other hand, if the supply is too small, bending it inwards will increase it. This is all Mr. Silber has done and all he claims to have done; but surely this is no invention or worthy of being patented and heralded in the *Times* as a scientific accomplishment. The Silber lamps are merely an adaption of the common flat-wick lamp principle to a round wick. There is an abundance of holes for the access of air, and they are better made than lamps are generally as their price can warrant.

When in 1869 the *Elleray* was lost with the material for the Japan lights, the writer was obliged to hit upon some device to show temporary lights upon the coast, and he got a number of lamps constructed in Yokohama, from his own design, with round wicks and to burn Kerosine. These lamps, on comparing them with the "Silber lamp," are identical in every way. On trying them with the photometer they have precisely the same photogenic power, and while Silber's lamp burns one gallon of oil in 73 hours, these lamps burn one gallon in 80 hours. Further, a number of lamps used in America for the fronts of locomotives were procured from New York for the same purpose, and the principle of their construction is also identical with Silber's lamp.

The actual power of the different lamps, all having wicks of the same size, is as follows:

Doty's lamp.....	20 candles.
Silber's lamp .....	16½ "
Common flat wick lamp .....	10 "

It will thus be seen that while Silber's lamp is more than ½ better than the common lamp, Doty's lamp is ¼ better than Silber's; and although Doty's is only at present used for lighthouse purposes it is quite easy to adapt it for domestic purposes.

At the ordinary prices of Kerosine in Japan the cost of the consumption of oil in these lamps burning for six hours each night is as follows:—

Doty's lamp.....	5½ cents.
Silber's lamp .....	6 "
Common Flat-Wick lamp.....	4½ "

Lamp for lamp, therefore, the common flat-wick lamp is considerably the cheapest, but as its power is so small it may not be, in some circumstances, the most economical to use.

The relative cost of burning them for 6 hours each night per candle power of light which they emit is

Doty's lamp.....	.27 cents.
Silber's lamp .....	.36 "
Common Flat Wick lamp .....	.47 "

Therefore when a great strength of light is required the Flat-wick lamp is the most expensive and Doty's the cheapest. With regard to the safety of the lamps a good deal depends on the material of which they are made as copper or brass conducts heat far more rapidly than porcelain or glass. The more brilliant the flame and the better the light the greater the heat that will proceed from it, and therefore a lamp giving a strong flame should have the reservoir containing the oil as far apart from it as possible. In Silber's lamp after 6 hours burning the oil in the reservoir rose from a temperature of 74 deg. to 86 deg., while in a commonly constructed flat-wick lamp it rose to 83 degrees. Both lamps are therefore safe to use with good oil, but with oil which flashes at 90 degrees there is doubtless some danger in using either.

All credit should be given to those persons who make improvements of this nature, and no one can question the great advantages in having a lamp which will consume perfectly and not emit smoke or disagreeable gases; but in Silber's case the alteration on the old lamp is so trifling, the old principle is unaltered, and lamps of precisely the same construction have been so often constructed before and the same results obtained from them, that to herald these lamps as the results of scientific investigation bears the impress of quackery, and to patent the slight and immaterial alterations proposed and carried out by Mr. Silber makes us very suspicious of the good judgment of those Commissioners whose duty it is to grant patents.

It should be understood that in the above remarks regarding Silber's improvements reference is only made to his house lamp with a circular wick of the ordinary

argand size. He has patented various other improvements for different kinds of lamps which the writer is acquainted with but which are not touched on in this paper.

Two other companies have lately been started to work inventions for the use of Petroleum, but on an entirely different principle to those above mentioned. One is the "Air Gas Company," and the principle on which they proceed is very simple. By transmitting common air through the lighter Petroleum oils in which a gum is dissolved, it becomes so impregnated with inflammable particles that it becomes a species of gas and burns with great brilliancy. But unfortunately this company was doomed to disappointment, as it was found that, on the passage of air so impregnated through pipes, it became condensed and the inflammable particles returned to their original liquid state.

To remedy this another company started called the "New Gas Company." They eject a jet of steam upon molten metal; the steam becoming decomposed forms a hydrogen gas, and this they then, in the same way as the "Air Gas Company," pass through petroleum so forming a hydro-carbon gas which gives a very pure light and which is said to cost only 1s. 8d. per 1,000 cubic feet.

The great influence and power of the large gas companies in England will cause a delay in the introduction of any such innovation as this, but in Japan, where the erection of gas works is only beginning, such improvements should be fully considered.

R. H. B.

#### A CHRONICLE OF THE CHIEF EVENTS IN JAPANESE HISTORY FROM 1844 TO 1863.

(Continued.)

##### 5TH YEAR OF ANSEI, (1858.)

1st month 14th day.—The Daimios were notified that the island of Etchu jima had been formed in the quarter of Fukagawa, and that they were to use it as a drill-ground.

1st month 21st day.—The Daimio of Sakura proceeded to Kioto. It was said that he reported to the Mikado the measures taken in regard to foreign countries. He arrived at Kioto on the 5th day of the 2nd month.

1st month 21st day.—Harris returned to Shimoda.

2nd month 2nd day.—Orders were given that the American Treaty should be sent to Nikkwo to the tomb of Iveyasu.

2nd month 9th day.—The Daimio of Sakura attended the Mikado's Court. On the 11th he had an interview with the Giso and Denso. (The Giso correspond to the present Sanji; the Denso were the officials through whom the Mikado communicated with the outer world).

2nd month 15th day.—The Daimio of Sakura expressed a wish to be allowed to leave Kioto, but was suddenly detained.

2nd month 20th day.—Orders were given for the extensive planting of Wax, lacquer, and paper trees, and also of tea-shrubs.

3rd month 5th day.—Harris arrived at Yedo, and demanded the signature of the provisional Treaty.

3rd month 10th day.—The Dutch arrived at Yedo from Nagasaki.

3rd month 14th day.—At Kioto, eighty Court nobles laid before the Mikado their views of the situation.

3rd month 17th day.—Tsudzuki Suruga no Kami committed suicide, probably on account of the changed condition of Kioto.

3rd month 20th day.—The Mikado gave orders through the Daimio of Sakura that the Daimios were to reconsider the measures taken in regard to foreign countries.

4th month 7th day.—The Daimio of Sakura left Kioto. He arrived at Yedo on the 20th.

4th month 7th day.—The Daimios were informed of the expected arrival of an American ship at Shinagawa. The reason of her coming was because they wished to hold personal communication with Harris who was now living at Yedo.

4th month 23rd day.—The Daimio of Hikone was appointed Tairo (Tairo, or more commonly Gotairo, was the Prime Minister under the Shogun's regime.)

4th month 24th day.—A interview took place with Harris at the house of the Daimio of Sakura. The signature of the provisional Treaty was postponed.

4th month 25th day.—The Daimios were all ordered to attend the Shogun's Court to deliver their opinions in regard to the foreign policy.

It is said that at this time the officials tried to bring the Daimios over to the opinion that under present circumstances there was no other alternative than to grant commerce.

5th month 2nd day.—Harris was informed that the signature of the provisional Treaty was postponed till the 27th day of the 7th month.

5th month 7th day.—Harris went back to Shimoda.

5th month 8th day.—The Daimios were informed that the American ship would not come to Shinagawa.

5th month 11th day.—Gesshō, a Priest of the province of Suwō died.

5th month 18th day.—The Daimio of Nagoya commanded that the Daimio of Mito's statement of his views (see 4th month, 25th day), should be amended, as it was objectionable.

6th month 1st day.—The Daimio of Sakura and others were commanded to attend to the duty of selecting an adopted son for the Shogun.

6th month 9th day.—A notice was posted at Asakusa and Kinnachi threatening with death the Shogun's unprincipled officials.

6th month 12th day.—The Shogun being himself unable to decide between the two persons proposed as his adopted son, viz., the Daimio of Wakayama (Kishu) and Lord Hitotsubashi, the views of the Mikado were inquired. On the 12th a reply was received at Yedo directing that the selection should fall on a person of ripe years and discretion.

6th month 13th day. Two American ships arrived at Shimoda.

6th month 16th day.—A Russian ship arrived at Shimoda. On the 17th she anchored off Koshiba.

6th month 17th day.—Harris arrived off Koshiba. He informed the Government that thirty English ships were coming, and demanded the signature of the provisional treaty.

6th month 19th day.—The Americans were granted the signature of the provisional treaty.

6th month 21st day.—The defence of Kioto was entrusted to the three Daimios of Takamatsu, Matsuyae, and Kuana, and the first two were relieved of the defence of Osaka: the Daimio of Tsu was charged with the defence of the shrines of Ise, and was also to assist, if necessary, in the defence of Kioto: the Daimios of Tottori, Okayama, and Kochi were charged with the defence of Ōsaka, Iiagi with that of Iiogo, and Yamagawa with that of Sakai. The Daimio of Tottori was relieved of the defence of Shinagawa, Okayama and Yamagawa of that of Awa and Kadzusa, Iiagi of that of Sagami. Fukui was charged with the defence of Kanagawa, and Nihommatsu with that of Futsu.

6th month 22nd day.—The Daimios were informed that the Government had been unwillingly obliged to grant the signature of the provisional treaty.

6th month 23rd day.—The Daimios of Sakura and Uyeda ceased to hold the office of Rōju; the Daimios of Kakegawa, Sabaye, and Nishio were appointed Rōju.

6th month, 24th day.—The Daimio of Nagoya, the two Daimios of Mito, Lord Hitotsubashi and the Daimio of Fukui went suddenly to the Castle and petitioned (the Shōgun) to cancel the signature of the provisional Treaty and to carry out the Mikado's wishes.

6th month, 25th day.—The Daimio of Wakayama was selected as the Shōgun's adopted son.

6th month, 26th day.—The Daimio of Sabaye was despatched to Kioto to speak about the signature of the provisional treaty.

On the same day, the Daimio of Okazaki ceased to hold the office of Shoshidai (Shogun's representative at the Mikado's Court) He was succeeded by the Daimio of Obama.

6th month, 27th day.—The signature of the provisional Treaty was announced to the Mikado. His Majesty was said to have been much enraged.

6th month, 28th day.—A great council was held at Court.

6th month 29th day.—The Karōs of the three Houses (Mito, Kishu and Owari) were sent for by the Government. They arrived in Yedo on the 4th of the 7th month.

7th month, 2nd day.—All the Daimios went to the Castle to congratulate the Shōgun's adopted son.

7th month 4th day.—The following persons were appointed physicians to the Shōgun.

Totsuka Seikai, ... of the Kagoshima Han

Itō Gembaku, ... of the Saga Han.

Toda Chōan, ... of the Tsuyama Han.

Awoki Shuntai, ... of the Imaharu Han.

7th month 4th day.—The Shōgun died. Mourning for him was proclaimed from the 8th of the 8th month. He received the posthumous name of Onkioin. He was buried at Ueyo on the 18th.

7th month 4th day.—The Russian ship came from the Koshiba roadstead to Shinagawa. On the 11th, a provisional Treaty was concluded with them. On the 12th the Russians attended the Shōgun's Court; on the 13th they left.

7th month 4th day.—Three English ships arrived at Shinagawa. On the 18th a provisional Treaty was concluded with them, and they presented a steamer. On the 19th they went away.

The Daimios of Nagoya and Fukui (Echizen) were ordered to retire from public life and to confine themselves to their own houses, the old Daimio of Mito was ordered to confine himself to his own house and the Daimio of Mito and Lord Hitotsubashi to abstain from attending the Shōgun's Court.

7th month 6th day.—Liberty was given to practise the Dutch system of medicine.

7th month 7th day.—Ito Kansai of the Wakayama Han and Takenouchi Gendō of the Marnoka Han were appointed physicians to the Shōgun.

7th month 8th day.—Gwaikoku bugio (usually styled Governors for Foreign Affairs) were appointed for the first time.

From this day till the 14th, the Mikado, fasted (i. e. abstained from animal food and wine), and prayed to the gods of the sixty provinces. This was because of foreign countries.

7th month 10th day.—A provisional Treaty was concluded with the Dutch.

7th month 11th day.—Owing to the press of public business, orders were given to the Daimio of Kagoshima to make the Lochooan Envoys postpone their visit.

On the same day the police of Kioto was entrusted to the Governor of Fushimi.

7th month 16th day.—The Daimio of Kagoshima died.

7th month 22nd day.—It was notified that officials were forbidden to disclose the condition of affairs.

7th month 28th day.—The following persons were commanded to keep the House of Mito in order, viz. The three Daimios Takamatsu, Moriyama, Naganuma and Owari Takenokoshi, Hiobu Shōyū and Kii Midzuno Tosa no kami.

From this month forward great numbers of persons died of an epidemic called by the people "Korori" (Cholera.)

8th month 1st day.—It was attempted to seclude the old Daimio of Mito in another Han. Yedo was greatly excited.

8th month 8th day.—On account of the youth of the Shōgun's heir, Lord Taryasu was appointed his guardian.

On the same day the Mikado's commands were given to the old Daimio of Mito. He arrived at Yedo on the 17th. The Mito Yashiki was frequently visited at this time by members of the Roju.

8th month 13th day.—Three French ships arrived at Shinagawa. A provisional treaty was made with them on the 3rd day of the 9th month, and they left on the 6th.

8th month, 23rd day.—The Daimio of Taira and Tsushima no kami, and also Midzuno Chikugo no kami and Nagai Gamba no kami were appointed Ambassadors to America. This appointment was afterwards cancelled.

In the last ten days of this month a comet appeared in the west.

9th month 2nd day.—Lord Kujō resigned the office of

Kwambaku (Mikado's Prime Minister). Lord Konoye became Nairan (a Minister of the Mikado).

9th month 3rd day.—The Daimio of Sabaye left Yedo for Kioto where he arrived on the 17th.

9th month 4th day.—The unattached samurai Yanagawa Shinjuro died.

9th month 7th day.—The unattached samurai Mameda Genjiro was arrested at Kioto. He afterwards died in prison at Yedo.

9th month 18th day.—A retainer of Soga Gonyemon named Iizumi Kinai was arrested at Yedo. On the same day Ukai Kichizayemon and Ukai Kokichi of the Mito Han were arrested at Kioto.

9th month 22nd day.—Kobayashi Mimbu Gontayu, a Karō of the Daimio of Takashi, was arrested at Kioto. Many other arrests followed, but I do not note them severally.

9th month 27th day.—Kusakabe Isanji of the Kagoshima Han was arrested in Yedo. He afterwards died in prison.

(These arrests with others which took place later were directed against the anti-foreign or "Jōi" party.)

In this month there was great excitement among the samurai of Owari and Mito. Over two thousand set out for Yedo without asking leave and assembled at Kagane in Shimōsa. The cause was the Mikado's commands (given to the Daimio of Mito.)

10th month 4th day.—A retainer of Koga Kinichiro named Fujimari Kiosuke was arrested in Yedo.

10th month 9th day.—Lord Konoye resigned the office of Nairan.

10th month 11th day.—Hori Oribe no Shō was despatched on a visit of inspection to the northern coasts. He returned to Yedo on the 4th of the following year.

10th month 12th day.—Lords Kujo and Sanjo asked leave to resign their offices. On the 21st permission was granted to Lord Sanjo.

10th month 19th day.—Iizumi Kinai and others to the number of 17 persons were some imprisoned, some given in charge.

10th month, 21st day.—Lord Kujō was again appointed Nairan.

10th month 23rd day.—The Board of Consultation was ordered to report upon the measures to be taken for opening the port of Kanagawa.

10th month 24th day.—The Daimio of Sabaye was received for the first time at the Mikado's Court.

10th month 25th day.—At Kioto notice was given to the Daimios that the Mikado had appointed a Shōgun.

10th month 27th day.—The Daimio of Sekiyado ceased to hold the office of Roju.

11th month 12th day.—The Imperial Messenger bearing the Shōgun's appointment left Kioto.

11th month 16th day.—Gessho, a Priest of the temple of Hoshoin in Kiyomidzu drowned himself in the Satsuma sea being overtaken by persons who came to arrest him. Nishizato Yoshibei of the Kagoshima Han escaped and returned to his province.

11th month 24th day.—The Daimio of Uwajima was ordered to retire from public life. The truth was that he requested permission to do so being privately advised by the Shōgun's Government.

11th month 26th day.—The Daimio of Tōura ceased to be Governor of the Osaka Castle. He was succeeded by the Daimio of Kameyama.

12th month 1st day.—The Shōgun's appointment came.

12th month 3rd day.—The inspection of the provinces was postponed as before till the year 1862.

12th month 5th day.—Kobayashi Mimbu Gontayu and ten others who had been arrested in Kioto were sent down to Yedo where they arrived on the 19th.

12th month 18th day.—Harris came to Yokohama. On the 21st he went back to Shimoda. It is said that he was angry, because the trading place was not yet built.

12th month 19th day.—The Jisha bugio (ecclesiastical commissioners) Ometsuke and the rest of the five officials were commanded to examine the Kioto prisoners. The trial commenced on the 25th.

12th month 21st day.—Lord Sanjo retired to a private house in Yedo and took up his residence there.

12th month 22nd day.—The Temple of Senyōji was burnt.

12th month 25th day.—Fujii Tajima no Kami and six other Kioto prisoners were removed to Yedo where they arrived on the 9th day of the 1st month of next year.

12th month last day.—The Daimio of Sabaye went to the Mikado's Court to take his leave. He was presented with a real sword which alarmed him greatly. (The usual practice was to give a sum of money as the price of a sword, and Sabaye took the gift of a real sword as a hint to commit Harakiri).

#### YOKOHAMA GENERAL CHAMBER OF COMMERCE. SPECIAL GENERAL MEETING.

WEDNESDAY, 17th September, 1873.

A meeting was held at the rooms of the Chamber this day for the purpose of electing a Chairman in the room of the late Wm. Marshall, Esq., and for supplying the vacancies on the Committee occasioned by the retirement of Messrs. Greeven, Spence and D'Iffanger.

The following members were present: Messrs. A. J. Wilkin, (Chairman), Thomas, Jackson, Winstanley, Atkinson, Evers, Pistorius, Dell'Oro, Barlow, E. J. Fraser, Johnstone, D'Iffanger, Abbott, Barnard, Van Oordt, Lane, J. A. Fraser, Milsom, Brent, Conil, Pearson and Dodds.

The Chairman, in opening the proceedings, adverted to the circumstances which had rendered it necessary to call the present meeting, and explained that owing to the diminished number of the Committee it would be, in practice, impossible to conduct the duties of the Chamber with a bare *quorum*. Before entering upon the opening business for which they were convened he desired to testify to the loss which the Chamber had sustained by the withdrawal from among them of their late Chairman, Mr. Marshall. Elected by their own body to that important office he had exhibited special aptitude in conducting its business and forwarding its interests. His tact, large experience and sound views rendered his assistance invaluable in matters of public importance, and he felt sure that the meeting would freely endorse his opinion when he stated that the void occasioned by his decease was one which could not easily be filled.

The Secretary then proceeded to read the minutes of the last meeting which were confirmed.

The Secretary read a minute to the effect that Messrs. Howard Church & Co. had been duly elected.

A ballot was then taken to elect Chairman, Vice-Chairman, and three Members of Committee, which resulted in the election of A. J. Wilkin, Esq., as Chairman, A. Winstanley, Esq., Vice-Chairman, and Messrs. Brent, Evers and Melhuish, as Committee.

Mr. Melhuish having explained his inability to serve, a fresh ballot was taken for Messrs. Dodds and Geisenheimer which, resulting in an equal number of votes, the first of these gentlemen retired in favour of the latter.

The Chairman intimated that should Mr. Geisenheimer decline to serve it would be competent to declare Mr. Dodds duly elected. He added that as no provision seemed to exist in the Rules of the Chamber for replacing retiring members of Committee, it would be desirable that a member should give notice of a motion for the next meeting in order to bring this matter under the consideration of the Chamber.

#### Law & Police.

GAIMUSHO, YEDO.  
CLAIMS AGAINST THE OLD HANS.

Judge HANSEN and Mr. TAMORO,

Commissioners.

J. M. SCOTT vs. TOSAMI HAN.

September 12th, 1873.

Kashichi, cross-examination continued:—The document produced marked A. I recognise as having been written by the second banto. I heard afterwards that Harinya transacted business for the Tonami Han. I did not go with my master to the Custom House to have the final contract for \$1,650 examined. I never saw my employer mark the contracts with a red pencil. I never saw any

stamps placed on the contracts marked B and C, nor have I ever heard anyone acknowledge the stamps were his.

In consequence of an apparent disparity in the evidence, a long explanation ensued between Mr. Tonami and witness.

Mr. Ness suggested that it would be more in accordance with usual procedure if these questions were asked through counsel. He was completely in the dark as to what was passing.

A suggestion to this effect was made by Commissioner Hannen.

Cross-examination resumed:—Mr. Scott has not, since the adjournment of the Court, the day before yesterday, told me that my former testimony in regard to B and C was wrong; nor has anyone told me that my evidence differed from that of my employer. As I have already said, I have seen those documents before. I know nothing of the execution of this contract, however. It was only the original contract which was left entirely to my charge, and which I saw sealed. I did not accompany my employer to the Saibansho to have B and C sealed. I first saw those contracts being sealed when copies were being made. I told my master what the names were. I told him that one name and a seal were wanting, but he said that it did not matter for the moment. When the copies were made, I thought they were for the purposes of the present action. I was not told so. Copies were perpetually being made, so that I cannot say exactly when these were made. I do not think the officers were all present whose seals are attached. I remember that I gave my employer a rough idea of the contents. The conditions Harinya Kianoske and Komeya Sakube referred to, when they spoke of having obtained certain conditions, were not mentioned to me. I suppose they referred to the present contract, when they spoke of delay. I know that the balance of the first contract was due at the end of the third or beginning of the fourth month. On the prosecution, at the time of the claim, I did not hear Mr. Kanasawa tell Mr. Scott what was to be done or what would be the result of the claim. I did not hear anything of it from my employer.

The bench at the request of Counsel for defendant, was here examined before the the Commission touching his knowledge of English, and specimens carefully taken down. The results obtained were not very brilliant.

Re-examined by Mr. Ness:—I understand my master's Japanese. He knows about as much Japanese as I know of English. Neither my employer nor any one else has asked me to say here what is untrue. My employer, from his office, cannot see all that takes place in mine. The two Offices are separated from each other by a partition about as high as my breast; the rest is open grating.

Court adjourned to two o'clock.

Re-examination continued.—I do not recollect in what part of the store Mr. Scott was when the original contract was signed. I cannot say whether my employer was looking on or not. My employer never told me that he had relieved Nakayama of his liability.

Mr. Okamura, examined by Mr. Ness:—I was acting vice-governor in Hiogo, in 1871. I have heard of Scott's claim against Tonami Han. It was brought to my notice by the clerk, Kanasawa. I and the acting governor sent a despatch to Yedo in regard to this claim.

Mr. Ness demanded the original of the communication referred to. (Letter produced, with the enclosures.)

Examination continued:—That is the letter which was sent on that occasion. The report does not purport to come from the Gon-Sanji, Dai-Sanji and Sho-Sanji, but from two persons, the Gon-Sanji and Dai-Sanji. It is dated the 5th day 9th month, 1871.

Cross-examined by Mr. Hill:—These are the copies of bonds which are mentioned in the letter as enclosed. They are not called enclosures in the letter. There were five documents altogether in the letter (Pointing out the documents). I did not enter into the details of the case. I was merely told that so much money was owing and referred the parties to the chief officer. I know nothing of the execution of the bond for \$1,000, nor of the one for \$2,050, nor of this one for \$1,666.

Mr. Ness signified that this closed the case for the plaintiff. He had no further witnesses to call.

Mr. Hill, for the defence, called Mr. Kanasawa. My position at present is Gon-Chiuroku; in 1871 I was complaint officer in the Hiogo Ken. I know something of the first part of Mr. Scott's case, but I was not there when the latter part was decided. The first thing I knew of it was a communication setting forth Mr. Scott's claim, sent in to me through the Consul. I did not decide the case for, while it was in suspense, the two parties came to an amicable arrangement, and the complaint was withdrawn. The defendants in this case were Tanaka Sanai, Harinya Kianoski, and Komeya

Sakube; at least they are those who came on this occasion. The copies of bonds I speak of, as coming from the British Consul, were, after the friendly arrangement, labelled and put aside for future reference. Scott brought the originals of these documents to the Foreign Office, but I did not take charge of them. They were merely brought to verify the copies. The papers were brought, probably, two or three times to the bureau. I gave instructions that, after the arrangement came to, the original documents should be given to Tanaka Sanai in exchange for the new ones. There were certainly new bonds drawn up; but where, I do not know. I did not inquire under the circumstances; nor did I see them after they were completed. I do not recognise the documents you produce in the least. [Documents marked B and C.] I cannot say whether the new arrangement was ever fulfilled. When the arrangement was come to, Tanaka and Harimya were present. I also think Komeya and Zokoya were there, Scott and his banto were there also. I don't know of an interpreter on the occasion: it is now some time ago. The private arrangement was come to elsewhere, so that there was really no need of one. There was a communication sent in to me from the Consulate, informing me of the new arrangement on the following morning. I heard of the action pending only after the laying of the complaint. Okaki Sakumon was not connected with this affair. He was only there, as well as I can remember, in order to prevent those who should sign the document from leaving. I know nothing of the social position of these parties. The fact of their being Tonami Han Samurai was only made known to me by the plaintiff.

Cross-examined by Mr. Ness:—When they first borrowed the money, they said that they had done so on their own private account.

Mr. Ness here gave notice that he should require the originals of the bonds said to be in the archives to be produced.

The Court here adjourned until Monday morning next, at nine o'clock.

September 15th, 1873.

Kanasawa, cross-ex. continued:—As to the authority of the three officers, enquiry was not made at the Saibansho from me. Scott brought a complaint against the three Tonami Han officers and the guarantee. I have no details of what took place. On the 9th month, last year, I sent sundry notes I had made on the occasion to the Keurci. I changed office in 1871, and know nothing of this report to the Governor and Vice-Governor, which was made three months after. When the amicable arrangement was come to, I told the Governor that he might write to the Consul that the case had been settled. [Letter to Consul produced, marked Z.] No one appeared to contest Scott's claim on the part of Tonami Han. No document was drawn up to release Otonoske while I was in office. I certainly saw the first contract. The documents say the goods were purchased on account of Tonami Han, but the officers told me they had falsely stated that they were for the Han. Therefore I treated the matter as a private debt. I am sure I told Scott this, as he was constantly coming to me. I do not remember distinctly about the proceedings, but as he was in constant attendance, I am sure I must have informed him of the state of the case. I believed from the statement of the officers that they were not acting for the Han. I did not think it worth while to go deeply into the question. I think that the persons who signed the first contract should pay. I did not know the Genshiro, Sanai, and Otonoske were officers of the Han, I knew that that they were *samurai*. I learnt this at the time of the investigation. Although I knew that they were *samurai*, and that they had acknowledged themselves guilty of fraud, still I believed them when they said that they had no authority to bind the Han. I considered at the time they were punishable for theft.

The witness was next asked whether he had taken any steps to punish Genshiro, Sanai and Otonoske for the fraud of which they had, according to his showing, acknowledged themselves to be guilty.

Mr. Hill objected to the question on the ground that it was irrelevant, and that it was in the nature of an inquiry into the witness' conduct in his judicial capacity.

Mr. Ness urged that it went to the credibility of the witness.

Commissioner Hannen explained that according to English law the question could not be objected to, and ought to be answered.

Mr. Tamano was of a contrary opinion. He considered that it was not the judge's official conduct which was under investigation.

Mr. Hill applied to the court to have his objection to the question noted.

Commissioner Hannen declined to allow the Counsel's application. He further intimated that according to the rules laid down for

the guidance of the Commissioners, it was for them to decide on the admissibility of the evidence; and that in the event of disagreement between the Commissioners the evidence must be accepted.

Mr. Tamano asked for an adjournment to consider the question, which he urged was of serious import. The question to his mind seemed to suggest collusion on the part of a public officer. He objected emphatically to the request of counsel for the plaintiff.

In consequence the Court adjourned to three o'clock.

On the re-assembling of the Commission: Commissioner Hannen said that the Commissioners had failed to come to an agreement, and that, in view of the rules laid down for the guidance of the Commission, the question would be put.

Cross-examination resumed:—I took no steps to punish the officers for their fraud. I made no inquiry concerning them. I found out that they were officers of the Tonami Han from the investigations which took place.

Mr. Ness at this point handed to the court the memorandum made by the witness at the time of the examination marked A. A.

Documents marked B. B. C. C, and D. D. were also handed in by Mr. Hill.

Saika, examined by Mr. Hill:—I am an officer of the 8th rank in the Okurasho. At the time of Scott's application I asked him for copies of original contract with Otonoske's seal on it, but he could only show me copies of second contract. In consequence I wrote him a letter declining to have anything to do with the matter. Mr. Scott replied to me. I went to see Mr. Scott about the original documents. I was to report to the Okurasho if I found all the documents in order. I had no authority to settle the claim. I made no promises to Scott.

Cross-examination by Mr. Ness:—I never saw the originals of the first two contracts. Scott, told me to inquire for them at the Saibansho. At the Saibansho I was told that they had not got them. I was simply told they were not there. I told Scott this. He then said, "they are in the Consul's hands." I saw Kanasawa at Kobe but I did not ask him about them. I did not know that he had investigated the matter. I saw copies of documents afterwards at the Saibansho. I was shown three copies, but I cannot say whether they were made from originals or not. I did not say that if Scott would produce a document with Otonoske's seal on it, the Government would pay the claim. I never wrote such a thing to Scott. I merely said that if a document bearing Otonoske's seal could be produced an investigation would be made by the Okurasho. If the seal had been forthcoming I should have reported the fact and asked for instructions. Scott asked to have his case treated like Twombly's. His contract had Otonoske's seal and was I believe paid by the Government; Scott's second contract of which he shewed me original had not. I told Scott of this. I don't know whose seal was on Twombly's contract. Otonoske's title was that of finance officer, and therefore I insisted on seeing his seal. Otonoske may or may not have abused his authority, but as he was an officer of the Tonami Han I insisted on seeing his seal. I have heard that Twombly's claim has been paid.

At this stage in the proceedings the commission adjourned until Monday next, the 22nd inst.

#### IN H. B. M.'s PROVINCIAL COURT.

Before N. J. HANNEN, Esq., Acting Assistant Judge.

(Postponed from the 2nd August.)

DEVINE v. KIRBY.

Yokohama, 18th September, 1873.

This was a suit to recover the sum of \$4,500 in respect of pecuniary loss and personal injury for wrongful dismissal. Mr. Ness appeared for plaintiff; Mr. F. V. Dickens for defendant.

In opening the case, the learned counsel stated that the parties to the suit had been acquainted for over ten years in business, and at defendant's solicitation plaintiff entered his service, the latter expressly stipulating that he should be allowed to sign or use the name of the firm. On November 15th, 1872, the defendant wrote to plaintiff agreeing to this, and to pay him as salary for his services the sum of \$200 monthly with quarters. In June last plaintiff received a letter stating that he had forfeited all confidence by signing the firm name to a cheque instead of doing so "per procurator," and dismissing him with a sum of \$400 in lieu of notice. Defendant now pleaded incompetence, incapacity, disobedience and falsehood of the plaintiff, and using the name of the firm in such a way as might have subjected him to a criminal prosecution. Mr. Ness in conclusion stated that he should prove the sanction

of defendant to the use of the firm name, and that the allegations now made were wholly unfounded.

Wm. Henry Devine said he was plaintiff in this action and entered the service of defendant under the written agreement contained in the letter produced. He acknowledged receipt of the letter and accepted the situation. He continued in defendant's employment up to the 2nd July, when he received a dismissal. On the 26th June he had received a letter from Mr. Kirby stating that on the previous day he had desired plaintiff to write out a cheque in favour of the manager of the Commercial Bank, and to his utter astonishment discovered that plaintiff had signed the firm name instead of per procuration. He replied to the effect that it had been distinctly understood between them that he was to sign the firm name, (the idea of his making that stipulation being that it would give him a better standing commercially), and further submitting that the arbitrary action of defendant in breaking the agreement would place plaintiff in a painful position with regard to the mercantile world; for which reasons he could not agree to accept the dismissal. The defendant answered this letter by another demanding delivery of the Power of Attorney to Mr. Valentine, and also sent another letter to the effect that the dismissal of the 26th was not absolute, but optional for plaintiff's acceptance; that he must have been under an hallucination as regarded the power he alleged to have been given him to sign the name of the firm, and that his previous misconduct in having signed the firm's name previously without the sanction of defendant—as had been found on reference to the letter book. Many conversations took place with reference to the powers of plaintiff before the agreement under which he entered defendant's employ was finally come to. The Power of Attorney was given in consequence of verbal arrangements made before the written agreement was entered into. He signed the name of E. C. Kirby & Co. from the date of receiving that power till the day of his dismissal. He considered himself empowered to do so both by reason of the Power of Attorney and the verbal authority he had received from the defendant, who knew that he thus used the firm name and never found fault with him for doing so. He wrote, almost daily, letters bearing that signature; and from first to last conducted the correspondence above that signature only. These letters were all copied in the letter-book which was kept in Mr. Kirby's own office, and frequently on his desk. Defendant occasionally went to Kobe, and on his return from such visits the whole of the correspondence which had passed during his absence was handed to him. Witness had seen him read such correspondence and refer to the letter-book produced. He sent letters from Yokohama to E. C. Kirby & Co., Kobe, and signed them E. C. Kirby & Co., whilst Mr. E. C. Kirby was staying at Kobe. One such was sent on the 26th April, and its receipt acknowledged by defendant in his own hand-writing. On the 14th of March, he sent a letter to the Kobe firm signed "E. C. Kirby & Co." which was similarly acknowledged. In neither reply was fault found with plaintiff for signing the firm name. On the 10th May, another letter signed "E. C. Kirby & Co." was sent, and acknowledged by Mr. E. C. Kirby on the 12th. On the 3rd June, he wrote to Mr. Hunter, the defendant's manager at Kobe, and from a subsequent conversation with Mr. Kirby ascertained that he had seen that letter. It was written under his instructions. Defendant looked over his shoulder whilst witness was writing it. On the 7th April last, he remitted a small draft to the firm's London agent. Mr. Kirby intrusted him to obtain the draft which was made out in favour of "E. C. Kirby & Co." and endorsed by witness similarly. As he had nothing particular to write about, and as Mr. Kirby was writing, witness took the draft into the inner office and asked Mr. Kirby to enclose it in his letter. Defendant looked at the endorsement upon the back of the draft, and made the observation "I don't think I've yet sent your signature to the London Bank." Witness, reflecting they did no business direct with the London Bank, remarked "The London agents have my signature and can produce it, if necessary." Previous letters had been forwarded formally to the agents in London with a specimen of witness' signature. Would most positively swear that Defendant looked at the endorsement on the draft and Bills of Exchange on the firm were accepted by witness as "E. C. Kirby & Co." The paid bills were kept in the office and open at any time to Defendant's inspection. Witness also signed all the Bank cheques under the belief he had full power to do so. He commenced immediately after he entered the Defendant's service. The accountant of the Bank called his attention to the difference in signature and he said "Well! if there any doubt about it, I'll go over and ask Mr. Dickens, as I'm under the belief my power of attorney gives me power to sign the firm name." He asked Mr. Dickens to explain to him the meaning of the words "P. Pro." as he could not find a full explanation in any commercial work in his possession. Mr. Dickens replied: "As far as P. Pro. goes, the meaning of those words is somewhat vague." Witness then asked "Am I safe in using this signature?" He said, "Yes, you are perfectly safe," and witness went away, and asked no further question. He had fully explained that he did not sign "P. Pro."

but "E. C. Kirby & Co." Mr. Dickens told him the Power of Attorney would cover that signature.

He went straight over to the Bank and told the accountant what Mr. Dickens had said, and heard no more till he got his letter of dismissal. Had never used the name "E. C. Kirby & Co." except in the ordinary course of business. The day before he was dismissed, the 25th of June, he made out a cheque and signed it in his usual way. He handed that to Mr. Kirby himself. Did not know if the latter took it to the Bank. Thought Mr. Kirby noticed the signature at the time. Theretofore no fault had been found with witness's conduct, directly or indirectly. He had never been accused of incapacity in business, and conducted defendant's affairs aright. Was never accused nor guilty of any act of disobedience: was certainly never accused of falsehood. Nor had he exhibited a gross disregard of truth in the conduct of his business, nor signed defendant's name contrary to his wishes, or in direct disobedience of his express order, with the object of fraudulently gaining some advantage for himself, or exposed himself to be criminally prosecuted, or improperly absented himself from the service of the defendant. Three years and a half of his agreement were unexpired at the date of his dismissal. Dismissed in such a manner, he had not dared to apply for another situation. His salary was to have been \$200 per month, with quarters—probably worth \$100 per month more. It was very improbable that he could obtain such another situation in Yokohama. He had sustained considerable personal annoyance, besides damage to his prospects and anticipated it would be necessary for him to go to England, to obtain a suitable employ. He had offered after being dismissed to remain in defendant's service.

Cross-examined. Had estimated his damages at a low scale. The accusation of having falsely and fraudulently used the name of Kirby & Co., had injured his feelings, together with the accusations of falsehood contained in the answer to the suit. Defendant had told Dr. Dalliston witness had "told a lie," nothing beyond that.

The witness here applied for the protection of the Court, Mr. Dickens having just said "That was a lie" to Mr. Kirby. His Honour: If you did so within the witness' hearing, Mr. Dickens, it was a most improper observation for a barrister to make.

Mr. Dickens: I must represent to the Court that witness made a very gross accusation against myself.

His Honour: He has not for one moment made any accusation against you, and you have no business to say that in Court to a witness.

Mr. Dickens: I did not say so to the witness.

The matter here dropped.

Witness declared most positively that Mr. Dickens told him that the power covered his act in signing the firm name. He had known Mr. Kirby for some years. Was never very intimate with him. Now knew his business habits thoroughly. Knew Mr. Kirby was a man of standing in the settlement, or would not have joined him. Remembered business negotiations in May, 1872. He was then in the employ of Lane, Crawford & Co., and wrote the letter produced, which declined to complete an arrangement to join Mr. Kirby, though the latter had stated he considered himself as much bound as if he had signed a deed of partnership.

A lengthy correspondence, in relation to the then contemplated partnership, was here put in, together with witness' acceptance of the offer made by the defendant.

He entered the employment of Mr. Kirby in January, 1873. He did not sign the firm name to the letters and cheques during January until he had a letter from the Bank accepting his signature. (A notice to the Bank from Mr. Kirby authorising it to honour the signature of Mr. Devine p. pro. E. C. Kirby & Co. was put in). The reason no Power of Attorney was then drawn out was because Mr. Dickens was too busy to do it. Witness might have signed "p. pro." in February. He might have signed half a dozen cheques as "E. C. Kirby & Co." before applying to know if the Power of Attorney gave him authority to do so. When Mr. Kirby saw the Power, he said "I see this gives you power to mortgage my property." Witness looked at the Power, and pointed out that the word was "manage." He knew the advertisements in the papers said he was to sign per procuration. Mr. Kirby left Kobe twice or thrice during the time witness was with him. During his absence "private" letters, as well as the "business" correspondence, passed between each. Generally there was a good deal of business introduced into the private letters. The letter-book was placed on Mr. Kirby's desk by witness when Mr. Kirby returned. He most certainly thought defendant must have read the official letters as well as the private. In one letter to plaintiff he replied "You do not say anything about forwarding the cattle in your official letter." He considered Mr. Kirby must have seen the letter of the 3rd of May from what he said to witness concerning it in a general way, from his always having the letter book before him, and from his looking over witness' shoulder whilst the latter wrote. He saw defendant read the endorsement on the draft procured for the London Agent. Witness' signature had gone several times to them. The letter with his

specimen signature was sent from Kobe for him to append his signature at foot and send it on. It stated that Mr. W. H. Devine was authorized to sign E. C. Kirby & Co. per procuration and that the firm were about to send several indentations for execution. When he presented the cheque he had signed to Mr. Kirby he made no remark whatever. Was positive he returned to the office that day; was in the house whilst dinner was going on. The cheque was drawn about three o'clock. Witness was at the office at five o'clock. His business took him away from it often. Did not exhibit his Power of Attorney at the Bank; he was not asked for it. Defendant must have known he was signing the name of the firm, as it was constantly before his eyes.

A letter was here put in received from Cowderoy & Rainbow calling attention to the fact that the signature of Mr. Devine to the letter of authority was informal, as he had signed the name of the firm instead of per procuration.

Witness continued. He went daily to the office after his dismissal. On two occasions he was ordered by Mr. Kirby to leave the premises. He continued to attend, as Mr. Kirby did not give him a definite dismissal; but had first written him a letter of dismissal, and then another stating that it was not a dismissal. He went to Mr. Dickinson's office on hearing that Mr. Kirby had said his statements about the power of attorney were a lie, to ask him to state what he had said about the power of attorney. Mr. Dickinson at first said he didn't remember about it, but afterwards did so and said, "It didn't authorise you to make new contracts." He could not at first remember that he had any conversation with witness about the power of attorney. He asked him to walk down with him to the Bank and Mr. Kirby's. Legal proceedings against him were never contemplated, so that he could not have begged with tears in his eyes that Mr. Dickinson should intercede for him with Mr. Kirby. He went to Mr. Ness after Mr. Kirby had ordered him to leave the place, when he had gone with Mr. Dickinson to this office. Considered his services were worth \$300 per month, but would rather some one else would say so for him. Knew Byron Binninger of New York; had known him as a neighbour in Shanghai; was not aware of any circumstance justifying his dismissal. Had never traded for his own account.

Two letters were here put in from Mr. Binninger thanking Mr. Devine for procuring him an order for 2,000 cases Devoe Oil, and promising to send some circulars of a Milking Machine.

Re-examined by Mr. Ness.—He had never absented himself from the office except on business of the defendant. It was not Mr. Kirby's custom to take his word for the contents of letters written by witness. It was a matter of caution on his part that he did not sign the firm name till he had the power of Attorney. Had never admitted to Mr. Dickinson he had ever done anything which was wrong.

Ed. H. Hunter testified that he was manager to Mr. Kirby at Hiogo between February and June. He had frequently received letters from plaintiff as manager of the Yokohama house signed E. C. Kirby & Co. On the first occasion he observed that signature in the beginning of February, he called Mr. Kirby's attention to it. Had also observed all letters thereafter coming to Kobe were signed in a similar way. As a rule, Mr. Kirby did not read the business letters which came to Kobe, but read the private letters. Defendant usually was only a short time there, and as a rule did not open the letters, as he never took the management of the business over. Defendant had spoken to him regarding the contents of business letters.

Cross-examined.—He never signed the firm name, but "per procuration." Did not consider himself entitled to sign in any other way. When he called Mr. Kirby's attention to the signature to the letter, he did not take much notice of it, but simply said "he supposed it was a mistake made in the hurry."

Mr. Wilson, assistant at Lane Crawford & Co.'s testified that in February last he was in Messrs. Kirby & Co.'s store at Kobe, where he saw defendant open and read the letters from Yokohama. Did not see whether they were official or private. He handed one to Mr. Hunter after he had read it.

Dr. J. J. R. Dalliston stated that he was an intimate friend of defendant, and formerly lived in the same compound with him. On many occasions Mr. Kirby had spoken to him concerning Mr. W. H. Devine. Did not think he had canvassed him favourably or unfavourably from after the first six weeks till after his dismissal. At first, he spoke very highly of his industry. Never heard any fault found with him up to the time of his dismissal.

Fredk. Towle testified that he had known plaintiff ten years—nearly eleven. Was once manager to Mr. Kirby, and considered plaintiff possessed capacity to fill that post. Never found Mr. Devine guilty of falsehood. He held a Power of Attorney from Mr. Kirby. There had been no previous agreement that he should sign the firm name; nevertheless, he had done so, and it had received the sanction and approval of Mr. Kirby.

Cross-examined.—Witness had signed the receipts for payments by the French Government for over three years during Mr. Kirby's absence. In the first instance, he did it without defendant's knowledge or consent; but afterwards it was known

to the latter and ratified. He ordinarily signed "per procuration." He should certainly think that the Power of Attorney of plaintiff's did not authorise him to sign the firm name.

His Honour.—What is the difference to a business man of signing per procuration and signing the firm name?

Mr. Townley.—I should say the power of signing the name would simply imply greater confidence in a person.

His Honour.—Nothing else?

Mr. Townley.—Nothing else, because I know of many instances where persons are in charge of a business who are not partners sign "per procuration." It is simply to put them in a certain higher position with regard to other persons.

This was plaintiff's case. In reply Mr. Dickinson, after referring to the case of Stagg v. Elliot where bill drawn on a father was accepted "P. Pro." by the manager of a firm, stated that in general he would argue that Mr. Kirby had justifiable cause for dismissing the plaintiff. As a matter of law it was not necessary that the alleged cause of dismissal should be a real cause, if he could shew at the trial, that there had ever been any real cause of dismissal. At first he would shew that a partnership was contemplated, but abandoned owing to plaintiff's conduct; and then that in November an ordinary service was agreed upon; that as soon as defendant's back was turned, he commenced signing the firm name; that there was no such stipulation made as he alleged; his conduct shewed wilful, downright disobedience of direct orders and must shew an evil motive on the part of plaintiff, and in the matter of the letter to the London agents, and in others to which he (the speaker) would refer he had misconducted himself.—But if a servant misconducted himself in only one single instance, his discharge was justified. Amongst other things, he should show how plaintiff's conduct shewed his intention to put himself in such a position as at a future day to be able to claim as partner. As regarded the interview with himself, he would prove by his own oath and books, that plaintiff's account was wholly false, and also give a very different version of the interview with Mr. Kirby. He regretted that it would be a lesson never to extend his good offices to a servant again under such a circumstances.

Edward Charles Kirby testified that he carried on business here and at Kobe as E. C. Kirby & Co. In May, 1872, negotiations with plaintiff for a partnership broke through owing to the vacillations of Mr. Devine. It was intended he should have one-third interest. In November fresh negotiations were commenced with him. It was not then understood he was to sign the firm; it had been before, when a partnership was contemplated. In November, plaintiff never asked to be allowed to sign the firm name. If he had served for three years and conducted himself well, witness might have done so. The letter to the Bank of the 15th January was not a simple *ad interim* power, but was intended to hold good till cancelled. Early in February witness asked Mr. Dickinson to draw up a power of attorney. He said he had not time, but meanwhile would buy a printed form and fill it in. Witness never intended to give Mr. Devine power to sign the firm name. Plaintiff never informed him he was signing the firm name up to the 23rd June, or that he filled in the letter to the London agents with the name of the firm. Between April and June he went to Kobe frequently and received private letters from plaintiff by every mail. He did not receive and read the official letters to the firm. On one occasion Mr. Hunter pointed out to him that a letter was signed E. C. Kirby & Co. He remarked that probably it had been written in a hurry and took no further notice of it. When he came up to Yokohama from time to time, nothing was shewn him to arouse his suspicions. Plaintiff would generally tell him what occurred in his absence. He remembered that on the 3rd May he wished plaintiff to write a letter to Mr. Hunter. Witness did not see it before it was sent off, and was never told by Mr. Devine that he had signed that particular letter with the firm name. Could make a similar answer with regard to all letters. With regard to the draft for £21, witness told plaintiff to get it and forward it to England. Did not remember seeing it. Did not see the endorsement on it. Plaintiff never shewed it him, nor did he examine it. As a rule, he seldom wrote business letters. About the date the draft was sent, he did not think any thing particular occurred to necessitate his writing a letter to Messrs. Cowderoy and Rainbow. [On reference to the letter book, one from Mr. Devine dated 7th April was found stating that the draft was enclosed in a private letter from Mr. Kirby]. Did not make any remark to the effect that his signature had not been sent to the London Bank. He authorised the order to Binninger for the oil, but wrote to plaintiff that "if the order for oil had not gone forward to give it to Mr. Abbott, a traveller for a New York house, and if it had been sent to give Mr. Abbott a small supplementary order." Mr. Devine did not send a small order by him but a large one for 2,500 cases costing about \$4 a case. He would not have sanctioned such an order immediately having followed the other. Would probably lose on the order. Kerosene oil was now selling at about cost price, and some 80,000 cases were on their way here. His special attention to Mr. Devine exceeding his power was called to

it by the letter of the 24th of June. He did not realise at the moment what the effect of such a signature would be. On the 25th, he told Mr. Devine to write a cheque in favour of the manager of the Chartered Bank, which he did, and placed the cheque on witness' desk. He looked at it presently, and was so astonished he sat there for ten minutes or so and did not move. He then went out, to the outer office, to speak to plaintiff about it and cancel the cheque. The latter however, had gone out. Witness thought Mr. Devine's manner peculiar as he brought in the cheque, and had since thought he might have been "trying it on" so as that if witness passed that cheque, he might claim some right to partnership. Mr. Devine did not return to the office that evening, but slept in the house. Witness then found on examining the letter book, the name of the firm had been frequently signed, and next day found out that the cheques had been signed in the same manner. Witness then visited Mr. Dickens who, on his stating he had lost all confidence in plaintiff, said "Then there's nothing to do but to discharge him." He could not in justice to his own interests take back Mr. Devine into his employ. The nature of his business required almost implicit trust to be placed in those in his employ. It was because of the trust he reposed in Mr. Devine, witness entered into so informal an agreement with him. There had been no personal quarrel or disagreement with him. The loss of confidence was one of his principle motives for dismissing plaintiff. Doing so was productive of the greatest inconvenience. Mr. Hunter was on the point of leaving witness, and Mr. Valentine had only just come out from England to take his place. No one else had signed the firm name, except Mr. Townley, who did so in an exceptional case.

Cross-examined by Mr. Ness: Mr. Townley might have signed his firm name without his authority. He managed the business here. If he required an ordinary business letter written, he told his confidential clerk to write it. He did not care to read it afterwards unless the letter was very important, and, in that case, he wrote it himself. He had copied other letters in the same copyingbook without observing the signature of the firm name to Mr. Devine's letters. Did not think anything of the signature pointed out to him by Mr. Hunter, because he imagined it was accidental. He objected to the signature E. C. Kirby & Co. because it would give him unlimited power. "P. pro." implied a limited power only, whilst the signature of the firm name would imply that he was a partner. Had the signature been to a cheque or important document, he should have objected immediately. Though the fact of signing the firm name did not constitute a partnership yet if permitted, it gave a man opportunity to set up a claim to partnership especially in the event of the decease of the other partner.

Witness had known plaintiff in Shanghai and was well acquainted with him. When witness came to Yokohama he did not see all the correspondence. He never looked at the letter book when he came from Kobe, and never saw Devine's signature. Had not, that he remembered, till recently, read any letter in the business letter book copied between February and June. The old acceptances were kept in the safe in the outer office. Never noticed the form of acceptance on the paid Bills of Exchange. Never found fault with plaintiff about the order to Abbott. He dismissed plaintiff because he received the letter from London stating that he had signed the firm name instead of doing as he was directed and signing "p. pro." at the foot of the letter forwarded to the Agents, which witness considered an act of direct disobedience, possibly with a fraudulent intention. The name of the firm had been improperly used at all times, witness considered, but did not know that it had been used outside his own business. Did not know that there was any document which would have had a different effect if he had signed "p. pro." He did not know of any specific injury suffered up to the present time. By saying plaintiff had "used the firm name so as to expose him—self to criminal prosecution" did not know that he had been forging his name to each cheque he had drawn because he had no authority to sign.

Re-examined:—Did not think if he had repudiated the cheques, the Bank could recover the money. It was his duty to superintend all the acts of his clerks, but having confidence in plaintiff did not take the precautions some others would have done. When he went to the Bank, to enquire concerning the payment of the cheque, he was told that Mr. Devine had stated he had seen Mr. Dickens who said his power extended to signing the firm name. Witness then saw Mr. Dickens who denied this.

(The Court here rose.)

19th September, 1873.

F. V. Dickens, sworn, stated that early in February last defendant instructed him to make out a power of attorney for Mr. Devine, as he was going home. Witness said it was a matter of importance requiring consideration, and he had not then time to prepare one. He suggested eventually that a short power made on a printed form, should be temporarily given. He did so because he knew that Mr. Kirby held much

property in Yokohama and it was necessary for some one to manage it. He inserted in the form the power to sign per procuration and to manage the business with the object of limiting Mr. Devine's power. In his opinion, this gave Mr. Devine no more power than he already possessed. In witness' rough diary there was no record of any visit from Mr. Devine in February or March; if he had come to witness specially in the way he alleged, it was extremely improbable witness should not have entered it in his diary. At that time the case of *Mammelsdorf v. Kirby* was pending and witness saw Mr. Devine several times in respect to that case, but never, so far as he could recollect, at his office. The questions Mr. Devine said he had put were never asked witness on any special visit or at any time touching the power of procuration, and he never gave the answer Mr. Devine alleged he did give, and never said at any time to him or any one else, from which that by any reasonable possibility, he could have inferred such an answer. He never in any way told Mr. Devine he had power to sign the firm name, and in fact on one occasion, (not at his office), something was said about the power and he told Mr. Devine his power was limited—that he could only manage the existing business and not initiate new, without Mr. Kirby's authority. On the 28th June plaintiff came to him and implored him with tears in his eyes to intercede for him with Mr. Kirby as his dismissal would damage him in the opinion of the mercantile world and urged it on the ground that witness had given him the alleged authorization, and on witness saying he had never done so, begged him to try to recollect their previous conversation. He looked at his book but found no record of such a visit. If he had not believed from the tenor of his conversation that Mr. Devine had put himself within the grasp of the law, he should not have interfered between the parties.

Cross-examined. Mr. Devine did speak of using the name of "E. C. Kirby & Co.," but did not admit that he had used it improperly. He was evidently of opinion witness had given him that authority, but made no positive statements to that effect. If he had not been in a terrible state of distress, witness would not have interceded for him. The power of attorney was prepared in great haste, and was intended to be replaced by another more definite and fuller when Mr. Kirby went to England, giving Mr. Devine more authority. What the difference was to be was not then decided upon. The chief object of the power given was to enable plaintiff to manage Mr. Kirby's landed property here. It was a somewhat vague power, but perfectly distinct so far as it went. Should not have told Mr. Devine it was vague, if he had asked. It was vague; because it did not distinctly define his duty and authority. It was a power generally to manage; but not a general power to manage. The latter would be the same power as the principal had. Devine was to sign p. pro., that people might know he was acting under a power of attorney. It did not imply a general agency, but a special agency in so far as it was intended plaintiff should manage the business as a manager, and not as a partner. He invariably entered every interview he had with clients by whom he was retained. Several relative to Mr. Mammelsdorf's suit were entered and such a conversation as he had referred to might have occurred at one of these consultations. He believed that such a consultation did not take place, and that if one had taken place, it could not have escaped his recollection. He would swear most positively, it did not take place. He never stated to Mr. Devine it was not likely to have been entered in his book.

R. B. Baker, manager of the Chartered Mercantile Bank, deposed that he did not think the plaintiff, under the power given, was justified in signing the firm name. If the power had been shewn him, he would not have honoured the cheques drawn. Signing per pro. denoted a limited power and confidence, and signing firm name unlimited power. He considered Mr. Devine ought to have signed the letter of advice to London "per pro," as the part defining that was specially underlined. Under such circumstances, he thought an employer would be justified in losing confidence in a servant.

Cross-examined:—Witness considered that the plaintiff had exceeded his power in using the firm name. He had a right to draw money by signing "per pro." If Mr. Kirby had disputed the cheques, the Bank would have been liable to him for the whole. The plaintiff's power ought to have been inspected at the Bank, but was not.

Mr. Jackson, manager of the Hongkong & Shanghai Bank, deposed that under the power Mr. Devine had the right to draw money from the Bank, but only in one particular form. He was not at all justified in signing in the way he did. Witness considered the money obtained improperly, though the result of signing in the other and proper way would have been the same. If he had once found a cheque signed in an improper manner he would at once have obtained a written ratification from the principal. Signing per pro. indicated a limited authority, and using the firm name usually indicated partnership. The firm name was, however, often used by persons holding powers of Attorney.

Mr. Fraser deposed that he should consider himself, if sign-

ing the firm name to such a letter as the letter of advice to London, guilty of disobedience to the instructions in the body of the letter. Signing the firm name instead of per procurator would be an excess of power.

In reviewing the case, Mr. Dickens raised a point as to whether under the order in Council the Court ought not to be presided over by the Consul, and whether under the 63rd Section, assessors should not have been called.

His Honour replied to the effect that the first question had been decided, and it was too late to raise it; whilst as to the latter, the Secretary of State's certificate had been extended to give the Court power to sit as it was then doing.

Mr. Dickens contended that the defendant's reasonable expectation of plaintiff's trustworthiness had not been satisfied, whilst the stipulation as to signing the firm name was a mere matter of credibility of witnesses. If such a stipulation had been made, how was it that plaintiff had signed properly during the time Mr. Kirby was in Yokohama, and not used the firm name till after his departure from Yokohama? All the points in Mr. Kirby's conduct were strongly indicative that no such stipulation was agreed to. Such a concession would have put the plaintiff in the position of a salaried partner, and it was hardly likely after the former vacillation of Mr. Devine, Mr. Kirby would so place him. No sooner was the defendant's back turned than plaintiff—who only had the most limited power a servant could have—arrogated to himself the fullest and most extensive; and in face of the instructions in the business and private letters, made use of the firm name in the letter of advice to Cowderoy & Rainbow, thus committing a gross and wilful disobedience of plaintiff's orders. This might have led to very serious consequences to Mr. Kirby, and even yet might do so. After Mr. Kirby had received the letter from Cowderoy & Rainbow, his attention was again attracted by the cheque signed in the firm name. It was the plaintiff's trump card which he was then playing. All the plaintiff's witness, all their evidence was in defendant's favour, and the whole question turned on the evidence of the chief parties to the case. After citing cases to shew that a single wilful disobedience entitled a master to discharge a servant, he contended that besides the acts of disobedience in regard to the letter of advice to London, and the giving a very large order to Mr. Abbott instead of a small supplementary order, the action of plaintiff shewed an intention to advantage himself, by causing himself to be regarded as a salaried partner, and either to thus gain at the expense of his principal a higher mercantile rank than he actually held; or to place himself in such a position as to be able to set up a claim to actual partnership. Had Mr. Kirby gone to England and died there, he would have been in possession of a mass of evidence upon which a very pretty claim to partnership might be founded. His conduct was certainly such as to expose him to criminal proceedings. Where a man signed another's name without particular power to do so, the law would infer fraud on his part, and that the act was fraudulent. Had the Bank repudiated the cheques, and plaintiff been brought up on a criminal charge, what evidence could he have offered in his defence? It was not misuse of money which was complained of, but the fraudulent assumption of the name of the firm at the expense of his principal. If it were set up that Mr. Kirby must have seen the official letters sent to Kobe, that would not ratify the signature to the letter to the London agent. It was impossible that he should have given such advice as Mr. Devine alleged after a few days previously preparing the Power of Attorney. If he had given such advice how could he have advised Mr. Kirby to discharge Devine for acting upon it? The conduct of the defendant must be taken as *bona fide*, and the only question for the Court to determine was "Was Mr. Kirby reasonably justified in losing all faith in Mr. Devine?" He submitted that he was.

In reply on the whole case, Mr. Ness contended that neither of the five justifications for plaintiff's dismissal had been proved—neither incapacity, disobedience, falsehood, absence from duty, nor improper use of the firm name. It had been laid down that to justify the dismissal of a servant moral misconduct, wilful disobedience or habitual neglect must be proved. The order for oil had been instanced as a case of wilful disobedience; but really at the most, it was only an error of judgment, and defendant's own letter shewed that he had expressly advised plaintiff of his desire to do a large business with Mr. Abbot's firm. The cases cited for the defence were not parallel with this. Before the defendant could rely on the signature to the letter to Cowderoy and Rainbow, he must first prove that it was used in bad faith, whilst as to the charge of falsehood, based on the allegation that Mr. Dickens had advised him he had a right to use the firm name, the coherency of the plaintiff's statement and his subsequent conduct caused the reasonable supposition to be that the interview had escaped his learned friend's memory. The idea of plaintiff's having committed an act of forgery was absurd, and had been set up to show *mala fides* on the part of plaintiff. Defendant had also failed to prove absence and had

altogether broken down. Even under the power of attorney given plaintiff had a right to sign the firm name. The rule of law was that the agent was bound to sign deeds under seal with his principals name alone and not introduce his own name at all. There had been no decision against a principal's name alone by an attorney. By *Story on Agency* it was laid down that it could not be absolutely necessary to the validity of an instrument if the agent should sign it with his principal's name without stating it was by Attorney. Thus, if it were legal to sign the firm name without expressing his agency, he had a right to do it. He argued that *per procurator* had not been properly interpreted in England and as was shewn by *Story*, simply meant "by the hand of another." With regard to the plaintiff's signatures he contended that they had been ratified. The fact of Mr. Kirby's having opened the cover containing both the private and official letters shewed that he must have seen the signature used. How else could he have distinguished between them. It was simply an insult to one's intelligence to ask one to believe that the plaintiff could have gone on signing the firm name for four months without its being observed by his principal. Was a man, desirous of fraudulently using such a signature, likely to see the manager of the Bank on which the cheques were drawn and consult the defendant's own legal adviser on the propriety of doing so. With regard to damages, the charges of forgery had been publicly made in Court and the sum sued for was the smallest that would reinstate plaintiff in his commercial position.

Judgment was reserved.

J. H. SMITH and J. WYNN v. J. H. WILKIN.

Mr. Ness supported, and Mr. Dickens defended the motion, which prayed the Court to restrain defendant from receiving or collecting monies for Captain Wm. Black or for the firm of Black, Batavus & Co., on the ground that it was expedient that the Estate should be liquidated and that defendant's presence was prejudicial to the interests of the creditors under the recent judgment.

His Honour questioned whether a precedent existed for such a motion, and especially in the present case desired not to overstep his powers. Under the aspects of the case, which on the face of it shewed a desire to defeat the judgment of the Court, he did not see how he could possibly interfere, as there were other modes in which Mr. Ness might obtain his end. His Honour contended: If people will do all they can to defeat their creditors, it is difficult for me to interfere. But I can do something else, and if such persons are brought before me I shall feel inclined to do it, and to punish them for what they are doing. You see Mr. Ness, every possible obstacle will be thrown in your way, and I ask you is it worth while going to the trouble and expense? Let it alone: see if there really has been any fraud committed, and if there has been, prosecute the parties. As they intend to fight it to the death, let them take the consequences.

Ultimately, His Honour refused to make an order restraining defendant from receiving or collecting monies or in any way intermeddling with the personal estate of Wm. Black, and adjourned the motion *sine die*.

## Shipping Intelligence.

### ARRIVALS.

- Sept. 13, *Golden Age*, American steamer, Coy, 1,870, from Shanghai, General, to P. M. S. S. Co.
- Sept. 16, *Saco*, American gunboat, Captain McDougal, 418, from Kobe.
- Sept. 18, *Ariel*, American steamer, Newell, 1,736, from Hakodate, General, to P. M. S. S. Co.
- Sept. 18, *Benedi*, British steamer, Buchanan, 990, from Shanghai and London, General, to Macpherson, Marshall & Co.
- Sept. 18, *Cadmus*, H. B. M.'s corvette, Captain Whyte, 1,400, from Hakodate, September 18th.
- Sept. 19, *Menzaleh*, French steamer, Mourrut, 1,008, from Hongkong, Mails and General, to M. M. Co.
- Sept. 20, *Colorado*, American steamer, Harris, 3,836, from Hongkong, Mails and General, to P. M. S. S. Co.

### DEPARTURES.

- Sept. 13, *Trafalgar*, British steamer, Watson, 846, for Hiogo, General, despatched by Jardine, Matheson & Co.
- Sept. 15, *Relief*, American steamer, Corning, 795, for Hakodate, General, despatched by P. M. S. S. Co.
- Sept. 15, *Nympe*, German corvette, Von Blanc, 1,800, for San Francisco.
- Sept. 16, *Fantic*, American sloop, Stanton, 1,000, for Chefoo.
- Sept. 17, *Bombay*, British steamer, Davies, 1,825, for Hongkong, Mails and General, despatched by P. & O. Co.
- Sept. 17, *Brami*, German Brig, Roder, 189, for Chefoo, in Ballast, despatched by Walsh, Hall & Co.
- Sept. 18, *Golden Age*, American steamer, Coy, 1,870, for Shanghai and Ports, General, despatched by P. M. S. S. Co.

## PASSENGERS.

Per American steamer *Golden Age*, from Shanghai. For Yokohama. The Embassy of Japan to the Treaty Powers, consisting as follows viz:—

His Ex. Iwakura, Junior Prime Minister and Ambassador Extraordinary.

His Ex. Ito Act. Minister of Public Works and Associate Ambassador Extraordinary.

His Ex. Yamaguchi, Assistant Minister of Foreign Affairs and Associate Ambassador Extraordinary.

Tanaka, Commissioner of Finance Department; Kourimoto, Komatz, Sougiwoora, Secretaries; Kounie, Private Secretary to Chief Ambassador; Itchikawa, Kawage, Tomita, Sougiwama, Attaches Finance Department; Chas. Walcott Brooks, Attache Diplomatic Department; Rinoski Yamaguchi, Mastmoto, Sagara, Wm. J. Hancock, Attendants; Mr. H. McGregor, Mr. and Mrs. D. Marks, Mr. Ide, Japanese Consul General, Messrs. Edw. G. Mayne, G. Duplaquet, S. Chapman, E. Jov, E. Behncke, M. S. G. Nugent and 9 Japanese, in the cabin; 4 Europeans, 73 Japanese, and 14 Chinese in the steerage.

Per *Bombay* for Hongkong.—Captain Blake and servt, Captain Leet, R. N., Mr. C. S. Brown and Mr. Davies.

Per American steamer *Ariel*, from Hakodadi.—Mr. A. Howell, Mrs. Howell and family, Mr. J. Albion, General Cannon, Mr. J. Thorne, Rev. Polly, Mr. Tokunaka, Mr. Yudzi, and 24 in the steerage.

Per American steamer *Golden Age*, for Hiogo.—Messrs. W. W. Cargill, S. Ohata, C. Esdale, 4 Japanese, in the cabin; and 54 in the steerage. For Nagasaki.—H. E. Von Weckhelin and 35 in the steerage. For Shanghai.—Mr. L. Ensell, Mr. J. Sheldon, Capt. Garcia y Garcia, Messrs. J. F. Elmore, G. Garland, Jno. Thorne, Mrs. Deacon, Mr. A. Kaier, and 10 in the steerage.

Per French steamer *Menzaleh* from Hongkong.—Messrs. Yamamoto, Morstuy, Durand, Clin, Laplace and wife, Kerest, Franck Perrin, Pillet, Farnkora, Denis, Nicolas, Argenson, Kaurier, Paizel Aérocezl, Meillier, Valentin, Gaillametel, Courtot, Madame Cousot, Messrs. Saulies, Simon, Rodin, Roux, Bersani, Charponel, Lefeu, Yasanda, Shinto, and J. Whitall.

Per *Colorado*, for Yokohama.—W. J. S. Cannon, R. N., and servt, M. Hayashi and servt, A. Hase and servt, Otto Weylandt, H. Gilliat and servt.

For San Francisco.—Miss Reynold, S. H. Clarke.

## CARGOES.

Per *Bombay*, for Hongkong:

Silk ..... 428 bales.

Per *Colorado*, from Hongkong:—

Treasure..... 837.647.

## REPORTS.

The American steamer *Golden Age* reports:—

Left Shanghai, Sept. 5th, 9.33 a.m. { Strong S.S.E. winds, thick  
Arrived Nagasaki „ 7th, 7.47 a.m. { rain and foggy weather during  
the passage.  
Left „ „ 8th, 0.45 a.m. { Light variable winds and  
Arrived Hiogo „ 9th, 5.34 p.m. { light rain.  
Passed U. S. Ship *Saco*,  
bound our course 8.38 p.m.,  
Sept. 11th, and exchanged  
signal with Co's steamer  
*New York*, bound for Hiogo  
10.30 p.m. experienced strong  
N.N.E. winds with rough sea.

The *Saco* reports strong head winds and a considerable swell; had to put into Simoda for shelter, and lay there thirty hours. Heavy rain and blowing hard all the time.

The British ship *B. each*, is now at anchor on the eastern side of the Bay about 8 miles from the light ves el.

CAMP, Yokohama, 19th September, 1873.

C. S. F. FAGAN,—Lieut.,

R. M. L. I.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, SEPTEMBER 20TH, 1873.

THE ONLY mail arrival during the past week has been the *Menzaleh* from Hongkong on the 19th inst. The *Bombay* sailed hence on the 17th inst.

The cargo of the O. S. S. Co.'s *Patroolus* has been brought on by the *Colorado* from Hongkong.

The *Bombay* took hence 428 bales of silk.

The *Colorado* brings \$37,647 treasure from China.

Latest telegrams announces a slightly better feeling in the silk market. Grey Shirtings, 8½ lbs., 9/7½ per piece.

**COTTONS AND COTTON FABRICS.**—There has been a somewhat heavy week's business in *Shirtings*, which influenced by the activity of the demand have advanced considerably in price. This, owing to the bareness of stocks, has been more noticeable in the heavier numbers although light weights have participated in the advance, 7 lbs. goods having changed hands at 2.25 per piece. Total sales amount to about 35,000 pieces. It may be observed that stocks consist chiefly of low and medium qualities, and that the demand runs upon the better makes with which the market is by no means well supplied.

In Taffelclass rather more business has been done although at prices which are by no means satisfactory. *T-Cloth* receives but little attention, and *Turkey Reds* and *Velvets* have been in less favour. In other goods there is little, if anything doing.

**YARNS** have not been in such active demand during the week. Some 400 bales have, however, changed hands at the rates quoted below, and a good feeling would seem to prevail in the market.

**WOOLLENS AND WOOLLEN MIXTURES.**—The general tone of the Woollen market has gained in strength during the past week and transactions indicate a decidedly favourable change. A large enquiry is to be noted for all descriptions of woollen and mixed fabrics, though up to this point we are unable to quote higher prices for goods, the low rates to which they have fallen still continuing with but little exception. The quotations given are nominal.

**IRON AND METALS.**—We are glad to observe that a better feeling seems to exist among native dealers as indicated by the increased enquiry for iron. As yet, however, there has been but little growth of business virtually, the week's settlements not exceeding some 50 tons. Stocks continue large and may be stated at 5,000 piculs *Flat and Round*, 6,500 piculs *Nail-rod* and 800 piculs *Hoop*. There is nothing doing in other metals.

**SUGAR.**—The business of the past week has been limited to insignificant transactions, but the market maintains a firm position at about quotations undernoted.

Sales have been 300 piculs *Chimpak* ... .. @ \$8.25

" " 90 " *Pingfah* ... .. @ \$9.00

Arrivals have been 13,600 piculs per steamers from Hongkong.

## COMMERCIAL INTELLIGENCE.

(Continued.)

## EXPORTS.

**SILK.**—Since the 6th instant, owing to a large business done in imports requiring prompt remittances, and sterling exchange rates remaining at unprecedentedly low values, a number of buyers have operated very largely at firmer prices. We estimate the settlements for the past fortnight at full 1,000 Bales, and, with fair arrivals, stocks are now about 900 bales. As yet, very few parcels of really fine grades have appeared, and the dealers are very firm in their demands for these, as prices in the interior, continue to be generally higher than the market rates at the open ports so they allege.

**SILK WORMS' EGGS.**—The native dealers agree in stating that the total production of this season has been 2,400,000 Cards and the export is said to have been arbitrarily limited by the Japanese Government at 1,300,000. The consumption of Japan being estimated at 600,000 Cards leaves a surplus of 500,000, which must either perish in this country or somehow or other find its way to the European markets. In other words the export of this year may eventually reach 1,800,000 cards and the effect of such a contingency on the price of Silk at home is worth considering.

Total arrivals are 18,000 cards against 500,000 last year at the same date, and there is not a single transaction to record.

**TEA.**—The improvement in rates in our Tea market in last issue has been fully confirmed and an advance of from \$2 to \$2.50 per picul has been established in all grades under "full fine." Finest and choice lots are deemed rather too high at present and but little business has been done in these. Settlements for the week amount to piculs 2,600 and supplies are coming in very meagrely.

This line of conduct on the part of native producers and merchants is exceedingly puerile, since it is obvious that to effect any extensive execution of home orders a still further decline is imperative from the low prices current at the opening of this month.

The *Etta Loring* is nearly full and will have speedy despatch for New York. The *Morro Castle* is also taking in freight for same port, and the *Clausina*, to follow, has been laid on.

VOL. IV.—No. 39.] YOKOHAMA, SATURDAY, SEPTEMBER 27, 1873. [PRICE \$24 PER ANNUM.

## DIED.

On the 22nd instant, ETIENNE AUGUSTE PRADIER, (lately of the firm of Sigrist & Pradier), aged 35 years.

On the 22nd instant, at Yedo, Mr. HAYASHI, Vice Consul for Japan, at Hongkong.

At the General Hospital, on the 24th instant, NICHOLAS WILLAUME, aged 27 years, late Agent of the Hongkong and Shanghai Bank at Saigon.

## Notes of the Week.

THE velocities of the recent blow, as observed by means of a self-registering anemometer at the Lighthouse Establishment at Bentsen, were as follows:—

From 4 p.m. of the 22nd to 8 a.m. of the 23rd, the average velocity was 19 miles per hour. From 8 a.m. to 4 p.m. of the 23rd, the average velocity was 27 miles per hour. The greatest force was attained about 1 p.m. on the 23rd, when the velocity was at the rate of 40 miles per hour, the equivalent pressure being 8 pounds per square foot. The direction of the wind was then N. N. W., the standard barometer standing at 28.76. Shortly after the wind changed to W. by N., its violence lessened, the barometer rose, and the centre of the typhoon had evidently passed us.

The wind on the night of the 22nd was N. E., with a rapidly falling barometer, and the typhoon must then have been approaching us from the southward, the centre travelling in a north easterly direction and passing closest to us when it was about east, distant from us, probably, though it is impossible to judge correctly without data, about 20 or 30 miles. This presumption is borne out by the extremely high tide on the night of the 23rd, the water then rose to nine feet above ordinary low water, being three feet higher than is usual. A northerly wind has generally the effect of keeping down the tide, but in this case it had a reverse effect, so shewing that the wind must have been blowing from an opposite direction outside, and that therefore the centre of the typhoon was between us and the mouth of the Gulf.

The wind was at no time sufficiently powerful to be termed a storm, being at its worst what is denominated by meteorologists as a "high wind."

During the storm which passed over London in February, 1873, the velocity of the wind was registered to be 85 miles per hour, and the pressure about 36lbs. per square foot, being  $4\frac{1}{2}$  times as powerful as this blow. The excessive rain, however, which accompanied it, made it unusually disagreeable, and rendered the wretched tenements which Europeans inhabit here almost uninhabitable.

We must be pardoned for transcribing the following scene from one of the best known books in the world.

"Then went the jury out, whose names were, Mr. Blind-man, Mr. No-good, Mr. Malice, Mr. Love-lust, Mr. Live-loose, Mr. Heady, Mr. High-mind, Mr. Enmity, Mr. Cruelty, Mr. Hate-light, and Mr. Implacable; who every one gave in his private verdict against him among themselves, and afterwards unanimously concluded to bring him in guilty before the Judge. And first, among themselves, Mr. Blind-man, the foreman, said, I see clearly that this man is a heretic. Then said Mr. No-good, away with such a fellow from the earth. Ay, said Mr. Malice, for I hate the very looks of him. Then said Mr. Love-lust, I never could endure him. Nor I, said Mr. Live-loose, for he would always be condemning my way.

Hang him, hang him, said Mr. Heady. A sorry scrub, said Mr. High-mind. My heart riseth against him, said Mr. Enmity. He is a rogue, said Mr. Liar. Hanging is too good for him, said Mr. Cruelty. Let us despatch him out of the way, said Mr. Hate-light. Then said Mr. Implacable, might I have all the world given me, I could not be reconciled to him, therefore let us forthwith bring him in guilty of death. And so they did."

We have had a very similar trial in our local Vanity Fair of Mr. Missionary, and a jury has recorded much the same foregone conclusion, miscalled a verdict upon the evidence. Whether he taught Christianity or whether he did not, the Missionary was to be condemned, and condemned he was. When a packed jury gets into the box with minds made up before a word of evidence has been heard, we all know what the result will be, and the case before us illustrates this.

Yet we must charitably hope that it would be very unjust to identify all those who have recorded their verdict in this trial with the jurymen in Vanity Fair. On the contrary, indeed, we entirely believe that there may be among them men who are as worthy members of society as those whom they arraign. What then is the cause of the extreme bitterness which characterises their judgments on this question? That it does not arise from any general aversion to Christianity as a religion or system of ethical philosophy, is sufficiently manifest, though it must be admitted that disbelief of the supernatural nature of our religion is apparent in every line of these judgments. An apostle of old in addressing his converts, said, "Marvel not, my brethren, if the world hate you," and the missionaries will adduce this as a prophecy of the fate which was predicted for them and which they are patiently willing to face. We shall not, however, accept this plea too easily. The world is quite tolerant enough and generous enough to admire what is truly admirable, and though men are perhaps prone to express very decided conclusions about matters which they take little real pains to master,—and this has certainly been the case in this late discussion—we think the contempt and scarcely concealed aversion which most of the writers adverse to missionary exertion have displayed, has some deeper seat. Where is this?

Setting aside the disbelief in the truth of Christianity which has inspired many of the communications on this subject, we think the seat of this bitter antagonism is two-fold. First, it appears to us to lie in a modern tendency to shift the ideal of character from one which embodies the more passive, to one which illustrates the more active, virtues; and, second, in a strong belief to that the departure in the average missionary of to-day from the great types which in former days surrounded the avocation with universal respect and admiration, is far greater than it need be. Take, for instance, the example and commands of the Founder of our religion. "And it came to pass that, as they went on the way, a certain man said unto him, Lord, I will follow thee whithersoever thou goest. And Jesus said unto him, foxes have holes, and birds of the air have nests; but the Son of Man hath not where to lay his head. And he said unto another, follow me. But he said, Lord, suffer me first to go bury my father. Jesus said unto him, Let the dead bury their dead; but go thou and preach the Kingdom of God. And another said, Lord, I will follow thee, but let me first go and bid them farewell which are at home at my house. And Jesus said unto him, no man having put his hand to the plough, and looking back is fit for the Kingdom of God." .. ..

"Provide neither gold nor silver, nor brass in your purses, nor scrip for your journey, neither two coats, neither shoes, nor yet staves, for the workman is worthy of his meat." Fifty similar passages from the Gospels and Epistles might be added to these. It is the barefooted enthusiast who converts the world, and it is incontestable that the great missionaries of the Church who brought whole kingdoms under the flag of the Cross, gained their triumphs by a literal following out of these commands. The modern missionary is married, and has a salary, an allowance for rent, coals and candles, and for every child born to him. Now, we have nothing whatever to answer to those who say that a man must have a coat and shoes, and should have a wife and a house and meals and candles, but this;—"We find no mention of these things in your orders, but as prohibited; and if you cannot carry out these orders, you are not the man for this high work. You put your hand to the plough, but persist in looking back. If so, you are not a fit instrument for the Kingdom of God." Into the practical difficulties of such a course of action as that enjoined, we refuse to enter. We only say that this is distinctly what Christ commanded; and we must confess that his religion is as little like the Christianity of creeds and churches as the modern Missionary is like him or those missionaries he sent abroad, and who undoubtedly laid the foundation for the conversion of the world. The modern missionary may be, and generally is, a very worthy man, but that he is not the man contemplated by his Master as a fit servant for this work, admits, to our mind, of no possible question, and Carlyleism, which is a very powerful solvent existing in the mind of the modern world, pronounces against him—whether fairly or unfairly is another question. We are certain that this is one of the reasons for the excessive bitterness men display on this subject.

The other reason we have adduced, viz: a change in the modern ideal type of character, is less active in its antagonism, but it appears to us to operate with sufficient force to make itself felt. It tends to make men indifferent to, if not slightly contemptuous towards, the somewhat passive virtues of the Christian type, and to the men who embody these. Humility, resignation, patience, and the group of virtues which are rather amiable than heroic, are somewhat out of fashion,—possibly because the strong antagonisms of modern society and modern thought demand champions,—and it is impossible to say how far the scepticism which is rapidly destroying the supernatural foundations of our religion (using the word supernatural in its ordinary sense, and not in the higher sense which the Duke of Argyll pleads for in the Preface to his *Reign of Law*) may not infuse new ingredients into the accepted type of character of the future which will largely modify our estimate of the type now held to be the most perfect. There is an evident tendency in this direction, in spite of the sublime heroism, all the more sublime perhaps for the entire absence of all defiance in it, displayed by Him whom we acknowledge as the great Christian example.

The practical question at issue is whether, on the whole, the influence of missionary effort is wholesome and civilizing, and on this we have already expressed our very decided opinion in the affirmative. But that it is far below what it ought to be, and might be, in this respect, were the generality of missionaries men of an altogether different type, admits of no doubt in our mind. "The enthusiasm of humanity" must come into operation before we ever again see any great triumphs from missionary exertion, and the men who possess or can exhibit this know nothing about wives, houses, coals and candles. We have ever thought that celibacy is the first requisite in the highest type of the missionary. We do not want men to be unmarried; but what we would have is that they should count the cost before they enter into this high service, and if they cannot pay it, we should reject them. There are fifty good arguments against this view, but there are a hundred and fifty better arguments for it. Such work as this demands all or nothing.

On reviewing the discussion, which we hope has now been closed by the letter published elsewhere addressed to the *Japan Herald*, it is impossible to doubt that its main characteristic has been its thorough unmanliness. As far as

we remember, not a single antagonist of the cause has appended his name to his letter, and considering the small size of the missionary body in this country, most of these letters must have acted as personal anonymous attacks upon individuals, wholly unprovoked and wholly unjustified, and Yokohama, as it seems to us, has great cause to be thoroughly ashamed of the whole affair.

THE following admirable letter appeared in the *Japan Herald* of Thursday evening last. It is the one redeeming feature of the correspondence which has appeared in that Journal on the grave and important subject which it treats. Our object in republishing it is to show both our foreign and native readers, some of whom may easily have been led to form erroneous conclusions upon the question at issue, the light in which it appears to one who can view it from the standpoint of a calm and well-balanced reason fortified with equally well-balanced emotions.

To the Editor of the *Japan Herald*.

SIR,—The "Missionary" correspondence which has of late occupied so much space in the columns of the *Herald*, has beyond question attracted public attention throughout Japan. This is a classic land of missionary effort. Christianity was planted here, flourished here, and expired in gloom and blood long ere Protestant Christians had appreciated their duty to the heathen. Now that the tide has turned, and the whole Christian world has resolved to do what the Roman church failed to do, we to-day see under our eyes missionaries, their labours and their past success; hence the missionary cause is a subject not only perfectly pertinent to the columns of the leading journal published in Japan, but it is a subject of deep interest to all the well-wishers of the Japanese people. It is therefore to be regretted that one portion of the community should have displayed a seeming acrimony that has been met with contemptuous disdain by another part. I submit whether such policy is the best way in which to elicit the opinions of men whose sheet-anchor is truth—not victory.

In the opinion of learned, wise, and noble hearted men, Christianity furnishes a system of religion, morals, and philosophy, absolutely perfect. They think that that system broke down the fierce materialism of Rome, that it emancipated the lower orders of society from grinding serfdom,—that in esteeming Mary blessed, it raised women from slavery to the dignity of equality with man,—that it preserved ancient learning during the feudal ages, and finally beat down feudality under the feet of modern democracy. They believe that Christianity has filled Christendom with thousands of institutions for the relief of the suffering, on a scale that the world has never beheld and never will behold in a heathen country. They believe that the system of Christ is one full of benevolence, full of hope, and calculated to raise men from the bonds of superstitious terror to be a little lower than the angels; now if to this be added the much more that might be adduced *in extenso*, the fact that all denominations hold to the doctrine of conversion, the necessity of missionary effort naturally follows. If God works by means; if Christ has commanded missionary effort; if missionary effort, and that alone, has been the means of propagating Christianity from Jerusalem to Yokohama; if man as a free agent must first hear the word, before conviction can reach his mind, then missionaries are not mere results of fanaticism, but simply the outcome of the system. As for missionaries themselves, the day has gone by in which as a body they can be treated with scorn. The names of Ricci, Scholl, Morrison, Judson, Marshman, Medhurst, and a countless host of other men, have associated imperishable glory around the name of missionary. The writer is not alone of this opinion, he shares it with Professor Agassiz, Karl Ritter, (the geographer,) Balbi, (the great encyclopædist,) Herschel, and many other distinguished scholars, who have done themselves the honour of acknowledging their indebtedness to missionaries for their efforts in the cause of scientific truth.

Certain it is that as a body, they compare at least favourably both as to intellect and morals with the trading class of foreigners in this country, while at home they are esteemed and beloved. Why they should be singled out for attack, and not the lawyers, or physicians, is not easy to see, unless their forbearance makes them fair game, for those who would not dare to insult and vilify the medical and legal professions. There may be unworthy men in all these professions, but while honourable men are connected with them they will continue redeeming the reproach of some few pretenders in religion, pettifoggers in law, and quacks in medicine.

In the meantime let us hope that the time will come when a discussion of this kind may be held in terms compatible with that respect which is due from equals to equals. Till then, controversy is impossible, and discussion a mere rignarole of personalities.

Yours truly,

FIAT JUSTITIA.

Yokohama, September 24th, 1873.

It is impossible to be satisfied with the judgment pronounced on the Japanese who lately assaulted Inspector Blockley, of

the Railway Department, and who was sentenced to pay a fine of fifteen *ryos* on the ground that his crime, which would otherwise have been punished with two years imprisonment, was committed in a fit of insanity.

If clearly proved to have been insane at the time the assault was committed, the man should have been acquitted and placed under restraint or surveillance. The evidence in regard to his conduct gives colour to this explanation of it, and the infliction of a fine under such circumstances is absurd. It was a question between the two years imprisonment, and acquittal under some guarantee of the State or his friends taking charge of him. There was no sound third alternative possible.

A MANUFACTURER of Bitters, H. Underberg Albrecht by name, whose wares, under the device "*Occidit, qui non servat*," are much advertised in the German papers in Europe, recommends them to the public on the guarantee of much Imperial and Princely patronage, including that of "His Imperial Majesty the Tycoon of Japan, and His Imperial Highness the Prince of Japan."

The Bitters may, for all we know, be good enough. The device is modest—"Immortalis, qui servat" would have been more in harmony with the present school of puffery—and the Crowned Heads of Europe may, equally for all we know, take them as the Elixir of Life. But if Mr. Underberg Albrecht wishes to be believed, at least in this country, he must take out the names of the Tycoon and Prince of Japan from the list of his customers, as such people have no existence, and his claim to the contrary somewhat invalidates such other portions of the advertisement as may be true.

WE must ask our readers to excuse the non-appearance of our usual Meteorological Tables for a few weeks. The observations are made as usual, but they cannot be reduced until the return of the gentleman, now away, who is so good as to furnish us with the tables.

A CURIOUS pageant marked the interment of the still-born child of the Mikado on Thursday week last. The higher officials paid visits of condolence at the Kunaisho.

#### *From the Japan Mail Daily Advertiser.*

THE following telegram was received on Saturday evening last:—"Financial crisis in New York. Jay Cooke & Co. failed." [It will be remembered that this House had the agency in London of the American Government.]

Another version of the position of financial matters in New York is given in the following telegram. "Financial crisis in New York: several banks have failed."

It was reported some time back in one of the Yokohama daily papers that the Empress was pregnant. This was untrue. It was one of the morganatic wives of the Mikado from whom an heir to the Throne was expected, and Yedo is now in mourning for the death of the prematurely-born child of this alliance. Mourning consists in the abstinence for a prescribed period from the use of musical instruments.

THE *Donnai*, with the French mail has met with an accident to her machinery which will detain her at Galle some days. Her mails may not be expected here before the 8th or 9th October.

In consequence of the unusually heavy floods caused by the rains of the 23rd, it was thought prudent to discontinue the ordinary forenoon passenger trains on the Railway on the 24th inst., until a thorough examination of the line and works had been made. The result of this was found satisfactory, the line is uninjured, and the service was resumed as usual.

THE following meteorological data are interesting:—  
22nd September.—At 9 a.m. the barometer stood at 29.83. The humidity of the atmosphere was .974. Rain set in and much wind from N.N.E.; glass began falling; at 3 p.m. stopped until 7 p.m. when it began to fall more rapidly. At

10 p.m. bar. 29.74: remained stationary until 11 p.m. then began falling quickly.

23rd September.—6 a.m. Bar. 29.32 wind N. by W. Much rain. 9 a.m. bar. 29.15; humidity of atmosphere .989. Glass fell until 2 p.m. when it marked 28.77 with wind from N.N.W. At 2 p.m. began to rise rapidly and the weather to clear; shortly afterwards the rain ceased and the sunset was bright.

In the 24 hours from 9 a.m. on the 22nd till 9 a.m. on the 23rd. 6.48 inches of rain fell, and from 9 a.m. until noon on the 23rd 2.23 inches: making a total for the 27 hours of 8.71 in.

It may be considered certain that the edge of the South Western quadrant of a very violent typhoon, travelling in a N. W. direction, passed over Yokohama, a conclusion strengthened by the unusual height of the tide in the afternoon of the 23rd.

Two landships occurred on the Eastern Bluff during the heavy rain of the 23rd, one of which was unhappily attended with loss of life.

THE Honourable Mr. Bingham, the newly appointed American Minister to this country, arrived on the 25th inst., in the *Japan*. Mr. Bingham is accompanied by Mrs. and the Misses Bingham.

THE P.M.S.S. Co's Steamer *Japan* which arrived on the 25th inst. brings an unusually large number of passengers for Japan and China. No intelligence of the impending financial crisis had been received at San Francisco at the time of her departure, but a perusal of the latest journals leaves little doubt that the unsound position of the financiers was pretty accurately known, and that few have been taken by surprise by the collapse which has occurred.

WE learn that a branch of the "Globe Parcels Express" is about to be established in Yokohama with the view of affording facilities for the transmission of small parcels to Yedo. At the present moment there is no organised service—the Railway Company undertaking merely the carriage over its lines—for the collection or delivery of parcels either here or in Yedo, and the European inhabitants of the metropolis are put to much inconvenience and expense in obtaining trifling supplies from Yokohama. A well-organised service under responsible European management is likely to prove eminently useful provided that it shall secure to the public punctuality, safety for its property, and a low scale of charges.

HIS EXCELLENCY TERASHIMA, the Japanese Minister in London, will leave for Japan by the French mail of the 29th inst. We understand that his departure from England is necessitated by ill-health, and that his successor is not yet appointed.—*L. & C. Express*.

#### IMPERIAL GOVERNMENT RAILWAY.

##### YOKOHAMA STATION.

September 25th, 1873.

Statement of Passenger Traffic for the week ending Sunday September 21st, 1873.

Passengers.....	28,095.	Amount.....	\$8,029.31
Goods and Parcels.....			238.31

Total.....\$8,267.62

Average per mile per week \$459.31.

18 Miles Open.

WE were witness yesterday to a very interesting proceeding, namely, the scientific "improvement" of seaweed previous to its being exported. A large quantity is bought by the Chinese here for export to China, but the importers in China do not get exactly what the Japanese dealers bring to market. The straw bags in which the commodity is handed over to the purchasers here, are opened at the Custom-house and their contents spread out upon mats. A quantity of salt is then mixed with the seaweed,—and to this we can enter no particular objection, as very probably it is necessary in order to keep the weed sweet; what we do object to is that at the same time the salt is put in a large quantity of common sand is added, for no purpose that we can see except to increase the weight. The character of the

Chinese who export this adulterated stuff is probably not of much value, but it is important to the Japanese to see that so well known an article of trade as this seaweed should leave their shores unadulterated. That the Japanese Authorities can entirely stop this or any adulteration of the same kind we do not believe, but they might, we think, object to the Custom-house compound being turned into a convenient place for prosecuting the export swindles by our Chinese neighbours. It is scarcely creditable that such a place should be the scene of such work.—*Hiogo News.*

#### MERCHANT CONSULS *VERSUS* MERCHANTS.

**T**WO Consular appointments which have been recently announced in the local press seem to point out a suitable opportunity for drawing attention to the composition of the Consular Corps in Japan with reference to the general commercial community.

The Consular Corps is composed of two elements—of professional Consuls who are magisterial officers and nothing more, and of merchants who are likewise Consuls, but who are essentially merchants, depending for their income solely upon their business transactions and receiving no salary in their Consular capacity. Such we believe to be the correct definition of the two elements of which the Consular Corps in Japan is composed.

It will be evident that the two classes above defined are widely distinct one from the other. The members of the first class are supposed to be carefully trained officers, and in many instances, at least, our readers will admit that they are so. It would be invidious to specify individuals, but, on the whole, we think the foreign Community, as well as the Japanese Authorities, have every reason to be more than satisfied with the proceedings and attainments of the professional paid foreign Consuls in Japan. But, theoretically, and in eye of the Treaties and the Law, *all* Consuls are Consuls, whether they be professionally trained Consuls or merely merchants who superadd to their position of trader the honorary position of Consul, and whilst we admit that there may be occasional instances where a Merchant-Consul may be possessed of the requisite legal knowledge necessary to enable him to discharge in an efficient manner the exceptional duties demanded of a Consul in Japan, yet we are constrained to say that we fear it would not be difficult to point to more than one instance of a contrary nature. The two classes of professional or paid Consuls and honorary or unpaid Consuls should, as it seems to us, be distinctly separated, as we confess that it must be rather hard for a professional Consul of high reputation and long service—such, for instance, as M. COLLEAU or Mr. ROBERTSON—to be subjected to be suddenly superseded by one or other of the unprofessional gentlemen who are from time to time added to the Consular Corps.

But it is not with reference to the wrongs of Consuls that we have drawn attention to the case of the two recent Consular appointments referred to above. It may be, and we doubt not it is, painful to a high degree to professional Consuls to find themselves liable at any instant to be bracketed with, and perhaps superseded by, any individual who, for the honour and advantage of being a Consul, may be willing to give a portion of his time gratis, in case of such sacrifice being called for, to the service of Greece or Peru. Yet, after all, the professional Consul is touched more in his *amour propre* than in his purse. It is far otherwise with the merchant in regard to the Merchant Consul-General. By the wording of the first Treaties between foreign nations and Japan, Consuls-General became entitled to the privilege of travelling freely in all parts of the Empire, and although from the context of

the clause granting this privilege it is evident that by Consul-General is there meant the representative of a country holding that rank, yet as no limitation was introduced, it became the right of all Consuls-General, whether or not the governments they serve be represented in this Empire by a diplomatic officer. It is this privilege to which merchants justly take exception, and which we in the public interest, together with all unprejudiced thinking persons, cannot too strongly denounce. If the privilege alluded to only extended to professional Consuls-General, no harm could come of it; but how does the case stand? There is, so far as we know, not one single professional paid Consul-General in Japan, excepting of course, those Ministers who likewise hold Consular rank. Consequently the privileges attending the Consul-General's rank fall to the lot of persons engaged in trade, and who are thus placed in a most unfairly advantageous position over their fellow merchants.

We propose on an early occasion to publish a list of the entire Consular Corps in Japan, trading and unpaid as well as paid and professional, and in the mean time we must give it as our opinion that it clearly falls within the province of the Chamber of Commerce to express, as a corporate body, with a view to the approaching revision of the Treaties, the opinion of the collective mercantile community on the subject to which we have drawn attention.

#### THE INEVITABLE TYPHOON.

**I**T is impossible to say what may be in store for us during the next fortnight, but the chances are that we have got over our inevitable typhoon, and that the small quadrant of the cyclone of Tuesday last which passed over us will be payment in full of all demands for the yearly tax nature lays on us by this disagreeable form of levy. A beautiful philosophy teaches us that these frightful meteors are necessary to the restoration of a disturbed atmospheric equilibrium, and the amiable optimist who accepts this doctrine as part of a theory which exhibits this as the best of all possible worlds, signs the cheque which represents the restoration of his overturned fence, fresh-plastered ceilings and new wall papers, with the conviction that this is a tax to which his theory has fully consented, and that in some mysterious manner it represents his fair share of the general obligation imposed on humanity to keep things going in a purposed direction. The more rebellious of us,—we believe rebellious to be the word—while quite willing to admit inscrutable purposes which we cannot fathom, are inclined to shift the question from a theological ground to the far simpler one of the comparative advantages of remaining at home or coming out to the East. It is even well if each of us do not say to himself in some disgust and disappointment, *Que diable allais-je faire dans cette galère?*

There can be no doubt that some twenty or thirty years ago there were strong inducements to young men of good parts to go abroad. Every family of the upper middle class in England had some member of it who had been in India or China or the West Indies, or, to speak generally, abroad, and who had returned either with plenty of money or an official status to which he could hardly have aspired at home. The conversations between our fathers and these men must have afforded the strongest inducements to the former to send their sons abroad. The old country had not begun to feel the effects of free trade, the avenues to wealth, or even to moderate success, were choked with aspirants, the law was overdone, civil engineers were as plentiful as black-berries, curates starved on eighty pounds a year and had no chance of preferment unless there was a living or two in the family, the home Civil Service was synonymous with respectable but inevitable poverty, the Army and Navy could not take all the sons of men of moderate means and large families, even if nominations could have been obtained for them, and few gentlemen were content to put more than one or two of their sons into trade even though

engaged in it themselves. There remained the colonies, then in their very earliest stages of development, and these were dreaded by mothers as places where their sons would inevitably lose all the graces of home life, exchange their good manners for a detestable colonial freedom, and from whence they would bring back wives as odious as the daughters of Heth were to Rebecca. Under these circumstances China or India was chosen, the former for the less, the latter for the more hopeful of the family, under the expectation, not, it must be confessed, ill-founded at that time, that in twenty or five-and-twenty years the one would return with a hundred thousand pounds, and the latter at least as a Judge, possibly as a Member of Council. Such fortunes had not been infrequently made on the one hand, and such a rise on the other was in the natural order of things. It was not surprising that the fathers of the present middle-aged generation consented to part from their sons for such prospects, and accordingly India and China attracted thousands of young men from England, it being considered almost as great a prize to get a son well placed in the latter as in the former.

Now, it would not be very profitable to enquire how many men of the hundreds who lived there have retired from China during the past twenty years with such fortunes as compensated for their exile, or how many of those who had so retired from the country contrived to retain them. It is perhaps better to contrast the comparative advantages and disadvantages of Eastern and home life in their present respective conditions.

And first as regards the advantages of Eastern life.  
Shakspeare says—

Home-keeping youths have ever homely wits—

And it can hardly be doubted that the plunge into the large volume of the stream of life which the young man undergoes on leaving home, braces and tends to make the stronger man of him. His prejudices are undermined, his all too narrow estimates of men and things have to be modified, his mind expands with the new thought it rapidly absorbs, human life is viewed as more many-sided, the judgment is called into more active play, the imagination is kindled, and the historical memories of school teaching are revived on the very ground where some great scene of immortal interest was long ago played. If he starts eastward, every city he passes through or valley he traverses calls to mind some momentous event of ancient or modern days, and he must be dull indeed if the northern cities of Italy, the capital of the Cæsars, the tombs of the Pharaohs, or the vast work by which French genius has made an island of Africa, awaken no interest or emotion in him. If he starts westward, his first step on landing brings him face to face with the results of a vast experiment in political philosophy, which, all in hope but many in fear, regard as the *experimentum crucis* of the problem of modern democracy. If his intellectual antecedents have carried him far enough to see the bearings of these results upon that future of Europe which they must so largely and inevitably influence, he will be no slight gainer by the journey which has enabled him to judge of them for himself, and however immature his power of reasoning upon them, this experience is of no slight value. On his arrival in the East he again encounters civilizations widely differing from his own, some undergoing modifications, indeed, yet, whether stationary or transitional, presenting a thousand problems of interest and importance. He is soon thrown into a society, widely differing, whether for better or worse, from that to which he has been accustomed, and has to carve out for himself a course every step of which is often inquisitively marked by men whose examples are as lax as their judgments are rigid and uncharitable. If moderately successful in his chosen career, he leads a life which is easy and superficially enjoyable, and though cut off from the higher pleasures which life in Europe or America affords, his day is, on the whole, more free from care and irksome labour than it would be at the same age at home. When he returns home after a few years, he is certainly a man of more experience than the average men of his condition, class and abilities whom he has left behind. His society is more courted, his opinion more often demanded and listened to, and though he may be somewhat behindhand in that which every one knows, he possesses a mass of information

upon matters upon which everyone is curious. He is the oracle of his family, and if in the country, of his neighbourhood; he is sure to be credited with boundless wealth or prospects, and if he fails to carry off the belle of his village it is his own fault.

But there is a heavy list of disadvantages to be set against this. He has chosen an Eastern career, and for better or worse must abide by his choice. He is away from the great stream of activity at home, where he is unknown, and into which he must abandon all chance of elbowing his way.

For emulation has a thousand sons,  
That one by one pursue. If you give way  
Or hedge aside from the direct forthright  
Like to an enter'd tide, they all rush by  
And leave you hindmost,  
Or like a gallant horse fallen in first rank  
Lie there for pavement to the abject rest.

The place of his exile is fixed, possibly in an unhealthy or uncongenial climate; he is cut off from associations which, whether appealing to his mind or his emotions, his tastes or ambitions, were the lode-stars of his existence; the exigencies of family life entail on him separations for which no wealth, —still less the mirage of it,—can compensate either him or those whose early training he has proposed to himself, as his first duty and pleasure, to superintend; an income, adequate for all the necessities and possibly the luxuries and elegancies of life at home, disappears in a thousand unfruitful channels; and the labour of a hardworked life barely suffices to leave the necessary portion to daughters and enough for the education of sons. There are sighs at home; but we doubt if they are so deep or so long-drawn as those which form the never-ceasing minor accompaniment of the majority of eastern careers.

The disadvantages of a home career, however, must not be overlooked. The early struggles are severe and many sink under them. Many a fine young fellow is caught in the undercurrent for want of a little assistance or, it may be, a little more firm purpose at one critical moment, and never emerges from it. Nature, though full of caprices, has no bowels; the big stream of life is to many, as they enter it, cold as death; and for those whose horoscope is adverse, the sweet influences of the Pleiades smile in vain. The struggle for existence is fierce and constant, and the law of natural selection is a powerful factor in producing the results which society exhibits. The deficiency of one feather tells against you in that rapid flight. You must not only possess a certain amount of quality, but it must be the right, adaptable, sufficiently-alloyed quality, otherwise the world will not accept you as current coin, and you are ticketed as an anomaly, put into society's glass case, and looked at through their glasses by successful millionaires on whose judgments on every question outside their business—in which they never err—you would not value at a stiver.

But the advantages of home careers are many and great. Men start in streets which it is not too much to say are paved with gold, and the average good sense and character of average men are quite enough to conjure some of it into their pockets. We do not say it is easy, but a clever man will go to or remain in places which are rich rather than places which are poor. The tendency of trade is to give much to him that hath, and London especially, from the very fact of its incalculable wealth, draws day by day to itself more of the world's riches. Men with sound wits, good digestions and fair tempers are best at home. They may not always command success; but, wholly apart from the fact that many a booby thrives there, a wise man will dig in a mine where gold is known to exist in inexhaustible veins, rather than in one where the prizes are now more and more rare, and the chances are ten to one that you draw a blank.

#### SNEEZING.

"She spoke, Telemachus then sneezed aloud:  
Constrain'd his nostril echoed through the crowd.  
The sniting queen, the happy omen bless'd:  
"So may these impious fall by fate oppress'd!"

Pope, Homer's *Odyssey* B. XVIII.

WHAT is the Sneeze? Such a curiously sounding noun ought to be onomatopoeically significant of its own meaning, and should hardly require any other answer to this query than, that a sneeze is—a sneeze. There are, however, persons of such a curiously inquisitive turn of mind, that such

an answer would not be received by them as sufficiently explanatory, and to such obstinate and persistent delvers after definitions, the following dissertation is addressed:—

Referring to the celebrated work of Professor Clavicle of the Jodleberg University, it will be found that, physiologically regarded, "a sneeze may be characterized as the result of reflected irritation of the fifth nerve whereby a spasm of the diaphragm is produced and a violent blast of air directed through the nasal passages." Thank you Professor Clavicle; this is really very comforting.

Socially speaking, a sneeze might be shortly summed up as an involuntary anachronism.

Morally regarded by a non snuff-taker, it might be described as an illicit and inconvenient pleasure.

Diplomatically used, it has been known to give valuable assistance in changing the subject when a cough has failed.

The ancients directed much of their attention to the subject of sneezing. Pliny tells us, "If one chance to sneeze after repast, the order is for to call for a dish of meat and a trencher of game to be set upon the board; and in case he taste not of somewhat afterward, it is thought a most fearful, and cursed, presage on his behalf." (Holland, Pliny, B. XX., VIII. C. 2.)

The ancients, says Strada, fancied sneezing betokened danger, and repeated a short prayer on such occasions to the gods, as "Jupiter help me."

Vergil accredits the plague of 558 with producing the idea of danger in connection with sneezing, as persons attacked fell down dead sneezing, though seemingly in good health.

In Ireland, the anxious mother has ever ready on her loving lips the "God bless ye before the fairies take ye" which is supposed to outwit for the time the malignant little Leprechaun who sits grinning on the rafters, ready to pounce upon the unlucky infant who has sneezed three times running, without the benediction being interposed to shield him.

The Japanese like every other great people are full of sneezing traditions for—not to mention that sneezing more than once betokens a state of bewitchment which has to be neutralized by running quickly through the scale of substantives of dislike, contempt and disgust, and tapping the points of the shoulders with opposite hands—the act was possessed of peculiar significance on occasion, in the days of the stately old Daimios. In those good old times when to be a man, unless a noble, meant no more than the possession of a certain number of limbs and a supple back, a Daimio's retainer was held by his master as being a good kind of attendant creature, useful for fighting purposes, handy about the house, and wonderful in his capacity for consuming rice. Doubtless there was a resemblance to himself in as far as he was possessed of a head, trunk, and extremities, but beyond these trifling externals, of course, no comparison could be instituted: the fellow probably felt heat and cold, experienced the pressure of hunger now and then, had a weak sloppy kind of fluid in his veins—had perhaps some machinery internally. But mental qualities, or sensations such as nobles felt;—everybody knew better than to credit him with such.

Now even Daimios have been known to sneeze; and with that magnanimity for which they were so remarkable, the privilege of sneezing in their presence has occasionally been accorded to such as suddenly overtaken by the explosion were unable to suppress it in time. But, until the epoch of which we write no domestic had ever been known to sneeze when his master happened to feel the tickling in his nostril. However all things have an end, and so it fell out that a startling instance of simultaneity of sneezing occurred in the *yashiki*, nay, under the very nose of a chieftain renowned for his wisdom, and who was himself agitated at the precise moment when his henchman—unable to restrain himself—sneezed!

A breach of etiquette so tremendous, and a circumstance altogether so unprecedented, would with a narrow minded and prejudiced noble have resulted in condign punishment for the retainer; but some men are born to luck, and so it began to appear to the culprit when he observed, the first shock of surprise over, that his master putting his head on one side, and smoking furiously was evidently thinking very hard, and by the expression on his venerable countenance

not unkindly. The thinking out of this difficult problem was carried on through the night, and the next day, and yet for three days and nights, during which time the number of pipes smoked by the sage, and the quantity of tea consumed, was so prodigious, that it has become a favourite equation in the schools of science to ascertain the unknown quantity represented by *x*.

During this period of rumination he covered sheets of paper with reflections and counter reflections, by which it has been gathered that his results were obtained through a progressive elaboration of results from remote causes, or by a scientific process of deductive reasoning, which satisfactorily demonstrates the antiquity of that ancient and therefore respectable method of investigation. Omitting his earliest hypotheses it will be sufficient to descend on his proximate deductions, which may thus be summed up. "It is a fact that we both sneezed together; now what made me sneeze? Let me see. I felt a vile creeping and tickling in my nostril, which, mounting up to my brain, plunged, in and forced me against my will to expire convulsively. What have I ascertained from my dependant? precisely the same train of symptoms. What follows? Why the fellow feels like me, he must have a brain and similar organs to mine, and be affected by the same impulses. But no servant can be constructed like his master." This was the "*pons asinorum*." At this obstacle he stumbled: let him rush at it never so often, let him try never so much, it would not be surmounted. However, having corrugated his fine forehead into permanent wrinkles over it, he found a way round, and gained undying fame for the discovery which he made at the other side of it. "Why? a servant feels all this he can't be a servant, he must be of gentle blood, he must belong to the noble class and my quondam retainer must be extricated from his servitude, and a pension allowed him to support his rank." And his noble old face glowed as he shouted for his steward, and taking his astonished servant by the hand explained that he had been entertaining an angel unawares, for whom he would please to find suitable clothes and apartments for the future.

Since that time, it has become one of the "*leges non scriptae*" of Japan that a servant who sneezed at the same time as his master is entitled to a pension, "but" quoth my quaint old informant, as he finished his narration, and swelling a little methought, "but although I have diligently enquired, and have searched in many books, I have yet to find an instance in which a retainer has been mean enough to benefit himself at the expense of his master by such a rudeness."

Yedo, 4th September, 1873.

#### THE EARTHQUAKE AT YEDO OF 1855.

*Personal experiences and observations at the time of the great Earthquake at Yedo, in 1855, as related to the writer by a former officer of the household of the Heir-apparent to the Throne of Japan.*

IN the days of the Shōgunate, I was a retainer of Rin-nōji, the son of Arisgawa Miya, and the adopted son of His Imperial Majesty Kōkaku Tennō. I held the office of one of the four stewards of the Prince's household. The Palace of my master was situated at Tōyezau, North of the Citadel on the road to Uōji. The great Earthquake of which I am about to speak occurred in the 2nd year of the period Ansei (1855). On the 2nd day of the tenth moon, it was my turn to pass the night at my master's Palace. The weather had been fine through the day, the night was calm, and the stars shone brightly, but I observed that the sky was here and there overcast with clouds of a strangely intense blackness. Having retired to my couch that night, but not fallen asleep, at about 10 o'clock I was startled by the Kara kami (papered partition), near which I had lain down, falling suddenly, and without hands, upon me. The night lantern (*andon*) in my apartment was at the same time upset, and a fellow officer who lay near me, cried out "Earthquake! Earthquake!" which thoroughly roused me. I got up and hurriedly attempted to dress myself, I had put on my long robe, and girdle, and was drawing on my *hakama*,

(loose trousers) when my companion feeling his way after me stepped on one leg of my trousers, and tore it off, I had previously rushed into an adjoining room, and then seeing the paper lantern on fire by the fire place in the floor, had seized a tea-kettle that stood near by, and extinguished the fire of the burning lantern, as also the live coals in the fire place. Finding that my trousers were minus a leg, I groped my way back to my room, and snatching up another pair, put it under my arm, and rushed out as fast as I could, to find a place of safety in the Palace Court, but the house was rocking to and fro, the plastered walls and the partitions were shaking as with a violent ague, and the mud and boards were falling all around me. The lintels of the doors were shaken out of their fastenings, and dropping on all sides. Every thing upon shelves, such as clocks, crockery or whatever it might be, was thrown down.

My first thought was to go to the rescue of my master, whose lodgings were in a distant part of the palace grounds. As I was hastening thither, and passed a kitchen which stood in an isolated position in the inner court, I saw a stone furnace in which a fire was blazing fiercely, which the servants, in their fright, had left when they quitted the kitchen, and the supper they had been preparing for themselves out of the remnants of the prince's evening meal. Lest the kitchen should take fire, I called two or three servants and had the furnace put out of doors in the open air, and then went on to my master's sleeping apartments. He was somewhat over fifty years of age. I found him with a candlestick and lighted candle in his hand walking about in his bedroom in a state of great perturbation. With the help of six or seven of his retainers whom I called to my assistance, I led the prince out through a long covered way, and a number of connected buildings into the open court of the *yashiki*. It was with difficulty that we got the old gentleman down the long flight of steps that led into this place of greater safety. The buildings of the palace that surrounded it covered and enclosed a parallelogram of three thousand feet by twelve or fifteen hundred. For the prince's comfort we brought out mats from the house and laid them on the ground in the middle of the court, clear of all buildings, and we all for a short time knelt down there upon the mats, and as there was a brief lull in the force of the earthquake, the two (*Sakujiyaku*) superintendents of the prince's buildings, brought bundles of bamboos, and stretched long chrysanthemum curtains around them so as to screen the prince from the wind, and protect him from the night air, stretched curtains or horizontal bamboos over the mats. It was cold weather and the prince, not being accustomed to exposure, was both frightened and chilled by his hasty egress from a comfortable room into the outer air. For his better protection, a large *norimono* was brought out and placed in this extemporized tent, and he was bundled up in quilts, and placed within the *norimono*. We then began to ask one another what valuables we should try to save from the palace. With one accord we all named first the ancestral tablet. It was kept in a gilded shrine of very costly workmanship and great size. But two of us rushed into the house, and brought it out of doors into the court. There then was a short intermission of the earthquake, and both our master and we simultaneously felt hungry. So the head cook brought out a (*riyogake*) pair of travelling boxes, which contained provisions, and dishes for his master's use. No one, however, had a flint to strike fire with, and I recollecting the furnace, which I had caused to be put out of the kitchen, went and found the fire in it had not gone out, and thus the cook was enabled to heat some food, and prepare some tea.

The comfort and safety of the Prince having been attended to, we began to think of our own houses, and of going to look after our families. It so happened that I had been the first to go to the relief of the Prince, and he therefore told me, I might go to my house first, and the rest should follow in the order in which they had hastened to his rescue. As I started off, I passed a first pond situated upon a mound about four feet above the general level of the ground around it. My path led me close by the foot of this mound. As I went by the water in the pond was so violently agitated, that it splashed over the brim and drenched me to the skin. The water was very cold,

but I minded it not, and went on my way out of the *yashiki*. I found further on that three of the long servants' quarters had been thrown down by the earthquake. Five persons who had been severely wounded by the fall of the buildings, had been brought out from the ruins and laid upon doors on the ground in the court. After seeing that the wounded were attended to by their fellow servants, who bound up their bleeding wounds as best they could. I passed out of the premises to go home. As I emerged from the gate, I had an extensive view of the city, and saw flames bursting forth far and near in every quarter. When I reached the foot of the hill on which the palace stood, I found the streets utterly impassable. The roofs of the houses on both sides had fallen into them and from beneath the debris the cries of men, women and children were heard on all sides calling for others to come to their rescue.

As I could not walk over the fallen timbers, I went back up the hill. Its sides were heavily wooded. I passed round the outside of the palace, and went down the steep hill-side among the trees, to find if possible a way to my own and my father's houses. But here too landslides and uprooted trees obstructed my path. I however wound my way through them, to a separate palace of the prince, intended for his occupation when he should retire from public life and leave his place to his son. It was necessary for me to pass through this in order to reach my own house. Here too I found the largest trees overturned by the roots, the buildings demolished and the earth risen in various directions, with the cracks open and visible wherever I went. Fortunately no one lived there at that time and consequently no lives were lost on those premises. As I entered the gate I heard a loud report as of a cannon fired. Ah! thought I, this indeed a dreadful earthquake that such an explosion should take place in the solid ground! But as I looked off from the hill, I saw that the sound had proceeded from the falling of a temple near the foot of the hill, on which I stood looking westward. Passing through the aforesaid *go-in-den*, I descended the hill westward in the direction of my own house. I was no longer in the crowded streets but passing among farmers' houses and residences of the gentry in the rural suburbs of the metropolis. Here I found men, women and children fleeing for safety, and carrying off such articles of clothing, furniture, and so forth, as came to hand when they made their escape from their falling houses, and which too often proved to be articles of the least value, mere rubbish. But I was anxious to reach my father's house, and could bestow no attention upon these poor homeless people. I ran to my adopted father's house. He was a retainer of my master also, and was on duty that night at the palace. I found he had not come home. The occupants of the house that night were my adopted mother and two brothers, with their male and female servants. The house, I found, had escaped destruction, and was still standing, but all its inmates stood shivering out of doors afraid to go in lest the house should fall and crush them. I therefore took two long poles and laid them across two near and parallel board fences, and laid doors upon the poles, and spread mats beneath to shelter them from the cold as well as I could. Thence I ran on to my own house five or six *chô* distant where I found my wife and children and servants all huddled together among the sprawling roots of a large pine tree that grew in the enclosure. My house was not destroyed, though very much racked and twisted by the earthquake.

Thence I proceeded to my own father's. He lived in a street seven *chô* from my house, in a southerly direction. On the way I found many houses prostrated by the earthquake, but my father's house was still standing. All along the streets where the houses had not been destroyed I saw families huddled together for shelter in the middle of the streets under coarse mat awnings waiting for the earthquake to cease. It began, as I have said, at 10 o'clock, p.m., and continued with longer and longer intervals till daybreak the next morning. Thinking the big pine tree with its many and wide spreading roots was the safest place for the purpose, I built a temporary shelter for my family around its base, of bamboos and matting. We had nothing fit to eat nor any table furniture, for the dishes had been broken by the falling mud and plaster

from the walls, and all our eatables were mixed with the same. By taking the upper part of a stone lantern that had been thrown down from its pedestal, I extemporized a cooking stove that answered a good purpose in the emergency. But we had nothing to cook. I therefore went out in the morning to see what I could find in the way of eatables. On the street I fell in with a man coming from the country with two bundles of radishes, but he declined selling any. I told him I did not mind the price, but he persistently refused to part with his radishes or any portion of them. Money was no object to him, he said. I pulled out a handful of money, and forcing it upon him, seized what I could carry of his vegetables and carried them home.

I afterwards went out to see the effects of the earthquake. There was no high wind, yet the fires that had been kindled by charcoal braziers in the houses, coming in contact with the falling timbers of thousands of buildings that were thrown down, had free course everywhere, and meeting in their onward progress, they sent up such and so wide-spread a blaze that the whole city seemed to be on fire. The destruction of human life also was immense.

Many entire families were here and there imprisoned within the fallen timbers and walls of their own houses, and crying for help with lamentable screams and entreaties. Many were smothered in the smoke of the conflagration around them, and so spared the agonies of being burned alive. Others caught under the débris of fallen buildings, and seeing the devouring flames creeping towards them, screamed and begged to be rescued from their impending fate, but in such an almost universal calamity, little could be done to save them, and thousands were doomed to die in the flames that consumed their demolished habitations. I was told that a man who was caught and held by one leg under a mass of timbers that fell from his own house, seeing the fire approach the spot where he lay, begged those who passed by to cut off his leg, and let him escape a doom so frightful. There was nothing at hand to do it with but a hand saw, but he entreated the bystanders to saw off his leg, and they did so, and carried him to a place where he would be out of reach of the fire. The strangest thing about it was that the man survived such an amputation, but he did live and recover.

After the earthquake was over, those houses that were not destroyed were so wrenched and twisted that the doors could not be shut by night or day, yet I heard of no thieving except occasional raids upon stores of provisions by those that were starving. The fire proof godowns of the city were either thrown down, or else the layers of mud and plaster were so shaken off from the wattle of their walls, as to leave their interior and contents exposed to view from without.

If I remember right, there was no tidal wave from the sea until twenty days after the earthquake. The earthquake alone was enough. It is impossible to describe it in words. It was a catastrophe inexpressibly dreadful.

#### THE NEW JAPANESE ORDINANCES.

THE following list of Ordinances is not without interest. They are directed chiefly against minor offences, but some of them show an improved sociological spirit, as we should now call it in Europe—Nos. 9, 11, 12 and 21 for instance.

The Japanese are very constantly reproached by foreigners for the narrowness of their legislation in regard to their own people, but such reproaches often seem to us as narrow in their origin as the legislation which is impugned, and we strongly suspect that censure of this kind is sometimes, perhaps often, awarded without any verification of the charge on which it is founded. For instance, some months ago kite-flying was said to have been prohibited. The probability is that this report arose from No. 61 of these Ordinances which is directed against "causing annoyance or obstruction by flying kites"—a very different thing.

Ordinance No. 14 has been impugned with more justice.

It would be well to amend this by changing the words 'without permission of the authorities' to 'without notifying the authorities.' But it must not be forgotten that this country is not yet open, and rules reflecting its condition in this respect are perfectly natural. All Englishmen who have lived on the Continent of Europe must have had some experience of the omnipresence of police authority, and of the importance the European Governments attach to it. We detest it as much as those whose lesser experience has not brought them into contact with it. But we are compelled by a sense of justice to admit that, in the present condition of this country, the Ordinance, as it stands, or better, as amended, is one which that condition demands.

#### ORDINANCES.

The following are the ninety new Imperial Ordinances to which we recently referred, they are to be enforced throughout all the Fu and Ken in the Empire by order of the Daijokuan, and they are now in operation of law:—

1.—Any person committing *Ishiki*\* shall be fined in the sum of from 50 to 70 sen.

2.—Any person committing *Kaia*† shall be fined in the sums of from 6 sen 2 rin, 5 mon, to 12 sen, 5 rin.

3.—Any person found guilty of *Ishiki* or *Kaia* and shall be unable from any cause whatsoever, to pay the fine imposed, shall be punished as follows:—

The offender for *Ishiki* to be flogged, receiving from 10 to 20 blows.

The offender for *Kaia* to be imprisoned from 1 to 2 days.

4.—Property may also be seized in execution in default of payment of any fine imposed.

5.—Any person who shall cause loss to another by being guilty of *Ishiki* or *Kaia* shall make good said loss in addition to the penalties attached to the same.

The different offences constituting the crime called *Ishiki* are:—

6.—To neglect to pay the taxes.

7.—To sell adulterated, or unfit food, or liquor.

8.—To build a house, or any part, or portion appertaining thereto, projecting over a road, river, drain, or public ground without permission.

9.—To sell obscene pictures or other articles, or any novelties intended for the furtherance of carnal pleasures.

10.—To sell the flesh of a beast that has died naturally, or of birds.

11.—To tattoo the body.

12.—To permit the sexes to be mixed in a public bath house.

13.—To ride furiously on horseback, or cause any one to fall in the road by touching him, when riding, or when driving a carriage.

14.—To give accommodation to, or lodge foreigners without permission from the authorities.

16.—To drive a carriage at night without having the lamps lit.

17.—To discharge fire arms in the neighbourhood of any houses.

18.—To ride on horseback to the scene of a conflagration, unless on duty, thereby making it dangerous for pedestrians.

19.—To throw a stone at a lamp in the public street.

20.—To cross a bridge, or crossing, or other place, when a notice is posted up at such place, declaring *no thoroughfare*.

21.—To hold an exhibition of wrestling by both sexes, or of serpent charming, human monstrosities, or deformed persons for the purpose of getting money.

22.—To throw any earth, dust, stones, broken tiles, or other rubbish into any river or stream, whereby the stream may be blocked up or shallowed.

23.—To gather sea weed, or other water plants, on the property of another person, without his permission.

24.—To catch fish with a weir across a stream belonging to another person, or in waters, forbidden by the government.

\* *Ishiki* ... willful offence.

† *Kaia* ... accidental offence.

25.—To snare birds or fish with any poisonous, or injurious substance, or mixture.

26.—To take the water out of a neighboring rice field into your own, without the owner's consent, or assisting to do so.

27.—To steal bamboo, or mushrooms, out of another man's field.

28.—To defile, or do any damage to any holy place, or break the fence of such.

29.—To do any damage to any dyke, or beach, excavate in any field, or garden etc., belonging to another.

30.—To cultivate vegetables by the road side, or make a dust heap, thereby causing an obstruction.

31.—To cut grass in a field, or meadow belonging to another village, or person.

32.—To cause any annoyance, or obstruction at any time during the marriage feast.

33.—To agree, or conspire together to prevent coolies, or pack horse tenders from working for reasonable pay.

34.—To annoy, or cause any obstruction, or damage to others, under pretence of observing a religious festival.

35.—To skin, or cut up any dead beast on a public road.

36.—To do any damage to any tomb, or grave stone.

37.—To enter a forest, or wood, or ascend a hill, where the Imperial edicts are posted forbidding the same.

38.—To take any public fire engine or lantern and use it without permission of the authorities.

40.—To use any boat without consent of the owner.

41.—To cut, break, or otherwise injure any trees, or plants in any public or private garden or ground.

42.—To damage anything belonging to any Buddhist or Shintoo Temple.

Offences coming under the head and term called "Kaia" are:—

43.—To drive a carriage horse furiously in a narrow lane or road.

44.—To draw a waggon, or ride a horse at night without a lantern.

45.—To cause annoyance to pedestrians by driving a carriage carelessly.

46.—To leave a carriage, waggon, jinricksha, etc., etc., on road, thereby causing an obstruction, or to leave a pack horse, or ox in the same manner.

47.—To throw any dead beast or bird, or any other offensive matter on any road.

48.—A woman to cut her hair short without any particular reason for doing so.

49.—To draw a waggon or jinricksha carelessly, along a road, causing danger to passengers and pedestrians.

50.—Nightsoil and manure collectors carrying their buckets without proper covers to them.

51.—Hotel or inn-keepers neglecting to keep a record of the names of people stopping there, or not reporting the same.

52.—To break the wooden tally or ticket on which the name of a street, person or number of a house is inscribed.

53.—To commence any quarrel, or excite others to cause a tumult.

54.—To extinguish any public lamp on any road.

55.—To raise a dust, or strike stones along the road to the annoyance of passers by.

56.—To lead a horse or ox across a garden or other place, thereby destroying plants.

58.—To cause an obstruction to passengers on any road by having waggons, or jinrickshas ranged along the side of the road.

59.—To cause a horse or ox to run into a house.

60.—Dog fighting, aiding or abetting in such, or setting a dog to bite or bark at any one.

61.—To cause any annoyance or obstruction by flying kites.

62.—To obstruct the passage of a carriage or horse purposely or by being intoxicated.

63.—To cause any obstruction at the places set apart for drying fish.

64.—To cause any obstruction at the places used for drying edible sea weed.

65.—To interfere with any weir set to catch fish.

66.—To stop or interrupt the streams of water used for irrigating the rice fields.

67.—To do or cause any damage to any breakwater, or piles in any river or harbour.

68.—To damage bamboos or trees, or gather fire or brush wood on another's land.

69.—To cause obstruction or damage on the hunting ground of another person.

70.—To damage or destroy another person's fence.

71.—For a ferryman to demand extortionate fare, or keep passengers waiting an unreasonable time.

72.—To damage any trees or plants on any road.

73.—To refuse to pay ferry-boat hire, or toll to a bridge keeper.

74.—To allow your horse or oxen to trespass and damage any crops or garden.

75.—To intermeddle in a quarrel without having any concern or interest therein.

76.—To beg in the public roads or streets.

77.—To feed cattle on pasture land without a right to do so.

78.—To set a dog to annoy another person's cattle.

79.—To destroy any offerings placed at a tomb.

80.—To cause any damage to any water mill or pounding machine.

81.—Any jinricksha drawers, horse-keepers, chair-carriers, or coolies, plying for hire at any place, who shall use intemperate language, in the event of not being employed.

82.—To cause damage to any fishing-nets spread out to dry.

83.—To cause a boat to do damage to any fence erected in any water for the purpose of collecting edible sea weed.

84.—To set fire to any wood, or grass etc., on any mountain, plain or field.

85.—To do any damage to, or hitch a horse to, any post used as a land mark.

86.—To set fire any boat or raft to the piles or posts of any bridge.

87.—To disfigure the walls or fencing of any temple or house, by marking them with chalk or any other substance or mixture.

88.—To throw stones, tiles, sods, sticks or any other matter into any field or garden.

89.—To pluck any flowers or plants that are public property, or breaking or damaging any plants in any public garden.

90.—To hang up old straw sandals etc., etc., to the branches of trees, by the roadside, or throw them up into the trees—*Higo Herald*.

## Law Report.

### IN H. B. M.'s PROVINCIAL COURT.

Before N. J. HANNEN, Esq., *Acting Assistant Judge*.

Friday, 26th September, 1873.

DEVINE v. KIRBY.

JUDGMENT.

The judgment in this case was thus delivered by Judge Hannen.

His Honour said: In this case I have been induced to deliver a written judgment, on account of two subjects of importance to a community like that of Yokohama, being involved in it. It is of importance to know what the effect of an agent signing the name of his principal "per procreation" is; and it is of importance not only to the parties, but to other masters and servants to know whether I consider the circumstances of the present case reasonable grounds for the discharge of a servant.

The latter point is not really so important as the former, for it is generally the province of a jury to determine such a question, and the suitors are now at liberty, in proper cases, to have the verdict of a jury if they so desire.

Were I sitting with a jury, I should direct them to consider, upon the evidence and upon the directions which I gave upon the law of the case, whether "the defendant was justified in losing all faith in the plaintiff." I use the words of the defendant's Counsel in thus putting the question, and I think that substantially they represent the question to be determined.

Before considering this question upon the evidence, I will state what I conceive to be the legal effect and meaning of the words "per procreation" in signing a principal's name.

Ordinarily speaking the powers of agents, and more especially of general agents, with whom business men are most often concerned, are derived from, and limited by the circumstances and usages of the particular firm or partnership, and their habit of doing business. In cases such as these the authority is, so far as third parties are concerned, of the widest description. Anything which the principal has, as a matter of custom, allowed his agents to do, a third party is justified in holding as within the agent's authority; and the third party has only to watch what the usual authority of the agent appears to be, and he is safe in dealing with him in matters which come within that authority.

Now the case is very different if, instead of a general agency, the agency is one created by a written instrument of the existence of which the third party is aware. In that case the third party must see that the acts of the agent are within the authority conferred by the written document, otherwise he will have no claim against the principal. And when a person signs another's name "p. procuration," all persons dealing with him have specific notice that there is a written procuration at the back of the agent's power. As the point is of importance, I will give an extract from a work of the highest authority both in England and America, I mean Mr. Story's book on Agency. He says at § 72 of the 7th edition:—

"Whenever an authority purports to be derived from a written instrument, or the agent expressly signs the contract or other paper, introduced with the words 'by procuration,' as if he signs 'by procuration' 'of A. B. (his principal) C. D. (the agent)'; in such a case the other party is bound to take notice, that there is a written instrument of procuration; and he ought to call and examine the instrument itself to see whether it justifies the act of the agent. For under such circumstances it is but a reasonable precaution and exercise of prudence, and he is put upon inquiry. And if, from his omission to call for or examine the instrument, he should encounter a loss from the defective authority of the agent, it is properly attributable to his own fault, since he must know that he has no other security than his reliance on the good faith and credit of the Agent."

I will also quote the judgment of Chief Justice Erle, in *Stagg v. Elliott*, (31 L. J. C. P. 260). He says:—

"If an agent, by permission of his principal sign his name without adding the words 'per procuration,' this is strong evidence of a general authority to bind the principal; but the addition of those words acts as an express warning to the party taking the bill that the agent accepts under the authority given to him by his principal, and the party taking the bill takes it at the risk that the agent is acting within that authority."

And Mr. Justice Byles says in the same case:—

"The words 'per procuration,' are an express statement by the person using them that he acts under a limited authority, and a person taking a bill so accepted, takes it at his peril. \* \* \* This mode of signature is recognised by mercantile persons both in this country and elsewhere as the legitimate way of informing a person that the bill is accepted by virtue of a special authority."

The distinction, then, seems plain. Where an agent signs the principal's name *simpliciter*, he binds the principal in all transactions within the usual scope of his business. Where he signs "per procuration" he only binds his principal in so far as he is authorised by his written authority—which written authority may be as contracted or as general, as the principal choose to make it.

All this refers to third parties, and it must never be forgotten that, as between the principal and the agent, the latter is bound to act within his authority, written or verbal, without any consideration as to the mode of creation of the authority, or the specific form of signature by which it is executed.

There is only one other point I need notice with regard to this portion of the case. There is absolutely no foundation whatever for Mr. Nes's contention that when a principal authorizes an agent to sign his name "per procuration," that agent has a right to sign it *simpliciter*. The contention is quite unfounded, and seems to me as repugnant to reason as it most assuredly is to law.

I now come to the evidence in the case. It is quite plain that Mr. Devine had *not* power to sign the firm *simpliciter*. That power is not given him in his agreement or in the Power of Attorney. I am equally convinced Mr. Kirby did not think he had given him such power, but I am as strongly convinced that Mr. Devine was under the firm impression that he had it.

It's whole conduct from beginning to end, seems to me to bear the stamp of *bona fides*, and although he was unquestionably acting under a wrong impression, I believe him to have done so innocently.

For four months he acts in a particular manner, and the first intimation that he has that what seemed before an almost unlimited

confidence was entirely withdrawn, was a letter, telling him not to appear at the office after the next day. Now upon the whole facts of the case, sitting as a jury, I say that the determination of Mr. Kirby that he must lose all faith in the plaintiff, and dismiss him summarily, was unreasonable. When Mr. Kirby saw the signature to the cheque on the 25th of June, he says he was much astonished, and sat for ten minutes musing what could be the motive of the plaintiff in signing thus. In these ten minutes, and in the time he has since devoted to the case, he has, no doubt, devised a series of acts and circumstances by which Mr. Devine might have gained an advantage, and inflicted damage upon him. But the question is, were these suspicions reasonable? The defendant instructs his counsel to suggest that if he, the defendant, had gone home, and if he had died on the passage, the plaintiff would have sworn falsely wherever he could not be contradicted; would have destroyed any papers he had or could find making against his allegations, and would have fraudulently set up a claim to a partnership, which he had not a shadow of a right to, and which he has, as a matter of fact, never said one word to induce anybody to believe he intended making. It is to be observed that such a claim could only have been made if Mr. Kirby had gone home, leaving all his documents in the plaintiff's hands, and would never have been feasible unless Mr. Kirby died. Under the circumstances, in order to ensure the success of the plaintiff's fraud, the only means would have been for him to have poisoned the defendant; and I am somewhat astonished that, to make the thing complete, the defendant did not instruct his counsel to suggest that this would have been the final act of the plaintiff, but for his prompt dismissal. The truth is, that the whole of this theory about the contemplated fraud is the emanation of the defendant's brain, brooding upon the motives he chooses to assume actuated the plaintiff in doing that which the defendant did not think the plaintiff had the remotest right to do.

If, instead of brooding for ten minutes over the signature of the cheque, he had done what his correspondents recommended him to do, there would probably never have been anything heard of this case. Messrs. Cowderoy & Rainbow say very sensibly, "Your official of the 7th, announcing that Devine is authorised to sign *per pro.* is rather informal, inasmuch as Devine has signed your firm instead of putting *p. pro.* E. C. Kirby & Co., W. H. D. I think you had better alter it; and if you mean *per pro.*, tell D. to sign accordingly." This is exactly what a reasonable man would have done. He would have gone to the plaintiff, and said, "You must sign *per pro.*, and not the firm *simpliciter*;" and the chances are that after a little discussion the parties would have come to an arrangement.

But if the plaintiff had signed the letters and cheques against the express orders of the defendant, had not the latter a right to lose faith in him, and discharge him? Most assuredly he had, if the plaintiff acted thus wilfully and intentionally against his orders. I am, however, clearly of opinion that he did not do this wilfully and intentionally against the orders of the defendant.

I am bound to say that the defendant has completely convinced me of his *bona fides* and truthfulness, and I am inclined to believe that, notwithstanding its improbability, the real fact is that he did not see Devine's signature of the firm's name so as to notice that the *p. pro.* was missing until the occasion of the cheque; but until he had sworn it most positively, and until he had explained his habits of business at Kobe and here, I would not have believed it; and I think that the plaintiff was perfectly justified in believing that the defendant had seen his mode of signing, and did not object to it.

Under these circumstances, and seeing that there has not been a little of evidence to show that the plaintiff was incompetent or inattentive, or that he has ever exhibited a gross disregard of truth, or that he ever wilfully disobeyed the orders of the defendant, I think there should be a verdict for the plaintiff.

I must add that not only have these accusations put forward in the answer not been proved, but with regard to the incompetence, the inattentiveness, and the untruthfulness of the plaintiff, it has been amply proved to me that he was competent, attentive, and truthful; and I am astonished that the defendant should have instructed his counsel to maintain these accusations, even in his closing speech, after all the evidence had been considered.

The only remaining question is, What should the damages be? On the one hand there is the wrongful dismissal; but the plaintiff says he has not endeavoured to obtain another situation. This makes it very difficult to assess the damages, and materially diminishes the amount I should be inclined to give, when taking into consideration, as a jury has a right to do, the persistence with which a series of accusations, which were not supported by any evidence, was maintained.

ed to the very last, and the fraudulent motives which were imputed to the plaintiff.

After giving as much thought as I have been able to the subject, I assess the damages at \$1,000, and the costs at \$250.

## Extracts.

### OLD AND NEW LAW IN JAPAN.

The following remarks of the *China Mail* upon the Revised Criminal Code of this country which we recently published and commented upon, show the satisfaction with which the humane and merciful spirit which has moulded it, has been received abroad:—

While we may fairly deprecate and laugh at the anxiety evinced by Japanese law-makers to legislate on such subjects as hair-cutting and mosquitoes, we must not be blind to the very real excellence of much that they are doing in the way of legal reform. The *Japan Mail* just to hand publishes one of the most interesting memoranda and tabular statements on this subject yet made public. It appears to be the work of some enlightened Japanese, who is anxious that his countrymen should have due credit where credit is due. He compares recent enactments with those put in force by the House of Tokugawa in 1716, which, he observes, were but a modified version of the laws of the Ming dynasty, "and partook largely of the ferocious spirit of that bloody code, inasmuch that in not a few points, they were a greater scourge to the people than the crimes they were meant to repress." His aspiration that the officials to whom the execution of the new laws are entrusted may be guided by their merciful spirit when called on to administer justice, and "that the masses of the people, relieved of the pressure of such laws as were unduly severe, may have the gate of the path of virtue opened for them, as it were, to walk in of their own accord," is one reflecting great credit upon himself, and indirectly upon the Government with whose consent such utterances are made.

The comparative table shewing the degrees of punishment attached to certain crimes under the laws of the old Shogunate, the New Criminal Code of 1869, and under the Amended Criminal Law of 1873, is very clearly drawn up, and is eminently suggestive of the progress made towards at least legal civilization since 1716. Thus the crimes of kidnapping children or selling into bondage human beings were of old punishable by decapitation, which the milder spirit of the nineteenth century has changed into penal servitude for ten and seven years respectively. The murder or even wounding of the head of a household by a hired servant was avenged by the crucifixion of the offender, as was also false coining. Decapitation or strangling have now taken the place of the more dreadful doom, coiners being subjected to the first-named penalty. Stealing and knowingly receiving goods that have been stolen incurred the death penalty amongst the Japanese of former days just as they do in all semi-civilized countries, where he who does not observe the difference between *meum* and *tuum* is not unnaturally deemed a public enemy too dangerous to be allowed at large. A less draconic system commutes death into penal servitude for ten years or for life according to the value of the goods stolen. Regarding infanticide a curious distinction was formerly observed. Banishment was the ordinary punishment, but if the crime was committed for the sake of gain, death was the sentence. We can hardly commend the change into "penal servitude for three years," which is the latest expression of Japanese official opinion as to the heinousness of the crime, especially when we find that homicide by ferocious ridding or driving (formerly punished with death) receives a sentence of ten years' penal servitude. Ordinary adultery, again, once a capital crime, now gets off with the mild corrective of a year's hard labour. There are two or three varieties of this offence specified, in which similar leniency takes the place of the avenging swordsmen. It is to be hoped that this comparative disregard of a once cardinal virtue is not one of the fruits of Western civilization! Another few years we suppose will see a Japanese Sir Cresswell presiding over a court of his own, and money fines will take the place of salutary imprisonment. Making false weights and measures is evidently thought a far more serious crime, as, though of old punished in a similar manner by decapitation, it now ensures five years' penal servitude to the cheat. Gambling we fear has risen in popular esteem, as, instead of "banishment," eighty days' penal servitude is now all that need be feared by the Japanese votary of dice and cards. Incendiarism, which used to be dealt with under a savage *lex talionis* condemning the culprit to being roasted alive, is now punishable with death.

Upon the whole, however, the general tendency of the new code

is commendably in favour of a less draconic system than that under which the Japanese of a hundred and sixty years since lived his appointed time. In one instance only do we note the retention of a really barbarous death penalty—that of impalement\* for parricide "by stratagem." Still, even this horrible fate touches the imagination less closely than the demoniacal torture of the *ling ch'i* inflicted by the Chinese upon similar offenders. There is in fact very much in the table before us to which the attention of philanthropic Chinese statesmen—there are such men—might be devoted, and we shall hail with joy any Chinese effort in a similar direction.

### THE BETROTHAL OF THE DUKE OF EDINBURGH.

(The Spectator.)

The marriage of an English Prince who is really within the succession—for we have a heap of Princes and Princesses who for practical purposes are not within it at all—is always a matter of some interest to the English public, and the Duke of Edinburgh is closely within the succession. He stands next to the Prince of Wales and his children, that is, to a single household who might be swept away by an attack of scarlet-fever or other wide-spread malady. The English law of succession is marked by one peculiarity not to be found, we believe, in the House-Law of any other monarchy, but, except in certain specified cases, it undoubtedly makes the Duke of Edinburgh the head of the first cadet branch. Its general principle is that which governs the descent of our most ancient baronies, and nearly all Scotch dignities, namely, descent to heirs general, male or female,—the males, if there be more than one, being exhausted before the females' right accrues. For instance, if Queen Victoria had a brother, he would have reigned before her, but her right as daughter of the Duke of Kent, eldest surviving son of George III., accrued before that of her uncles of the Cumberland and Cambridge branches. Had she died unmarried, however, the Duke of Cumberland would have been barred by Parliamentary enactment. In the same way, if the Prince of Wales's family were reduced to one daughter, she would ascend the throne, and her descendants; but failing all his children, the Duke of Edinburgh stands next. This is the regular descent of baronies, but three specialities have been introduced either by prescription or statute into the English law of succession, one being that the Throne cannot lie in abeyance as the barony may lie between two girls, the eldest always taking; another being that profession of Catholicism, or marriage with a Catholic, strikes out the Prince or Princess so offending; and the third, and most important of all, being that under a statute of Anne, any Prince or line of Princes can be legally barred out by an Act of Parliament. This remarkable provision, which might under certain circumstances make the English Monarchy elective—though the candidates would be confined to the descendants of the Electress Sophia—might, as we have said, have been applied to bar the Duke of Cumberland, who was, probably without reason, an object of passionate hatred to the people; but as it is never likely to touch the Duke of Edinburgh, unless he assumed some exceptional position in Germany, he must be regarded, as we have said, as the head, of the cadet branch. As such his marriage is an object of some interest, and we believe, as we trust, that we shall not have a repetition of the popular riots about the dowry granted to the Princess Louise. The Northern Members were quite in a quandary about that vote, which became the Republican war-cry, but we think they need not be uncomfortable this time. The electors outside the clergy will not be hypercritical. The previous marriage was not a popular one in England,—the instinctive sense of the people having now, as ever, decided on preserving the separateness of the Royal caste,—but the present one will be regarded as, in ordinary parlance, a good match. The pains of the *Daily Telegraph* to tell its readers that the English House is the oldest in Europe—which it is not, the Mecklenburger going much farther back—and to write the usual stuff about a "marriage of affection," which, true or otherwise, it cannot know, are all pretty much thrown away. The average British elector thinks the Emperor of Russia a very big man indeed, and a marriage between Prince Alfred and that Emperor's only daughter a most becoming alliance, and will vote any reasonable sum the Government may fix on as necessary or as liberal. That is the way average fathers of families behave, and the British elector stands to the children of the House of Brunswick very much in that position. There is not the slightest dislike of the Duke of Edinburgh, though we should not claim for him his next brother's popularity, and no distaste for Russian connection. If there had been, we should have had all that matter of the creed brought up by a hundred incise

\* This impression has been produced by a mistake in our translation, subsequently corrected. The punishment is decapitation and exposure of the head.

pens. The Grand Duchess belongs to a Church which accepts transubstantiation and "picture-worship" just as much as the Catholic, though it stops short of images, and scolded Titian because "his scandalous pictures stood out of the canvas so;" but the Greek Church does not curse us at all, allows its priests to marry once, does not persecute anybody except fools and Catholics, and does not forbid the reading of the Scriptures, and Englishmen will be quite content to consider it a Ritualistic variety of Protestantism or some creditable division of Dissent. Indeed, that numerous section of the Clergy, which is never at peace unless it is offering to some old Church or other that communion with the British Establishment which it does not offer to Wesleyans, will be apt to celebrate the occasion as a special providence. For the rest, the electors think that if we have to fight Russia a royal alliance will not hinder us—an opinion always repeated with a certain quaint pride, as if the liberty of killing were the first of rights to be protected—and that if we do fight, we shall fight all the more genially because the Russian House has intermarried with the English one. That the lady is rich will be a distinct reason for enriching her husband—"just out of pride, you know, so that he shouldn't be beholden"—and there will no be husting's cry about the matter.

It may help to prevent one if we show that, apart from politics—though the marriages of the Romanoff Princes are political events, as French papers will delightedly announce—the betrothal concluded on the 11th is a wise one in the interest of Monarchy. All recent events have tended to show that the European States have the greatest difficulty in replacing the royal caste by any device of election—though there is of course one remarkable exception, the success of the bernadottes,—that the usefulness of the caste depends on its separateness—all marriages end in mischief,—and that it is essential to keep the range of choice as wide as possible. It has been far too closely confined to the States of Germany. When the Prince of Wales married, his choice was of necessity limited to six possible persons—too limited a number, lucky as all England pronounced him to be—and the extension of the right to princes of Greek faith is a very perceptible and advantageous addition to the number of eligibles. It adds to the families, one of which is extensive, and the other may become so. That extension is not, of course, so wide as that created by the last precedent, but it is a wide one, and one more in consonance within the habitual opinion of the masses of the people. When they cease to wish their sovereigns to be of a caste divided by an imperceptible but irresistible line from all others, even the greatest nobles, they will be at heart Republicans, and a good deal besides the Monarchy will silently disappear. That may be very foolish, indeed is so, but Brahminism has lasted very long, and Brahminism exists only by its separateness.

We presume the Ministry will be wise enough to insert a proviso in their Annuity Act providing that it shall cease to be paid if ever the Duke of Edinburgh succeeds to this German throne. The precedent of allowing the Prince to keep his money or return it at will did not work well in the case of Leopold, who was believed by the commonalty to have kept his pension to the day of his death; and though the Duchy of Saxe-Coburg Gotha is not now a very attractive one, having to take orders from Bismarck and snubs sometimes from the Emperor, still it is not likely to be renounced, particularly as in the present temper of the Germans and the Guelphs the Duchy of Brunswick might by possibility accompany it. There will be trouble enough about that throne when it falls vacant, and the Guelph who is already a German Sovereign may be preferred both to the Hanoverians who will not recognise accomplished facts and to a family which has become so thoroughly English as that of Cambridge. We do not therefore regard the appanage of Prince Alfred as one of the many remaining troubles of the Session.

#### THOMAS MERRY.

Died at sea, 7th July, 1873.

"Sweet life if life were stronger."

Full early torn away from this gay world,  
Too sadly taken from so many friends:  
Ta'en in life's morn—alas, the evening rays  
Point from the sea 'neath which life's sun descends.  
Strong in life's fever time, with buoyant hopes  
Springing exultant from thy youthful breast:  
Smiled with and at, and lov'd and cherished more—  
Aye, lov'd and cherished most, since gone to rest.  
Full of youth's ardour, battling towards the goal—  
Oh! sacrifice for us to bear in mind—  
Passed now beyond where seas no more shall roll;  
A world before thee—now, a world behind.

Life's drama over, ne'er shall we again,  
Enchanted, see thee play the actor's part;  
The past we'll dream upon and mem'ry warm  
Shall keep for thee a corner in each heart.  
Nigh reach'd thy home, here, friends so far away;  
Too dear a price to lose a friend like thee—  
Heart's chords are touch'd, but they can ne'er recall  
The brother journ'ying o'er Death's cruel sea.  
Oh! silv'ry sea, with glistening Heav'n kiss'd waves,  
Our brother keep; his task in life is o'er—  
Sleep now, pale friend, new life's bright shining beams  
Smile sweetly on thee from the golden shore.  
Farewell! The task is done. One ling'ring pause,  
Thy memory upon our hearts will stay:  
Night comes to us, the weary toilers here—  
With thee is peace in everlasting day!

J. K. A.

### Shipping Intelligence.

#### ARRIVALS.

Sept. 22, *Costa Rica*, American steamer, Williams, 1,917, from Shanghai, General, to P. M. S. S. Co.  
Sept. 22, *Endeavour*, American ship, Warland, 960, from New York, General, to Captain.  
Sept. 25, *Aden*, Chinese steamer, Peterson, 587, from Shanghai, Sept. 22nd, Rice, to Captain.  
Sept. 25, *Japan*, American steamer, Freeman, 4,350, from San Francisco, September 1st, Mails and General, to P. M. S. S. Co.  
Sept. 25, *Arco*, British steamer, Andrews, 1,480, from Hongkong, September 16th, Mails and General, to P. & O. Co.

#### DEPARTURES.

Sept. 24, *Colorado*, American steamer, Dearborn, 3,336, for San Francisco, Mails and General, despatched by P. M. S. S. Co.  
Sept. 25, *Nit*, French steamer, Samat, 1,010, for Hongkong, Mails and General, despatched by M. M. Co.  
Sept. 25, *Quora*, British ship, Murphy, 1,225, for San Francisco, Ballast, despatched by Captain.  
Sept. 26, *Costa Rica*, American steamer, Williams, 1,917, for Shanghai and Ports, General, despatched by P. M. S. S. Co.  
Sept. 26, *Salamis*, H. B. M. despatch, Littleton, 650, for Nambu.  
Sept. 27, *Japan*, American steamer, Freeman, 4,354, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

#### PASSENGERS.

Per *Costa Rica*, from Shanghai.—Bishop Williams, Messrs. A. M. Moore, C. F. Mayers, W. Steel, J. Sanlin, N. Bachii, W. Willaume, M. Bagwig, J. Nowlan, and 10 Japanese in the steerage.  
Per American steamer *Colorado*, for San Francisco.—Mr. W. H. Turner, Mrs. Dearborn and family, Mon. and Madame Lavande, and 19 U. S. Marines in the steerage. For New York.—Mr. S. H. Clarke, Miss Farley, Mr. F. B. Washington, Pay. G. W. Long, and 37 in the steerage. For Europe.—Mr. A. Howell, Mrs. A. Howell, 2 children and Nurse.  
Per *Aden* from Shanghai.—Messrs. J. A. Triggs, Watts, and Jacobson. One Chinese and three Japanese.  
Per British steamer *Arco*, from Hongkong.—Messrs. Abano Murato, Heke, Schenus, Stollery, and 6 on deck.  
Per P. M. S. S. *Japan*, from San Francisco.—For Yokohama.—Hon. J. A. Bingham, wife, and two daughters, J. Alliso, H. P. Andrew, A. Adamson, U. S. N., D. W. Stevens, Mrs. Deniston, Dr. F. Von Haupt, V. Dama, Lt. Com. D. W. Mullen, U. S. N., Mrs. E. F. Doane, Rev. W. B. Wright, Thos. Walsh and servt., Rev. A. C. Shaw, A. W. Unthank, Miss E. Harrison, H. Latham, Rev. J. L. Atkinson, wife, and two children, and two in steerage.  
For Hiogo.—Henry Schoning, Rev. C. H. Newman.  
For Shanghai.—Mrs. C. J. Hangecho, F. R. Halsey and wife, General S. J. Bridges and nephew, Miss Lottie Moon, Rev. J. H. Davis, G. W. Painter, Miss A. C. Safford, Mrs. Sheppard and inf., F. Collins and wife, A. R. Margary, Rev. W. S. Holt and wife, Albert Draper, Miss H. L. Winn, C. B. Collins, and nine in steerage.  
For Hongkong.—Edmund Sharpe and wife, R. H. Pye, wife, and servt., H. S. Steino, Mrs. D. M. Stout, and 254 in steerage.  
Per P. M. S. S. *Costa Rica*, for Hiogo.—Ishikawa and servant, L. Von des Polder, R. V. Boyle, J. Pinel, G. W. Painter, and one Japanese officer, 58 in the steerage. For Nagasaki.—W. H. Emory, Dr. Rotz, Jamaust, M. Noel, Miss A. G. Safford, Miss L. Moon, and 38 in the steerage. For Shanghai.—Mr. and Mrs. A. A. Hayes, W. Cowderoy, Miss Nugent, W. S. Holt and wife, Rev. D. L. Atkinson and wife, A. Besel and servant, G. Van des Vlies and child, Rev. J. W. Davis.  
Per American steamer *Japan*, for Hongkong.—Messrs. A. Hara, M. Barrilics and Shanogich.

#### REPORTS.

The *Endeavour* reports fine weather generally during the voyage. Had a typhoon on the 9th inst. near the Bashees. Spoke the ship *Salent*, from London for Yokohama, June 28th in 34° 30m. south, 26° west, and the *Stornoway* near Balintany, 65 days from Padara. The *Aden* loaded her cargo in Shanghai, calling at Nagasaki on the way. Reports clear weather and N. W. winds from Kobe up.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, SEPTEMBER 27TH, 1873.

THE MAIL ARRIVALS during the closing week have been the *Arvoa* from Hongkong and the *Japan* from San Francisco, both on the 25th instant, bringing the London Mails of the 8th and 11th August respectively.

The Mail Departures are the *Colorado* for San Francisco on the 24th instant, and the *Nil* for Hongkong on the 25th instant.

The *Endeavour*, arrived from New York on the 22nd instant, has brought a large quantity of Kerosene.

The break-up of the warm season with the inclemency of the weather have, to a very large extent, prevented native dealers from continuing their operations in imports, and trade shows some falling off from the activity which characterised the preceding week. There is, however, reason to believe that with the resumption of business the firmer tendency of the markets will be maintained and that an active month's business may be continued through October.

The *Graineurs* are loud in their complaints of the course of action determined on by the Government, and their operations are of the slenderest character.

**WOOLLENS AND WOOLLEN MIXTURES.**—The improvement which we were able to announce last week has not continued through the present week, and the meagre transactions which have taken place are at very reduced rates. *Cloth* is entirely neglected. *Mousselines de Laines* are less firm and in less demand.

**COTTON FABRICS.**—Transactions in *Shirtings* have been carried on on a fair scale and the tendency of these goods is unquestionably towards greater firmness. During the week some 22,000 pieces, of all weights, have been settled at, in most cases, improving rates and with every promise of continued activity. A large quantity of *T-Cloth* has also changed hands at low prices, and settlements in *Taffachelass* have been heavier than usual at quotations which indicate greater steadiness.

Greater favour is shown to *Velvets* which have come into demand at improving prices. Some 1,600 pieces have been taken off the market during the week and rates are very firm. We hear of \$10.75 being asked for first-class chops of these goods.

In other cotton fabrics the demand is but slender. In most cases a stronger tendency is observable and with the return of fine weather greater activity may be expected.

**IRON AND METALS.**—No transactions have taken place in Iron, but a better feeling as regards *Nail Rod* may be recorded. In *Bar* only a few sizes are saleable, the greater number being overstocked. *Hoop* may be quoted at \$5 to \$5.10 with no enquiry. There have been no arrivals in augmentation of stocks. *Tin Plates* may be reported somewhat better with more enquiry.

**SUGAR.**—Our market during the past week has continued steady and there is an improvement in price for best quality *Formosa* only.

Arrivals from Hongkong are 1,600 piculs.

Sales are as follows:

11,900 piculs *Formosa* at \$4.15 to \$4.55; 500 pls. *Swatow* at \$3.92½; 440 pls. *Kongfung* at \$6.50; 230 pls. *Kookfah* at \$6.80 to \$6.85; 400 pls. *Epak* at \$5.75.

## COMMERCIAL INTELLIGENCE.

(Continued.)

**SILK.**—Since the 20th instant, arrivals are 400 bales, and purchases about 400 piculs, now in course of inspection. The demand continues active for all fine-sized silks, and we have no change to report in prices.

**SILK-WORM'S EGGS.**—Total arrivals are 46,000 cards against 650,000 last year at the same date. No transactions worth mentioning have taken place, and no prices are as yet established.

It is now very positively asserted by the Japanese that the Government, disregarding all remonstrances from whatever side they come, have decided upon limiting the export of this season at 1,350,000 cards, and will by all means enforce their decision. It is not, however, expected that they will pledge themselves to that course by any official declaration.

**TEA.**—Business in Tea has been very quiet for the closing week, settlements amounting only to some 600 piculs, and arrivals reaching 1,700 packages or about 900 pls.

Although no actual alteration in rates can be quoted, buyers are rather pressing their stocks and a drop in prices seems probable.

Advices brought by last American mail shew that we evidently must enforce more reasonable ideas on the Japanese merchants as to the really intrinsic value of their goods in comparison with the China teas, if our tea trade with America is to be carried on in a satisfactory manner. To meet the New York quotations a further drop of some \$2 @ 4 per picul all round is necessary.

We regret to report that one or two cases of fraudulent adulteration in parcels of tea have been recently detected, and we would remind the Authorities that it is much more easy to stamp out such an evil in its commencement than when it has become a partially recognised "trick of the trade."

## THE GREATEST WONDER OF MODERN TIMES!

## HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

## THE GREAT CURE ALL!

## HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diphtheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

## THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873.

## DEATH.

On the 1st October, at No. 42, Yokohama, of Inflammation of the Brain, JOHN A. son of F. DOUGLASS, aged 10 years and 9 months.

## Notes of the Week.

THE week has been a bad one for the farmers. We want sun and southerly winds, instead of which we have had a great rainfall and cold winds from the North. But with good fortune this month we shall see a fine harvest carried, lower prices for rice, and a possible export of some importance. Japan rice is said to be gaining favour in England where the rice consumption is far larger than might be expected in a country the adult inhabitants of which rarely touch it. This is probably mainly owing to the simple manner in which English children are fed, a custom in which our trans-atlantic consins have much to learn from us.

The death of Sawa, formerly Principal Secretary of Foreign Affairs, and recently appointed Ambassador to Russia, whither he was on the point of starting, has cast a gloom over official circles, both native and foreign, in which he was deservedly a favourite. A short obituary notice of him will be found elsewhere. Among other branches of knowledge in which he excelled was that of the arts of his country, and we believe he had prepared for publication a monograph on this subject in the leisure interval between his retirement from the Foreign Office and his appointment to St. Petersburg. The finished manuscript was burnt in a fire which occurred at Ozaka some months ago and destroyed his residence, and of which we gave our readers an account at the time. But the draft of the work is, we believe, still in existence, and may possibly be obtainable from his executors or published by them after going through the hands of a competent editor. A translation of this work would certainly throw much light on the history of art in this country, a subject so far almost wholly unexplored, but of great interest. Lavish praise has lately been bestowed upon the specimens of it exhibited in Vienna, and it would be curious to ascertain at what period of Japanese history it flourished most highly, regard being had to the condition of the political institutions of the country at the time.

Kido, one of the principal members of the recent Embassy to Europe and America, is also reported to be dangerously ill from a stroke of paralysis. This is also bad news, for great hopes were entertained by those who knew him well that his liberal views, his undoubted courage and great aptitude for political life would make him a valuable member of the administration on his return from Europe. The country can ill spare the services of such men as he and Sawa, and the death of the one and dangerous illness of the other may in some sense be regarded as national calamities.

The Missionary discussion has brought a writer into the field who challenges the statements of his opponents upon the charge brought against the Missionaries of having received pay from their own Societies while engaged by the Japanese in teaching in their schools. In every instance this has been disproved, many of the Missionaries having actually remitted to their Societies a considerable proportion of the pay they were drawing as Japanese teachers. The charge that they had signed agreements binding themselves not to teach Christianity also has been effectually broken down, though there is some sophistical and lubricious wriggling on the part of their op-

ponents to make the charge cover a forced inaction on their part in this country arising from the prohibitions of the Government on this question and wholly due to political causes. This is all of a piece with the publication of the letter covertly mocking all Missionary endeavour and signed "A Missionary." If this is "fun," our sense of humour has failed us, and if it is fair our sense of fairness has become inverted. Very deservedly do settlements of foreigners in Asiatic countries fall into disrepute at home when they are judged, as they must to a great extent be, by the character of some of the journals which claim to represent them. And the worst of it is that we are all so much arched with the same brush that men who wish to stand well on their return home are almost forced to keep their antecedent residence abroad in the back-ground. It is no light misfortune to have lived in a place where the incidents which have attended this discussion were possible. We know of course "that Japan is a charming country and we love the spot in which our lot" &c. &c., but sober people at home, who judge wisely and well on these subjects, pay us but scant respect.

AFTER a long period of dulness, trade is beginning to revive again, and the month now entered upon promises to be one of unusual activity. A large export of every kind of Japanese produce is likely to take place, and we are glad to notice that business in 1873 contrasts very favourably with that of 1872 as far as prudence is concerned.

In the latter year, merchants acted very wildly in almost all their purchases, and they have since fully realized the imprudence of more than anticipating any rise in prices that possibly could take place in the home markets, without for a moment thinking of the fall which a high range of values left room for, and which actually took place.

In Silk, purchases are going on steadily on what seems to be an intelligent basis, staple kinds being bought at about the present low range of London prices, and a reasonable chance of profit exists.

Up to the present time barely one third of the crop has been bought, and the Japanese seem to be partly reconciled to dispose of their stocks at reasonable rates; we may therefore look for a large business and not unfavourable results from the present season's operations.

New York advices about Tea are favourable considering the extraordinary state of things existing there, and it is gratifying to know that shipments of Japan tea so far promise pleasing results. As with Silk, purchases are being made upon a low, instead of a high range of figures, and although those interested complain that the fall in price of the article in America has not been fully responded to here, still the trade appears to be sound, and those engaged in it should persevere in keeping prices within bounds, and not as in former years bid against each other to the detriment of all concerned except the native tea dealers.

The delay in bringing the silk-worm's eggs to market is most unusual, and the general impression is that the *graineurs* will be much pressed for time, as they must conclude all their business by about the middle of next month. We understand that there are 1,300,000 cards to be disposed of, and it is estimated that some twenty to thirty lacs of dollars will be invested in them; this large outlay in such a short time will give an impetus to trade, as the money spent will find its way back into the hands of importers, and will no doubt induce a large and, let us hope, a better business in Imports, a branch

of trade which has been in a most unsatisfactory condition for a long time.

It is worthy of notice that under the new regulations Rice is being bought at Osaka in large quantities for shipment to Europe, unless a profit can be realized by re-sales on the market, and merchants are only waiting for tonnage before forwarding the grain. Much as we appreciated the new measure at the time, we were not aware that they would be so soon availed of, and it is a matter for congratulation that the country will have a surplus of grain instead of a deficiency as seemed probable during the long drought in July and August.

Everything considered, the foreign trade of the country is decidedly in a healthier condition than it has been for years past, and though we cannot look for any great expansion in the immediate future, we may hope for a different state of things to that which we have unfortunately of late experienced, and we confess that we see no sufficient reason why the contrary should be the case.

There is, however, one matter to which attention may be profitably drawn, viz: the proper proportion of stocks of goods to the total consumption or the average deliveries. It is manifest that before the establishment of telegraphic communication with Europe and the new lines of steamers which incessantly traverse the Suez Canal—means by which we can procure any quantity of goods we may require within sixty days of the demand for them—stocks, larger in proportion to the average or anticipated deliveries than are now required, were a necessary feature of the trade. Everything used to come out in sailing vessels and all orders were transmitted by letter, so that it took fully six months before a suddenly increased demand could be met. There was, indeed, China at hand from whence stocks might be increased on any sudden emergency, but, speaking generally, our stocks were adapted to conditions of the trade which are now passed away, and stocks which were legitimate and necessary once, in relation to the total extent of the trade, are entirely superfluous now, and tend to produce lower prices than are consistent with a sound trade. It is quite true that, as a general rule, merchants will have to look forward now to a very much smaller range of profit than before the days of telegraphic communication and the opening of the canal. Indeed, their commissions are perhaps as much as they can in general hope for. But with the maintenance of prudent views and reasonable stocks, they should realize these commissions pretty steadily, and not be exposed to the severe losses which have characterized too much of the business of the past year.

It is with sincere regret that we find ourselves called upon to record the death of Sawa Nobuyoshi, appointed a few months back Envoy Extraordinary and Minister Plenipotentiary at Petersburg, on the 27th September. The deceased was the representative of one of the most ancient families in Japan, and claimed descent from Shōtoku Taishi, a prince who was most instrumental in the introduction of Buddhism into Japan. He was born in 1836. In 1863, he took the side of Chōshiu in the political quarrel at Kiōto, and was one of the seven Court nobles, who left that city with the Chōshiu troops when they were expelled on the 30th September. In November of the same year, he headed an unsuccessful insurrection against the existing government (that of the Shōgun) in Tamba. Having returned to Chōshiu he passed over into Shikoku, and managed to elude the vigilance of the emissaries of the Shōgun when the other Court nobles were surrendered by the reactionist party in Chōshiu in January 1865. He returned from exile in 1868, and was shortly afterwards appointed Governor of the newly constituted Fu of Nagasaki. In 1870, he was appointed Minister for Foreign Affairs, which post he held until August, 1871, when he was removed and replaced by the present Udaijin Iwakura Tomomi.

Sawa Nobuyoshi was a man of sound judgment and political knowledge. His learning, though perhaps not profound, was exceeded by that of but few of his countrymen, particularly in the department of history and antiquities. He possessed varied accomplishments, and shone more in conversation than any Japanese whom we can recollect. He was looking forward with high and intelligent satisfaction to the prospect of starting on his

mission to Russia and seeing the western world for the first time. An artist himself, he anticipated great enjoyment from the fine collection of paintings in the Winter Palace, a collection which, as some perhaps of our readers may recollect, is singularly rich in the fascinating works of Murillo. His manners, feelings and tastes were eminently those of a gentleman, and his uniform courtesy and kindly disposition will long be remembered by all who came in contact with him either officially or privately.

THE following, taken from an American paper, furnishes an abstract of the more important points of the Postal Convention concluded between the United States and Japan:—

#### POSTAL TREATY WITH JAPAN.

Washington, Aug. 6.—The new postal treaty with Japan was to-day officially signed by the President. The following is an abstract of the more important provisions: The mails shall be carried by the present steamers between San Francisco; and Japan, or by others which may hereafter be designated; letters, newspapers, and samples of merchandise may be carried; San Francisco and Yokohama shall be the exchange offices; no account shall be kept, and each country shall retain its own domestic postage; single rate letter postage shall be fifteen cents the half ounce, prepayment peremptory; delivery should be free to destination; the rate of postage for single letters shall be reduced to twelve cents after the treaty has been in operation one year, the Japanese desiring the first year to secure some revenue; newspaper postage two cents; there shall be postal communication between Shanghai and Japan at six cents single rate postage; European closed mail may be sent by the United States for two cents additional; passenger letters may be exchanged; Pacific States continue the present subsidy to the Pacific Mail steamers; Japan agrees to pay the cost of transportation if mails are sent by other steamers.

THE "Deutsche Gesellschaft für Natur und Völkerkunde Ostasiens" has issued its second Journal of Transactions. The principal papers consist of a continuation of the Laws of Iyeyas by Mr. Kempermann; a Description of a Japanese Globe with photographic illustrations by Mr. Heeren; a description of the processes of paper manufacture in this country by Mr. Zappe; and the first part of an Essay upon *Kak-ke*, a disease very common in this country, but the pathology of which has hitherto been very obscure and ill understood, by Dr. Hoffmann.

WE trust two or three gentlemen may be found to take up the skating question this year. Last season we had frost for more than a month which would have kept a covered rink going for at least three weeks. The winter before that we actually had ten days skating on the uncovered canal, and should have prolonged this but for the pumping of salt water, instead of fresh, upon the ice. We have heard that a convenient and suitable field has been found, fairly sheltered from the sun and fairly exposed to the cold. If half a dozen gentlemen would form themselves into a committee and share such little work as the necessary arrangements entail, we might have a month's skating without difficulty. There is no necessity for running into much expense. The rent of a field for a month or two, a little bamboo scaffolding, a few hundreds of mats for covering from the sun, and the cost of watering by night, need not and should not demand over a couple of hundred dollars, to raise which a hundred subscribers could be found with ease.

An idea appears to exist among the *Graineurs* that some half million of cards out of those reserved by the Japanese Government for home use will be available for export. We possess, however, the best authority for stating that this rumour is entirely destitute of foundation.

MR. MARSH has announced a concert for Thursday next the programme of which embraces some novelties, the most hopeful of them being a violoncello performance by Mr. Chapman, formerly a member of the band at Her Majesty's Theatre.

By the way, why should the English persist in writing programme and keeping a French termination to a word of purely Greek etymology which they have themselves naturalized? They are content to write monogram, telegram, epigram, why not then program?

(From the Japan Mail Daily Advertiser.)

A REPORT has gained currency that the Oriental Bank Corporation have sustained a loss of £100,000 by a failure in Ceylon, but we have the best authority for stating that this report is untrue, the Corporation only being interested in the Ceylon failure to the extent of from £7,000 to £10,000.

We hear from Shanghai of an extensive fraud committed by the godown-keeper of a mercantile house who has obtained large advances on fictitious godown orders. The case will, in all probability, come into Court, as the employee of the godown-keeper may plead non-liability on account of negligence on the part of those who made the advances.

The liability of Bankers or Merchants for the acts of their Compradors or Godown-keepers is a matter which deserves the fullest consideration, and whatever may be the legal value of public notices disclaiming all such liability, they are, or may be useful in drawing the attention of the Public to the necessity for extreme caution in regard to the powers and acts of their servants.

THE latest accounts from Tokei yesterday represent the condition of Mr. Kido as affording cause for the gravest apprehension. We hope that the grounds of uneasiness may not prove so serious. Japan can ill afford the loss of one of its wisest counsellors at the present conjuncture.

WE observe that Mr. Marsh announces his third concert for the evening of the 9th instant, under the patronage of H. R. H. the Duke of Genoa. Mr. Marsh has been fortunate enough to secure the cooperation of the leading musical *dilettanti* of Yokohama and his programme furnishes an excellent selection of vocal and instrumental music. Mr. Chapman (a violoncellist of considerable reputation in the Australian Colonies, we understand,) will make his first appearance in Yokohama on this occasion.

A FURTHER contribution from the fitful artist who presides over the destinies of the *Japan Punch* was published yesterday. It is probably a little short of the usual average of merit, though that, no doubt, is less the fault of the artist than of fate which has thrown but little matter in his way for his pencil. The "Missionary Question" receives, of course, its share of satire, and the recent incidents at the Railway Termini, the "Bivoltini," "Prince Charlie," &c., supplement the series.

The *croquis* of "Cupid" is excellent in its way, though, assuredly, somewhat too intentional.

WE have to acknowledge the receipt of the first number of the *Foochow Herald*, apparently a weekly paper, to which we wish every success in its proposed career.

AN execution of two criminals took place at Tobe on Saturday morning. A large number of foreigners were present on the occasion.

A report has obtained currency in Yedo of the decease of the morganatic wife of H.M. the Mikado whose infant child died last week. The intelligence requires confirmation.

A MEETING of the Silk buyers was held on Friday, but as the proceedings were of a preliminary character we forbear from comment upon them. We regret, however, to learn that a subject of such paramount interest to the commercial community attracted so little attention among its members. It indicates either apathy on the one hand—and it were idle to suppose this,—or a disbelief in the possibility of obtaining redress by any available means for a very flagrant breach of the treaties under which foreign trade with Japan is supposed to subsist.

F. AUGUSTIN was charged before Mr. Wilkinson, H. B. M. Acting Consul, on Friday, with the robbery of three pairs of socks. After hearing some evidence, the case was remanded until this day to allow of the production of witnesses.

THE Yokohama Daily News is responsible for the announcement that the Minister of Finance has received intelligence that cholera and dysentery have broken out in Wakamatsu Ken. It would appear that of 593 persons attacked, 76 have died.—*Japan Herald*.

#### HIOGO.

THIS being just the time of the Autumnal equinox, some rather severe weather has been looked for as a matter of course, and the gale which set in from the Northward early on Monday morning, and continued till yesterday, was so heavy as to give rise to the most serious apprehensions of another typhoon. At sunset on Sunday evening the sky had a very angry appearance, but there was hardly a breath of wind till some time after midnight, when the banging of doors and window shutters gave notice to the more wakeful among the community that a change had taken place. Little or no rain fell in Kobe, but the gale continued with such violence all through Monday that the departure of the steamer *Aden* for Yokohama was delayed more than twenty-four hours; a boat from the barque *Westbury*, which arrived in the offing in the morning from London, tried to make Kobe harbor but was obliged to go into Hiogo, and the *Taiting*, coming down from Osaka, lost some sails; a junk was swamped in the offing, but the crew to three men were saved by a compadore's boat belonging to Messrs. Domoney & Co., and the *Budgji-maru*, on her way down from Osaka, saved two men from a fishing boat which had shipped a quantity of water and then upset.

On shore we have as yet heard of but few accidents. Some tiles have been blown off, and a house, or rather shed, which had been erected in the new street, was blown down. The worst accidents we have seen has befallen the Union Protestant Church, which verily seems to be an unfortunate structure. It was only the other day that the present roof was finished and the community congratulated on the possession at last of a building which was out of debt, and likely to last, without much fear of accidents happening to it, for some time to come; but the windows were not shut on Monday night, and the wind blowing in at those on the North side, lifted up a great part of the opposite side of the roof, which is now more or less of a wreck throughout great part of its length, some of the sheets of zinc having been entirely blown off and many others loosened and twisted out of shape. We sincerely hope that the Trustees will be able to repair damages before the next fall of rain.

The gale abated yesterday morning and there was little wind throughout the remainder of the day. The barometer is still, however, standing low, and the aspect of the sky to the North and North-East remains very threatening.—*Hioogo News*, 24th inst.

WE learn that the Japanese Government are about to send some Military Officers to Acheen, for the purpose of enabling them to obtain a practical insight into the art of warfare.—*Nagasaki Express*.

The Hongkong and Shanghai Banking Corporation have established an independent agency at Amoy. The want of increased Banking facilities at that port has been felt for some time, as the firm of Messrs. Tait & Co., which so efficiently acted as agents for both the Hongkong and the Chartered Banks, found the work increasing to an extent requiring undivided attention.—*China Mail*.

#### NEUOHWANG.

Our Newchwang correspondent writes:—There is no particular news, except that the country is flooded by the late heavy and unusual rain. The poor people, rather than starve, band themselves together and become "Ma-taze"—mounted robbers—which by the bye requires some capital to begin with, as they say these brigands are better mounted than, though not so well led as, the mandarin soldiers. Our Commissioner of Customs, during an excursion up river, was fired upon by river pirates; but, though the only foreigner on board—after shewing himself in the hope that he would not be attacked, and receiving several shots which fortunately only entered his boat—he returned the fire, killing at least one scoundrel. We hope to get a few marines for the winter, as the neighbourhood of the robbers makes it unsafe.—*N. C. Daily News*.

#### FOOCHOW.

The long-continued drought is exciting anxiety among the people, and frequent visits have lately been made to the temples of Kwan-yin, the Chinese Goddess of Mercy, to pray for rain.

Finally, the officials have felt moved to pray, and have gone, in the proper robes, to burn incense to Kwam-yin. In order to propitiate the offended deities who are withholding the rain, they have forbidden the butchering of animals, in the usual proclamation of eight characters:—Beef and pork disappear from the stalls, but we do not hear that foreign residents find any difficulty in keeping up supplies. The prohibition is for three days, to be followed by another, if the prayers are not effectual. By the appearance of the clouds at the present writing (Monday), we prognosticate that the grateful showers will have descended ere the first number of the *Herald* reaches our readers.

MR. ROBERT H. MACLAY, elder son of REV. R. S. MACLAY D. D., formerly of Foochow, graduated recently at the Syracuse University, New York; and has received an appointment as clerk in the Japanese Customs' Service, with a salary of \$2,590. REV. R. S. MACLAY, D. D., for many years superintendent of the American Methodist Episcopal missions at this port, has been transferred to Yokohama as superintendent of the Missions of his church in Japan. We are sure that the best wishes of his many friends in this community will attend him in his new field.—*Foochow Herald*.

#### TIENTSIN.

Many unprejudiced travellers have expressed a conviction that Tientsin is the dirtiest city in the world. The water-cure has been tried for several years, with slight success. Although the rains appear to have mostly ceased, the hopes of an abatement of the waters have not been realized. The water in the river on the 2nd instant was higher than ever before. The courts of the Custom House at high tide are declared ports of entry. The French Concession stands out of the water and in the water. As yet, the British settlement is high and dry. Day by day the embankments between the

settlement and the native city grow a little higher. The surface of the river is at least twelve or fifteen feet higher than the plain. Everywhere, the water is oozing through the porous soil. Along the river bank, houses are undermined, shops transformed to ships that have been scuttled, sunk, and everything menaced.—*N. C. Daily News*.

#### THE POSTAL CONVENTION.

IT is not strange that the new Postal Convention made between Japan and the United States has not been received with favour by the Public. The responsibilities connected with the receipt and delivery of letters are of the most weighty kind, and the Government which claims the acceptance and discharge of those responsibilities as an Imperial right must give good and sufficient evidence that it acknowledges in the fullest sense the duties with which that right is correlated. It requires but little knowledge of this country to discover that, in the sense in which we understand the term, the people of Japan have no rights, and it may therefore be legitimately doubted whether any such sense of responsibility as controls the administrations of Western countries, exists in the minds of the governing class here. In Europe and America the respective relations of the governors and the governed are so well defined, the rights of the Public are so firmly insisted upon and so unhesitatingly acknowledged, that any failure in the discharge of imposed responsibilities brings down immediate retribution, and guards the future against the recurrence of similar negligence or perversity. Many of us can recall the storm of indignation which followed the opening by the late Sir JAMES GRAHAM of certain letters on their way through the Post Office. His object was pure. He was desirous of protecting the Government of a friendly Power threatened with dissolution, whose enemies were hatching their plots in England. But his act set the country instantly in a blaze, and under whatever temptation of fear or friendly motive, no English Minister will ever dare again to follow his example. In the East it is otherwise. Here the patience of the people is the sole measure of the power of the Government, and an act which in Europe would serve to drive the strongest administration from power, like chaff before the wind, would pass without public remonstrance, or perhaps even without the idea of making it. It does not therefore surprise us that the idea of entrusting letters—a very sacred trust—to the keeping of a Government which neither has, nor can well be blamed for not having, this sense of responsibility, has excited much misgiving and some remonstrance. The abject failure of the Telegraph administration here, and the scandal of which it is daily the subject, are warnings that dangers of a formidable kind attend the working in this country of any administrative machinery involving responsibilities to the Public, and though, as we hope to show, there is less analogy between this and the case under examination than at first sight appears, the Authorities who are entrusted with the guardianship of our interests not unnaturally hesitate to make concessions for which they not only receive no equivalent, but which might entail the most serious loss or inconvenience upon the subjects or citizens of their respective states.

But there appears to us to be another side to this question, and we are anxious to urge it. There seem to be many grounds on which this Convention may fairly be urged as reasonable, and though it would be absurd to ignore the objections to it, we are in no way persuaded that they are fatal to the acceptance of it by the Treaty Powers to whom it will be presented and on whom it will be pressed.

In the first place the guarantees offered by the Japanese Government for the fulfilment of their obligations are at least fair. They have appointed as Superintendent of Foreign Mails, a gentleman whose acquaintance with his duties is best vouched for by the fact that he occupied the "British desk" in the Post office at Washington for some years, a post which involved the entire management of the largest foreign mail despatched by the United States Government. This official will be assisted by skilled employes to any extent which may be deemed necessary for the efficient administration of the Department, and it would not be difficult to demand that such assistance should be retained until the common agreement of the Foreign Representatives was given for dispensing with it. In other words, we should at once have the services of skilled workmen instead of those of amateurs, and we have yet to learn how this will be a disadvantage to us. These officers will in no way be placed under Japanese jurisdiction, though they will be amenable to Japanese authority, and we are by no means clear that any claims which might arise for the consequences of mismanagement would not be more easily urged against them than against the representatives of the present postal administration. From our own point of view, it seems almost an indecent thing, in a place as large as this, to see the United States Consulate a kind of hybrid establishment, partly devoted to its legitimate duties, and partly to an amateur Post-office the hypothetical expenses of which are doubtless charged to the taxpayers of the States, but of which the very large emoluments go in that very worst form, the form of perquisites, into the pockets of the United States Consul and his assistant. The world will never be injured by the cook claiming the dripping which from time immemorial has been her legitimate share of the kitchen spoils, but it is not desirable that commissioned officers, whose swords may justly claim some moral superiority over spits, should waste their speculative energies upon calculations the only unknown quantity of which is the exact amount they will derive from the varying difference between the Mexican dollar and its equivalent in greenbacks.

Then, again, as regards responsibility to the Public. It has been taken for granted that the Japanese are in no condition to assume and discharge this with any sufficient sense of its weight. But it must be allowed that, as regards the Railway, they have risen to a sense of the obligations imposed on them in a manner equally unexpected and creditable. Nor is it any answer to our plea to say that this is owing to the constant supervision and guidance of the foreigner, and to the fact that they are only wheels in a machine of which he is the contriver, regulator and mainspring. It is not so. The Japanese have grasped the ideas belonging to the efficient working of the system, and in spite of ample room and free-will to make mistakes, they have made few or none. The imposed responsibility has produced the power of meeting it in the one case, and we see no reason why it should not do so in another. The directing supervision will be foreign, and the maintenance of this can be stipulated for. The Press is available for the representation of possible grievances, and any claims could be addressed arising out of the short-comings or misdeeds of the administration to the Ministers.

We have spoken of the mal-administration of the Telegraph Department in order to face fairly the objection our opponents might urge from this illustration of Japanese unfitness for trusts of this nature. But it must be allowed that a telegraphic system, involving as it does the

use of a large number of delicate and easily disordered instruments, the unbroken continuity of a line passing through hundreds of miles of country liable to floods, earthquakes, typhoons, and the attacks of an ignorant peasantry, differs widely from a postal system such as that contemplated in the Convention. The break-down of a telegraph line may arise from the minutest disorder occurring at any point of its course. An incapable assistant, a disordered instrument, a chance and careless connection by accident of two lines of wire, a local insurrection, meteorological violence, or unforeseen and unavoidable accident, may paralyse a line and deprive the Public of its services. This cannot be pleaded in the case of a Postal system, and especially a system organized and conducted under skilled officers. In one case the cause of failure or delay may be distant and recondite; in the other it is proximate and easily discovered. In the one, complaint is almost unavailing, and claim for damage or punishment by exposure—presuming that individual negligence is the cause of the fault—is impossible. In the other, it is wholly the reverse. The Public is equally near to the spot where the offence is committed, and to those who are responsible for it, whether as agents or principals, and we shall not believe that this check will fail to produce the effects it invariably produces elsewhere.

The fact is that we are all out of humour with the Japanese, and the causes of this displeasure we put before them frankly and fully in our issue of last Saturday week. But this should not blind us to the fact that though the success may not have equalled the effort, there has been, and still is, much effort in the right direction. It may be vitiated by vanity or by a pride which refuses to see its shortcomings and to acknowledge its deficiencies. But there is the effort, and unless we are convinced that we should be exposing our own people to unnecessary and preventable dangers, it is neither wise nor generous in us to damp this effort, to chill the feelings from which it springs, and to encourage the reflex influence of a retaliatory policy. We have much to hope and ask for from this country—not indeed, for that which would benefit us and impoverish it, but for that which would benefit both of us—and we must be prepared to run some little risk in our mutual intercourse. Let us, by all means, reduce this to a minimum; let us demand guarantees for the strict fulfilment of promises and the discharge of accepted responsibilities; let us insist on indisputable rights and see that the acknowledgement of them is accompanied by full admissions of the correlative duties attached to them; let us, if need be, retain in our hands the power of revoking our act of concession. But let us also remember that a generous policy evokes a corresponding spirit, and that while we must negotiate on a matter of this kind and this gravity like sensible men of the world, we should also negotiate as those who know that the repression of legitimate aspirations is not calculated either to improve the Japanese or advance our own cause with them. If, with the Press to expose mal-administration, and our Ministers to urge claims which may arise from it, we cannot afford to run the risks entailed by this experiment, there is an end of every thing.

## DEVINE VERSUS KIRBY.

THE judgment in this case was pronounced too late in the week to permit of our reviewing it in our last issue; but it must not be passed over without comment.

The contention of the two parties to the suit arose out of the following circumstances.

Mr. KIRBY, being in want of a confidential assistant in his business, made overtures with this end in view, in the latter part of last year, to Mr. DEVINE, whom he had known for some ten years and with whom he eventually came to terms. The connection was maintained, apparently with mutual satisfaction, up to the 26th June this year, when Mr. DEVINE received a letter from Mr. KIRBY expressing great astonishment that he had signed a cheque with the name of the firm, and not with the more limited form of "per procuration," and dismissing him from his post for what was to Mr. KIRBY's mind a grave breach of duty. A demand was made on the same day for the Power of Attorney held by Mr. DEVINE, and another letter was written to him stating that the dismissal was not absolute but optional for the plaintiff's acceptance, but that he must have been under an hallucination in imagining that he ever possessed the right of signing the name of the firm *simpliciter*, and that his misconduct consisted in his having done so. To the first letter Mr. DEVINE replied by saying that it had been distinctly understood from the first between himself and Mr. KIRBY that he was to sign the name of the firm, the idea of his making that stipulation being that it would give him a better commercial standing; submitting further that Mr. KIRBY's peremptory dismissal of him would act adversely upon his reputation, and stating that on this account he could not accept it. He entered Mr. KIRBY's service in January, 1873, and, on receiving the Power of Attorney, signed the name of the firm *simpliciter* up to the date of his dismissal. In April last, under Mr. KIRBY's instructions, he had obtained a draft from the bank and endorsed it in this manner. He took it to Mr. KIRBY, who enclosed it in his own letter to the destined recipient of it, the endorsement of the bill by Mr. Devine giving rise to some conversation in which not only was no objection made to Mr. DEVINE's signature of the firm, but Mr. KIRBY spoke of the necessity of sending the signature to the London Bank so that it might be recognised, though Mr. DEVINE said it was unnecessary as the London agents already had his signature and could produce it if necessary, thus proving that he had so used it before and without any objection having been raised to the act. In cross-examination Mr. DEVINE admitted that he might have signed cheques in February "per procuration" because he was not quite certain at that time whether his Power of Attorney gave him the fuller power of signature, but he testified to a conversation with Mr. DICKINS, (Mr. KIRBY's legal adviser) which satisfied him that he possessed this latter power. Mr. DICKINS, indeed, denied all recollection of this conversation, and adduced the fact that no memorandum of it was made in the register which he keeps of such interviews. Yet the interview, if so held, was evidently a very short one; Mr. DICKINS was much engaged at the time, the question of the extent of Mr. DEVINE's powers was to be arranged subsequently, and a provisional answer to his hasty question was all that the circumstances appeared to demand. It is quite conceivable, therefore, that the matter may have slipped Mr. DICKINS' memory—far more conceivable than that Mr. DEVINE should have signed the name of the firm without first satisfying himself that he had the power to do so. He admitted that the advertisements which announced

his connection with Mr. KIRBY said that he was to sign "per procuration," but in view of the previous understanding with Mr. KIRBY, and the impression existing on his mind of the conversation with Mr. DICKINS, he never doubted his right or power to use the name of the firm *simpliciter*. In proof of this he adduced the fact that the official business letters which he wrote from Yokohama to the firm at Kobe, a branch which Mr. Kirby constantly visited in residence, and which were of course intended for Mr. KIRBY's own perusal, were also so signed. Mr. HUNTER, the manager at Iliogo, had frequently received letters from Mr. DEVINE, as manager of the Yokohama house, signed E. C. KIRBY & Co. and called Mr. KIRBY's attention to it. He (Mr. H.) subsequently observed that all the letters which came from Yokohama were addressed in the same way, but stated that Mr. KIRBY did not take much notice of it, but "simply supposed it was a mistake made in a hurry."

On Mr. KIRBY's side it was urged that a partnership had been at first contemplated, when it was understood that Mr. DEVINE should sign the name of the firm, but the negotiations hung fire owing to the vacillation of Mr. DEVINE, and when the actual arrangement came into force, he did not intend giving his assistant that power. He admitted that Mr. HUNTER had drawn his attention to the fact that the plaintiff was signing the name of the firm, but he took but little notice of it, attributing it to haste. He did not remember seeing the Bank draft already spoken of bearing the plaintiff's endorsement with the simple name of the firm. As the semi-official letters to him treated of all business points he did not read the official letters, and thus was not aware that the plaintiff was habitually signing the name of the firm. On the 24th June, however, his attention was called to the fact of Mr. DEVINE's having exceeded the powers he had intended to delegate to him, and he brought the matter to an issue, evidently under circumstances of great impatience, and having stated to Mr. DICKINS, whom he consulted as to the best course he could take, that he had lost all confidence in Mr. DEVINE, he was advised that there was nothing to do but to discharge him. He did so, and hence the action.

Mr. HANNEN, of course, gave a judgment for the plaintiff, with \$1,000 damages and costs. There never was a clearer case, and it is only in regard to the damages awarded that we have any fault to find with the decision.

Mr. HANNEN, while very decidedly showing the repugnance both to reason and law of the contention of the plaintiff's counsel that an agent having the right to sign "per procuration" has a right to sign his principal's name *simpliciter*, ruled that Mr. DEVINE had no such power and that Mr. KIRBY never intended to give it to him. But he pronounced emphatically that the plaintiff's conduct from beginning to end bore the stamp of *bona fides*, and that he was innocently acting under a wrong impression. He did so for four months without a word of remonstrance from the defendant, when, in a moment, all confidence was withdrawn from him and he was summarily dismissed. The defendant no sooner took this most unaccountable fright than he conjured up a thousand suspicions, and allowed his mind to be preyed on by a host of fanciful terrors. Instead of going quietly into the question with Mr. DEVINE and pointing out the limitations which bounded his delegated powers, he acted upon these suspicions and wholly imaginary terrors, and dismissed him. A few words and a little friendly discussion would have settled the matter, not perhaps without some remonstrance from Mr. DEVINE, who imagined that full powers had been

promised him, and whose commercial status would be somewhat lowered by the change, but certainly without any inevitable rupture between two men who had known and respected each other for a period of ten years, and both of whom were desirous of maintaining the connection existing between them. Charges of inattentiveness, incompetency, and untruthfulness had been made against the plaintiff during the progress of the suit, but they were effectually disproved by the evidence, and Mr. HANNEN expressed his astonishment that the defendant should have instructed his counsel to maintain these accusations even in his closing speech, after all the evidence had been concluded. The plaintiff's salary was \$200 a month and quarters which he valued at another \$100 a month, three years and a half of his engagement had yet to run, and his feelings could not but have been cruelly injured by the defendant's conduct.

Under the circumstances the damages (\$4,000) at which the plaintiff assessed the injuries done to him, were not, in our opinion, a farthing too heavy. Mr. KIRBY made a grave mistake in his handling of the whole matter. His hasty and most ill-advised conduct deprived the plaintiff of a good situation, made him the object of unfounded suspicion, lowered him in the estimation of his fellows, threw him upon the world, and grievously wounded his feelings. It is the office of the Law to redress such grievances, and make men pay adequately for such mistakes, and an award of little more than three months salary to a man so dealt with does not appear to us to do this.

Mr. HANNEN appears to have been guided in his estimate of the damages awarded by the fact that Mr. DEVINE had not sought any situation after his dismissal. Was he either in a condition of mind or circumstance to do so? He had been discharged from his employment with the utmost peremptoriness, he could not name his last employer as a reference to his character and capacity, he felt himself grievously wronged, he was wounded in his feelings, indignant, and naturally bent and determined on the redress of his grievances. These are not conditions of mind in which men seek other situations. Their conduct has first to be justified and their injuries redressed in the face of the world before they turn in a fresh direction. Mr. DICKIN's remark that he might have left Mr. KIRBY without "esclandre" is to the same effect, though warranted perhaps by the ethics of advocacy. "Esclandre," indeed! His character was at stake, his conscience reproached him with no misdeed, he was summarily dismissed from his situation, his means of livelihood were temporarily cut from under him; was he to leave without protest in fear of an "esclandre" which, if law is justice, could only be to his advantage? It is most creditable to Mr. DEVINE that, in the condition of mind to which he had been wrought, he laid his damages so moderately, and so disposed we are to think that he has been inadequately compensated for the injuries he received, that we should be pleased to hear that he has resolved to appeal against Mr. HANNEN's decision.

#### A CHRONICLE OF THE CHIEF EVENTS IN JAPANESE HISTORY FROM 1844 TO 1863.

(Continued.)

##### 6TH YEAR OF ANSEI, (1859.)

1st month 12th day.—One English ship arrived at Shinagawa. On the 17th they presented a letter from their Sovereign at the residence of the Daimio of Kakegawa, and on the 19th they went away. Their business was said to be to urge the sending of an envoy to England.

1st month 13th day.—It was notified that the ports of Nagasaki, Hakodate, and Yokohama having been thrown open, any one who pleased was at liberty to carry on trade there.

1st month 16th day.—It was notified that the national flag of Japan was the "*Hi no maru*" (Sun-circle), and was to be hoisted on the stern shrouds. The flag of the Taikunate would have a black stripe in the centre and would be hoisted on the main mast.

1st month 23rd day.—To-jo Yeian of the Hagi Han was appointed to the Department of the Governors for Foreign Affairs.

1st month 28th day.—An American ship arrived at Kanagawa. She went away on the 17th day of the 2nd month. It was said that the Americans urged the despatch of an ambassador to America, and that they discussed matters relating to commerce.

2nd month 2nd day.—The Daimio of Matsuyama (in Bitchu) one of the Commissioners for ecclesiastical affairs, was dismissed because he maintained that the trial of the Kioto prisoners should not be proceeded with.

2nd month 8th day.—Notice was given of the discontinuance of the practice of receiving instruction from the Dutch at Nagasaki.

2nd month 13th day.—The Military School was ordered to devise a plan for maintaining in its integrity the national system of tactics.

2nd month 13th day.—Twenty five accomplices of the Kioto prisoners were some thrown into prison, some given in charge to bailsmen.

2nd month 17th day.—Prince Awada was ordered to confine himself to his house.

2nd month 20th day.—The Daimio of Sabaye left Kioto. He arrived in Yedo on the 12th of the 3rd month.

2nd month 25th day.—Kasuga Sanuki no kami and twelve other Kioto prisoners were sent down to Yedo, where they arrived on the 10th day of the 3rd month.

2nd month 26th day.—The Daimio of Kochi (Tosa) was ordered to retire from public life. It was said that the Taikun's Government privately advised him to request permission to do so.

3rd month 17th day.—Lord Konoye and the Daimio of Kochi were ordered to live in strict seclusion; Lords Ichijo and Kuga to retire from public life and to live in strict seclusion and Lord Madenokoji to retire from public life.

3rd month 23rd day.—An American ship arrived at Uraga. It was said that the Americans said that an English ship was coming and that they did not know whether the English would not commit violent acts.

4th month 1st day.—A Dutch ship arrived at Shinagawa. She went away on the 6th after establishing a Dutch Minister in the Temple of Chôji.

4th month 14th day.—Tatsuda Mondo no Sho committed suicide, perhaps from grief because of the unsatisfactory state of affairs.

4th month 26th day.—Yasujima Tatewaki of the Mito Han was given in charge to the Daimio of Sanda. He was tried for complicity with the Kioto prisoners.

In this month a German ship came to Nagasaki and asked for trade.

5th month 25th day.—Notice was given of a new coinage of Kobans, gold bus, and silver half-bus.

5th month 26th day.—The Daimios of Takatsukasa father and son, and Lords Konoye and Sanjô were compelled to retire from public life.

5th month 27th day.—An English ship arrived at Shinagawa. On the 9th and 12th of the 6th month, interviews took place at the residence of the Daimio of Sabaye and the real Treaty concluded. (This is what we should call exchanging the ratifications of the Treaty.) This ship left on the 14th, after establishing Minister Alcock in the Temple of Tozenji.

5th month 28th day.—It was notified that as permission to trade had been granted at Yokohama, Nagasaki and Hakodate to America, Russia, France, England and Holland, every one was at liberty to buy and sell with them.

5th month, 28th day.—Merchants were prohibited from wearing clothing or headdresses of foreign fashion.

This month there was much excitement in Mito. Many thousand samurai of that province went to Yedo without

asking permission. The reason was the unjust punishment of the old Daimio of Mito.

6th month 4th day.—Harris became Minister and took up his residence in Tempukuji.

6th month 23rd day.—An interview was held with Harris in the residence of the Daimio of Sabaye. The question of the trading settlement at Kanagawa was discussed.

From this month forward numerous merchant ships came to Yokohama.

7th month 1st day.—Some Russians landed on Ojishima in Dewa. They cut firewood and then went away.

7th month 4th day.—Orders were given that the procession of the festival of Sanno Kanda should pass, as in former years, inside the castle enclosure.

7th month 8th day.—Russian ships arrived at Kanagawa. On the 18th, they came to Shinagawa. There were about seven ships in all. Muravieff was on board. He concluded the real treaty on the 23rd. On the 9th day of the 8th month they went away, one ship being left behind.

7th month 14th day.—Twenty-five guardians of Shin-to shrines in the Mito territory complained to the Daimio of Takamatsu of the injustice done to the two Daimios of Mito.

7th month 23rd day.—The Daimio of Kakegawa ceased to hold the office of Rôju.

7th month 27th day.—Three Russians were cut down at Yokohama by some unknown persons.

8th month 4th day.—It was notified that persons who flung stones at foreigners when taking their walks would be punished.

8th month 12th day.—A French ship arrived at Shinagawa. The real Treaty was concluded, and Minister Bellecourt was established in the temple of Saikaji. The French ship then left.

8th month 27th day.—The following sentences were passed :—

The old Daimio of Mito—Strict seclusion for life.

The Daimio of Mito—Not to appear in public.

Lord Hitotsubashi—To retire from public life and seclude himself in his house.

Yasujima Tatewaki of the Mito Han—To commit *harakiri*.

Ashine Iyonske—Death.

Ukai Kichizayemon—Death.

Ukai Kokichi—Beheading with exposure of the head on a spike.

Aizawa Idayu and a retainer of the Daimio of Takatsukasa named Kobayashi Mambu gon tayu—Transportation.

The unattached Samurai, Ike uchi } Banishment.  
Daigaku and others, ... }

8th month 28th day.—The old Daimio of Kakegawa was condemned to live in seclusion.

In the course of this month, on account of the distress in Kioto, an offering was made to the Mikado of 5,000 rios, and the Court nobles were presented with 20,000 rios. In addition Lord Kûjo received an increase to his revenue 1,000 kokus of rice, and Lord Hiroashi, a present in silver.

9th month 1st day.—The old Daimio of Mito proceeded to Mito.

9th month 11th day.—Udono Mambu Shôyn was ordered to retire from public life, and to live in seclusion, Kurokawa Kabei, Hirayama Kenjiro and Hiraoka Yenshiro were deprived of office and forbidden to appear in public.

9th month 13th day.—Shimmi Buzen no Kami, Muragaki Awaji no Kami and Oguri Mataichi were appointed Ambassadors to America.

9th month 16th day.—There was an interview with Harris at the residence of the Daimio of Tatsuno about the Ambassadors to America, etc.

9th month 23rd day.—Tejima Jinshiro was murdered, probably in revenge for some punishment inflicted by him.

9th month 27th day.—Yezo was distributed among the Daimios of Sendai, Wakamatsu, Morioka, Akita, Hirozaki and Shonai with orders that it should be brought under cultivation. Wakamaku and Shônai were relieved of the defence of the Shinagawa forts; fort No. 2 at Shinagawa was entrusted to the Daimio of Himeji and fort No. 5 to the Daimio of Kokura.

10th month 6th day.—Lord Sanjo died in a private house at Yodo.

10th month 7th day.—Iidzumi Kinai, Rai Miki saburo, an unattached samurai, and Hashimoto Sanai of the Fuku Han were sentenced to death; Rokumitsu Kuman of the Temple of Daigakuji, and a farmer of Kanawara in Musashi called Hachiro, to transportation, and twenty other retainers of Princes or Court nobles, to banishment and other punishments.

10th month, 11th day. The old Daimio of Kochi (Tosa) was ordered to live in seclusion.

10th month 11th day.—Harris proceeded to the Castle and had an audience.

10th month 12th day.—A Chinaman was cut down at Yokohama by some person unknown.

10th month 16th day.—The Frenchmen proceeded to the Castle and had an audience.

10th month 17th day.—The chief buildings of the Castle were destroyed by fire. The Shogun removed to quarters in the western enclosure.

10th month 27th day.—The revenue of the Daimio of Kawanari was reduced by 5,000 kokus, and he was ordered to retire from public life and to live in seclusion. His son Iwami no kami was made Yoriai (a class of Hatamoto); Ishi kawa Tosa no kami was ordered to retire from public life and to live in seclusion, and Sasaki Shinano no kami was made Kobushin (a Hatamoto of the lower class.)

10th month 27th day.—Yoshida Torajiro of the Hagi (Choshu) Han was executed Kusakabu Yunoshia of the Kagoshima Han, and a retainer of Abe Jujiro named Katsuno Morinoske were transported, and men of the Wakayama, Mito, Uwajima and Takamatsu Han along with Fujimai Kioske and others were banished.

10th month 28th day.—Yamakuni Kibachi of the Mito Han and Hagi Shinnoske with eleven others belonging to the Kagoshima, Kochi, Himeji, Toina, Sabaye and Kameyama Han were condemned to strict seclusion. The seclusion of Princes, Court nobles and Daimios and the punishments inflicted upon Shodaihu and the retainers of Han up to and including those just mentioned were commonly spoken of as the "Terror of the years of the Horse and Goat." They were all victims to their own loyal grief at the sad condition of affairs.

11th month 14th day.—An interview took place with the English at the residence of the Daimio of Tatsuno. It was said that they asked for auxiliaries against China.

11th month 19th day.—The Americans had an interview as above.

11th month 23rd day.—Mimbu Tayu who had been adopted by the Daimio of Oshi returned to the Mito yashiki.

12th month 1st day.—The Daimios were called upon for contributions in consequence of the destruction by fire of the Castle.

12th month 2nd day.—The Daimio of Nishio was presented with a saddle and stirrups. His territory was increased by exchanging villages to the amount of 10,000 kokus. This was in order to reward him for his services in dealing with the Kioto prisoners.

12th month 18th day.—The Daimio of Mito was ordered to give up the Imperial rescript which had been given to him the year before.

12th month 21st day.—An interview took place with the English at the residence of the Daimio of Tatsuno.

12th month 24th day.—The Daimio of Sabaye ceased to hold the office of Rôju.

12th month 28th day.—Rewards were given to the officials concerned in the trial of the Kioto prisoners.

12th month 28th day.—Notice was given that foreign coins would be made current by stamping them at the Mint.

12th month 29th day.—An interview with the English took place at the residence of the Daimio of Tatsuno. It was said that they asked for 3,000 horses.

This year the English and French were preparing to invade China. The reason was that this summer the Chinese had attacked and beaten the English at Tientsin.

## Correspondence.

## THE BLUFF ROAD.

TO THE EDITOR OF THE *Japan Mail Daily Advertiser*.

SIR,—Permit me to draw the attention of those who undertake the maintenance of this Road to the condition of that part of it which lies between the Eastern corner of the Camp and the Legation Buildings.

The macadamised surface has been carefully removed, and the rain and the traffic have produced between them a slough of mud and a series of ruts which are unendurable both to pedestrian and rider.

Why should not the road be relaid?

I am,

Yours obediently,

SALVEO PEDES.

## Law Report.

## FRENCH CONSULAR COURT.

Before OSCAR COLLEAU, Esq., Consul.

SEPT. 20TH, 1873.

PAUL CULTY v. MESSAGERIES MARITIMES CO.

The parties to this suit were Paul Culty, plaintiff, merchant of Yokohama, on the one part, and the Messageries Maritimes Company, defendants, Paris, on the other. The latter failed to put in an appearance.

A. Gerard and E. Piquet, Esqrs., both of Yokohama, were appointed assessors.

The facts of the case adduced in Court are as follows:—It would appear that the plaintiff, Paul Culty, applied to the agents of the M. M. Co. for delivery of twenty-eight packages of merchandize variously marked, pursuant to two Bills of Lading produced, issued at Marseilles, France, acknowledging payment of freight thereon in full and designating the marks of the goods. Conil, the agent of the Company, however, refused to deliver them. In justification of such refusal, the agent, on the 13th ult., forwarded to the plaintiff the copy following of a telegram received on the 13th of July from the head offices of the company: "Marseilles, 5th July. Refuse delivery of the goods destined for Paul Culty or his order. Judgment for detention. Signed, Talon."

In view of the refusal to deliver up to him the merchandise in question, the plaintiff, on the 16th ult., summoned the defendants before the French Consular Court, claiming restitution of the goods detained, \$300 for losses sustained up to date of summons, and \$50 for each day's additional delay from date of judgment.

The legal points considered by the assessors were, whether a shipowner or Captain has the right to refuse delivery of merchandise to a consignee, for which he has delivered an acknowledgment to the effect that the consignor has paid freight, and fulfilled all necessary conditions.

Is it sufficient on behalf of those concerned, that the shipowner or captain should instruct his agent at port of destination not to deliver the goods because such delivery is opposed?

As is usual, is it incumbent on the court, in view of the non-appearance of the defendants or their representative, to give judgment by the default in favour of plaintiff on all the points; or ought the case to be dismissed; and with or without costs?

After a careful review of the facts of the case under consideration by the court, a decision was come to against the M. M. Company, and in favour of the plaintiff; seeing that on the 22nd June, 1873, twenty-eight packages were delivered on board the M. M. Company's steamer *Tigre*, at Marseilles, for transmission to Yokohama on board said vessel, or any two following, to M. Culty or his order, as proved by the bills of lading delivered same day;

That it appears from the tenor of these bills of lading, that the sum of F526.55 was paid in advance;

Seeing that the packages therein designated safely arrived at Yokohama;

That Culty, the bearer of the two bills of lading, having demanded delivery, Conil, the agent of the Company, refused, alleging as his reason the receipt of a telegraphic despatch from the head offices of the M. M. Company on the 15th July last;

Seeing that this despatch, of which a copy has been handed by Conil to Culty, has not and cannot have any legal force;

Seeing that according to law in such cases provided, had opposition been made, it would have been irregular; that it is at the

place of destination and not at the place of departure that such opposition should be made;

That, as is usual in these cases, the M. M. Company, having received the freight due, had no right to refuse, as they have done, the packages designated in the bills of lading aforementioned;

Finally, seeing that the bills of lading were to order and transmissible by endorsement, and further passed into the hands of a third party in good faith, no opposition or judgment for detention regularly made on the first endorser could prevent the delivery of the goods therein designated into the hands of the third party;

That the goods in question have been arbitrarily refused delivery to Culty;

Seeing that this act, which is, moreover, the act of the agency of the M. M. Company of Yokohama, does Culty injury, in consideration of which he is entitled to damages;

The Court condemns the M. M. Company by default, within twenty-four hours after notification of present judgment, to deliver to Culty the twenty-eight packages designated in the Bills of Lading delivered to him or his order at Marseilles, on the 22nd June last, with reservation of Culty's rights, in case of damage accruing to said packages.

In the event of the Company failing so to do in the time specified, they shall pay to Culty the sum of \$50 for each day's additional delay, as compensation.

And in consideration of the loss sustained up to present date, the Court condemns the Company in addition, to pay Culty the sum of \$300 damages.

The Company is further condemned in costs in the sum of 165 francs, for the draft, copy, and notification of the present judgment, together with registration of the two bills of lading, on the 22nd June, 1873, and the copy of the telegraphic despatch of the 4th July.

M. Kmetzer, Chancellor of the Consulate, is intrusted with the notification of the present decision.

The Messageries Maritime Company have since signified their intention to oppose the decision of the Court as above given.—*Japan Gazette*.

## GAIMUSHIHO, YEDO.

## CLAIMS AGAINST THE OLD HANS.

Acting-Assistant Judge HANNEN and Mr. TAMONO,  
Commissioners.

September 29th 1873.

E. C. KIRBY & Co. vs. TONAMI HAN.

The present action, instituted by the plaintiffs, E. C. Kirby & Co against Kitamura Yoskatz, representing the Japanese Government as defendant, is for merchandise, &c., furnished in the early part of the month of June, 1871, value \$15,000, being balance of account still remaining unpaid.

Mr. Dickens appeared for the plaintiff, and Mr. Hill for the defendant.

Mr. Hill admitted the sale and delivery of the goods, except that of the steamer, for \$3,500.

The first witness called was—

E. H. Hunter, examined by Mr. Dickens: In June, 1871, I was manager of Mr. Kirby's business, at Kobe. I made a contract with certain Japanese in the early part of June, 1871. [Contract produced.] They desired to buy goods to the extent of \$30,000. I told them that I could not sell to that amount on credit. I finally said some time afterwards that I would furnish the goods required if the officers could prove to me that they were properly authorised to act on behalf of the Han. Hyano introduced to me Tanaka Sanai, Hara Genshiro, and Nakayama Otomoske, and gave me the paper marked B, that I might make inquiries about them and their seals. They also wanted a small launch. I had not one ready, but afterwards got one built for them, which they agreed to take, at \$3,500; but owing to the money not being paid at the time specified, I did not deliver it into their hands. The banto went to Osaka, and from inquiries concluded that they were *bona fide* officers of the Han, and that their seals were genuine. From inquiries I made at the Custom House, I learned that the seal attached to the contract A was the Tonami Han seal. At the time the contract was sealed \$4,000 was paid, balance in four months, three months without interest, last month 2 per cent. a month—a low rate of interest at that time. When the money fell due and nothing was paid, I sued in Osaka on a promissory note (F) for \$11,000. It was made by the four surties to the contract. I sued through the English Consul. I got no satisfaction from the suit. I afterwards proceeded against the Tonami Han. I

have constantly urged the present claims. The sureties never hinted to me that the Tonami Han officers were on private business. When I sued the sureties they said nothing to that effect. The defence to my claim or contract was want of authority and fraud in the seal. Otonoske was chief, and next to him Akabane Sanai.

The court here adjourned to 2 p. m.

Examination resumed: The reason assigned by sureties for not paying the promissory note was their poverty. So far as I know, the Tonami Han officers were never examined regarding my claim. I have done business with other Hans. The contracts were similar to this one, only the stamps were not put on in the same way, although I took more precautions in this case than in the others. In regard to former contracts, I got no information from the Custom House; yet they have been paid. I sent up to Osaka to accept an offer to settle of \$2,000 cash, the rest in monthly instalments; but the officers had been sent to Yedo. I don't recollect the date of this offer.

Cross-examined by Mr. Hill: I have no other copies of original documents with me, nor have I my books. This transaction was entered in them. Hyano was the party who conducted the business on behalf of the officers. He was an interpreter at the Custom House. The items and prices of goods were settled by persons who came for the purpose, on behalf of the officers, one was a broker called Sozemon, the other was Sugai Kitchitaro. They acted through Hyano as interpreter. I made no other inquiries than those I have mentioned at the Custom House. I have made contracts with Morioka Ken, Seyama Han, and another, I don't remember the name. On them were the official stamps and seals. The finance officer was generally considered the one with whom it was safe to do business on behalf of the Han: I don't remember the dates of the contracts I have just mentioned. I do not know which officer showed me the Han seal on the first occasion; but it was voluntarily shown to me without my asking for it. I saw the piece of paper on which the Han seal is attached to the contract. The stamp was attached at my office, by Tanaka Sanai. I cannot say that even now I know the difference between an officer and a samurai. When I went to the Custom House, I understood sufficient Japanese to make myself understood by the officers. I made enquiries about the peculiar way of putting on the seal at the Custom House. It was in consequence of my suspicions that I exacted the promissory note I have mentioned before. At the time I had no doubts about the validity of the contract; for had I had any such suspicion, I should not have entered into it at all.

Court adjourned till to-morrow.

September 30th.

E. H. Hunter, cross-examination continued: Saw no other seals put on the contract except the Han seal. The reputation of some of the sureties was unquestionable. The house of Tonajai Gohie is and was the first in Osaka; that of Minakata Ginpei was agent for the Steam Company Kuwaiso Kata. I would have dealt with the sureties with no other security than their names and seals to the extent of this contract. The goods sold by me were delivered to the order of the four purchasers—officers. I believe that the personal seal of an officer binds him in his official capacity also; but that depends on the nature of the document. I have since received neither money nor goods, except what was paid on delivery of goods. It took about four months to build the steamer. I heard of sale of goods to these officers by Scott, in the beginning of 1872. I never heard of any attachment by Scott of the goods I had sold. I cannot read Japanese. The banto explained to me that when he went to Osaka he saw a sign on the house of the parties to the contract, explaining that they were officers of Tonami Han. This was explained to me at the Custom House, at the time of the investigation. I did not procure from the officers any written authority by which they acted. Do not know if they ever had any such authority, or only the stamp of their principal. I did not ask to see the stamp. I have never seen the authentication of an agency by means of a seal on a blank piece of paper, but I believe it is customary, from inquiries I made on the occasion of this contract.

Re-examined by Mr. Dickens: Hyano never acted in any other capacity than as interpreter in this transaction. The officers were present while negotiations were going on. None of the officers signed the promissory note; in consequence, I did not sue them. The seal being affixed to the contract in a way I had never seen before, I thought I would take extra precautions. The sureties made no difficulties about giving promissory notes. They did not appear to have any doubt

about it themselves. They are still doing business in Osaka. I don't believe it is necessary that the Han seal should be on a contract when the seals of the officers are on it. I offered to deliver the steamer on receipt of the money due for her.

Court here adjourned to Friday, the 3rd inst.—*Japan Herald*.

IN H. B. J. M.'s COURT, YEDO.

Before MARTIN DOHMEN, Esq., *Vice Consul*.

PEARCE *versus* POAT.

We extract from the *Japan Herald* the following decision in the foregoing case. The *Herald* points out the desirability of intimation being given to the Press of the occurrence of such cases of importance at Yedo as may offer matter of interest to the public, in order that the decisions of the Consular Court may be more generally promulgated through the medium of the Yokohama journals:—

The following is the decision in a case pending between John Pearce, of Yokohama, plaintiff, and Thomas Pratt Poat, Yedo, defendant, for alleged breach of contract. Claim, as compensation, \$1,200.

#### DECISION.

The evidence adduced in this case goes to show that on the 18th of March, 1871, the defendant sold to the plaintiff, in consideration of the sum of \$800, half his interest and responsibility in the lease of one of the houses on lot No. 10, at Yokohama, belonging to the Messageries Maritimes; that on the 30th June last the defendant, contrary to agreement, surrendered the said lease to the landlord without the consent of the plaintiff; that prior to the surrender, the defendant informed the plaintiff that unless he took over the whole lease, it would have to be broken, as he (the defendant) had no means of his own to go on with it. The evidence further shows that at the time of the surrender, the premises had been unoccupied during three months, and that there was no immediate prospect of finding another tenant.

However, there is a clear case of breach of contract on the part of the defendant, and the plaintiff is therefore entitled to damages.

In assessing the extent of these damages, it is necessary to consider at some length the terms of the lease. The original lease dates from the 1st of August, 1869. It was transferred to the defendant on the 1st of March, 1871, and was to expire on the 14th of April, 1879. The monthly rent to be paid to the Messageries was \$130, payable in advance. According to clause 5, the premises could not be used as public houses nor for unhealthy purposes, and clauses 4 and 6 provide that all taxes, if any, pertaining to the house itself, and all internal repairs such as painting, plastering and papering, and repairs to doors and windows had to borne by the tenant.

Now, the premises were sublet to Adds for \$165 a month, and so long as he paid the rent regularly, there was a profit of \$35, to be divided between the parties. But Adds ceased to pay the rent in April; and from that time up to the date the surrender of the lease, the premises remained unoccupied, or at least did not yield any rent. It is of course impossible for me to determine how long they might have remained unoccupied, but it is reasonable to suppose that before another suitable tenant could have been found, the profits of the last two years would have been absorbed by having to meet the rent falling due in the meantime. It is also probable that such a contingency would have repeated itself from time to time, owing to the difficulty of securing a permanent lease for such premises. Nor am I aware that rents have risen since 1871; I believe the reverse is the case. It is true the plaintiff says that the upper part of the house is now let to *graineurs* for \$125; but the season of the *graineurs* is of short duration, and at any rate \$125 is less than the rent that was to be paid to the Messageries.

Taking all these things into consideration, I am of opinion that the lease, on the whole, was not a profitable investment, and that therefore the plaintiff has suffered no real loss by the surrender of the same. I have the less hesitation in arriving at this conclusion, as the plaintiff has shown by his refusal to take over the whole lease when he knew that the defendant was forced to give it up, that he himself did not believe in any satisfactory result in the end.

Judgment is entered for the plaintiff with nominal damages in the sum of one dollar. Each party to pay his own costs. The counter-claim of the defendant is disallowed.

## Shipping Intelligence.

## ARRIVALS.

Sept. 28, *Oregonian*, American steamer, —. 1,914, from Shanghai and Ports, September 20th, General, to P. M. S. S. Co.  
 Sept. 28, *Orfordshire*, British steamer, Jones, 1,229, from Shanghai, September 23rd, General, to Jardine, Matheson & Co.  
 Sept. 28, *Belliqueuse*, French Iron-clad Captain Libaudiere, 2,800 tons, 10 guns, from Nagasaki, September 24th.  
 Sept. 28, *Solent*, British ship, Meldrum, 718, from London, General, to Cornes & Co.  
 Sept. 30, *Relief*, American steamer, Corning, 795, from Hakodate, Native Produce, to P. M. S. S. Co.  
 Oct. 2, *Jason*, British ship, Leslie 877, from Newport, May 26th, Coal, to Strachan and Thomas.

## DEPARTURES.

Sept. 29, *Parnenio*, British barque, Abbott, 368, for Hakodate. Ballast, despatched by Captain.  
 Sept. 29, *Elta Loring*, American barque, Loring, 716, for New York, Tea, despatched by Smith, Baker & Co.  
 Oct. 1, *Ariel*, American steamer, Newell, 1,736, for Hakodate, General, despatched by P. M. S. S. Co.  
 Oct. 2, *Benledi*, British steamer, Buchanan, 990, for Kobe, General, despatched by Macpherson & Marshall.  
 Oct. 2, *Oregonian*, American steamer, Harris, 1,914, for Shanghai and Ports, General, despatched by P. M. S. S. Co.

## PASSENGERS.

For *Oregonian*, from Shanghai.—Mrs W. P. Mangum, Mr. A. E. Jones, Mr. Joseph and servant, Rev. O. Villion and servt., Mr. Hoher and servt., Mr. Okada and servt., Dr. C. D. Fisher, Rev. R. S. Mackay, Mr. W. W. Cargill and servt., Mr. E. H. Bird and servt., Mr. T. Lopper and servt., six Japanese officers. Steerage—Mr. S. Morris and wife, Mr. John Ashton, Mrs. Morris, and 57 others.  
 Per American steamer *Ariel* for Hakodate.—Messrs. Cheshire, Haber, George, and 1 Japanese in the cabin, and 19 in the steerage.  
 Per American steamer *Oregonian*, for Hiogo.—Mr. C. A. Flanders, 6 Japanese, in the cabin; and 56 in the steerage. For Nagasaki.—Mr. Jno. Maack, and 67 in the steerage. For Shanghai.—Mr. Sheppard and wife, Mr. Halsey and wife, Bishop Williams, Mr. A. R. Morgan, Mr. Jno. Schoning, and 10 in the steerage.

## CARGOES.

Per *Oregonian*, from Shanghai:

Treasure ..... \$545,250

## REPORTS.

The *Oregonian* reports fine weather the entire trip.  
 Report of British ship *Solent*, J. Meldrum master, from London to Yokohama, 135 days.—Left the W. I. Docks May 14th and proceeded on with light winds Southerly and Easterly. N. E. trades very light weather thick, passed the Equator June 8th, Long 29° 59' W. Heavy S. S. E. squalls in S. E. trades. From thence to the meridian of the Cape, (which was passed July 12th) variable winds light and fine. Usual run of Westerly and N. W. gales in running down Easting, which was done between Lats 39° and 41° South. Only 3 days S. E. trades but light Westerly winds up to Anjer Strs. which were entered August 15th. Bealmed in Java Sea until August 20th; passed through Gaspar Straits, a large ship there three skysails set ahead of us. August 23rd, had excessively heavy squalls abreast the Gulf of Siam, which continued till 25th, when it moderated, and wind set in North E. and light until passing through the Bashees on the evening of the 2nd September from thence until September 7th, had fearfully heavy sea from S. E. and N. E., and squally weather but no indication of any extraordinary blow. Barometer standing 29.30 steady. On September 9th indications of bad weather, but nothing extraordinary: towards midnight blowing terribly with a cross sea, furling everything except main topmast staysail reefed, and mizen staysail; (Barometer 29.42) continued blowing till the 13th, when it moderated in Lat. 29° N., Long. 121° 30' E. fine weather continued till the 21st, glass steady at 29.80, till 22nd when it commenced to fall down to 29.28 getting squally, with heavy rain and a heavy S. E. and N. E. sea running the same as before: commenced to shorten sail at noon and reduced the ship to reefed main top-mast staysail, and mizen staysail. Blowing terribly from N. N. E. and N. E. fearfully heavy seas running and ship labouring very heavily. Began to moderate on the 23rd September, wind hauling to the N. W. and finer weather. made necessary sail, glass rising steadily. Took the pilot September 25th, at 6 p.m. N. E. winds and thick rainy weather. During the passage sprung jib boom, and lower main topsail yard. Split jib, main and fore topmast staysails and mizen topsail.

The American steamer *Relief* reports light head wind during the early part of the passage. Left in Port one English and one German vessel loading for Shanghai. Passed a barque bound in about 18 miles from Hakodate on the Nambu side, and another yesterday near Cape King. The *Fanward*, from London for this Port is reported having put into Shanghai with loss of spars, sails &c.

The British ship *Jason* reports: left Newport, May 26th, and crossed the Equator June 15th; had light N. E. and S. E. trades with heavy gales running the easting down after passing the Cape: wind from the S. W. with a very heavy sea. Passed Anjer Aug. 1st

29th; carried a light S.W. monsoon through the China sea; cleared the Bashee Channel September 14th; met with a very heavy N. E. swell with a light westerly wind. Bar. down to 29.58 and the weather hazy, passed the Loochoo September 21st still a heavy N. E. swell. Wind light from N. N. E. made Rock Island October 1st having been set into Suruga Gulf: took Pilot on board at 10 a.m., and anchored here October 2nd, at 6 p.m., 129 days from Newport.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, OCTOBER 4TH, 1873.

THE accident sustained by the *Donnai* which detained her at Ceylon has deprived us of our usual mail arrival this week. The Messageries Maritimes Steamer, we now learn, may be expected here on the 12th or 13th inst. only.

Owing to the change of monsoon there has been no mail departure this week.

The *Oxfordshire* (str.) via Shanghai, and the *Solent* (sail) have arrived this week from London with general cargoes: the *Jason* (sail) from Newport with coal. The *Etta Loring* sailed on the 29th ultimo, for New York with a full cargo. The *Oregonian* brought \$545,250 treasure from Shanghai.

The protracted duration of wet weather has naturally affected business to a sensible extent and transactions have been in the main weak and unprofitable. A more hopeful feeling has, however, from various causes obtained and the present month will, it may be hoped, do much to relieve the despondency resulting from glutted markets both here and at home. Operations in silk worms eggs continue to be on a most limited scale. The Government, it is stated, will not permit the export of any portion of the home reserve.

**WOOLLENS AND WOOLLEN MIXTURES.**—Prices for all Woollens have ruled very low during the closing week and transactions have been irremunerative. A slight improvement in demand is, however, observable and encourages the hope that at no distant date the market may recover a more buoyant feeling.

**COTTON FABRICS.**—The sales of *Shirtings* have not been so well maintained this week and only some 11,000 pieces of all weights have been settled at rates but little changed from those of the preceding week. *Velvets* continue in favour and some 1,600 pieces have changed hands at firm prices for unquestionably standard chops. In *Taffachlass* there has been a smaller business, but rates promise greater firmness and, with moderate stocks, a remunerative trade may be hoped for. Some transactions have had effect in cotton *Italian Cloth* but the ruling prices are reported to be very unsatisfactory.

**YARNS.**—A fair amount of business has been done in *Yarns*, the attitude of the market being much firmer than for some weeks past. Sales are about 1,100 bales.

**IRON AND METALS.**—The market is unchanged and no business of importance has been transacted in the past week.

**SUGAR.**—We have to quote a firm market at our last quotations.

The sales reported are as follows:—

1,200 piculs Swatow	...	...	...	...	...	...	at \$3.25
100 "	Hongkong refined	...	...	...	...	...	" \$9.20
89 "	Kwang-fung	...	...	...	...	...	" \$6.52½
53 "	Ke-pak	...	...	...	...	...	" \$7.50

## COMMERCIAL INTELLIGENCE.

(Continued.)

**SILK.**—Business has continued active during the past week. We estimate arrivals since the 20th ultimo at 850 bales, and settlements as above 1,000 bales mostly Hanks.

**SILK-WORM'S EGGS.**—Total arrivals to date are 198,000 cards against 850,000 last year at the same date. A few purchases, some thousands cards in all, have taken place, in connexion with which the following prices have transpired:—Joshiu, good to best \$3.20 to 3.90; Bushiu, all round to \$2.50 to 2.80; Oshiu, medium \$2.65.

The Japanese continue to insist on their statement that the export shall not exceed 1,300,000 cards.

**TEA.**—The closing week generally has been a quiet one on our tea market, buyers, with the exception of one or two firms, observing great caution, and supplies coming in very slowly.

Settlements through the heavy purchases of one house amount to nearly piculs 3,000, comprising in them a considerable proportion of commoner classes, at \$21 to 24 per picul.

Stocks are light and there appears to be some conflict in the interior between the leading native houses and the Yokohama agents as to price, which interferes with business, but the former must sooner or later make the necessary concession.

## MISCELLANEOUS.

**M**ICROSCOPICAL investigation has proved that the decaying substances which accumulate between the teeth contain animal and vegetable parasites, and that the TOOTH POWDERS, PASTES, AND WASHES IN GENERAL USE have no effect upon these. Messrs. GABRIEL'S CORALITE TOOTH PASTE, ROYAL DENTIFRICE, and ODONTALGIQUE ELIXIR, completely destroy and remove these animalculæ and also preserve and beautify the TEETH AND GUMS.

Sole by Chemists, Perfumes and Storekeepers throughout the World

MESSRS. GABRIEL'S { "SEDADENT," THE ONLY REAL CURE FOR TOOTH-ACHE, prepared for general use after 25 years' experience in their own practice gives immediate relief by the painless destruction of the nerve and forms a Stopping. Price 1/14.

MESSRS. GABRIEL'S { WHITE GUTTA PERCHA ENAMEL, for stopping decayed and tender teeth. Renders the tooth sound and useful for mastication, no matter how far decayed. Price 1/6.

MESSRS. GABRIEL'S { CORALITE TOOTH PASTE, for cleansing and improving the teeth, and imparting a natural whiteness to the gums, whitens the teeth without leaving between them any trace of powder, and gives brilliancy to the Enamel. Price 1/6.

MESSRS. GABRIEL'S { ROYAL DENTIFRICE, prepared from a recipe as used by Her Majesty. Whitens and preserves the teeth, and imparts a delicious fragrance to the breath, gives the teeth a pearl-like whiteness, and protects the enamel. Price 1/6.

MESSRS. GABRIEL'S { ODONTALGIQUE ELIXIR.—THE CELEBRATED MOUTH WASH. A few drops in water produces a most pleasant, agreeable, and refreshing Mouth Wash; it hardens the gums, prevents the accumulation of tartar, gives the breath a delightful perfume, removing all traces of tobacco smoke or unpleasant odour arising from decayed teeth, and is an excellent detergent. Price 5/-.

MESSRS. GABRIEL'S { OSTEO-ENAMEL STOPPING, warranted to remain white and firm as the Tooth itself. This beautiful preparation restores front teeth, and can be easily used. Sufficient to stop six Teeth. Price 5/-.

Full directions for use enclosed in each box.

"Messrs. GABRIEL are particularly successful in their system of ARTIFICIAL TEETH, which they fix firmly in the mouth by means of an ELASTIC GUM, without springs, painlessly, and without any operation."

All correspondence must be addressed—

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. IV.—No. 41.] YOKOHAMA, SATURDAY, OCTOBER 11, 1873. [PRICE \$24 PER ANNUM.

## BIRTH.

At Kaisegakko, Tokio, on the 10th October, the Wife of ERWIN KNIPPING, Esq., of a Daughter.

At Yokohama, on the morning of the 8th October, the wife of Mr. C. V. MARTINHO MARQUES, of a son.

## Notes of the Week.

ON the afternoon of Tuesday, the 7th instant, the remains of the late Sawa Nobuyoshi, Minister elect of Japan to the Court of St. Petersburg, were consigned to their resting place in the Temple of Dendzû-In, in the outskirts of Yedo. The ceremonial observed on the occasion was interesting and impressive, and as perhaps many of our readers may not yet have taken part in a Japanese funeral ceremony, we do not doubt that they will be interested in the following brief account of what took place on the occasion referred to.

The hour fixed for the mourners to meet at the house of the deceased Minister was 2 P.M., and at that hour precisely the funeral train left the house for the cemetery. The distance to be traversed between the two places was considerable, but the weather fortunately was fine. The deceased being a Kiôto nobleman of the Mikado's Court, his funeral was attended by the Prime Minister and by a long-train of Kugé and attendants. As the deceased had likewise formerly been Minister for Foreign Affairs, and was much esteemed by foreigners for his attainments and amiability, his funeral was likewise attended by nearly all of the Foreign Ministers at this Court, including Sir H. Parkes, Mr. Berthémy, Mr. De Long, Mr. Von Brandt and Mr. Butzow, and by many of the junior members of the Legations and Representatives of the Consular Corps, and many other foreigners.

At two o'clock the procession left the residence of Sawa, but it was not until nearly half-past three that it reached the Temple of Dendzû-In. It was preceded by a detachment of Japanese troops with reversed arms, but without military music. After these came a succession of mourners in the ancient Japanese costume,—then the body of the deceased, carried by bearers on a plain wooden catafalque, behind which immediately followed the son of the deceased seated alone in his carriage. This in turn was followed by three other carriages, in two of which were the ladies and children of Sawa's family, and in the third some Japanese in Court costume. The son of the deceased was clothed in white with the exception of some black garments; the ladies were clothed entirely in white, their hair being spread out in one broad band, after the manner followed by the ladies of the Court. One of these ladies, who was presumably the wife of the deceased, could not contain her emotion as the procession moved slowly along, but etiquette apparently required all present to observe unmoved composure.

After the family of the deceased came the carriages of the Prime Minister and of the Foreign Representatives and others, many of those present preferring to accompany the slow procession on foot.

On arriving at the Temple, the catafalque containing the body was carried to a wood platform in the middle of which it was placed. The platform stood at one end of a court-yard with a large open space in the middle. To the right of this were ranged in line the Japanese mourners; on the other side the Europeans. Both were seated. On the Japanese side the front bench nearest the coffin was occupied by the eldest son of the deceased; behind were the ladies and children of Sawa's

family, and to their left were Japanese in European mourning costume or in Court mourning attire. The Prime Minister stood throughout.

On the body having been placed on the platform, whilst low Chinese music sounded, some attendants brought large bunches of flowers which they placed in front of it. After this, other attendants in Court costume and having their mouths covered with crape, brought successively many offerings of fish, fowls, vegetables and fruits, which were in turn placed on small white tables surrounding the bier. This part of the ceremony having been completed, a Kugé noble stepped forward, followed by six gentlemen wearing the Kiôto Court costume, and having bent himself before the coffin of the deceased, read slowly a prayer or invocation from a scroll before him, the chief mourners bending their heads meanwhile, after which he retired from view followed by his six supporters. The Father Nicholai, the Missionary of the Russian Church, stepped forward and pronounced in Japanese a short funeral oration on the deceased; after which Sawa's eldest son went slowly to the gate of the Temple and having applied cold water to his eyes, mouth and hands, took from the hands of an attendant a funeral garland with white flowers, which he reverently placed on his father's bier, bending his head low, seemingly being engaged in prayer for some instants. He was followed in this ceremony by the ladies and children of Sawa's family and next by the Prime Minister, Sanjo, and all the Japanese present, after which the Foreign Ministers and others paid a similar last tribute of respect and affection to the memory of an upright, amiable and enlightened Japanese noble, whose premature death is deeply regretted on all sides.

WE recently published an article pointing out the uses and dangers of Petroleum, and we now deem it right to place before our readers, more pointedly, the actual risks which they run in burning in their house lamps or having stored in contiguity to their dwellings, petroleum oils which have not been thoroughly purified. In all European countries—and notably so in America—the most stringent regulations are enforced to prevent the use of petroleum oil in the least dangerous. Oil imported to Yokohama from America has presumably undergone the proofs instituted by the authorities in that country; but we are in position to state as a matter of fact that most of the oil lately received is far below the American standard, and is of a most inflammable and dangerous nature.

The standard in America by which oil is tested is that it should not emit an inflammable vapour when heated up to 100 degrees Fahrenheit or under. In England 100 degrees is fixed by act of Parliament as the limit of safety, but the scientific men who have investigated the matter recommend no oil to be used which has a flashing point under 130 degrees. Various specimens of the American Kerosene recently imported have been tried and they give off a gas which explodes when they are heated to 85 degrees. Therefore, when we consider that the temperature of our rooms in summer is often above this, and that the oil reservoirs of our lamps are seldom less, the amount of danger which we incur by using such oil may be imagined. We think this an opportune moment, owing to the large quantities of petroleum now here, to impress upon our local authorities the necessity of some action being taken, both in regard to the manner of storing petroleum or inflammable liquids of any kind in the settlement, and, also, in regard to some test being applied to the quality of the oils imported for public use. But we are free to confess that al-

though this is a matter affecting the public safety we have little hope of our representations being followed by any practical or useful measures. To point out irregularities in the conduct of local affairs in Yokohama is to create despondency in ourselves. Our complaints are generally speaking shelved and our protests ignored, and we have always more or less a feeling of insecurity, discontent and discomfort. So if we now point out that there exist no regulations for the storage of petroleum, that it is left to the conscientiousness of those importing it to store it in such quantities and in such places as they choose, and that no means are taken to discover its quality, whether it is safe to allow the public to use it or whether it is as explosive as nitro-glycerine, we are not sufficiently sanguine to imagine that our representation will have any effect whatever on the authorities to whom the safety of the Yokohama Public is entrusted. We are, however, glad to be able to draw attention to the subject and indulge a hope that our remarks may be of some ulterior benefit.

We all know the dangers of level crossings on Railways, and have been startled by the numerous and appalling accidents which have occurred through their means. The Board of Trade Authorities in England will now allow no level crossing on a new Railway if the road can by any possibility be carried over or under the Railway by means of a bridge. There is a level crossing on our Yokohama and Yedo Railway about one mile from Yokohama, on the road leading to the new town on this side of Kanagawa station, over which there is an immense traffic both of jinrickshas, horses and foot-passengers. The following paragraph from the *Pall Mall Gazette* will illustrate the care which is paid to level crossings in England and how accidents still occur on them.—

The narrow escape of the Irish night mail on Saturday last from a fearful accident exhibited a new variety of the dangers incident to "level crossings." The spot which was so nearly the scene of a catastrophe was a place named Weeping Cross, about a mile and a half from the Stafford station. The turnpike-road here crosses the line, but "everything," we are told, "which human ingenuity could devise" had been done for the safety of trains and passengers along the turnpike road. The crossing is furnished "with one of Lea's patent gates, and Saxby and Farmer's interlocking apparatus." About half-past ten on Saturday evening a farmer living near Stafford was returning to that town in a gig, accompanied by his two sons and a relative. On arriving at Weeping Cross the horse, hearing the Irish mail approaching, took fright, rushed at the "patent gate" and defeated the "interlocking apparatus" by clearing the gate at a bound, breaking loose at the same time from the gig, the occupants of which jumped out. No sooner had they done this than the Irish mail came up, and the engine struck the horse and threw it with great violence against the patent gate, which it broke in two. The horse was killed on the spot, and on the engine arriving at Stafford the buffers were found to be covered with blood. So great was the shock that for a few seconds the engine-driver and fireman imagined that the train had left the rails, and were about to jump off. Fortunately, however, the engine soon steadied itself, and neither driver, fireman, nor passengers sustained any injury beyond a severe shaking. It appears to us, however, that "human ingenuity could devise" a gate which a frightened horse would be unable to leap over.

Instead of the crossing above mentioned having "everything which human ingenuity could devise," it has only a couple of pairs of flimsy Japanese gates which, when opened, instead of shutting across the Railway, leave it perfectly unprotected. A restive horse or cow which takes fright may therefore without obstruction bolt along the line and almost inevitably cause an accident. The gatekeepers, also, seem to have only an indistinct notion of their duties, and when traffic should be allowed to cross the Railway and when not. We recently heard of a gentleman wishing to cross it with a carriage and pair of ponies; he knew there was a train about due, but he was not aware whether it had passed or not. The flimsy gates, however, were not closed across the road and he proceeded; but just as he got his ponies halfway across the line the gatekeeper rushed up and seized their heads with what intention the driver of the ponies could not divine. But he, imagining that the train had not yet passed and that the gatekeeper wished to prevent his crossing the line until it had passed, lashed the ponies forward and fairly across the line. Shortly afterwards the train whizzed past. Such a state of matters should not be allowed to go on unaltered, and we are sure that we have only to direct the attention of the Director and Chief Engineer of the Railway to the manner of managing this crossing, to have it immediately corrected.

MR. MARSH'S Concert on Thursday evening was the source of some disappointment, on account of the absence from it of one or two attractive features which the first published programme promised. But no one felt the disappointment more than Mr. Marsh, and no protest can be made when illness interferes.

The Concert opened with an adaptation of Beethoven's first trio for pianoforte, violin and violoncello. The whole work would have been far too long for any but an audience prepared by previous acquaintance with Beethoven's music, to follow it, and much as we dislike these mutilations, there is no doubt that the performers did well in presenting only such parts of the work as gave a fair idea of its various subjects, without following them through their more difficult ramifications. The old trouble, too, of finding an amateur who can do any sort of justice to such music, and sustain his part in company with the finished execution of professional musicians, had also to be faced, and, in view of this, we were easily reconciled to the course adopted. And yet the trio presents Beethoven in so sweet and genial a mood, that had there been any one capable of running abreast of the two stronger players, we can hardly help thinking it would have made some new disciples for the great master. It is written in his early manner, before a larger knowledge had brought the doubt to which knowledge leads, and the melancholy which is the inseparable concomitant of that doubt. It was born of a time when love had no pangs and ambition no disappointment, before the ingratitude he experienced from one to whom he gave his whole heart, and the death of that precious sense, which was perhaps more exquisitely developed in him than in any one of our race, had embittered his soul and clouded the brighter visions of his early life. In it he seems to rejoice in the beauties of external nature, and if a thread of melancholy appears here and there in the tissue, it is only that suggested by the impossibility of an entire absorption of the soul into the spirit he was worshipping. Here we no more have the Beethoven of the first and the later quartets, the Rudolf trio or the C minor symphony, than we have the Shakspeare of Hamlet, Lear, and Measure for Measure in A Midsummer Night's Dream or As You Like It. None of the intense and melancholy subjectivity of Beethoven's later works appears in this trio. The Adagio is pure and tender beyond description, almost beyond rivalry, and but for the exigency which deprived the audience of it, the trio which follows the scherzo would have shewn the composer in his very happiest frame of mind.

Webbe's Glee for three voices "Winds Gently Whisper," followed the Trio, and, but for one little flaw in the early part, it went pretty fairly. Yet we dare not praise a performance which was below the powers of the three singers. When the best possible is done, there is nothing to be said. But a little more practice would have made this beautifully-written glee more perfect. Mr. Pearson sang Prince Poniatowski's song "The Yeoman's Wedding" with something less than his accustomed accuracy, and though the Prince is confessedly a good musician, his little work has no particular merit. Mr. Marsh's Fantasia on the harp from subjects of Strauss was, of course, beautifully played; but the harp does not make "man's music." It was very well for Orpheus in the woods. Its appeal, to our mind, is purely sensuous, and "the smallest flower that blows" is more powerful than it to awaken the thoughts which lie "too deep for tears." Macfarren's song "My Own, My Guiding Star" is prettily written, as was everything that Macfarren wrote, and was pleasantly given by Mr. Townley, but it belongs to a school which is rapidly losing its hold on musicians, and the world will be no great loser when the stratum to which it belongs is fossilized. A concertante duet for piano and flute followed, and was extremely well played by Mr. Marsh and Mr. Wagner. Both parts are written with great grace and knowledge of artistic effect. All Benedict's peculiar power of ornamentation, a power which, unlike that displayed by ordinary ornamentation, is almost creative in his hands, is visible in it, and Mr. Marsh reproduced this with great effect. Bucher wrote like a master of his instrument, and we think Mr. Wagner never played here to better advantage than in rendering this music. Mr. Black brought the first part of the Concert to a close with "Die Fahnenwacht," the song by which Pischek,

years ago, carried the English public by storm. We are not in the humour of the the Athenian who cast his oyster shell against Aristides because he was tired of hearing him called The Just, but we have a certain jealousy which makes us extreme in marking anything which Mr. Black does amiss, and we do not know that we can pay him a better or juster compliment than by saying so. But if he had sung his song in English he would have better pleased the two divisions of his audience who cannot and who can understand German. The former would have accepted gratefully the not inelegant translation of the German words, and the latter would have been spared the only pain which it is possible Mr. Black could give them. German in this respect is not like Italian. A very slight knowledge of the latter is quite enough to prevent any glaring error in pronouncing it in singing, (though our insular Italian is not attractive,) but this is not the case with German. He who cannot speak it cannot sing it, and it is abundantly clear that Mr. Black cannot speak it. But he delivered the music with combined fire and tenderness, and carried off his audience, as he alone of all our musicians can.

The second part opened with Bishop's "Hark! 'Tis the Indian Drum"—a dear old thing which can never be revived without being admired, but which has not a particle of nap left on it. It is like one of "remnants of the palæozoic age" used by the members of the "Society upon the Stanislaw." We do not say that it could have the effect upon an audience which the "chunk of old red sandstone" had upon "Abner Dean of Angels." But if the audience had, after its very excellent delivery—a point it enjoyed in common with the missile in question—curled up on the floor, and been no more interested in the subsequent proceedings, we could not have felt any surprise.

The interest was, however, to be revived by an excellent performance on the violoncello by Mr. Chapman, of Pague's Andante and Bolero, "*Souvenir en Espagne*." The great Belgian player who wrote it would, as we know, have been pleased to hear his music so well played in this distant country, and we hope Mr. Chapman's stay here may conduce to the cultivation of an instrument which is, of all others, the instrument for the amateur and the gentleman. His handling of it is that of a master, and we should be glad to think that some musical aspirants would place themselves under his efficient guidance. Mr. Townley sang his second song "Love's Request" with more effect and spirit than his first, but his voice requires a little more power to fill so large a room. Mr. Ludwig followed with a solo upon the zither by which he deservedly earned an *encore*. A little more certainty of intonation is still requisite before he can do entire justice to the pretty and touching little instrument of his choice. Of its peculiar powers we spoke on a previous occasion, and it is curious to see how far these powers transcend those of the harp, an instrument of infinitely higher rank, more perfect in its mechanism even than the piano-forte, and to compare which with the zither is enough to make Bochs or Chatterton turn in their graves. Yet the knot will rise in the throat under the influence of the one as it never does at the appeal of the other. Even the cold Englishman who only knows Switzerland or the Tyrol as a tourist, how deep so ever his love of them, experiences that craving and hollowness of heart at the sound of this little instrument which drive the Swiss to a melancholy madness when away from their country. It seems to pierce like a red-hot silver wire, and has an altogether strange power over those emotions which depend upon the memory for their activity.

Mr. Black followed with "Bonnie Prince Charlie" which was redemanded and redemanded—and no wonder. Mr. Black is without compeer in Scotch national songs. He revives recollections—now grown very dim—of Wilson's powers in the same direction. We detest the Stuarts, but should assuredly have lost all constitutional principles under the influence of such songs. Spohr's song "The Huntsman, Soldier and Sailor" was then sung by Mr. Anderson, the beautiful violoncello accompaniment being played by Mr. Chapman. The song is curiously free from Spohr's mannerism, and we doubt if it could possibly be recognized as his work but for the *obligato* string accompaniment, which is very masterful. It is the small

work of a great—we have been taught to think a very great—master, and shows how even in *minimis* the indestructible quality of genius will assert itself.

M. Michel then performed a solo on the *cornet à piston* with pianoforte accompaniment on the subject of the "*Carnival de Venise*," with excellent effect. He is a great proficient on his instrument, and the Settlement owes him more obligations as the leader of the amateur wind band which did so much towards enlivening the Bluff Gardens during the summer, than all may be aware of. The applause he earned was thoroughly well deserved. The Concert was brought to a close by Mr. Black's singing of the Sardinian National Air "*Signor, che sei nel ciel*."

The Duke of Genoa, under whose patronage the Concert was given, was absent on account of indisposition. His presence would have been appreciated at a concert got up in his honour, and the programme of which was not arranged without a view towards the illustration of the music of his country.

The Concert, on the whole, was somewhat tedious, and showed but little solid advance upon previous performances. But it was redeemed by two or three good points, and these sent the audience away in good humour.

Yet "the banner with the strange device" should hang over the proscenium of the theatre.

We question if even Mr. Mori can conscientiously endorse the following which may be seen posted in a street in Shanghai:—

"Notice.—The undersigned SHOP has turned inside house and everything has removed To SELL there untill new house is built in this corner. Y. H. Kiyogo & Co., Shanghai, 11th August, 1873."

THE correct text of the notification about which so much has been said and written this week is as follows.

The servants in the employ of foreigners at this port not having hitherto been registered, the number of vagrants has greatly increased, almost beyond control.

Permission has been granted to Sudzumura Yozo and two others to establish a business for the supply of servants.

All persons wishing to go into the service of foreigners had better make application to the above.

Those who have countrymen or friends willing to become their sureties must apply with a writing duly sealed, and countersigned by their Kocho (wardmaster) to the officer in charge of Koseki (registration) at the Machiguaisho and procure a Kansatz (ticket).

Anybody found hereafter in service without a Kansatz will be liable to investigation.

Let every body remember and observe this order so that there may be no misunderstanding.

(Signed) OYE TAKU,  
Kanagawa Ken Gon no Kami.

29th of 9th month, 6th year Meiji.

POSTSCRIPT.

Employés already engaged must apply as above stated with writing sealed by their fathers or brothers and countersigned by the wardmaster, and then they can obtain a Kansatz from the Machiguaisho.

It will be seen that this differs from the translation published in the *Japan Gazette* and republished by ourselves on the following day, in as far as it is recommendatory and not obligatory. But even in this form it is highly objectionable, and the Governor of Kanagawa made the only amends in his power for the publication of it by cancelling it directly its full bearing and the just and indignant protests of the foreign public were brought to his notice.

ATTENTION has been called to an inconsistency between the following paragraph (which first appeared in the *Japan Weekly Mail* of the 4th instant, and was subsequently reprinted in the *Japan Mail* of the 8th instant), and the silk report embodied in the "Commercial Intelligence" of the latter journal.

An idea appears to exist among the *Graineurs* that some half million of cards, out of those reserved by the Japanese Government for home use, will be available for export. We possess, however, the best authority for stating that this rumour is entirely destitute of foundation.

Under the head of "Commercial Intelligence" we wrote as follows:

On the 20th ultimo, it was officially intimated by the Finance Department that "no permission had been granted by the Japanese

Government to export any portion of the silk-worms' eggs cards reserved for the home use."

Had it mentioned either the quantity reserved for home use or the quantity at which the export is decidedly to be limited that notification would have thrown some light on the subject; but it mentions neither the one nor the other, and the question remains precisely where it stood before.

What we know from the best Japanese sources is this: 1st that the total production of this year has been 2,400,000 cards; 2nd that the consumption of Japan not exceeding 600,000 leaves a surplus of 1,800,000 cards. Of this surplus we are semi-officially given to understand that only 1,300,000 are to be stamped by the Government for export.

What we do not know is whether the balance viz about 500,000 cards is to be finally included in the home reserve or in the export. Under their notification of 29th September the Government remain free to do either, and the calculated ambiguity of their language is the cause of the unsettled state of the market.

The first paragraph, which was intended as a denial to the report of an Italian newspaper that the Government had authorised 580,000 cards out of those reserved for home use to be exported by Japanese merchants, was written under a strong impression that the export of cards for the present season had been, by overt official declaration, fixed arbitrarily at 1,300,000. When the foregoing report was furnished the writer's attention was drawn to this erroneous impression and to the incongruity involved in the retention of the paragraph. But in the haste of preparing the fortnightly paper for the outgoing Mail it was overlooked, and has thus been unguardedly retained. That there was any intention in this is best refuted by the following unambiguous language of the Summary:

The *Graineurs* are greatly perplexed: a Government notification states that no portion of the reserve of silk-worms' eggs will be allowed for export, but as it is not definitely pledged to reserve any fixed quantity, the buyers are without any basis upon which to calculate the value of the cards. We discuss the point fully in our silk report.

MR. EDKINS' paper on the Japanese language which was read on Wednesday evening at the meeting of the Asiatic Society, fell into terrible hands, and was torn to pieces without an effort. Mr. Satow humorously proposed that instead of making the changes suggested by Mr. Edkins, the "pidgin Japanese" spoken at Yokohama should become the recognized instrument of the nation's thought. Mr. Aston said that Mr. Edkins' paper recalled to him the schoolboy line

*Patres conscripti* took a boat and went to Philippi.

We are compelled by old instincts to finish the stanza:—

Omnes drownerunt  
Qui swim away non potuerunt.  
Exeipe John Periwig  
Qui clung to the tail of a dead pig.

And it must be confessed that Mr. Edkins seems to regard changes in a language as a matter which can be regulated by a few learned or even visionary gentlemen who may dispose of them at will from a study table. But it is not so. The idea of introducing English prepositions into Japanese at the will of an Educational Council is absurd. "With," "from," "by," "to," "at," are delightful and useful words to us, and Mr. Edkins would have them introduced without circumcision or baptism bodily into Japanese by an Imperial Order in Council. (His scheme involves little less). Is it conceivable that he thinks any such scheme feasible? What nation will abandon its prepositions? Imagine a Greek of the old days coming to England in the time of the earlier Henrys and saying, "Ye barbarians, to what intent do ye persevere with the customs of your illiterate forefathers and retain such words as "through" and "against" and "towards" and "with" and "from." Know ye not that we, who are as Gods in comparison with you, say "dia" and "pros," and "epi," and "meta" and "para?" Will ye remain in your blindness, or be deaf to the heaven-sent language we offer you?" The chances are that our rude forefathers would have said:—"God hath senden us non but goode. Thou wol have us make obeissance and do feste reverence and thi commandement obeys. Pardy, we wil it not!" Where, under these circumstances, would have been the prepositional scheme?

Mr. Edkins is a very bold fisherman, and, to do him justice, he has landed many a good fish. But every now and then it comes to an up-and-down tussle between him and his salmon, and on the last two occasions when the public has had the advantage of seeing the struggle, the fish has certainly had the best of it and dragged the man into the water.

IN Yedo the great event of the week has been the opening by H. M. the Mikado of the Kaisei gako, the chief educational establishment of the capital. A detailed description of the event will be found elsewhere.

THE weather has been more favourable for the approaching harvest in this neighbourhood.

THE race yesterday afternoon, between three crews of the Y. A. Rowing Club for five Silver Cups presented by Howard Church, Esq., was one of the best contested and fastest races that has taken place in Yokohama, and Mr. Church can congratulate himself on having given an incentive to rowing here which we trust will not die out. Before giving an account of the race we would make a few remarks on the three crews whose names and weights are added below. The Scotch crew, as we have already said, have been the favourites since the training began, both on account of the heavy men composing it, and of their not having had to make a change in the boat since the commencement of their training. Their "stroke" is we believe the most persevering rowing man here, pulling a very powerful oar, and they adopted the use of sliding seats which no doubt gave them a slight advantage over the English crew. The only disadvantage they laboured under was the indisposition of No. 3, who, being the oldest man in the three crews and having been a long time in the East, found the hard training almost too severe for him. The result, however, proved that he has plenty of "go" left in him still. The English crew were a good, even crew, but far too light to compete with the Scotchmen, averaging, as will be seen by the weights given below, more than one stone per man lighter. It must be admitted that they showed they had not spared hard work and strict training to bring themselves up to the mark and make such a close race with their more powerful opponents. They had also, within a fortnight of the race, to change their "bow," through sickness, which must have largely told against them.

The American crew were a heavy crew as compared with the English, and had the advantage of the lightest boat and the best oar in Yokohama for their stroke; and we can safely say that had they had another fortnight's training, would not have let the Scotchmen win by much, if at all. They were most unfortunate in the illness during the last week of No. 3, who showed great pluck in taking his place in the boat, and pulling in such a hard race. Their stroke deserves great praise in bringing his crew up so well, and it is with much regret that we hear he is leaving the settlement as we can ill afford to lose so accomplished an oarsman.

The race is described in a few words. The three crews shortly after 3 p. m., paddled up to the starting post, and at about 3.30 p. m., got away to a good start; the English crew taking the lead with a quick stroke, Scotch next, pulling well together with a good long swing, the Americans holding their own well, till half the course was accomplished, when the Scotch, maintaining the same steady stroke, gradually gained on the English, and just before reaching the P. M. S. S. Co.'s wharf drew ahead of them; the English then put on a good spurt and again drew up on the leading boat, but could not keep it up for long and the Scotchmen drew away from them with each stroke, only quickening the last half dozen and taking their boat in a length and a half ahead of the English, who, in their turn, were half a length ahead of the Americans.

Time 6 min. 27 sec.

The water was as smooth as glass, and the weather everything that could be desired.

We are gratified to be able to announce that the Royal Humane Society has been pleased to award its medal to Mr. Dowson in consideration of his distinguished humanity and courage in rescuing a number of Japanese coolies from drowning in February last. The medal has been forwarded to Mr. Consul Robertson for presentation.

In regard to the note in the *Japan Gazette* of Tuesday evening on the case of Devine v. Kirby, it is almost needless, though perhaps right, to say, that we had no idea that Mr. Kirby had lodged an appeal against the decision of the Assistant Acting Judge until made aware of it by the note in question.

In reference to a note in the *Japan Gazette* of Tuesday evening upon an article which appeared in the *Japan Weekly Mail* of the 5th instant on the case of Devine v. Kirby, it is only necessary to state that what appeared to the writer of that note an "attack upon Mr. Kirby" was an opinion formed solely upon the report of the case, written with no more knowledge of Mr. Kirby on the part of the writer than is inevitable in a small place like this where both have resided for some years, an absolute ignorance even of the person of Mr. Devine, and without the slightest bias towards either party. Any such bias we should hold to be an absolute disqualification for commenting upon the question at issue between these litigants, and we cannot but express great surprise that such an imputation as that referred to should have been made.

THE heat at New York in the early days of September would seem to have been very great. On the 5th September, the thermometer registered 99 deg. in the shade at 1 P.M.

We learn that a very large sale of egg-cards from *Yamamura* was made on the 6th instant at rates varying from \$2 for inferior to \$4 for best quality of card.

We believe that the announcement made in the *London & China Express* that the port of Simonoseki will shortly be opened to foreign trade is at the present moment premature.

THE Athletic Association have not been idle we find. They have caused to be formed under the superintendence of one of their most energetic members an excellent running path at the Rifle Range, a quarter of a mile in its total length with 150 yards on either side perfectly straight. Enclosed by the path, they have had about 130 yards so levelled as to fit it for hurdle races, and their arrangements comprise a dressing-room for the members and a "Grand-stand" for the accommodation of visitors. Much credit is due to this little Association which would seem to be struggling against a very general indifference to physical education and to be doing good work within its limited scope.

IMPERIAL GOVERNMENT RAILWAY.  
YOKOHAMA STATION.

October 7th, 1873.

Statement of Traffic Receipts for the week ending Sunday October 5th, 1873.

Passengers.....	24,301.	Amount.....	\$7,212.82
Goods and Parcels.....			568.21
Total.....			\$7,781.03
Average per mile per week	\$432.28.		
18 Miles Open.			

It has been our bad fortune to discover that there are a number of counterfeit ten rio kinsatz in circulation. Since the severe measures put in force by the Imperial Government a couple of years ago, when the wholesale forging of one-rio satz was found out, no suspicion attached to various notes, which have passed from hand to hand with perfect freedom. We were astonished to be told on application at the Mitsui bank

that the existence of this fraudulent paper has been known to the authorities for some time past, but that no steps have yet been taken to make the fact public. The imitation is printed on a very inferior paper, and most of the strokes in the engraving are heavier than in the genuine satz. There is also a want of regularity in the design. After this any one who receives any ten-rio satz in payment would do well to send them to the Mitsui bank for verification.—*Hiogo News*.

As a curiosity in the shipping news of this port, we may mention that Wednesday last, the 1st instant, witnessed the arrival of an American barque, the *James S. Stone*, direct from New York,—the first ship so far as we know that has ever done so—and the departure of the British ship *Taitaing*, for Falmouth with rice,—the first time that kind of cargo has ever been loaded here direct for England since the granting of the recent permission to export grain.—*Ibid*.

The officers and crew of the American brigantine *Admiral*, wrecked in Singu Bay, arrived in Kobe yesterday. The cargo and everything else worth saving from the vessel, with the exception of the masts, have been placed in junks for transport hither, and the said masts will no doubt follow at the earliest opportunity. The men report most favorably of the treatment they have received at the hands of the Japanese. As an instance of the violence of the storms in Singu Bay, we may mention that though the wreck was ten yards from the breakers on the occasion of the visit of the steamer *Augusta* three weeks ago, the sea has already thrown her up one hundred yards farther.—*Ibid*.

THE OPENING OF THE NEW POLYTECHNIC  
SCHOOL BY THE MIKADO.

THE new buildings erected for the Kai Sei Gakko, or Polytechnic School, which we have described elsewhere, were begun in April last, and were finished in August. The Mikado had consented to open the new edifice in person, and the day fixed for the ceremonies was Thursday, the ninth day of October.

The most elaborate preparations had been made to render the opening of this, the finest building devoted to educational purposes in Japan, as grand and impressive as possible. The front of the edifice was festooned with evergreens decked with gay flowers. In every window of the second story, flags of Japan were displayed with those of the four leading nations of civilization, Great Britain, the United States, France and Prussia; a high flag-staff was erected from which the national flag of Japan floated, and another large one, having the Chinese character *kai* (civilization), printed upon it, was hung from the balcony above the portico. An arch of evergreens, filled with artificial flowers, was erected within the gate. Every blade of grass appeared to have been rooted up from the street. The ditches were cleaned and the streets swept along the entire road from the school to the Palace, a distance of several miles. So smart and trim did everything look, and such appeared to be the beneficial sanitary effects of the Mikado's coming that the foreigners living in the dirty wilderness of Tokai began to wish that the Mikado would pay frequent visits through all the unwholesome streets of the capital.

Thursday, October 9th, was fair in its coming, and delightful in its presence. It was one of those lovely days which the dweller in Japan appreciates most after long weeks of rain. Lest the scholars should possibly be late, since they had about one hundred yards to walk, they were awakened at four o'clock a.m.

The "politeness of Princes" was in arrears of twenty minutes; the Emperor was to have been at the school gate at 8 a.m. At 8.20, two troopers, the advance of the Mikado's body-guard, swept round the watched corner, and with reversed lances rode towards the end of the

avenue. A moment or two more, and all the pennons of the company were in sight. The Imperial carriage occupied the centre. The students of the Polytechnic School and School of Foreign Languages were ranged along the street on either side, the foreign Professors stood at the south end of the entrance, and the officers of the Education Department at the north. Within the grounds, stood the Japanese high officers, and the Mikado's band of twelve musicians, having wind instruments, with which they saluted His Majesty and tortured the foreigner's ears for the space of several minutes. All the Japanese officials, from the Minister to the gate-keeper, were in foreign costume, and it was remarked that they looked better in dresscoats, high hats, and white neckties on this occasion, than they usually do.

The Emperor, having alighted from his carriage, entered the building and sat down in the reception room prepared for him. Mr. Tanaka, Acting Minister of Education, then advanced and presented His Majesty with copies of the plan of the buildings and the order of studies. Mr. Ban, the Chief Director of the Imperial College, handed the key to His Majesty, who then read a speech in which he expressed his high gratification at what had been done, and his great pleasure at being present on the occasion of opening the Polytechnic School; expressing his belief that as education was the true, and the best means of elevating the people and developing the nation, he desired that such education as the Polytechnic School was designed to foster, should be encouraged and stimulated by his officers, who should explain his wishes to all the people. Prof. David Murray, the Chief foreign officer of the Mom Bu Sho, then made a very appropriate speech, congratulating His Majesty, and pledging his best endeavours to advance the interests of education in Japan.

The principal exercises of the day were to be held in the amphitheatre or chemical lecture room, which lies at the east end of the central wing. In this room the students of the Polytechnic School were to recite and perform experiments before His Majesty and officers. A procession was formed, and proceeded to the room in which chairs had been arranged, that for His Majesty being made of fine gold-lacquered wood, with cushions of gold brocade.

The Emperor, on his visit to the old school buildings in May of the previous year, was dressed in the old Kioto costume of loose wide robes of crimson and white silk, with a head dress of black and gold. On the present occasion, he wore a gorgeous full-dress suit of European pattern. His tightly-fitting surcoat was of dark cloth, almost hidden under a stiff mass of gold embroidery. It extended a little below the hips. A gold-embroidered belt clasped his waist, and sustained a gold-mounted sword and scabbard. His hair was cut and parted in foreign style, and a full moustache darkened his upper lip. His trowsers were of fine white stuff, with wide stripes of gold embroidery down the sides, and were held beneath his boots by straps. His cocked-hat was very long, with white down or feathers in the middle, and a row of chrysanthemums, worked in gold, adorned either side. His *tout ensemble* was excessively gorgeous, almost dazzling. He walked with grace and ease, and throughout the exercises seemed to observe everything with an intelligent interest. At his left sat the Prince Fushimi no Miya. Among the Japanese magnates present, we noted Sanjo, Prime Minister; Goto, the head officer of the *Sa In*; Itaraki, Oki, and Ito, counsellors, or *sanji*; Yamaoka, the chief officer of the Ko Bu Sho; Saigo the hero of many battles in the civil war, and now acting Commander-

in-Chief; and several other officers of the third and fourth rank, besides many of the fifth and sixth. None of the foreign ministers were present.

The students of the English department came first in order. Saito, a young student in the Legal section, who has studied English only two years and a half, read in a clear voice, and without a single error in pronunciation, a well-written essay on the idea of Law, as understood by civilized nations. After reading his essay in English, he translated it into Japanese. Three students, Hasegawa, Mambu and Sugiura, from the Scientific section, then made nine or ten experiments in chemistry and natural philosophy. Some of these required careful manipulation, but all were performed with perfect success, with a single exception, which could not be called a failure. The French students followed with different experiments, which were done in a manner that reflected credit upon their able instructor Prof. X. Maillot. The English students have had one lecture and two recitations in chemistry and physics respectively for over a year, the French for about eight months, and the German for less than six. In place of the students, Dr. Ritter, the German professor of chemistry, made several fine experiments. Everything passed off, without any failures or accidents, except the letting fall of a bottle of ammonia-water by a not over-careful assistant. The escape of the pungent gas into the room caused, for a time, a general reddening of faces, tingling of nasal nerves, and pulling out of handkerchiefs among the Japanese officers in one quarter of the room, but no harm was done to any one.

The Emperor rose after these performances, and proceeded to the reception room, where he rested awhile. He next visited the library, apparatus room, &c., inspecting the books, maps, instruments, &c. The class-rooms were rather too freshly redolent of lacquer and varnish to be inspected fully, though these were looked at. Gymnastic exercises, by the students, then took place in the Gymnasium grounds, His Majesty occupying a covered seat while watching them. These over he walked to his carriage, entered it, and returned to the Palace.

The foreign professors, invited guests, Japanese high officials, and all the officers then proceeded to partake of a collation in the refectory. The floral decorations here were in good taste, and the Hall wore a gay and bright appearance. About one hundred gentlemen sat down at the board, after partaking of the fruits, &c., all rose to drink to the health and prosperity to His Majesty, the Mikado. After the collation, the company broke up, and the buildings were thrown open to public inspection. Many thousands of people visited them during the day.

The smooth working of all the parts of the programme reflects great credit upon the Directors and their assistants, and especially upon Mr. Tanaka, the Acting Minister of Education who had the chief direction of affairs. Yet we would venture to suggest, that when so many foreigners are present on such occasions, a foreign, as well as a Japanese Master of Ceremonies is a necessity. The need of one on Thursday was most signally shown at several points in the execution of the programme.

However, we do not wish to mar our description of the significant event of the opening of the Polytechnic School by His Majesty the Mikado, by any adverse criticism. We know that it has taken much patience and faithful labour to produce the results summed up on Thursday last, and we too congratulate His Majesty and His servants in the Mom Bu Sho, both Japanese and foreign, on the auspicious opening of the Polytechnic school, and wish it all the solid and abiding prosperity which it deserves.

## THE IMPERIAL COLLEGE, TÔKEI.

THE Kai Sei Gakko, formerly called Nan Ko, is situated in the north-western part of the city of Tokei, just outside of the Castle circuit and near the celebrated gate called Shitotsunbashi Go Mon. The name given to the College, by the Japanese, and said to have been bestowed by the Mikado, means literally "Civilization-making School." In a circular announcing the change from Nan Ko to Kai Sei Gakko, it was given out that the title Kai Sei Gakko means, "The College devoted to the revival of learning, and the reformation of knowledge, in which the sciences hitherto unknown in Japan shall be studied." The name of the school has, however, been so often changed, that the foreigners, who are less affected with the mania for change, prefer to retain the name first given to it by the foreign principal, and still call it "The Imperial College in Tokei."

This institution, which is now under the care of the Education Department, originated as "an office for the examination of foreign books" in the time of the Shôgun. After the civil war and revolution, the Government made it a school of foreign languages. The Rev. Guido F. Verbeck, then in charge of the Nagasaki school, was called to the superintendency; and from an humble beginning of two teachers, one French, and the other English, the College now numbers over six hundred picked students, with six German, six French, five American, and five English teachers.

The buildings hitherto in use are mere sheds ranged in rows, but during the present month, the new edifice, built since April last, will be opened by the Mikado in person, and the higher classes, in each of the three departments, constituting the Shem Mon Gakko, or Polytechnic School, will enter and occupy it. The lower classes, constituting the Middle School, will continue to recite in the old buildings.

The new College buildings are so different from the old, and so far surpass any structure formerly devoted to instruction, that a detailed description of them may not be without interest.

The edifice has a frontage on Shitotsunbashi avenue of three hundred and twenty-four feet. It is built in the form of a trident, the front being the base, and the long wings forming the tines. Each of the three wings is 192 feet long. The buildings are two-storied, and are twenty-five feet high from earth to eaves. The architecture is very plain but substantial-looking. The front is covered with white plaster, with which the green venetians contrast pleasantly. The central portico which is the officer's and teachers' entrance, and the side porticoes for the students' use are pleasing additions to the main edifice. The grounds are tastefully laid out, and in addition to the evergreens, there is a mound in the centre composed of densely growing dwarf pines. A flag-staff with cross-rest, and the guys, so necessary in this country, will float both the national, and the "educational" flags. A neat stone wall and coping, white paling fence, and a handsome painted gate, with carved posts and a central lantern, and a porter's lodge complete the front view of the new Imperial College.

On the ground-floor front, are the foreign superintendent's, native directors', librarians', clerks, etc., etc., rooms. These are carpeted, curtained, and properly furnished. In the centre wing, are the recitation rooms, laboratories for the professors of physics and chemistry respectively, and the amphitheatre or lecture-room, with circular rows of ascending seats. The north and south wings respectively, are to be occupied by the French and German departments.

The rooms on the second floor front are assigned to the officers of inspection, and are nicely furnished. The wings are occupied by the students; eight being assigned to a room, which is large enough to allow the proper number of cubic feet of space to each person. The total number of rooms is seventy-six. They are warmed either by grates or stoves, burning coal. Rigid regulations concerning the use of petroleum are enforced, and the students are to be drilled so as to vacate the house in a rapid and orderly manner, in case of a fire.

Between the wings of the main edifice, and communicating by covered passage, are two one-storied houses which are the servant's quarters.

Beyond the end of the central wing stand the refectory and kitchen. The former communicates with the northern and southern wings by a covered passage way. It is two-storied. On the lower floor, is the dining room. The main features of the kitchen, which is sixty feet long, and thirty feet wide, are three huge rice-boilers, and the furnaces for cooking. The dining room is ninety feet long, twenty-four feet wide, and ten feet high. The tables and benches are of plain wood. The usual native table-furniture of chop-sticks, lacquered rice and soup bowls, cup of soy, &c., are found on every table. On the second floor of this building are more bed rooms.

The bath house is situated not far from the kitchen. In this, are partitioned boxes for depositing clothes, a huge bath-tub for hot-water, a copper boiler, cold-water vats, &c. Only the students belonging to the Polytechnic school are fed and clothed by the Government. Below this grade, students must pay a monthly stipend of seven riô. The Polytechnic School is the goal of every under-class scholar, and the thought of it, his spur. The students rise at half past five a.m. and breakfast at six. The morning session is from eight to twelve o'clock, and the afternoon from one to two o'clock. Five hours are devoted to foreign learning, and one to Japanese and Chinese reading, writing and translation.

One hour's exercise, in walking, or gymnastics, alternately, is given to the students. Both kinds of exercise are taken in classes. In the former, the students must not scatter or mix indiscriminately along the streets, but keep together, and within sight of each other. In gymnastics, they have trained native instructors. After their return in doors, they eat supper, and then devote themselves to their tasks till bed time which is at half past nine. These hours vary slightly according to the season; but eight hours for sleep, six for recitation, three for exercise and meals, and seven for preparation of studies is considered to be the proper distribution of time.

The general health of the students is good, though not equal to the average observed in English and American schools. A sick-bay, or small hospital, is attached to the college, and is under native doctors and nurses. Very serious cases are sent to the large government hospital, so as to be under the care of the German surgeons.

Japanese diet is the staple food of the students. Meat is allowed them once every other day. The students wear a neat uniform consisting of a blue cloth cap, black alapaca coats and white trousers for summer; blue swiss jackets and grey trousers, with sack overcoat, in winter.

The regular holidays are Sundays, the first day of each month, the national festivals, and the foreign public holidays. The total number of holidays, however, is less than in Europe or America. On Saturday evenings, and before holidays, they are allowed to be out until nine p.m. They are strictly forbidden to drink any kind of distilled or fermented liquors, to go out at night, to visit the Yoshiwara, or to go to tea-houses and amuse themselves with singing girls. During the summer holidays of one month, and the winter holidays of two weeks, they are permitted to live out of the schools, at home or at hotels.

Almost every province in the Empire is represented in the College, Satsuma, Choshû and a few others have but a small proportion, but Kaga, Yechizen, Mito and some others are largely represented. Those pupils who had foreign instructors in their native cities, i.e., those who started with a foreign, and not with a native teacher, are now the most advanced pupils. This fact holds good to such an extent, that a professor can, in general, without knowing the antecedents of a class of boys pick out the students who had foreign teachers in the beginning. Some of the young men now in the first classes have been studying under foreign teachers steadily for four years, though most of them for less than that period. Very nearly all the students are of the *samurai* class. Some were formerly *hatamoto*, *daimiô*, or their near relations, and one of the students in the French department is an uncle of the Mikado. Most of these once titled youths illustrate most signally the old adage, "there is no royal road to learning." By far the two brightest students in the College hail respectively from Hizen and Yechizen, and are ordinary *samurai*.

Some idea of the range of studies may be obtained by

an examination of the roster. In the English department of the Polytechnic School, for instance, there are four classes. Two of these will pursue the Legal, and two the Scientific course. The principal studies of the Legal course, are Law, Latin and Modern History. In the Scientific Course, Chemistry, Physics and Mathematics are the chief studies. The following is the programme followed during the last six months.—

## SCIENTIFIC SECTION.

Studies.	Hours per week.	Text books used.
History	4	The Student's Hume.
Latin	3	Andrews Latin Grammar and Reader.
Law	3	Dictations from Pomeroy's Introduction to Municipal Law.
Political Economy	3	Perry's Polit. Economy.
English Grammar	2	G. Brown's Eng. Gram.
„ Composition	2	Quackenbos' First Book of Eng. Composition.
Arithmetic	2	Felter's Arithmetic.
Geometry	1	Robinson's Geometry.
Algebra	1	„ Algebra.

Logic is studied three hours a week, and Guizot's "History of Civilization" is read one hour a week, by the first Law class. In the second class, Geography takes the place of Logic, and the students have more practice in English instead of Guizot.—

## SCIENTIFIC SECTION.

Studies.	Hours per week.	Text books used.
Chemistry	3	Barker's, Roscoe's and Hooker's Chemistries.
Algebra	3	Robinson's Algebra.
Physiology	3	Huxley and Yorman's.
Geometry	3	Robinson's Geometry.
Physics	2	Ganot's, Quackenbos' and Steele's, (Native teacher.)
Drawing	3	
Book-keeping	2	
Mechanics	1	Peck's Mechanics.
Trigonometry	1	Robinson's Trigon.
English conversation	2	
„ composition	1	

The second class, in place of Mechanics, and Book-keeping, have more practice in English.

The above is an outline of the organization, character, and course of studies pursued in the Polytechnic school, the highest seat of academical learning in the land. We shall present, in a future number, the same summary and details of the "Middle school," which ranks next in order. We refrain from any comment upon what we have set forth, as the object of this paper is simply to state facts. Whatever opinions may be expressed concerning the fitness of the schedule of studies in use in the Imperial College, it should be distinctly understood that the allotment of *seven elementary, and five special, studies, all in foreign languages*, to boys of from fifteen to twenty years of age, is *not* the work, nor is it done by the advice of, the professional teachers of the Imperial College.

## MERCHANTS AND MERCHANT CONSULS.

In continuation of our article of the 27th ultimo respecting Consuls and Merchant Consuls we have procured the following list of *Professional* Consuls in JAPAN, which so far as we have the means of knowing is a complete one.

Great Britain.—Consuls at Yokohama, Hiogo, Nagasaki and Hakodate.

Vice Consuls at Yedo, Osaka and Niigata.

These officers also act as Consuls of the

Austro-Hungarian Monarchy.

Italy.—A Consul and a Vice Consul at Yokohama.

France.—A Consul at Yokohama.

(\*) Germany.—A Consul General at Yokohama and a Vice Consul at Hiogo.

(\*) Russia.—A Consul General at Yokohama and a Consul at Hakodate temporarily attached to the Consulate General.

(\*) The Consuls General of the countries marked thus (\*) are also diplomatic agents.

(\*) Spain.—A Consul General at Yokohama.  
United States.—Have *paid* (but not professional) Consuls at Yokohama, Hiogo and Nagasaki.

## LIST OF MERCHANT CONSULS AT YOKOHAMA AND YEDO.

* Switzerland...Consul General	Yokohama.
Denmark..... do.	
Hawaii ..... do.	
Netherlands...Consul	
Belgium ..... Vice Consul	Yedo.
† Peru ..... Consul General	
‡ Portugal ..... Consul	
§ Germany..... do.	
Greece..... do.	

## JAPANESE NOTES.

A recent number of the *Dajōkan Nisshi* contains an account of the maltreatment by savages of some Japanese sailors who were cast away in the spring of this year on the inhospitable coast of Formosa.

It appears that a junk manned by four men belonging to a port in Bitchiu sailed from Tamashima in that province with a cargo of salt and matting on the 28th November last, for Owase in Kishiu, where the cargo was disposed of and a fresh one taken in consisting of joss-stick powder and dried mushrooms. Having quitted Owase on the 9th January, they anchored at Nigishima off the same province, and started again on their voyage on the 14th. A gale sprang up immediately which lasted till the 18th, during which time the junk was blown far out to sea in a southerly direction, so that those on board entirely lost their reckoning. After drifting about for some days, they sighted a steamer on the 4th February, and lighted a fire with matting in order to attract attention. The steamer responded to the signal, and approached close to them, but after stopping her engines for a moment, proceeded on her voyage to the great disappointment of the castaways. After this they contrived to hoist a sail, and put the junk before the wind. On the 3rd of March they descried an island far away in the offing, the sight of which somewhat revived their spirits, although they had been absolutely without food for the last four days. About four o'clock in the afternoon of the following day they reached land, at a place in Formosa called Maboké. Twenty or thirty beings of strange appearance surrounded them, and robbed them of their property against which proceeding they endeavoured to expostulate, but the crowd increased to two or three hundred people, who carried off the whole of the cargo, broke up the junk, stripped the castaways naked, and appeared to be about to murder them. All they managed to save was a single old garment for each, the junk-pass, a five *riō* note, and a charm from the temple of Kampira in Saunki. Fortunately an old native took pity on them, and carried them off to his house, where they obtained food and shelter. The family of this old man consisted of five persons besides himself. There were many huts in the neighbourhood, constructed (says the account) with something resembling bamboo leaves. The soil seemed rich, and was planted with barley, it seemed far superior to the soil of Bitchiu. The locality was large, and well-wooded. About ten o'clock in the morning of the 9th, they were escorted by their protector to a place called Kančba, some four miles further, where they found three houses occupied by Chinese, with one of whom they found shelter for a night. In company with this man they returned to Maboké on the following day to endeavour to recover their property, but the natives refused to surrender it, and they returned without having effected their purpose. They stopped two nights longer with the Chinese, who forced them to saw wood by threatening to tie them up, although they made signs to them that they were too tired to work. On the 12th March, a Chinese named Ansen came and carried them off to a place called Bakarao. Between Kančba and Bakarao they passed several places inhabited by the aborigines, some of whom had pity and gave them food, while others mounted their backs and insulted them by striking them

- \* Is Chairman of the Consular Body.
- † Is Consul General for Japan.
- ‡ Is also Consul for Yokohama.
- § Has no jurisdiction.
- || Has no treaty with Japan.

on the head. Bakarao, where they stopped about a hundred days, is occupied by Chinese and aborigines in common, the latter being about twice as numerous as the former. Most of the Formosans were armed with swords, spears and match-locks, but for all that the Chinese seemed the more powerful, and made the natives work for them. Ansen had all along seemed to say that as soon as the barley was harvested, he should go to Kiyô to sell it, and would hand the castaways over to the Japanese officials at that place, and out of gratitude they cheerfully worked for him, tending cattle, cutting wood, and cultivating the ground. On the 14th June they embarked with Ansen from Bakarao and arrived on the 20th at Kiyô, where they stopped two nights. Some officials of Taiwanfu came and carried them to the office of the local authorities, where they remained nine days. Here a Japanese named Fukushima Reiské gave them ten dollars. On the 30th they returned to Kiyô, where they embarked for Foochow on the 5th July in a steamer. The Chinese authorities there gave them food, clothes and money and sent them to Yedo by steamer under the escort of two officers.

#### A CHRONICLE OF THE CHIEF EVENTS IN JAPANESE HISTORY FROM 1844 TO 1863.

(Continued.)

##### 1ST YEAR OF MANYEI, (1860).

1st month, 2nd day.—An Italian ship came to Yokohama.

1st month, 6th day.—Denkichi of the province of Kû, Interpreter to the English was murdered in Yedo by some person unknown.

1st month, 13th day.—Kimura Settsu no kami Katsu Rintaro (the present Minister of Marine) and others started for America in the ship Kanrinmaru.

1st month, 15th day.—The Daimio of Taira was appointed Roju.

1st month, 18th day.—Shimmi Buzen no kami and his fellow—ambassadors left for America in American ship.

1st month, 20th day.—It was notified that the Koban marked *Ho* should be current at the rate of 3 rios and 2½ bus., the gold bu. with the same mark at 3½ bus., the Koban marked *Shô* at 2 rios 2¾ bus and the gold bu. with the same mark at 2¾ bus.

1st month, 28th day.—Notice was given of the discontinuance of the European military exercise, and also of practising the European style of drumming.

2nd month, 4th day.—Orders were sent to Fuchu that the Korean envoys were to come in the year 1866.

2nd month 5th day.—An Englishman and a Dutchman were cut down at Yokohama by some persons unknown.

2nd month, 6th day.—An interview took place with the English at the residence of the Daimio of Tatsuno. Another interview was held on the 18th. The subject of these interviews was said to be the above mentioned murders of foreigners.

2nd month, 18th day.—There was fighting among the Samurai in Mito on account of the giving up of the Imperial rescript.

2nd month, 18th day.—Russians went by land from Yokohama to Hakodate.

2nd month, 25th day.—At Yokohama one of the Japanese night-patrol was shot by a foreigner.

2nd month, 27th day.—The Shôgun had the front of his head shaved, (in token of his attaining his majority.)

3rd month, 3rd day.—Sano Takenoske of the Mito Han, Arimura Jizayemon of the Kagoshima Han and fifteen others attacked the Daimio of Hikone (better known as Iê Kamou no kami) at Soto Sakurada and killed him. The mourning for him was kept secret and was not notified. (The Japanese law then was that if man was from any cause decapitated, his son could not succeed him in the family estates and honours).

3rd month, 9th day.—A Satsuma man arrested a Mito man named Kaneko Magojiro at Yokka ichi in Ise and delivered him to the Shôgun's Government.

3rd month, 11th day.—Notice was given that the number of guards at the Castle gate would be made the same as it was up to 1855.

3rd month, 13th day.—The Daimio of Kagoshima while

in Chikugo on his way to Yedo turned back and went to his own province.

3rd month, 15th day.—The Shôgun summoned the Daimios to the Castle and explained to them that on account of foreigners of all countries having take up their residence in Yedo, and also on account of the affair at Soto Sakurada, they must take steps to guard against mischief.

3rd month, 23rd day.—At Osaka Takahashi Taichiro, Shôzayemon and Kawasaki Magoshiro committed suicide; Yamazaki Riôzô and two others were arrested.

3rd month, last day.—The Daimio of Hikone was released from the duties of the office of Tairo (see 3rd month 7th day).

Intercalary 3rd month, 1st day.—The name of the period was changed to Manyei.

Intercalary 3rd month, 1st day.—The Daimio of Sekiyado was again appointed Rôju.

Intercalary 3rd month, 1st day.—Some Yokohama merchants flung a petition into the *Kago* of the Daimio of Tatsuno denouncing the secret schemes of the foreigners.

Intercalary 3rd month, 5th day.—The title-deeds of the Daimios were renewed to them as usual.

Intercalary 3rd month, 6th day.—The Daimios who had charge of the defence of Yokohama were warned that there was danger of an attack by *rônins*.

Intercalary 3rd month, 11th day.—Matsunaga Hanroku committed suicide in the guard-house at the front gate of the Castle, probably from apprehensions excited by the affair of the Daimio of Hikone.

Intercalary 3rd month, 17th day.—Owing to the scarcity of soy, wax, grain, clothing and silk, it was notified that supplies of these articles should be sent to Yedo.

Intercalary 3rd month, 20th day.—It was notified that men-of-war would guard the Yokohama sea.

Intercalary 3rd month, 29th day.—An interview with the English took place at the residence of the Daimio of Taira. It was said that the subject of the interview was the foreign residence on Gotoyama.

4th month, 3rd day.—The defence of Shinagawa was entrusted to the Daimio of Tokushima (Awa).

4th month, 7th day.—Mourning was proclaimed for the Daimio of Hikone. On the 28th the succession was granted to his son.

4th month, 28th day.—The Daimio of Nishio ceased to hold the office of Roju.

5th month, 4th day.—An interview took place with the English at the residence of the Daimio of Taira about the buildings for foreigners on Gotoyama and about building houses for merchants at Shinagawa.

5th month, 6th day.—Kimura Settsu no kami and his colleagues returned from America.

5th month, 24th day.—A Portuguese ship came to Shinagawa. Interviews were held with them at the residence of the Daimio of Taira on the 2nd and 18th of the 6th month. A Treaty having been concluded with them, they went away on the 19th.

5th month, 26th day.—Sakura Yukiye an unattached samurai and Shima Onari were thrown into prison. They were probably the remainder of the Kiôto prisoners.

5th month, 26th day.—Ono Tomogoro of the Kasama Han had the honour of an audience of the Shôgun.

6th month, 4th day.—Midzuno Tosa no kami, a dependant of the Daimio of Wakayama was commanded to retire from public life and to live in seclusion. It was said that the reason of this was that being the Shôgun's maternal grand-father he had been concerned in the plot.

6th month, 18th day.—The Mikado issued an important command for the expulsion of the barbarians. Okubo Osumi no kami was despatched to Yedo with it. He delivered it to the Shôgun on the 1st day of the 7th month.

6th month, 21st day.—An interview took place with the English at the residence of the Daimio of Taira.

6th month, 25th day.—The Daimio of Okazaki was appointed Roju.

7th month, 4th day.—The Americans went to the Castle and had an audience of the Shôgun. It was said that the ceremonies observed the previous year were modified.

7th month, 6th day.—Interviews took place with the Americans on this day and on the 18th at the residence of the Daimio of Taira.

7th month, 9th day.—The Englishmen went to the Castle and had an audience.

7th month, 11th day.—Notice was given that vaccination for small-pox would be performed at the vaccination office.

7th month, 11th day.—The Daimios of Takamatsu, Hikone, Koriyama, Matsuyama, and Kuwana, were ordered to guard Kiôto strictly, and the Daimios of Yedo, Takatsuki Leze and Sasa yama to guard the entrances to Kioto.

7th month, 18th day.—The English went to Suruga. On the 26th they ascended mount Fuji.

7th month, 20th day.—A Prussian ship arrived at Shinagawa. An interview took place with them on the 22d at the residence of the Daimio of Taira, and also on the 15th and 18th of the 8th month. The Prussians went away without being allowed to conclude a Treaty.

7th month, 21st day.—The French went to the Castle and had an audience.

7th month, 26th day.—A German ship came to Shinagawa.

7th month, 29th day.—Anenokôji, a lady of the Shôgun's Court went to Kioto. It was said that the object of her Mission was the Shôgun's marriage to Princess Katsu.

8th month, 3rd day.—The Daimio of Kagoshima was informed that he would afterwards receive orders respecting the visit of the Loochoo envoys.

8th month, 15th day.—The old Daimio of Mito died. He received the posthumous name of *Rek-kô* or "The zealous noble." On the 26th the sentence of strict seclusion passed on him was recalled.

8th month, 22nd day.—Territory in Saghalien was granted to the Daimio of Ono.

8th month, 27th day.—Thirty-seven Sammai of the Mito Han went to the residence of the Daimio of Kagoshima, and made a statement of their views; on the 5th day of the 7th month of the following year they were allowed to return to the residence of the Daimio of Mito.

This month the English and French took the northern capital of China.

9th month, 4th day.—The sentences of seclusion passed upon the old Daimio of Nagoya and on Lord Hitotsubashi were rescinded, but they were warned not to present themselves before the Shôgun.

9th month, 7th day.—The sentences of seclusion passed upon the old Daimio of Kakegawa, upon Hongo Tango no kami and upon Ishiko Tosa no kami were rescinded.

9th month, 13th day.—Hayashi Dôkai of the Kokura Han was appointed physician to the Shôgun.

9th month, 16th day.—The Daimio of Ogaki was presented with a saddle and stirrups and a dress suitable to the season in recognition of his good government of his province.

9th month, 18th day.—An interview took place with the Americans at the residence of the Daimio of Taira.

9th month, 20th day.—The Daimio of Mito was informed that it was unnecessary for him to give up the Imperial rescript.

9th month, 28th day.—Shimmi Bugen no kami and his colleagues returned from America.

Prince Suke was proclaimed heir and successor to the throne of the Mikado.

10th month, 4th day.—Interviews took place with the Americans at the residence of the Daimio of Taira on this day and on the 15th. The subject of them was said to be the land question.

10th month, 27th day.—Odzuki Shinsui of the Sendai Han was appointed Chief of the vaccination office.

11th month, 1st day.—It was notified that the Princess Katsu would be given in marriage to the Shôgun.

11th month, 5th day.—The conduct of foreign relations was entrusted to the Daimio of Taira alone. (Andô Tenshin no kami).

11th month, 5th day.—Hori Oribe no Shô committed suicide. It was said that he intended his death as a remonstrance against the entire change of policy in respect to Kiôto and to foreign countries.

11th month, 6th day.—Notice was given that there was no objection to the sails of war vessels being made of white material, and to the use of crests on them.

11th month, 9th day.—The Shôgun returned to the chief buildings of the Castle.

11th month, 13th day.—An interview took place with the Prussians at the residence of the Daimio of Taira. On the 18th another interview took place and a provisional Treaty was concluded.

11th month, 16th day.—An interview took place with the French at the residence of the Daimio of Taira.

11th month, 19th day.—On account of Princess Katsu being given in marriage to the Shôgun, the Court nobles jointly received a present of 15,000 rios.

11th month, 20th day.—An interview took place with the English at the residence of the Daimio of Taira.

11th month, 21st day.—Orders were given to the Daimios of Fukuyama Nishio, Amagasaki, Shinjo, Kameyama and Kôrigaya to protect the foreigners of all countries. A report that a band of *rônins* was about to attack the foreigners was the cause of this measure. These Daimios were repeatedly changed afterwards, but all these changes are not noticed here.

11th month, 29th day.—The old Daimio of Tatsuno ceased to hold the office of Roju. He afterwards retired from public life.

12th month, 5th day.—The American interpreter Henskin was cut down in Yedo by some persons unknown.

12th month, 6th day.—The English and French left Yedo and went to Yokohama. On the 21st of the 1st month they again came to Yedo. From this time forward they kept going backwards and forwards and did not live quietly in one place.

12th month, 11th day.—An interview took place with the Americans in the residence of the Daimio of Taira. Another interview was held on the 27th. The subjects were the murder of Henskin and the postponement of the opening of Yedo, Osaka, Hiogo, and Niigata.

12th month, 15th day.—The Daimio of Sekiyado received a gift of 10,000 Kokus. The Daimio of Murakami was ordered to exchange villages so as to increase his revenue by 10,000 Kokus. Rewards were also given to all the building-officers who rebuilt the Castle.

12th month, 28th day.—The Daimio of Kameyama was appointed Roju.

This month the Mikado presented 50 pieces of gold to the inhabitants of the province of Yamashiro.

(To be continued.)

#### THE NATURE OF THE JAPANESE LANGUAGE, AND ITS POSSIBLE IMPROVEMENT.

By the REV. J. EDKINS, of Peking. Read before the Asiatic Society of Japan, October 9th, 1873.

THE comparison of Japanese with kindred languages may be expected to yield most interesting results. The field is a new one and its riches are therefore unknown. Why not try what it will yield?

The methods of inquiry are now better than they used to be, and in the present state of our knowledge they are not difficult to apply. Philology, is now a recognized science; comparative philologists by limiting themselves almost exclusively to one family of languages have left the more to be learned by inquirers in new fields. We have grammars and dictionaries of the Chinese, Mongol and Manchu languages on the one side, and of the languages and dialects spoken on the islands of the Eastern Archipelago and of the Pacific Ocean on the other. By placing them in juxtaposition it is not difficult to assign to the Japanese language its true place in the world of speech.

The Japanese then is not in immediate sisterly relation to the Chinese because it is polysyllabic and places the verb at the end of the sentence; nor is it Polynesian or Malay because its adjectives do not follow their substantives; nor does it place the genitive after the nominative. Polynesian grammar like Chinese grammar requires the verb to come before the word it governs. Not so the Japanese. The verb is rigidly attached to the end of the sentence and marks the conclusion instead of the recommendation of action.

The place of the verb in Japanese is highly unnatural and seems very much opposed to simplicity and good sense. But it is far from being uncommon in languages. The native of Tartary, be he Turk, Mongol or Manchu always pays rigid obedience to the same law. He must by the

necessity of his syntax say "The Lama prayers recites," "the shepherd the flock leads," "the boy a horse rides." He cannot alter the position of the nominative or objective noun or of the transitive verb. So it is also in Japanese. For the human mind to resign itself to the control of so inconvenient a law is a decisive proof of intellectual inferiority. It does not belong to the speech of nations with creative genius. There can be no just or well-founded hesitation in calling the Japanese a sister language to the Turkish, Mongol and Mauchu when it is remembered that this and similar laws reign in the domain of its syntax.

There is often visible a congruity between the history of nations and the languages they speak. Poets, historians and philosophers have all of them owed not a little to the languages they used. Greatness in literature is impossible to those who have not been born to the use of an elevated language. Hence all the Japanese have attained they owe to the assiduous cultivation of borrowed literature. Unfortunately when they adopted the Chinese writing and books they made no improvement in the native syntax, and after 1600 years the laws of the collocation of words are as objectionable as they were in the infancy of the language. There has been none of that boldness in innovation which might have modified the grammar, shortened the words in the native vocabulary, struck out much of the painfully extensive honorific element, and revolutionized the syntax.

We had in the Anglo Saxon a very good basis for our living English tongue. But before A.D. 1,300 it was practically impossible for great writers to achieve an immortality. The infusion of French modifying elements beginning from the Norman conquest, and of Hebrew originated by the intense study of our Sacred Records modified and moulded our language to a form which might suit the genius of Shakspeare.

The Japanese pedagogue does not permit similar modifying influences to come into the sphere of his thought and produce improvement in his language. He admits new words to any extent but the grammatical framework of the language remains. In translating Chinese he alters the order of words to suit his own syntax, instead of allowing the Chinese syntax to improve his own.

But what will these islanders now do with English? It will be well for the intellectual progress of Japan if under this new impulse which forces the native mind onward in the path of educational improvement, it should become conscious of a power to renovate the native language. This would be worth more to the people than hundreds of steamers and thousands of miles of railways. The English language is much more fitted than the Chinese, to improve the Japanese language. There is more freedom in its syntax, and by its polysyllabic structure it is more akin to the Japanese and perhaps better able to lend to it elements of lasting utility.

The question mooted by Mori the Minister to Washington is of high importance in a way perhaps which did not strike his own mind. The substitution of English for the native language appears to many persons an impossibility, and therefore the proposition is regarded as absurd. But if the question be modified so as to refer particularly to the renovation of the native language by contact with European speech it becomes highly practical and interesting.

The position of Japanese in language as a cousin of the Tartar modes of speech and with them of the Tamil and other languages of South India may be decided by the place assigned to the verb as already remarked. This may be regarded as a characteristic unique, uniform and conclusive. But it carried with it other laws such as the following case marks must be suffixes. And why? These case suffixes are themselves chiefly verbs. It is the law of the position of the verb which originates and necessitates the law of the position of case marks. The one law embraces the other. Treat the case mark as a verb and its proper place is after its noun. *Kara* from and *made* to must then be looked for among verbs meaning for example to begin and terminate action. Among Chinese roots we have *kai* to open, *k'i* begin, *pit* to end. To some such roots I should look for the origin of these Japanese case marks.

Another group of case marks, those which indicate the nominative, genitive and accusative, are more correctly

regarded as demonstrative pronouns. The Japanese and Mongol usage in regard to these are the same, as may be seen by comparing them. In accounting for their origin there need be no great difficulty felt. Take the old English, John Smith his book. *His* has in modern English become abbreviated into an *s*. The principle would be the same if *he* were used instead of *his*. Probably no genitive particle in any language has any other origin than this. Bopp explains genitives in this way, and his system in this respect serves as well for the Eastern Asiatic languages as for those which he examined.

We may go farther than this. The growth of the European verb tree may be illustrated from Japanese and kindred languages. The European languages are the most perfect and finished in the world. Rudimentary forms are therefore more lost to view in Latin and Greek Grammar than in the more primitive speech of Eastern Asia where the verb is in a sort of chrysalis condition. As the caterpillar changes into the chrysalis and then into the butterfly, and the leaf into the bird and then into the flower, so the bare and unornamental forms of Chinese grammar are seen passing into the crude transitional state assumed by the verb in Japanese and Mongol, previous to their European development, embracing those varieties of voice, mood, tense and person which strike us by their precision, richness and beauty. By dissecting the verb in its intermediate condition as in Japanese, Tartar or Tamil we can trace much of the process by which the European verb was formed.

In the European or Sanscrit verb there is no more interesting point than the formation of the past tense indicative from the participle. One of the ways in which this is done is easily seen in colloquial Japanese. In Mr. Aston's "Colloquial Grammar," he says "the *ta* of the past tense is a shortened form of *taru*, which is itself contracted from *te aru*, *te* being the termination of the participle and *aru* the verb to be." The crucial point here to be noticed is that the past tense indicative is formed from the participle. So in English the past indicative loved is formed from the participle loved, by the instinctive effort of language which is always striving after the attainment of greater precision and variety of idea.

But the question is asked, how does the participle receive an indicative sense? It may be by dropping the last word. Thus in Mongol *yabeju boi* *he is having gone* becomes in colloquial use *yabaji* *he is gone* and sometimes *he went*. In this easy way a participle or gerund becomes indicative. Sometimes we cannot trace such a loss or a last word. Thus in Greek elegon, *he said* from *legon*, *legon*, *saying*. We may then invite attention to a law described in Mr. Aston's Grammar of written Japanese by which verbs assume two forms according as they are complete in action or not. The form of completed action occurs in the last place and has a peculiar suffix. The form of incomplete action wants this suffix, and its place is earlier than the last. The law appears in Mongol with greater distinctness. A special suffix *ksan* belongs to the category expresses completed action.

In the Mongol expression *bi martaju boi* *I have forgotten* we have a pronoun *bi*, *I*, and two verbs, one meaning *to forget* and the other *to be*. The verb to be is in its primitive radical shape and corresponds in sense and use nearly to the Japanese *aru* and *mas*. Etymologically it is more closely connected with *mas*, than with *aru* *b* and *m* being interchangeable letters.\* The suffix *ju* in *martaju* was probably at an earlier stage a sort of case suffix used like the Japanese *ni* in a like position, that is when attached to verbs. It gradually assumed the character of a participial or gerund suffix. In the modern colloquial Mongol the final verb *boi* is omitted and *martaji* (which is the same as *martaju*) is a past indicative, *I have forgotten*. So the participle or gerund grows out of the law of position by which, when verbs are used together, completed action claims the last place and incomplete action an earlier place. Let us call this the first stage of metamorphosis. The participle or gerund takes in the next place as a suffix an old verb (for example *ju* that is *de*) which has become transformed into a case

\* *B* in Mongol frequently corresponds to *m* in Japanese, as in the following examples *biye* or *beve*, *bulgy* Jap. *mi*, *bedere* *hu* to seek Jap. *motome*.

*Bas* and, also Jap. *mo*.  
*Buri* all, altogether Jap. *mattai* or *mattaku*.

mark. So far there are two stages of formation. Then the participle becomes transformed into a past indicative. This is a third stage.

Grammar is the work of the human mind operating systematically on linguistic elements within its reach in an instinctive and unconscious manner. One language shews some special process better than others. Take the expression in Hepburn's Dictionary, Hanashi wo kiki ni itta, *he has gone to hear what is said*, kiki hear with the suffix *ni to* is a verb in the supine in a crude state where the suffix is still disconnected with the verb to which in favourable circumstances it may subsequently become indissolubly allied. The book Mongol, has a true supine ending in *re*. It is an instance of a noteworthy fact, viz, that the grammar of the Tartar languages is more advanced than that of Japan, and possesses a verb tree more like that of European grammar. All languages are in a state of transition from one state to another guided by the principles which are peculiar to them. It possible for them to be improved by the adoption of new principles. Those who have the control of education and literature wield a power which should always be used for the progressive improvement of languages. Without this aid languages deteriorate and pass into decay.

If we understand the place held by the Japanese language and estimate rightly the value of its special principles of development, it appears undoubtedly possible to improve it by the adoption of suitable educational methods with the aid of English speaking teachers and of the Government department of public instruction; the Mombusho.

When fifteen hundred years ago the Chinese language was brought over to Japan and taught in schools no effort was made to introduce changes into the native grammar. The Chinese and Japanese Buddhists taught Buddhism. The object of attention and admiration to the Japanese youths of the time was the literature of China, no attempt was made to translate the Buddhist books or those of Confucius into Japanese tongue. It was the task of the educator to teach both in the Chinese language. The consequence was that Chinese words and phrases were imported into the Japanese language wholesale. The Japanese medium of thought remained in all its grammatical categories unchanged. Nothing but the use of numeratives between numbers and nouns, such as the word *ban* in *icte ban nie*, *the first article*, and perhaps some few other unimportant additions, was gained to the grammar. The old stiffness of the laws of position was still retained. This is much to be regretted, a fine opportunity was lost of altering the grammar for the better.

Now that the Mombusho has undertaken to establish instruction in English throughout Japan, another such opportunity for modifying the inconvenient principles of the native grammar is afforded: a vigorous effort now made to correct vicious principles of grammar, and introduce the germs of solid improvement on a sound philological basis would open a new path of progress to the language.

There is no good reason for the verb always coming last or for the case marks being always suffixes. Why not attempt to restrain and modify these capricious limitations? I would propose the introduction of the English prepositions, *from*, *to*, *by*, *with*, and would recommend that teachers should not allow them to be placed after their nouns. It should be the duty of the teacher in schools to enforce English syntax, so as to accustom the youth of the country to think in the European manner, and to the adoption of our order for the words.

The method have recommended for use is the reverse of "pigeon English." The characteristic of that jargon is that it uses English words in a Chinese order. The Japanese in learning Chinese were guilty of the same mistake, they read Chinese in a Japanese order. They would have done better if they had adopted the Chinese grammar with the Chinese words. Had they early insisted in native schools on reading Chinese in its order instead of altering it as they now do into a Japanese order, they would long since have introduced into their native tongue principles from which their language would have derived the greatest benefit. By this time the whole nation would have been accustomed to freedom in the place of the verb and of the case marks. There

would then be a better prospect of progress in the formation of a good native literature.

The introduction of English words into the Japanese language should also by all means be encouraged. It is not an opprobrium to a vocabulary to be rich in words, derived from various sources. Poverty in a vocabulary indicates poverty in ideas. Our English words are instinct with the life of modern science, art, and learning. The appetite of the Japanese youth for foreign words and knowledge is a happy circumstance and should be gratified. Thus their language will be enriched and may achieve some thing more in the world than it has yet been able to do under the painful restrictions to which it has been subjected. Let it not be said that the vocabulary will become heterogeneous in character. Is not our own English eminently so? All languages are liable to this charge if carefully examined. If we take the Japanese vocabulary as it is and compare it with the Chinese and Mongol, it is seen to be of the most composite character. I do not here refer to Chinese words introduced such as *konnichi to-day*, *sakoban last evening*: I speak of the native part of the vocabulary.

Thus *uma* horse is the Chinese *ma*, and Mongol *mori* with *u* prefixed; *sakana*, fish, is the Mongol *dagas* with the *d* changed to *s*. This tendency to sibilate appears in the Japanese syllabary very distinctly. What but this has introduced irregularity into the *t* series and changed *ta*, *ti*, *tu*, *te*, *to*, into *ta*, *chi*, *tsu*, *te*, *to*? The same principle of sibilation which since the invention of the Japanese syllabic *kana* ten centuries ago has expelled *ti*, *tu*, *di*, and *du*, from the list of sounds and introduced *chi*, *tsu*, *ji* and *dzu* in their place, operated at an earlier period to change the (Hebrew *dag* and) Mongol *dagas* into *sakana*. So also *shita below* is in Mongol *dôtai*; *soroi to agree*, *correspond*, *be a match for* is in Mongol *taraho*.

I give some examples from Japanese words beginning with *k*. The Mongol equivalent is *h* or *g*. *Kutsii*, shoes gotai; *kitsui*, fierce, strong, huchu; *kayeru*, return home, *hairehu*; *oki*, great, ihe; *huldehu*, freeze, *kori*; *koto*, thing, hereg; *kotoba*, speech, language, *hele*; *kotaye*, return answer, *hairehu*; *kuro*, black, *hara*; *kawa*, river, *gol*; *katai*, hard, *hatago*; *katana*, knife, sword; *hadogor*, sickle; *okure*, behind, *hotai*.

In identifying these words let it be assumed that the letters *l* and *r* both come out of *t* or *d*. This is in language so common a phenomenon that it is needless to prove it here.

In making a comparison of words throughout the vocabulary, the following changes of letters come to view.

The Japanese *k* corresponds to *h*, *k* and *g* of other languages. The Japanese *h*, *f* and *b* correspond to the *h*, *p* and *f* of other languages.

The Japanese *ts*, *ch*, *sh*, *z*, *s*, *j*, and *r* belong to the *t* and *d* of other languages, together with the *s*, *l*, and *r* of those languages. The Japanese *w* and *p* may usually be referred to *g* and *d* respectively.

The Japanese *m* at the end of the root very often corresponds to the final *ng* of Chinese roots.

The Japanese initial *m* corresponds often to the *b* of other languages. In modern Japanese *m* becomes *n* when final.

The Japanese vocabulary if compared with constant reference to these correspondences of letters will be found to have very little of purely native growth.

Thus *hosoi* is *petit*.

*hitots* is the Turkish *bir one* and the Engl. *first*.

*hineri* is the Chinese *pien* to plait, twist.

*futatsi* is the English *both*.

*samui*, cold, is the Chinese *shwang*.

*same*, to wake, is the Chinese *sing*.

*sama shape*, form, is the Chinese *chwang*.

*sumeru* clear is the Chinese *ts'ing*.

*sumi* to end is the Chinese *chung*.

Enough has been said to shew that if any one undertook to prove that the native Japanese words are of home growth he would have a hopeless task. The examples adduced are most of them beyond cavil.

Such being the state of the Japanese language there is no reason why the process of enriching the vocabulary should not be allowed to continue. This is only to do what has been before, whether before or after the beginning of Japanese history. They were once a Tartar peo-

ple who came by way of Corea into the beautiful islands, they now inhabit. They drove the Ainos, a people originally as shewn by their hair of a much more northerly home, into north Nippon and afterwards into Yesso, and proceeded to develop their legends and their grammar till they reached their present form. When the unassisted progress made by the native mind in the formation of religious myth and of the formulae of Japanese speech had proceeded to the extent of which they were capable, the Chinese language and system of thought appeared on the scene. The effect was most remarkable. A system of instruction was established which resulted in the introduction into the language of many thousands of foreign words and expressions. This was the work of school training in the hands of Japanese masters and assisted by the government. At the present day we find in the common talk of the people, including the uneducated men and the women of all classes, Chinese expressions which may be counted by thousands. This striking fact clearly shows the effect of schools in modifying popular speech.

In accounting for this remarkable adoption of Chinese words and phrases the aid of Buddhism must not be overlooked. Religion is always a powerful factor in modifying language. For three centuries the *Go on*, the pronunciation of Chinese words common among the Buddhist monks, prevailed exclusively in Japan. Early in the seventh century Japanese students were sent to the Chinese capital in the province of Shensi to study the Chinese language more thoroughly and to bring back books and information bearing on the Confucian religion. The Japanese at that time were so enamoured of every thing Chinese that they adopted it in the most wholesale manner and never thought of an alphabet for themselves till late in the eighth century. There was no one to undertake to alter the Japanese language and the attempt was never made. When at last the alphabet was invented, its chief use was to aid pupils in learning the sense of the Chinese books and the sounds of the characters. As, however, most pupils never learned Chinese thoroughly, a mixed written language grew up resulting in the native literature which has since come into existence.

To foresee what if left to themselves would be done by the Japanese in regard to English is not difficult. They would treat English books as they have been accustomed to treat Chinese books. They would introduce the *kana* into English works to assist students. The native order of words would still be retained and an immense number of new words would be added to the vocabulary.

This course so highly to be deprecated they may be induced to avoid. The advice, example and reasoning of foreign teachers, may persuade them to learn English in a more enlightened way, and more thoroughly than they have done Chinese. In schools where English is taught a mastery of the grammar and the pronunciation should be made a *sine qua non*. No vicious pronunciation or erroneous syntax should by any means be allowed. When the Mombusho according to its present programme proceeds to appoint native schools for an English education throughout the country particular pains should be taken that the teachers appointed are qualified to give instruction and enforce correctness in these two particulars.

The consequence of this will be that the principles of European grammar will become familiarized to the juvenile mind of the country. The syllabary will also be greatly enlarged. There is in the English language a very great variety of syllables. By their adoption the Japanese syllabary would be more than doubled in capacity. Their acquisition of the letter *l*, of *th*, of *f*, would be a great gain. They would have a vast number of compound initials such as *str*, *pl*, *kl*, *tl*, *pr*, *kr*, *tr*. The lost syllables *ti*, *di*, *tu*, *du* and others would be restored. Finals such as *m*, *rn*, *rd*, *ld*, *lt*, *ks*, *ps*, *nd* and many others would be added. By such means a very poor syllabary would become rich. The enunciation of the native of Japan would become as full of energy, variety and expressiveness as our own. He would become master of two languages the one spoken by him from a child, marked by perverse laws for which no good reason can be given, and a syllabary soft and melodious, indeed, but wanting in force, range, and adaptability; the other cultivated, scientific and unrivalled for compass, flexibility and variety.

Let us suppose that in all the 40,000 or 50,000 schools

intended to be established by the Mombusho really good English were learned by the boys, could not something decidedly valuable be then done for improving the native language? An immense number of words will soon be added to the vocabulary. The most assiduous care should be taken that they be correctly pronounced. In the departments of religion, science, navigation, politics, and all the arts of the west the importation of new words should be encouraged. For example the word God is so far superior to the Japanese term *kami*\* that it would be well to adopt it at once by the unanimous determination of all who are interested in the spread of Christianity among the vivacious people of these lovely islands.

The importation of new words however will not be enough. The native grammar requires to be expanded and the syntax remodelled. This can only be accomplished by the resolute and enlightened handling of those who, whether natives or foreigners, have charge of the new system of education. I mention here several particulars which appear to be important.

1.—The introduction of English prepositions to be used interchangeably with the Japanese post positions; such are, in, up, from, to, by with above, below, etc. Such words should keep their own position before the noun while the corresponding Japanese words retain their place after the noun.

2.—The directive adverbs up, down, in, out, above, below, should be introduced as appendages to verbs. It is found very convenient by Chinese, Polynesians and Englishmen to be able to indicate the direction of a verb's action by these and similar words *e. g.* press up, press down, press through.

3.—The article should be introduced. It has been found of great use in English, French, Greek and other of the most perfect languages spoken by man.

4.—The relative pronoun should be introduced. The Japanese interrogative *dare* would form a good base for it, but perhaps the English *who*, *which*, *that*, would in the circumstances of the country be better.

5.—The English syntax in regard to verbs should be carefully followed. There could be no better guide than the Bible because of its Hebraistic cast of expression. For example. "In those days came John the Baptist preaching in the wilderness of Judea." To accustom the Japanese youth to place the verb "came" before "John" and "preaching" before the words "in the wilderness," would be of the greatest benefit to them, because, though contrary to native rules of grammar, it is according to the law of nature and is authorized by the usage of languages of the best type.

6.—The introduction of the genitive with *of* would also be a benefit; adding greatly to flexibility and agreeably varying the expression of native thought. They might learn to say "The Ko of the Mikado" as a variation of Mikado no ko. As these changes found place in the language the present imperfect literature of the country might be ameliorated and elevated. Poetry with sweet, rhyming measures would become possible. The orator's eloquence might be exhibited in assemblies of the people. Government despatches and epistolary correspondence would undergo a beneficial renovation.

Perhaps however, English teachers will consider that their task is done if they teach good English to pupils. They will not readily be persuaded that it is part of their work to improve the native language. It is the only aim of this paper to point out the importance of the object in view, and offer some suggestions as to how it should be done in the hope that educators will take it into consideration.

The government has great power, on account of the submissiveness of the people. In China the improvement of the native language by foreign education is utterly impracticable. It is not so in Japan. The institutions of the country are in the hands of the Government. The gradual abridgment of a Chinese education by the Japanese would open their minds to a true philosophy, and allow of a much more useful education being imported to

\* The word *kami* at first meant the souls of ancestors, and afterwards the gods of the Shinto religion, which are in fact the souls of ancestors deified. The Buddhists and Romanists have both avoided the term *kami*. The Protestant Missionaries would do well to imitate their caution. Christian theology seems to require a better word for the Divine Being.

the youth of, both sexes than that which they now receive. But this object might not be gained by the sacrifice (as suggested by Mori Ambassador at Washington) of the native language.

Instead of abandoning the native language in favour of English it should be enriched by large additions, and the extension of its idioms after the European type of language. The more able pupils in schools will learn to speak English thoroughly. For an inferior class books should be provided by a commission under the superintendence of foreign educators and of the Mombusho. For them a new idiom should be furnished on some such system as that recommended in this paper for a judicious amalgamation of the English and Japanese idioms. The rules of this amalgamation should not be left to chance and caprice. They should be adopted with forethought and with due attention to the principles of philology.

There is no more ill-founded prejudice than that which takes for granted the equality of languages in excellence and in suitability for literary development. A good literature never can grow out of a poor language, and consequently all languages are found to be poor which have not a good literature. The best languages in modern Europe are the English, the French, and the German just as the literatures of England, France, and Germany are also the best in Europe. So the Japanese language and literature are both poor, the literature being the reflection of the language.

Of course it would be better for the Japanese to improve their own language than for the foreign educators to undertake the task. But they will probably not do it without foreign help. It is also a problem beyond their competence in the present state of things. It would be an achievement worthy of the foreign educator in the most practical and scientific age the world has ever known to take in hand the Japanese language and mould it into a shape which should adapt it for the production of a fine literature, and for all the noble uses to which a well-constructed language can be devoted.

There never was a nation more willing than the Japanese to make changes, if they only knew how and except in regard to our religion they have shewn a truly liberal desire for knowledge of all kinds. Through a false impression they are for the time opposed very unwisely, to the teaching of our religion. This limitation to their liberality they will probably soon abandon. When they have done so they will prove themselves to be deserving of our fullest sympathy and aid.

## OUR NEIGHBOURHOOD.

### PART I.

Hominem pagina nostra sapit.—MARTIAL.  
Men and manners I describe.

"Our Neighbourhood" is situated in a retired and quiet suburb of the ancient city of Yedo. It is a quaint and straggling village in which the evidences of Western civilization have not displayed themselves as yet. An air of great antiquity clings around the place. The houses, built of heavy timbers, and roofed with ponderous tiles, green with the moss of ages, are long since out of perpendicular and seem to stand at ease, and, as they lean towards one another, they look like a group of old and friendly neighbours in grave and quiet conversation. Not that they are all so old and grave-looking either. See that trim little fireproof storehouse, shining in its black lacquered coat like a neat young Quakeress in satin. No wonder that the rollicking-looking silk-mercier's opposite has cocked his gabled roof at her in that knowing fashion when she was varnished up last year, and—for all one knows to the contrary—the house at the corner which is falling in two may have split its old sides laughing at the monstrous pretensions of the silk-mercier.

Then the barber's shop, (a saucy-looking little houselet between two giants), with its screen of bamboo rods for the sunny days, which tinkle musically as they strike against one another in the breeze—there's a pert air of confidence about the barber's which seems to say "I'm a weak little thing of a house it's true, but for all that I'm not a bit afraid of you big fellows. And indeed, I don't believe you could get on without me, you old totterers. You'd surely fall together, and hurt your old selves, if I did not prop you up. I know very well that

the huge crossed-beams between you above my roof are meant to keep you apart and are not protecting arms for little me, as you'd have folks believe—so none of your patronising airs, if you please, Sirs."

The main street of "Our Neighbourhood" has a cloistered appearance about it, from the projecting verandahs on each side thereof. It is always damp in the summer time; fungi sprout luxuriously, and it is here that the moss lies thickest on the roofs. An air of repose habitually pervades the place. Nay, when the summer sun is hottest, and the drowsy hum of the bee and the shrill chirp of the cricket is loudest, and the stone mason, laying aside his mallet and chisel, and the blind priest intermitting his monotonous chant, follow the example of their neighbours and stretch themselves in slumber, stagnation would best describe the state of the venerable thoroughfare. Nothing stirring save, perhaps, a surly dog as he snaps in his sleep and snarls at a persistent horse fly, or an uneasy cat upon a roof, looking for a shaded spot with a breath of wind playing on it whereon to take her nap.

The street, however, is alive to-day, for the funeral of a Person of Quality is winding its way along and has attracted all the residents from their houses to see it pass. There stands the old grey-haired *Momban*, who lives alone amongst the dreadful-looking implements which, ranged about his doorway, should be enough to deter from entering the thief they are meant to catch; but which are now as obsolete as the *Momban* himself, or the ponderous gate of the *Nagaya*, which he is supposed to guard, and which is never opened, and leads to—nowhere. The waggyish stonemason has left his work to have a look, and, perhaps elated with the prospect of a headstone, is cracking an unseasonable joke with the rice-merchant next door.—The surly clog maker—the *saké* man—the fried-eels woman—the umbrella maker, and even the blind priest, are all out and speculating on the condition of the deceased.

The object of their curiosity looks like a huge bride-cake, as it is being borne along shoulder-high by four men who step together, and change places with great precision when their shoulders ache on a signal from one of the foremost bearers. It is all in virgin white, square as to the body, but rounded off into a blunt pyramid above, which is topped with a gilded ball, the four pagoda-shaped corners being also topped with yellow metal which glistens in the sun. A scalloped vallance, (each scallop ornamented with a gilt paper leaf), depends from where the pyramid begins, and a similar one appears beneath the first. A hollow piece of bamboo at each corner of the coffin, and attached to the trestle on which it is borne, is filled with sprigs of a tree called *shikimi*. Full a hundred men are decently following in the coffin's wake. They are very quiet and have a subdued and mournful look, which is not without its effect on the spectators. Of these from twenty to thirty are dressed in blue *kamishimo* or winged dresses, the two nearest the coffin, however, excepted, who are dressed in brown, (or tea colour as it is called), and every man carries a *makizashi*, (or short sword), stuck in his belt, the handle of which is carefully wrapped round with *hanshi*.

And now the funeral cortège has passed out of sight. The last follower has turned the corner, and the neighbours, hitherto straining their eyes in one direction and speaking in whispers, have turned round and formed themselves into groups. But the effects of this momentary interruption gradually passing away, these soon break up, and the good folk dispersing to their usual avocations leave "Our Neighbourhood" as placid as a mountain tarn when the ripple from the summer breeze has lost itself upon the shore.

Yedo, 6th October, 1873.

## Law & Police.

GAIMUSHO, YEDO.

CLAIMS AGAINST THE OLD HANS.

Judge HANNEN and Mr. TAMOTO, Commissioners.

CABELDU c. EWASAKI HAN,

October 8th.

The hearing of this case before the Commission was this morning resumed.

B. Cohen, examined by Mr. Dickens: I am a merchant at Kobe. I

remember selling goods to the officers of Ewasaki Han, in March, 1871. One was Yamasaki Shozo, and the other Yoshida. Merchandise was sold on account of the Han to the value of \$3,700; \$700 cash, and balance secured by a promissory note. The seal of the chief officer was on it. I telegraphed to Osaka, and received a reply that Shozo was the head man, and authorised to buy goods. The promissory note, however, was never paid. Through the Consul, the Vice-Governor of Osaka said that the contract was in order, but that I should have to wait for my money. A few days after, the Shusanji of the Han arrived, and, at the Custom House, gave me a new note at fifty days for the amount due. On the termination of this time, the money was paid. The balance was paid by order on the Oriental Bank Corporation, given me by the Vice-Minister of Finance.

Tawaraya Manjiro, examined by Mr. Ness: I never went to Cabeldu's place at any time to purchase goods. I met him first at the Foreign Office. Senzo brought a contract to my house, and asked me to seal it, which I did. I made a contract with Cohen. Senzo signed the document, as produce agent for the Han. I signed merely as a witness. I did not think that I was liable for the goods purchased, if the Ewasaki Han failed to pay for them. Senzo told me that the contract was on behalf of the Han; but I afterwards found out that it was a piece of cheating on his part. I also learned some time after that he had absconded. After my house was sold to pay Cabeldu, there still remained \$500. I made a second contract to pay this, but I don't know now where it is.

Cross-examined by Mr. Hill: I held the position of Sanji at Kobe, from 1871 to July of this year. I examined the claim of Cabeldu when it was made. It would depend on the circumstances of the case, in the event of the principal not being able to pay, the guarantor would be liable. According to Japanese law, the principal was bound to pay up to the last; then came the surety. If the sureties make a second contract to pay alone, the former contract is null and void.

This closed the case for the plaintiff.

Asakea, examined by Mr. Hill: I am at present teacher in a school in Hiogo. In 1871, I was a foreign judicial complaint officer in the Hiogo Ken. Cabeldu's complaint was brought before me. Tawaraya Manjiro said that he could not see how, as a simple witness, he was liable to pay the demands of Cabeldu. Shozo was to have been examined, but he had absconded. A document was made out in lieu of the original one, according to the terms of which the two parties, Manjiro and Cabeldu, had arranged the affair amicably. In the event of the guarantor taking over the claim, the principal's claim becomes invalid. According to Japanese law, if the property of the principal is not sufficient to pay the sum total, the guarantor then becomes answerable in all cases for the remainder.

Court adjourned to 1 p.m.

Examination resumed: Cohen's contract was signed by Senzo, who said that the goods were for Ewasaki Han, as well as Cabeldu's. I have always understood that Senzo was an official of Ewasaki Han.

Mr. Hill here handed in to the Commission the promissory note given by the Daisanji and Shosanji of the Han, to Mr. Cohen.

Ritamura Yaskadz, examined by Mr. Hill: I know nothing of the claim paid by the Government to Mr. Cohen. When the hans were changed into kens, an order was issued by the Finance Department, calling for copies of all debts due by the different hans to foreigners; and the claim of Cohen was among those sent in by the Ewasaki Han.

Cross-examined by Mr. Ness: I do not know whether the Government has paid any other claims. I believe that the Han said that the document in question had been changed.

Senzo, examined by Mr. Hill: I was, the year before last, in the service of Ewasaki Han. I wrote this document, but I know nothing of the piece of paper attached. Shozo's seal was attached by me, in addition to the three others. It was on a blank piece of paper, which I attached to the document to make it appear in proper form. I did so on my own motion. Cabeldu told me he wanted Shozo's seal attached to the contract. Shozo was in confinement at the time, so I attached a blank piece of paper, with a seal which had been given to me to facilitate the purchasing of goods the year previous. I did not get the piece of paper from Shozo. Several times, when Shozo wished to purchase anything, he told me that I had no authority whatever to purchase or transact business for the Han. I entered into a transaction with Cohen. Shozo was first; I was second. I was certainly under the impression at the time I purchased the goods from Cabeldu that they were for myself, and I endeavour to make him understand so, he being a foreigner. Shozo was in confinement. I don't think he knew that I had the piece of paper I have before mentioned. I do not think that I used deception either to Cabeldu or Manjiro.

Cross-examined by Mr. Ness: The goods that were purchased from Cohen were used by the Han; those purchased from Cabeldu I sold through a Kobe merchant. The proceeds of the goods purchased from Cohen were applied to the Han; whilst those arising from the sale of the goods purchased from Cabeldu were spent by myself. The seal was given to me for the purpose of making contracts, but I ought to have retained it.

Yamasaki Shozo, examined by Mr. Hill: I was, in 1871, Kussui of the Ewasaki Han, at Osaka. I knew nothing whatever of this document until I heard of it from the Foreign Bureau at Kobe, in connection with the complaint. I did not make, or authorise any one to make, this contract. I never made contracts in this way; the paper and

From observations at 9 a.m. daily, on the Bluff (100 feet above sea level), the mean reading of the barometer last month was 29.82 in.; the highest reading was 30.08 in. on the 14th; and the lowest 29.15 in. on the 23rd; but at 1.50 p.m. on the 23rd, the reading was 28.77 in. probably during the passage of a circular storm in a direction to the Northward and Westward of the station.

The mean temperature of the air during the month was 71.0 degree.

The highest day temperature in the shade was 85.0 deg.; on the 4th and 5th, and the lowest night temperature 56.5 deg. on the 29th; The extreme range in the month was therefore 28.5 deg.

The difference between the mean dew point and the air temperature was 3.2 deg.

The mean degree of humidity of the air was .902; complete saturation being represented by 1.

The general direction of the wind during the month was Northerly.

Rain fell during the month to the amount of 15.82 in. There were 8 days on which no rain fell; the maximum fall in one day was 6.48 in. registered on the morning of the 23rd; but in the 27 hours between 9 a.m. on the 22nd and noon on the day following 8.71 inches fell.

R. M. L. I.

CAMP, Yokohama, 10th October, 1873.

everything should be different. None but myself had power to make such contracts.

Cross-examined by Mr. Ness: I recollect giving my seal to Kinzo on a piece of paper, merely as a sample of the seal that would be attached to a document. I have been examined by the Judicial Board. I never said that I had given my seal on slips of paper to do business with Adrian & Co. My seal was only a specimen, and should not have been used on a contract. I ought to have got the seal back from Kinzo; but I was busy.

Mr. Ness requested that a copy of the depositions taken before the Judicial Board should be handed in to the Commission.

This witness's evidence closed the case for both parties.

Court adjourned to Tuesday next.—*Japan Herald*.

## Shipping Intelligence.

### ARRIVALS.

Oct. 4, *Maud*, British steamer, Britton, 843, from Hongkong and London, September 23rd, General, to S. Evers & Co.

Oct. 4, *Lackawanna*, American corvette, Captain McCauley, 1,026 tons, from Hakodate, September 30th.

Oct. 5, *Iron Duke*, H. B. M. Iron-clad, Captain W. Arthur, 3,300 tons, from Nambu, October 2nd.

Oct. 5, *Salamis*, despatch vessel, Captain Hon. A. C. Littleton, 650 tons, from Nambu, October 2nd.

Oct. 5, *Dwarf*, Gun-boat Captain Bax, 464 tons, from Nambu, October 2nd.

Oct. 6, *New York*, American steamer, Wise, 2,119, from Shanghai and Ports, September 27th, General, to P. M. S. S. Co.

Oct. 6, *Frolic*, H. B. M. gun-boat, Captain Buckle, 462 tons, 4 guns, from Nambu, October 2nd.

Oct. 6, *Thistle*, H. B. M. gun-boat, Captain H. A. Digby, 564 tons, from Nambu, October 2nd.

Oct. 6, *Quang Se*, British steamer, J. M. Lachlan, 1,778, from Hongkong, Mails and General, to P. M. S. S. Co.

Oct. 7, *Tamerlane*, British ship, Ken, 768, from Sydney N. S. Wales, August 30th, Coal, to Wilkin & Robison.

Oct. 8, *Governolo*, Italian corvette, Captain Accinni, 900 tons, 8 guns, from Hakodate, October 4th.

Oct. 9, *Bellona*, German steamer, Schultz, 707, from Hongkong, September 27th, General, to S. Evers & Co.

Oct. 9, *Bombay*, British steamer, Davies, 1,325, from Hongkong, September 29th, Mails and General, to P. & O. Co.

Oct. 10, *Great Republic*, American steamer, Howard, 4,315, from San Francisco, September 16th, Mails and General to P. M. S. S. Co.

### DEPARTURES.

Oct. 7, *Avoca*, British steamer, Andrews, 1,485, for Hongkong Mails and General, despatched by P. & O. Co.

Oct. 7, *Oxfordshire*, British steamer, Jones, 1,228, for Kobe, General, despatched by Jardine, Matheson & Co.

Oct. 8, *Quang Se*, British steamer, McLachlan, 1,759, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

Oct. 10, *Maud*, British steamer, Britton, 707, for Kobe, General, despatched by Simon Evers & Co.

Oct. 11, *Great Republic*, American steamer, Howard, 4,315, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

### PASSENGERS.

Per American steamer *New York* from Shanghai and Ports. For Yokohama.—Mr. and Mrs. J. P. Macques and svt., C. H. Oliver, J. A. Primrose, Revd Dr. C. Vrooman, Revd Midon, Lieut. Ella U. S. N., H. Becker and svt., R. V. Boyle, J. Pinel and svt., W. Wheeler and svt., M. MacLagan and svt., V. E. Braga and svt., M. Mancini and svt., M. Jacquet and svt., and 74 in the steerage. For San Francisco.—Major T. W. Kinder, and 3 in the steerage.

Per British steamer *Quang Se*, from Hongkong. For Yokohama. Mr. Gorset, B. E. and servant, and 2 Chinese. For San Francisco 95 Chinese.

Per British steamer *Avoca*, for Hongkong.—Mr. and Mrs. Shand and child, Mr. Lovel, Mrs. Hearne, Ishingami, and Achew.

Per British steamer *Quang Se*, for San Francisco.—Mrs. Yane, Major Kinder, and 17 in the steerage. For New York.—W. S. Smith U. S. N., Lt. C. H. Black U. S. N., and 3 steerage.

Per British steamer *Bombay*, from Hongkong.—Rev Mr. and Mrs. Summers, 3 children and infant; Messrs. J. E. Day, Robt. Campbell, C. Newton, G. Impey, H. Bristow, S. Cross, R. Walter, and T. Smith.

Per American steamer *Great Republic*, from San Francisco.—Messrs. J. H. Bull, U.S.N., R. O. Caumody, U.S.N., F. W. Greenleaf, U.S.N., F. W. Dickens, U.S.N., G. Nagashima and servant, C. Homura and servant, W. W. Hyde, M. Isuda, Jas. McFarlane, Mrs. M. Kingsland, Messrs. Alexis Janin, F. M. Wilbur, O. H. Glover, W. Anderson and wife, E. S. Smith, Mrs. C. Debur, For Shanghai.—Capt. J. Rouse, Mr. J. H. Burnett, Rev. C. A. Stanly, wife and 3 children, Mr. Yung Wing, Mr. George Eccles, Miss Addie Tyler, Miss Nellie Wado. For Hongkong.—Mr. H. G. Kunhardt, Don Juan Sevilla, Mr. S. Profomo.

Per American steamer *Great Republic* for Hongkong.—1 European, in the second class.

### CARGOES.

Per American steamer *New York* from Shanghai and Ports.

Treasure ... .. \$467,303.17

Per British steamer *Avoca*, for Hongkong:—

Silk..... 844 bales.

### REPORTS.

The British Iron Clipper ship *Tamerlane* arrived here last night from Sydney N.S.W., after a very fast passage of 38 days. Reports left Sydney on the 30th August, had fresh easterly winds to 23 south from thence light variable winds from N. E. round to S. E. and S. W. as far as the Equator which was crossed on the 18th September, in 160° east longitude; she then experienced west and N. W. winds with violent squalls and heavy rain till she entered the N. E. Trades in lat. 15.30 north and long. 158.30 east on the 27th September.

In 25 north and 151 east the trades veered W. S. E. and eventually a heavy gale set in veering S. W. west and N. W. with high cross seas which lasted 3 days followed by a day's calm and incessant rain, when the wind sprang up from the N. E. and blew as heavily from that quarter as it had done from S. W. On the evening of the 6th instant, sighted Cape Mela light, next morning received a pilot on board and came to anchor in Yokohama bay the same evening. The *Tamerlane*, brings a cargo of Coal for the P. M. S. S. Co.

The American corvette *Lackawanna* reports very severe weather yesterday, strong gales from South and West and a heavy cross sea.

## PUBLIC AUCTION.

The Undersigned has been favored with instructions from

H.E. KANDA TAKAHIRA,

Kami of Hiogo Ken (Governor of Hiogo),

TO SELL BY

## PUBLIC AUCTION,

NEAR THE EASTERN CUSTOM-HOUSE.

AT 2 P. M.,

On Saturday, 1st November,

## OIL

## PRESSING MACHINERY, COMPLETE.

Consisting of:

1 Steam Engine and Boiler of 6 H.P. nominal, complete, and with Double Set of Grate and Bars.

1 Set of Edge Runners and Bed-stone, with latest improvements.

1 Set of Seed Crushing Rolls, complete.

1 Steam-Jacketed Heating Kettle.

2 Self Acting Hydraulic Pumps and Presses equal to a pressure of 1½ tons per square inch—say 100 tons.

1 Set (8) Leathered Horsehair Mats.

1 Set (16) Woollen Meal Bags.

1 Set of Spare Leather for Hydraulic Presses, and 2 Sets for the Pumps.

Leather Belting to drive the Various Machines.

1 Oil Pump for lifting the Oil from the underground to the Clearing Tank.

The above is capable of producing 2,500 to 3,000 lbs. of Oil per day.

The Drawings and Specifications can be seen at the office of the undersigned, who will give all further information regarding this machinery.

K. DE PIOTROWSKI,

Auctioneer.

Hiogo, September 29, 1873.

4ws.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, OCTOBER 11TH, 1873.

The Mail arrivals during the closing week are the *Bombay* from Hongkong, bringing English Mails to the 15th and 22nd August, and the *Great Republic* from San Francisco, with Mails to the 26th August. The *Avoca* for Hongkong, on the 7th instant, and the *Quang Se* for San Francisco, on the 8th instant, are the mail departures of this week.

The steamers *Maud* and *Bellona* have brought cargoes *via* China, and the clipper ship *Tamerlane* brings coal from Sydney.

Business during the past week has been hardly as brisk as was expected, but a higher range of prices seems to be obtainable for many staple imports. Tea and silk are in fair supply.

**COTTON FABRICS.**—Considerable sales of *Shirtings* continue to be made and an active and improving market may be recorded at firm rates. From the reported sales it would seem that some 35,000 pieces have changed hands in the various weights during the week, though it is possible that this statement does not embrace all the sales that have taken place. Dealings in both *T-Cloth* and *Taffachelass* are on a restricted scale, and we cannot record any business in *Velvets*. Some transactions in *Turkey Reds* have taken place but at low prices. And in sundry other fabrics the amount of business which has been done is exceedingly unimportant.

**YARNS** have sold rather less freely this week, some 534 bales being reported as changing hands at about under-noted figures.

**WOOLLENS AND WOOLLEN MIXTURES.**—No change in the market for Woollens, the demand continuing on a small scale, and quotations being about the same as reported at the end of last week.

**IRON AND METALS.**—These continue steady but the market is somewhat inactive nevertheless. Transactions are few and slight. We report the sale of 50 tons *Hoop* at \$5.10 and 28 tons *Sheet* at \$6.75. Quotations may be taken as unchanged.

**SUGAR.**—Our market continues firm and there is no change in values except for best Formosa, which we quote at \$4.50 to \$4.55. Arrivals are :—1,500 piculs from Hongkong. Sales :—500 piculs Hongkong, refined at \$9.75.

## COMMERCIAL INTELLIGENCE.

(Continued.)

## EXPORTS.

**SILK.**—Since the 6th instant, arrivals amount to 450 bales and purchases to about 400 piculs, mostly Hanks, which are now under inspection. Until settlements have taken place we are unable to report any change in our last quotations: \$680 has been paid for best Sinchu and common Hanks are obtainable on easier terms.

**SILK-WORM'S EGGS.**—Arrivals since the beginning of the season are as follows:—

Joshui	...	...	...	...	...	93,150	Cards.
Koshiu	...	...	...	...	...	45,260	"
Bushui	...	...	...	...	...	108,900	"
Shinshui	...	...	...	...	...	87,580	"
Oshui	...	...	...	...	...	107,920	"
Other sorts	...	...	...	...	...	35,700	"

Total... .. 478,500 Cards.

Against 975,011 last year at the same date.

Settlements are estimated at 180,000 cards against 860,000 last year at the same date.

We quote Joshui best, \$3.25 to \$4.00; Common to good, \$2.50 to \$3.00; Sinchu, \$2.50 to \$3.00; Oshui good, \$2.50; \$4 being asked for certain sorts.

We are not aware of any purchase having been made under \$2; but on the whole prices are tending downwards.

**TEA.**—A steady business has been done in Tea during closing week and settlements amount to piculs 2,200.

The chief feature to remark on is that more attention is being paid to Good Medium and Fine classes which form the bulk of the settlements, at \$34 to \$35 for the former and \$37 to \$38 for the latter: There has also been some moderate amount of "choice grade" settled at \$48 to \$49.

Supplies are coming in more freely and could Yokohama dealers have unrestricted action in trade matters it is likely that a satisfactory business for all parties concerned might be transacted: but whilst the existing Bank and Guild monopolies are maintained and supported by Government we must still suffer under existing evils. That there is plenty of Tea in the country is a certainty, and it seems an act of gross vandalism that such produce should be withheld, especially as it is now a well-established fact that after the commencement of Autumn the unfired leaf deteriorates rapidly, and Teas which, bought and fired to-day would class as "Fine," will at the same date next month not grade higher than "Good Medium."

## Notes of the Week.

THE foreign dealers in silk continue as disunited as ever, and have fallen once more an easy prey to the combination and organization of the native silkmen.

It had become a custom of the trade to weigh the silk to the buyers in shirting bags, for which an allowance of 1 lb. per bag was made by way of compensation for the dampness which always exists to a greater or less degree in silk as it arrives from the country. It is true that the actual weight of the shirting bags being only about  $\frac{1}{4}$  lb., there was apparently a small profit accruing to the buyer; but that compensation was very far from being sufficient to meet the losses in weight which occurred at the place of destination in Europe.

Suddenly the native silkmen, without waiting to come to an understanding on the subject with the foreign Houses, have withdrawn even the small compensation alluded to above, and insist upon the actual weight of the shirting bags being deducted instead of 1 lb. per bag as heretofore. In strict justice no one can object to such a proceeding. But then what are the foreign Houses to do with regard to the dampness of the silk, which, this season in particular, has been greater than for many years past?

Several firms have already submitted unresistingly to the new arrangement. The silk market is just now much excited: many want to buy as much as they can and are afraid of being shut out by the native dealers if they decline to comply with their terms. We are even told that a dispute on this subject has been submitted to the British Consul, who will have to investigate the matter, and we hope that the result will be such as to bring about, once for all, a fair understanding between the buyers and sellers.

THE *Japan Gazette* supplies the following report of the speeches which were made at the last interview of Mr. De Long with H. I. M. the Mikado.

"YOUR MAJESTY,

Having been relieved from my duty here, I come to bid farewell.

In the name of the President, the Government, and the people of the United States, I beg to announce the earnest and united wishes of a "for the health, well being, and continued prosperity of Your Majesty and the people of Japan.

I beg to assure Your Majesty that it is the most earnest wish and desire of the President of the United States to have ever continued the existing ties of amity which united that Government to Japan in such close relations. I beg to bespeak in the name of the President, and in my own behalf, Your Majesty's confidence and support (so kindly yielded to me in the past), to be bestowed in turn upon the honorable and most distinguished gentleman who will succeed me.

His age, his great experience in public life, and his long service in the highest official circles of the United States Government, thoroughly qualifies him to meet in council with Your Majesty's Ministers.

It is my proud privilege to now state that during the entire period of my service here, I have met with nothing but kindness and courtesy at the hands of Your Majesty's Ministers; and having

received repeated proofs of Imperial favour I turn away with no feelings but those of gratitude and reverence for Your Majesty, respect and esteem for the ministry, and kind regards for the Japanese people.

Venturing for a moment beyond the possibly proper limits of an adieu; I beg to say that my Government and people, rejoicing at the adoption by Japan of the policy of the Western States, hail with peculiar pride and pleasure the release of Japanese converts to Christianity from their bonds of captivity and their being allowed to return to their homes: and the removal of the edicts against Christian teaching and practices, as a friendly concession to the opinions of those nations in alliance with Your Majesty.

The recent action of Your Majesty's Government in earnestly joining with Western Powers in their efforts to suppress the 'Coolie Trade': the recent negotiation of a Treaty of Peace and Amity with China: thus helping to break down his barriers of seclusion: whilst Your Majesty's noble and distinguished Ambassador led the way to the presence of the Chinese Emperor: and the indicated policy of Your Majesty to compel the barbarian inhabitants of countries adjacent to Japan to treat with kindness and mercy distressed travellers cast upon their shores; all bespeak such a kindred sentiment to that prevailing amongst nations in the West that I venture to speak the thanks of the American people to Your Majesty.

The action of Your Majesty in sending forth to the nations of the earth the most distinguished Councillors, has met at the hands of those nations with such a hearty response that no words of mine are needed to picture the gratitude this action has to Your Majesty's allies.

The sending out of young noble men as students to learn and bear back with them a correct knowledge of the customs, manners and policy of Western States, also assures all concerned that the time is near when this lovely and picturesque Empire shall be as free for trade, travel and residence to the citizens and subjects of Western States as are those lands to Your Majesty's subjects.

God speed the hour that shall behold a consummation of these wishes. When it comes none will rejoice more with Your Majesty than will the American people.

Whilst the sure foundations were being laid for these developments I have been permitted to enjoy the confidence and association of Your Majesty's Ministry. I now step on one side to be henceforth no actor in this scene; but through life I shall ever remain a most friendly and interested spectator.

With all due humility I now bid Your Majesty adieu.

REPLY OF HIS MAJESTY TO MR. DE LONG.

"It is with much pleasure that I have heard on the eve of your departure the assurances you give me of the good wishes which the President of the United States vouchsafes for the prosperity of this country.

I doubt not your successor will meet with the same goodwill and confidence that has ever been extended to you.

It is a source of much gratification to me to know that the intercourse between my Ministers and yourself has never ceased to be mutual agreeable.

I fully appreciate the statements you make in praise of acts of this government but which I apprehend are possibly overrated; although it has been my constant aim to lead my people toward a higher grade of civilization.

I shall never forget your friendly sentiments for my country; and I am pleased to hear that they will remain unchanged after your departure.

I sincerely hope that you may ever enjoy the blessings of health—especially during the long voyage that lies before you."

Mr. De Long's successor the Hon. John A. Bingham was then introduced to His Majesty and delivered the following address, to which the usual reply was made.

"Your Majesty,

Obedient to the instructions of my Government and to my own sense of duty as well, it shall be my endeavour by good offices so strengthen, so far as I may be able, the friendship now happily subsisting between Your Majesty's Government and my own to advance the interests of each.

It is a pleasure to me to say that I but obey the instruction of the President who has commissioned me, when I assure Your Majesty that you have the good will of the President and people of the United States of America, and their best wishes for the prosperity of Your Majesty and of the people of Japan. The people whom I represent are not unmindful of the trust and confidence uniformly manifested by Your Majesty's Government towards the Government and cities of the United States.

Thanking Your Majesty for the distinguished consideration shown me and sincerely desiring that this growing Empire of the East may continue to advance with the advancing civilization of the age, I have the honour to place in Your Majesty's hands my letter of credence signed by the President and authenticated by the great seal of the United States of America."

WE observe that the Japanese Government have been distinguished in the prize list of the Vienna Exhibition by "Honourable Mention" (a Diploma) for the lighting of their coasts, a fact creditable and gratifying both to the Government and the Department over which Mr. Brunton presides.

THE Dowager Empress, attended by her suite, arrived in Yokohama yesterday and drove through some of the streets of the settlement.

THE *London and China Express* states that during the absence of H.E. Terashima, the Japanese Minister in London, Motono Morimichi, First Secretary of Legation, will act as Chargé d'Affaires.

THE latest advices from South America report that the Peruvian workmen were violently protesting against the employment of Chinese labour. It was feared that the ultimate result will be a general massacre of all the Chinese in the country.—*L. & C. Express*.

THE Cricket match which took place on the 15th at the grounds of the Yokohama Club between Land and Water, terminated in favour of the latter side, which obtained 189 runs against the 85 of their antagonists with, moreover, five wickets to spare.

THE *Japan Herald* states that in consequence of the protest of the British Authorities against the absurd result of the trial of the *samurai*, who assaulted Inspector Blockley a fresh examination has been instituted. This took place on the 14th instant, in the presence of H. B. M. Vice Consul and some of the Railway Authorities and the enquiry was to have been resumed yesterday.

The building of the new fortress above the Taku villages or towns still continues, and every other day we see large numbers of boats passing down from the interior with large government bricks for the raising of the new fortress walls and forts. Li-Hung-chang lately engaged the services of a Prussian gunner to teach his officers the use of the Krupp guns, and he is at present engaged on that work, in the Taku forts. The gunboat (Chinese) which was lately dispatched to Corea, has not yet returned to Tientsin.—*N. C. D. News*.

18 Miles Open.

WE direct the attention of the members of the "Club Germania" and of their guests to the performance of this evening. The hour fixed is nine o'clock.

AN interesting marriage took place at the British Consulate, yesterday, the 3rd instant, at 11 A.M. A Japanese girl of 16 summers named Ohayi Isobi, of Yenokesu matchi this city, was married to Beng Teck, a Chinaman, who was born, educated, and became a British subject at Singapore, and was therefore married under the British law.

This is the first marriage of a Japanese according to the European ceremony, in this city, and as far as we are informed the first case of the kind in Japan.

The friends of the girl obtained a permit for this marriage from the Government authorities at Yedo.—*Nagasaki Gazette*.

During the storm on Thursday a Japanese woman was struck by lightning at Mogi and instantly killed. It appears that she was with three friends in a boat anchored near the shore.—*Nagasaki Gazette*.

The report of the Union Insurance Society of Canton shows a balance in hand on the 30th June, of \$129,037, in addition to the sums of \$250,000 representing the paid-up capital of the Society, \$250,000 the amount of its Reserve Fund, and \$25,000 the reserved third of profit attaching to the dividend declared in March last. The net premia earned since the 1st July are estimated at \$130,000. The claims paid since 30th June, and the further losses to date are estimated at \$171,000, which includes the *Drummond Castle*, *Singapore* and *Alethea*. The Directors propose a second interim dividend of \$150 per share, which would absorb \$37,500, a further sum of \$18,750 being set apart for apportionment amongst contributing shareholders in conformity with the provisions of the articles of association.—*N. C. Daily News*.

On Friday last, an investigation took place at the offices of Messrs. Adamson, Bell & Co., into a chop of Tea, brought by that firm from the Tcheun Tai Hong, which, while being prepared for shipment to the Colonies, was found to contain in all the packages a greater or less quantity of inferior dust, grit, and other spurious matter. The parcel was examined carefully, in the presence of Mr. Pelham F. Warren, appointed by H. B. M. Consul, and two native Officers appointed by the Chinese Board of Trade, by Messrs. Hickling and Haslam, who decided that the Chop was "unmerchable," and that the inferior dust was designedly packed by the Teamen, near the bottom of the package, in such a way that in the ordinary course of inspection, the difference would most likely have escaped observation. The officers of the Yamen were very anxious to come to some arrangement on the spot, admitting that the owner was in fault, but Messrs. Adamson, Bell & Co., replied that the matter was entirely in the hands of H. B. M. Consul out of their control. We await the decision with much interest.—*Foochow Herald*.

#### RECONSTRUCTION.

IT would be curious and interesting to know what are the views held at this moment by the most thoughtful and sagacious Japanese statesmen, respecting the existing polity of this country; but of one thing we may safely assure ourselves, which is that they cannot possibly be satisfied with it. Great as is the necessity for an administrative reform which shall combine the forces of the different departments and compel them to more harmonious action under one head, this necessity is as nothing compared with that of reconstituting society upon some political basis strong enough to bear the weight of the future superstructure which it is the object of the reformers to rear upon it. In making the few following remarks upon this weighty subject, we shall begin by frankly acknowledging the great difficulties which the treatment of it presents to Europeans as ignorant as we are of that deposit of ideas on which the old polity rested,

and by which its stability, at least up to the time of the Revolution, was assured. Of these foundationary ideas we know little more than the outline, and there are perhaps not half a dozen Europeans living who could throw more than a very dim light on them. We know, of course, pretty well, what were the relations of the two foci of the ellipse which may be held metaphorically to have represented the respective positions and forces of the Mikadoate and the Shogunate. But we know very little of what has become of the fragments of that vast body of aristocracy which was dismembered by the great convulsion of 1868. We do not know how many of these fragments, or—to pursue our astronomical simile—these asteroids, fell into and were absorbed by the great central body. We do not know how far those which were not so absorbed are liable to the attraction of other and antagonistic forces, and so few are our data for determining the value of these unknown quantities, that we can barely form a hypothesis, much less a theory, of the whole system.

And yet it is impossible to imagine that the condition into which affairs settled down—the rough working order into which they were brought by the very necessity of getting them into working order—can be otherwise than provisional. Revolutions do, apparently, like cyclones, travel according to certain laws, some of which have perhaps been dimly apprehended by political philosophy. But he would be a bold man who would venture to predict, in a country like this, what edifices have been destroyed beyond the power of reconstruction, what boundary lines have been irrevocably washed away by the fury of the waves, or how far those waves have permanently gained upon the shore lines which hitherto confined them. Yet, granting all this uncertainty, we shall hardly do wrong in making some few general reflections upon the question at issue, and offering them to our foreign or native readers for what they may be worth.

In the first place, it must be greatly doubted whether such an entire destruction as we have seen in this country, of the old feudal system, and the aristocratic foundations on which it rested, was not far too sweeping a measure for a nation which had not, at least at that time, the slightest tendency to democratic institutions as such. We say as such, because though the revolution may have marched on parallel lines with popular institutions, any such ideas as those known to us as democratic could never have entered into the minds of the people of this country. For, what has this sweeping measure left between the Throne and the people? A bureaucracy alone, which may be a force, indeed, but is in no sense an institution. And what kind of a force is it? Surely rather one of repulsion than of attraction. It is purely mechanical in its operation; it breeds no respect, much less any veneration; it appeals to no national sentiment and reposes on no historical tradition; it neither moves the heart nor excites the imagination. The old aristocratic institutions had precisely the opposite effect, and though the real unification of the Empire was impossible so long as, in virtue of them, each Daimio had the almost sovereign power which inhered in his rank, they were still a bulwark of prodigious strength to the Throne, inasmuch as popular discontent could expend itself with almost any extent of fury upon the representatives of any given clan or daimiate, without the slightest ripple of this discontent breaking at the foot of the Throne itself. Under such circumstances the Son of Heaven had but to make, in one of those time-honoured formulæ which rather exalted his office than acknowledged a fault, the unforced admission that the eternal principles of government had

somewhere or somehow been neglected, to rebuke all those concerned in the dissatisfaction, and to throw all the blame of it upon them, whether they were the authors or victims of it. And in view of the superstitious reverence in which his person and office were held, this admirable expedient of averting from either the displeasure of the people, was quite consistent with a stable though an unprogressive government. It is quite true that no people who had once admitted into their minds the ideas of rights and liberties as belonging to themselves, and of responsibilities as inseparably attaching to the Head of State, could long be satisfied with such a mode of response to their appeals. But such ideas were unknown here, possibly are unknown to this day, and though one of the problems of the future will assuredly consist in having to deal with them, it is easy to understand how the old polity cohered perfectly well during the period of their non-existence. But these superstitious ideas of reverence are evaporating under the heat produced by the increased intellectual friction of the day, the foundations of the Throne have descended from heaven to earth, and that Throne requires supports and guards unnecessary to it in earlier times. The unscientific Parsee may worship the Sun, but the philosopher whose telescope and spectroscope have convinced him that it a vast globe of minerals emitting hydrogen gas in a state of combustion, and probably of much the same constitution as our own Earth, is little likely to do so. The presumable theory of the Government is that the bureaucracy, which constitutes its machinery, is the means by which the mind and intentions of the Sovereign are made operative upon the condition of the people. But this involves the reflection of the errors of the Government upon the person and office of the Sovereign, and contravenes the safe and preservative theory so useful in our own constitution that "The King can do no wrong." It cannot be well that errors such as must be made by the wisest councils should be attributed to the Sovereign, and yet this is what actually takes place in Japan at this moment, the existence of the highest council notwithstanding.

The two causes which are most likely to produce discontent in this Empire are the heavy taxation and the excessive number of the officials employed in the machinery of Government. In this case Japan presents at this moment a striking analogy with the condition of France before the Revolution of 1789. The first of these causes may be modified gradually as more enlightened commercial legislation, the abolition of those monopolies which prevent the free development of trade, and the cessation of expensive experiments, give relief to the Treasury. The country has neither made nor saved as much money as it might have made and saved, and it has spent, and is even now spending, more money than it can afford without distress. Yet there is no great danger in this, provided the fact is recognised, and financial reforms are made in order to bring the expenditure down to the level of the revenue. The excessive employment of officials, however, is a more serious evil, and threatens to neutralize many of those benefits which a wiser commercial policy would bring in its train. The poverty of this country, a fact which cannot be too constantly insisted upon as an incentive to wiser commercial legislation, has undoubtedly been caused by the enormous number of men who constituted the retinues of the Daimios, and who were not only not producers adding to the wealth of the country, but were too often destroyers,—not alone idle consumers of the fruits of other men's labour, but agents in the destruction of wealth, and too often, perhaps, of the very instruments by

which wealth was created. These men are still the curse of the country, though they have transferred their allegiance from their old masters to the Sovereign. If employed, they do little more than harm; if unemployed, they are isolated atoms of revolutionary discontent, liable to combine under circumstances favouring such combination, and to thwart the work of the Government at every turn. They fasten on to every new enterprise by which wealth might be created or saved, and may be compared to those *entozoa* the existence of which in the animal body is wholly incompatible with health and vigour. We have suggested a comparison in this respect with France before the Revolution, and the best authorities agree that more harm was done to trade and agriculture by the wretched ambition which there took the form of the passion for place, than even by the repressive operation upon trade of the French guilds, or, what was worse still, the immense taxation of the people, and the exemption from that taxation accorded to the nobles and placemen.

To these existing causes of discontent, whatever be their actual force, we must add the effect of the new ideas, derived from external sources, which are beginning to germinate in the national mind, and which, though they may be sound and excellent in many respects, are so far revolutionary, that they are suggestive of change and unsettle the faith of men in the existing order of things. Nor must it be supposed that even an entire success on the part of the Government in raising the condition of the country by wise reforms, and the extension by educational measures of the horizon of the people's thought, are necessarily sources of security and guarantees of peace. To recur to the analogy of France before the Revolution, it must be abundantly clear to any student of the causes and antecedents of that vast event, that the very means taken to relieve the people were precisely those which excited them to revolt. The fiscal avidity of the guilds, the vexations incident to the collection of the *taille*, the injustice and insensibility of the land-owners, the ambition of the Parliament, the rapacity of the rich, the lavish expenditure of preceding reigns and the odious means used to raise the money necessary for it, the malversation of funds destined by the Government, or, we should more properly say, by the King, for Public Works—all these evils, denounced in words put by men as wise as Turgot into the mouth of the King himself, were distinctly enumerated to the people as those which the Government was instructed and intending to abolish, and this enumeration, so honest and benevolent, served only to stir up in the minds of those to whom it applied, a burning sense of their wrongs and of hatred against the authors of them. It cannot be well that there should be no bulwark against which feelings of this nature, should they arise with the general march of affairs, should first beat, before touching the steps of the Throne.

We have on two or three occasions spoken of the danger to this country arising from its proximity to America, and we must not omit mention of this as among the facts which a wise statesman will bear well in mind in reconstructing the political fabric in this country. America is the land of free institutions, but also of dangerous experiments; of progress, certainly, yet of shallow legislation, and the domination of the wise by the ignorant. Turn and twist the question as we may, it resolves itself into this, and while we say it in no spirit of unkindness or detraction, it must be acknowledged that there is more in the present condition of affairs in that country to make us fear than hope. The art of government—at once the noblest and most difficult of arts—is there handed nomi-

nally over to the people, but is in point of fact, taken out of their hands by the most ignorant and unscrupulous class of men that ever usurped the functions and controlled the machinery of government. But the prosperity of the country arising from its enterprise and resources, the religious character of its people, the admirable spirit of the laws they have inherited, their own law-obeying instincts, their freedom from poverty or the ills arising from a pressure of population, their material comfort, and the almost boundless space over which the discontented experimentalist can roam, combine to cloke the inherent defects of a system, the conditions of the success of which have not been fulfilled by any society of men the world has yet seen. But the young Japanese who are imbibing American ideas, either at first or second hand, cannot but be moved by such freedom and such prosperity, and will infallibly reproduce in this country the ideas in which, as they conceive, they have their origin. "He who will go about to persuade a multitude," says Hooker "that they are not as well governed as they ought to be, will never want attentive listeners, nor grounds on which he can enforce his teaching." To these young men the old aristocratic institutions of the Empire will appear unredeemed follies, and they will justly rejoice, as, indeed, we do, at their fall. But they cannot be expected to know, as they have had no opportunity of seeing, the support given to a Throne by a wisely constituted aristocracy, and may not realize the necessity for supplying the gap which exists at present in this country between the Throne and the people. The Ambassadors, however, who have lately returned from Europe, have seen there how compatible such institutions are with the freedom of the people, with all that is wisest in Government, and most stable in a political fabric. They will have seen in England that an aristocracy can exist which is at once active, useful, and unambitious, in any sense in which its ambition can injure the Throne, while this activity and usefulness are turned to the best purposes of government.

The legitimate object of an aristocracy is to preserve the people from the oppression of that Throne of which it is yet the best, most solid, and most legitimate support, and to guard them against the calamities of a revolution; and the chief argument for its maintenance is that the privileges established apparently in the sole interest of those who possess them, do constitute the best security that can be found for the tranquillity and prosperity even of those who are without them. It is quite true that the old aristocracy of this country presented, for the most part, a type of the weakest and most decrepit inanity, the best proof of which is afforded by the circumstances which attended its fall,—circumstances surrounded, indeed, with an illusory halo of patriotic magnanimity, but declaratory of an actual weakness to which history affords no parallel. But its ruins afford perfectly legitimate, possibly the only legitimate materials out of which it could be reconstructed, and it is in that direction that we must look for its re-appearance, at however distant a date.

The general reflections which we have made on this subject, and the analogies we have introduced, have been suggested by the history of nations far more highly developed in their political and social institutions than the Japanese,—nations which have risen to heights, and sounded depths, of which the mind of this people is utterly ignorant. But human nature, its wants, passions, follies, its strength and weakness, is the common measure on which all such reflections and analogies must be based, and the permanent quantity of which the science of government must take chief cognizance in the solution of its vast problems. It is

to the knowledge of this human nature that such speculations as these, desultory and defective as we frankly acknowledge them to be, are addressed; and it is conceivable that they may have some slight value at a time when the statesmen of this country must be debating over institutions examined in the large spheres of their recent experience, and the lessons taught by which they may be seeking to adapt to the future wants of this country.

The destruction of the old institutions of Japan was sudden and complete, and the future prosperity of the country depends upon their reconstruction on a basis, and in a form, in harmony with higher aspirations and more complex conditions. The lessons taught by history will not, under these circumstances, be disregarded by wise men.

#### ROADS.

THERE can be little doubt that one of the greatest dangers to which the leading men in the Japanese Government are exposed is the variety of advice to which they are obliged to listen. They are urged on one side that it is the duty of the Japanese as a nation to maintain fleets and armies and to vie with other nations in the excellence of these; while, on the other side it is demonstrated to them that what the country most requires and what should chiefly occupy the attention of the Government and almost entirely usurp its finances, are those internal improvements which will elevate its people and develop its resources. In matters of education they have the missionary enthusiast who declares that every kind of prosperity will be a necessary accompaniment of the adoption of Christianity, and the materialist who sees no advantage that can accrue from a proposal to him so visionary and unpractical. The Revd. Mr. EDKINS in his paper read before the Asiatic Society at its last meeting, gives it as his opinion that a renovation of the native language by the admixture with it of English words, and by its reconstruction on the English model, would be worth more to the people than hundreds of steamers and thousands of miles of railway. It was plainly enough shewn at the meeting that in itself Mr. EDKINS' proposal was impracticable, but his statements are on that account none the less dangerous to the Japanese. They have not the experience necessary to form correct judgments, and are as easily led into some flighty and visionary scheme as they may be convinced by sound reasoning. They are further inclined hastily to adopt radical changes, and without having the strength or solidity of character necessary to carry out any extensive work, are always aiming high. Thus the improvements which have already been effected in Japan are, with one or two exceptions, of a very shallow and unsubstantial nature. It is true we have eighteen miles of railway open with the prospect of twenty miles more in a few months; we have a telegraph to Nagasaki, which, from the obstructiveness of the Japanese officials, is almost continually interrupted; some parts of the coast are tolerably well lighted, though much more remains to be done; Yokosuka dock is completed, but extensive repairs on ships or works of any great extent cannot be executed there, and the Osaka mint has been established. But these are all the works having any semblance to utility or solidity which have been accomplished. On the other hand, the colonization of Yezo is a failure; the sending of students to America and Europe has not been attended with success; the results obtained by the various educational establishments are up to the present superficial and unimportant; the obstructions to the development of trade still remain;

the mineral and other products of the country are still locked up; no means of communication have been made throughout the country; the rivers leading to the great trading capitals are unimproved; still do the same difficulties exist in landing or discharging cargo at the open ports; still are the native steamers navigated and engineered by incompetent and ignorant men; and still are the roads leading through the country, and the thoroughfares in the principal towns, rutted quagmires which are a disgrace to any nation having the smallest pretensions to civilization.

Without wishing to advise, and with all deference to those who may differ from us, we are of opinion that while a proper and well-organized system of education is all important to the elevation of the people of Japan, no more effective means could be taken to open up the resources of the country, to increase its prosperity and wealth, or to render it more agreeable as a residence than a radical and sweeping improvement in the internal communications of the country. To say this is almost to repeat a hackneyed truism, but it is one which has been almost entirely ignored in Japan. The resources of this country, like those of all other countries, are spread throughout its length and breadth. Thus, in the provinces of Shinano and Echigo we have petroleum without any proper means of bringing it to the localities where it would be principally consumed; coal exists at one place, iron in another, and there is no way of getting the two together; it is almost practically impossible to use building material in any part of Japan except that found in the locality in which the building is to be erected, on account of the difficulties of transportation; and no large export trade can ever be done from the country until some means are taken for the transportation of the produce of the interior to the sea ports.

Whether railways or roads are the most suitable means of improving the internal communication of the country, is a question which we do not think requires a moment's consideration. Roads are not antagonistic to railways, they are rather necessary adjuncts to them. The construction of a railway, so far from destroying the usefulness of a road, increases the necessity for it—and very often renders the construction of a new one imperative. Therefore, although the construction of railways throughout the country would no doubt be a useful and beneficial, though an expensive work, we are of opinion that on account of the ease, rapidity and cheapness with which they could be made, and the means which they would afford for the transit of merchandize or passengers, whatever may be done hereafter no work would now be of such immediate or lasting advantage to this country as the construction of well-made macadamized roads. Roads are the paramount and at the same time most feasible undertaking to which the Japanese Government should turn its attention. Railways will naturally follow in due course.

But the construction of roads seems so easy of accomplishment that it is just one of those matters which the Japanese, with that extraordinary self-sufficiency which characterizes them, are likely to imagine they are conversant with and capable of executing without any external aid, whereas, in point of fact, it requires great engineering skill to lay out a road with gradients to suit the different localities, and great experience to select and to lay in their proper positions the different materials which should form its surface. The difficulties of road-making may be understood when we recall the fact that up to 1820 the roads of England were in a most unsatisfactory state, and that it was not till MACADAM introduced his system that they

were got into anything approaching their present condition. It would be absolutely necessary for the success of the undertaking, therefore, that it should be put into experienced and professional hands, and the Government has now several engineers in its service who could be entrusted with it.

The following is an extract from a report of a Committee of the House of Commons in the year 1811, and we think we cannot conclude this article in any better way than by giving it, feeling sure that the advantages which are described there as likely to accrue in England from good roads will, to almost the same extent, be felt in Japan.

"The many important advantages to be derived from amending the highways and turnpike roads of the kingdom need hardly be dwelt upon. Every individual in it would thereby find his comforts materially increased and his interest greatly promoted. By the improvement of our roads every branch of our agricultural, commercial and manufacturing industry would be materially benefited. Every article brought to market would be diminished in price; the number of horses would be so much reduced that by these and other retrenchments, the expense of five millions would be annually saved to the public. The expense of repairing roads and the wear and tear of carriages and horses would be essentially diminished; and thousands of acres the produce of which is now wasted in feeding unnecessary horses would be devoted to the production of food for man. In short the public and private advantages which would result from effecting that great object the improvement of our highways and turnpike roads are incalculable: though from their being spread over a wide surface and available in various ways, such advantages will not be so apparent as those derived from other sources of improvement of a more restricted and less general nature."

#### DEVINE *versus* KIRBY.

IT has been represented to us by the Counsel for the Defendant that we have done an injury to his client in making certain comments upon the case DEVINE *v.* KIRBY after notice had been given that an appeal would be made from the decision of the Acting Assistant Judge, and have committed a contempt of Court by so doing. We must plead guilty to the latter charge, as the notice of appeal—wholly unknown to us—was lodged on the Thursday of the week at the close of which our article appeared, and cannot hesitate to express our regret both to the Court and to the Defendant in the action for our mistake.

A more careful analysis of the evidence, a perusal of the letters on both sides, and a more accurate knowledge of the case than could have been gained by the reading, however careful and unbiassed, of the report of it, would have materially altered our views of the feelings and temper under which Mr. KIRBY acted. This being the case, and as we neither had, nor could have had, any other view than to represent both parties to the action with entire impartiality, we willingly express this conviction, together with our regret that some of the comments we made were calculated to produce impressions against Mr. KIRBY which the evidence and correspondence did not fully warrant.

#### JAPANESE PAPER.

THE following article affords a very excellent and, apparently, complete account of the various descriptions of paper manufactured in this country, and is translated, by permission of the "Deutsche Gesellschaft für Natur und Völkerkunde Ostasiens," from their Transactions for July, 1873:—

In the manufacture of paper the Japanese have for centuries past employed the bark of the *Bronssonetia Papyrifera*, which flourishes in almost every district of the country. Old roots, cut into lengths of about 3 inches, are placed in the ground in such manner as to leave about half an inch projecting above the surface. These roots throw out shoots in the first year of about one foot in length, growing in the second to a length of from two to three feet, and in the third somewhat over four feet. In

their fourth year they attain a height of six and, in some cases, even as great as nine to twelve feet. In the tenth month of each year the shoots are cut close to the roots. In the following year each branch throws out five new shoots and thus, in the course of five years, a thick bush is obtained the branches of which may be suitably employed in the manufacture of paper.

The boughs obtained in winter afford the best quality of material. They are cut in lengths of two feet six or seven inches and subjected to wetting sufficiently long to permit of their rind being easily removable by the fingers.

When this process is complete the bark is dried loose, so that the knots should offer no impediment, tied up in bundles and hung upon poles in the air. The drying is found to require two to three days, though if the wind be strong twenty-four hours prove sufficient.

The bundles are then rinsed for, at least, twenty-four hours in running water, so as to remove the inner fibre from the outer bark and the former is scraped upon a knife fixed upon a straw mat until its complete separation is effected. The dark outer bark, known as *saru kawa*, is used in the preparation of coarser descriptions of paper, such, for example, as *chiri gami* and *kigo suki*.

Paper, properly so-called, is made from the inner fibre known as *sosori*.

For this purpose the fibre is tied up in bundles weighing thirty-two pounds, thoroughly washed in a running stream and placed in tubs filled with water. The water is subsequently allowed to run off from the latter and the remaining moisture pressed from the fibre by means of heavy weights. The latter is then boiled with a preparation of the ashes of buck-wheat hulls, being meanwhile continuously stirred with wooden staves, and this process continues until the boiling water from below is distributed throughout the mass of pulp through the holes with which the lower part of the staves is furnished.

In the event, however, of the pulp not boiling some *kobai* or ordinary lime is added although the colour of the paper suffers from this materially.

The fibre thus prepared is then for the second time immersed in running water in a basket, and left there for such time as may be necessary to cleanse it thoroughly from all impurities. After its removal from the water it is stretched upon a plank of either oak or cherry-wood, some five feet long by three in width and four inches thick, and well beaten with a square mallet, three feet in length, for about twenty minutes. It is then rolled up in large balls from which it is detached as required.

In the course of its manufacture a certain quantity of *tororo* is added to the mass of pulp. This is prepared from the root of the "Hibiscus Manihot" which is removed from the ground in the fifth month, peeled, lightly beaten and boiled to the consistency of a moderately thick paste which is strained when required for use. In Summer rice-water is added for the same purpose. The Winter manufacture, known as *hidzuki*, is more highly esteemed from the fact of its not being exposed to the attacks of the worm.

The pulp prepared either with *tororo* or rice water is then treated in precisely the same manner as is usual in Europe.

The leather-paper is prepared from the *Tosa Senka* paper, its substance being obtained by uniting several thicknesses together. After being saturated with the oil obtained from the *yenoki*, (*Celtis Wildenowiana*), the parts are pressed together in heavy wooden presses, and the sheets dried and covered with an outer coating of lacker.

The materials for clothing manufactured from paper are prepared in the province of Sendai from a description known as *Shifu*. This paper is cut into wide or narrow strips according as the substance required be fine or coarse, twisted with the fingers and then reeled. The threads are subsequently twisted upon the wheel and are prepared either alone or in conjunction with silk. The material is washable and is esteemed exceedingly durable.

In the preparation of crape-paper a moistened sheet of stout paper is stretched upon a wooden cylinder upon which the design has been engraved. It is then stripped off and dried. By another method the damp sheet receives a mechanical pressure while on the cylinder. Both procedures impart a *crépé* appearance and elasticity to the paper.

In addition to the *Bronssonetia Papyrifera* the *Edgeworthia Papyrifera* is also employed in the manufacture of paper.

The following is a specification of the various descriptions of paper in the collection of the "German Asiatic Society":—

- 1.—Hankire, made in Suruga: used for letter paper.
- 2.—Hanshi, made in Suruga: do. do.
- 3.—*a* Noure, made in Suruga: do. do.
- 3.—*b* Hosho gami, made in Igo: used for women's writing paper.
- 4.—Kobanshi, made in Suruga: used for pocket handkerchiefs.
- 5.—Wata atzu, made in Suruga: used for bags.
- 6.—Chirigami, made in Suruga: used for pocket handkerchiefs.
- 7.—Hankire, made in Kai: used for letter paper.
- 8.—Hankire, made in Hiuga: writing paper.
- 9.—Hankire, made in Tsikugo: do. do.
- 10.—Ochiai, made in Tsikugo: used for furniture.
- 11.—Hankire, made in Musashi: writing paper.
- 12.—Hankire, made in Musashi: do. do.
- 13.—Wadoshki, made in Musashi: do. do.
- 15.—O gzenshi, made in Musashi: do. do.
- 16.—Schkiehi, made in Musashi: used in writing poetical compositions.
- 17.—Tansake, made in Musashi: do. do.
- 18.—Uda-chiri, made in Musashi: used for sugar-bags.
- 19.—Hoso-kawa, made in Musashi: used for account-books.
- 20.—Tanagawa doshi, made in Musashi: for writing and furniture paper.
- 21.—Katamen, made in Musashi: used for various purposes.
- 22.—Yomokawa, made in Musashi: used for bags.
- 23.—Riomen-ben-gami, made in Musashi: used for bags.
- 24.—Hankire-ben-gami, made in Idzu: writing paper.
- 25.—Eban-kire-ben-gami, made in Iyo: do. do.
- 26.—Takenanga, made in Iyo: do. do.
- 27.—Tobosho, made in Iyo: do. do.
- 28.—Osu-hanshi, made in Iyo: do. do.
- 29.—Senka, made in Iyo: used for bags.
- 30.—Tyo uda, made in Iyo: used for umbrellas.
- 31*a*.—Chiri game, made in Iyo: used for pocket handkerchiefs.
- 31*b*.—Iyo hosho, made in Iyo: used for women's writing paper.
- 32.—Otaka, made in Echizen: used for official paper.
- 33.—Date shiwo, made in Echizen: do. do.
- 34.—Kotaka, made in Echizen: do. do.
- 35.—Takenaga, made in Echizen: used for writing paper.
- 36.—Obosho, made in Echizen: do. do.
- 37.—Is'shiki bosho, made in Echizen: do. do.
- 38.—Kobosho, made in Echizen: do. do.
- 39.—Benito rinoko, made in Echizen: used for wardrobes; printed in Kioto.
- 40.—Mutama rinoko, made in Echizen: do. do.
- 41.—Beni bosho, made in Echizen: used for tickets; dyed in Yedo.
- 42.—Noshi iro marun kami, made in Echizen: used for tickets.
- 43.—Kidzuki-o maniai, made in Echizen: used for paper screens.

- 33.—Kin mo toi nishin kami, made in Tosa: used for women's hair ornaments.
- 34.—Takenanga nishi kami, made in Tosa: do. do.
- 35.—Iro mo toi kami, made in Higo: do. do.
- 36a.—Hanemo toi no kami, made in Higo: do. do.
- 36b.—Hanemo toi no kami, made in Higo: do. do.
- 37.—Kanako kami Jokokami, made in Higo: used for ornamenting small boxes.
- 38.—Hanemotoi techotcho, made in Mino: used for women's hair ornaments.
- 39.—Kinshia mino kami, made in Mino: do. do.
- 40.—Becco kami, made in Osaka: do. do.
- 41.—Mange djimo, made in Yedo: do. do.
- 42.—Ochiri, made in Tchikugo: used for hangings.

Besides these there are one hundred and thirty-seven other descriptions of hangings made in Echizen, Tosa, Setzu, Yamashiro and Yedo.

#### B II. LEATHER-PAPER.—(Toile cirée ?)

- 1.—14 from Shimoduke.
- 15.—20 " Hitadji.
- 21.—22 " Issé.
- 23.—32 " Yedo.
- 34.—43 " Karasu yama.
- 44.—46 " Mito.

Besides several descriptions of oiled-paper for rain-coats, &c. from Yedo, tobacco pouches, &c., &c.

#### REVIEW.\*

WE believe that we only endorse the public verdict on all the books of dialogues and sentences which have appeared previously to the publication of Mr. Satow's book when we say that they have been without exception conspicuous failures. Most of them are exceedingly inaccurate, and even the few which are moderately correct are, for want of proper notes and explanations, almost useless to the learner. In the case of a language so different in its idiom and construction from our own as Japanese this is a fatal defect. In both these respects "*Kuwa Hen*" is an immeasurable advance upon its predecessors, and the student has now within his reach a manual on the thorough correctness of which he may place implicit reliance, and which contains all the explanations which he can possibly require.

\* *Kuwa Hen*. Twenty-five Exercises in the Yedo Colloquial, for the use of students, with Notes. By Ernest Satow, Japanese Secretary to H. M. Legation in Japan. Yokohama, Lane, Crawford & Co. 1873.

The *Kuwa Hen* is in three parts. The First Part contains a series of Japanese sentences and dialogues printed in the Roman character with the English translation on the opposite page. The sentences become gradually more difficult as the work advances, but for the average student they might with advantage have been made even more progressive. Books of this kind are usually very dull reading, and the authors of them are sometimes driven to great straits in order to make them interesting. Most of us can call to mind one in which there was an attempt to relieve the natural dryness of the subject by witty remarks and by the dramatic interest excited in the sayings and doings of two imaginary personages into whose mouths the sentences were put. Mr. Satow's dialogues have a more legitimate interest. Many of them were composed in the first instance by native scholars, and contain lively pictures of Japanese life and manners. Those who care nothing for the Japanese language may read with interest the dialogues on A Fire, on Travelling, on the New Year, and the Discussion between a foreign Consul and a native official on the subject of a broken contract. These dialogues are all the more readable, as they are translated in good, idiomatic English, the literal translations being banished to their proper place among the explanations in the second part. By the plan of having them first composed in Japanese and then rendered into English, their value to the student is much enhanced, as translations from English are apt to be stiff and unidiomatic, while innumerable expressions common in daily life, but which have no counterpart in English, are necessarily omitted.

Perhaps the most valuable portion of Mr. Satow's book is the second part, which not only contains all the explanations which the least advanced student is likely to require, but is a rich mine of information respecting the idioms and grammar of the spoken dialect of Yedo. The student who has thoroughly mastered this part need fear little further difficulty with the grammar and construction of the spoken Japanese.

The Third Part of the *Kuwa Hen* contains the Japanese of the dialogue in the native character, the first fourteen dialogues being printed in Hiragana only, the remainder with an admixture of some of the more common Chinese characters. This is a great improvement on the old plan of employing the almost useless Katakana for this purpose.

Most readers of the *Kuwa Hen* will be glad that Mr. Satow has not yielded to his desire to omit altogether the version in Roman characters contained in Part I. The labour of familiarizing the eye with a set of strange characters is no doubt very irksome, and as it is possible, after some practice with a native teacher, to pronounce correctly the transliteration contained in Part I., we fear that many learners will be tempted to shirk the trouble of mastering the native syllabary, and to confine themselves to the version in Roman letters. At the same time, it cannot be too strongly impressed on the genuine student that his best plan is, as Mr. Satow advises, "to work with the Japanese text alone, even at the expense of some extra labour at first." The native spelling throws much light on the grammar, and if the student intends ever to get beyond a phrase-book, it will be necessary for him sooner or later to learn the native character, to a knowledge of which he can have no better or more convenient guide than these exercises in their Japanese form.

We hope the publication of Mr. Satow's book will be another inducement to residents in Japan to undertake in earnest the study of the spoken language. The almost insuperable difficulties which beset it not many years ago have been in a great measure removed, and at present there is really nothing to prevent any one who devotes a little diligence to the task from acquiring a very serviceable knowledge of the language.

#### A CHRONICLE OF THE CHIEF EVENTS IN JAPANESE HISTORY FROM 1844 TO 1863.

(Continued.)

##### 1ST YEAR OF BUNKIU (1861).

1st month, 4th day.—An Imperial edict was issued. It was occasioned by the neglect to refer the Prussian Treaty for the Mikado's approval.

1st month, 9th day.—On this day and on the 16th and

25th interviews took place with the Americans at the residence of the Daimio of Taira.

1st month, 10th day.—Two French ships came to Shinagawa.

1st month, 21st day.—Notice was given to the wards to display flags (with the streets' names) at their guard-houses. It was said that the foreigners requested this.

1st month, 24th day.—The Government received information that a band of *rônins* had committed outrages in Sawara, in the province of Shimôsa.

1st month, 29th day.—Orders were given for the arrest of all *rônins* in the eight provinces round Yedo.

2nd month, 3rd day.—On this day and on the 17th and 22nd interviews took place with the English at the residence of the Daimio of Taira. It was said that the interviews which took place at this time had chiefly reference to the Minister's residence, the opening of Hiogo and Tsushima, and the bands of *rônins*.

2nd month, 3rd day.—Russians came to A sūmi ura in Tsushima ostensibly with the object of repairing their ship.

2nd month, 3rd day.—The Daimio of Mito's address to Government in which he promised to arrest the *rônins* was circulated for the information of the Daimios.

2nd month, 7th day.—An English ship came to Shinagawa.

2nd month, 9th day.—A Russian ship came to Shinagawa. She left on the 5th of the 3rd month.

2nd month, 9th day.—Okabe Sanjuro of the Mito Han was arrested at Yedo.

2nd month, 9th day.—Sumiga Timoske and Nakajima Kimpei of the Mito Han were arrested at Sakai.

2nd month, 23rd day.—The Americans proceeded to the Castle, it was said in order to offer their congratulations on the new year.

2nd month, 28th day.—The name of the period was changed to Bunkin.

2nd month, 29th day.—An interview took place with the Americans at the residence of the Daimio of Taira.

2nd month, 29th day.—Notice was given of a loan of money to the Hatamotos' retainers on account of the rise in prices.

About this time numerous reports were received by Government from Shimos that the *rônins* intended to expel the barbarians. It was also said that several hundred men had formed a camp at Akagisan in Kodzuke.

3rd month, 1st day.—The English Minister Alcock suddenly left for Hongkong.

3rd month, 4th day.—Russians came to Masugawa in Tsushima and erected houses.

3rd month 15th day.—Notice was given of a delay in the marriage of the Princess Kadzu.

3rd month 15th day.—Caps made in foreign fashion were prohibited.

3rd month 17th day.—There was a great thunderstorm at Yedo.

3rd month 22nd day.—The Daimio of Taira was ordered to increase his revenue by an exchange of villages to the amount of 10,000 kokus.

3rd month 23rd day. There was a performance of *No* and *Kiogen* in honor of the Shogun's return to the chief building of the Castle.

3rd month 23rd day.—It was notified that priests who had broken their vows, women of a strange trade (meaning prostitutes not belonging to the Yoshiwara), and others would be deported to Yezo.

3rd month 24th day. Takenouchi Shimotsuke no kami, Kuwayama Sayemon no Jo, and Kiogoku Hiogo were appointed envoys to western countries.

3rd month 26th day.—A notification was issued enjoining zeal in the acquirement of the arts of war and learning and recommending economy.

3rd month 27th day.—Shiwonoya Kozo of the Yamagata Han and Wakayama Sokichi of the Iwamura Han were admitted to an audience of the Shôgun.

3rd month 27th day.—An interview took place with the Americans at the residence of the Daimio of Taira. The subject of it was said to be the despatch of ambassadors to western countries.

4th month 12th day.—The Russians shot a Japanese servant named Yasugoro at Tsushima. On the 13th they again committed an outrage.

4th month 12th day.—An English ship visited the bay of Fuchu in Tsushima. She went away on the 14th.

4th month 19th day.—Oguri Bungo no Kami and Mizoguchi Yasugoro were despatched to Tsushima, where they arrived on the 7th of the 5th month. They had an interview with the Russians on the 10th, and returned immediately.

4th month 19th day.—The Mikado raised the Princess Kadzu to the rank of Naishimo.

4th month 28th day.—From this day English ships anchored at Shimonoseki in Nagato, at Kadoshima in Bugen and other places. The Englishmen landed at several places, and on the 15th of the 5th month, they buried a man at Kusurwara. They then went away, but it was said that they came and took away the body in the course of the 10th month.

It was said that in the course of this month an autograph letter of the Shogun was sent to Russia, England, France and all the other countries, respecting the delay in the opening of the ports of Yedo, Osaka, Hiogo and Nii-gata.

5th month day.—The Englishman Alcock came to Hiogo. He returned to Yedo by land along the Tokaido, arriving on the 27th.

5th month 14th day.—An interview took place with the English at the residence of the Daimio of Taira. The subject of it was said to be the surveying of the Japanese seas.

5th month 15th day.—The Dutchman Siebold came to Yedo. He was taken into the Government service and was lodged in the Conference House at Akabane. In the course of the fourth month he had come to Yokohama and lived there.

5th month 19th day.—Midzuno Chikugo no Kami was appointed envoy to the countries of the West.

5th month 28th day.—Mayegi Shimpachiro, Ariya Hanya and twelve others of the Mito Han attacked Tozenji, and wounded two Englishmen. They fought with the Hatamoto's men and with the soldiers of the Daimios of Koriyama and Nishio. There were killed and wounded on both sides.

In the last ten days of this month, a comet appeared in the northwest.

6th month 3rd day.—An interview took place with the Dutch at the residence of the Daimios of Taira.

6th month 4th day.—An interview took place with the English at the same place.

6th month 5th and 13th days.—Interviews were held with the English chiefly respecting the Tozenji affair, it was said.

6th month 16th day.—Shogimo Government ordered the Daimios to arrest the survivors of the band who had broken into Tozenji.

6th month 16th day.—The Daimio of Mito was commanded to maintain strict order within his territory.

6th month 19th day.—It was notified that merchants might build large ships if they chose.

6th month 20th day.—Oguri Bungo no Kami and his colleagues arrived in Yedo from Tsushima. On the 28th they were ordered to proceed there a second time. They did not go, and were dismissed from office on the 26th of the 7th month.

6th month, 20th day.—The Daimios of Nagoya and Wakayama were summoned to the Castle to discuss the Mito question.

6th month, 21st day.—The Daimios of the Tamari Noma were summoned to the Castle to discuss the Mito question.

6th month, 23rd day.—An interview took place with the French at the residence of the Daimio of Taira.

6th month, 24th day.—The Daimios of Shinjo, Kuana, and Matsuyama were commanded to defend the foreign settlement at Kanagawa.

In the course of this month Nagai Uta, of the Hagi Han went to Kyoto by order of the Daimio of Hagi (Choshu) and laid before the Mikado arguments for throwing open the country. It was said that the Mikado expressed his admiration, saying at the same time that there would be a special decree on the subject.

About this time Swiss and Danes came to Yokohama and asked for commerce.

7th month 2nd day.—It was notified that leave had

been granted to the English to survey the Japanese seas. On the 11th English ships left Yokohama and surveyed the coasts of the provinces.

7th month, 4th and 6th days.—English ships came to Yokohama under the command of Hope.

7th month, 9th day.—An interview took place with the Americans at the residence of the Daimio of Taira respecting the foreign settlement.

7th month, 10th day.—An interview took place with the English at the same place, respecting the Russians who are staying at Tsushima, it was said.

7th month, 10th day.—Officials were ordered to examine the sea shore at Shiba and Tsukiji in order to discover a suitable place for the erection of foreign residences.

7th month, 11th day.—Orders were given for the erection of residences for the foreigners at Gotenyama. They were commenced on the 17th day of the 11th month.

7th month, 16th day.—Until the buildings on Gotenyama should be completed, the foreign Ministers went to live at Yokohama, and after this they passed back and forward frequently.

7th month, 20th day.—Nonoyama Tango no kami and Ogasawara Settsu no kami were ordered to Tsushima. They left on the 2nd day of the 8th month, and returned to Yedo on the 13th day of the second month of the following year.

7th month, 26th day.—Kaneke Magojiro, Ozeki Washichino, Mori Gorokuro Okabe Sanjuro, Hasuda Ichigoro, Moriyama no Suke, and Sugiyama Yaichino of the Mito Han were executed for the murder of the Daimio of Hikone. Ten others had already died.

8th month, 6th day. The English made presents to the defenders of Tōzenji in the 5th month.

8th month, 11th day.—The Daimio of Saga presented to Government three cannon.

8th month, 12th day.—The Mikado commanded that steps should be taken to prevent the English surveying ships from coming to Ise or Shima.

8th month, 13th day.—It was announced that the marriage of the Princess Kadzu (to the Shōgun) would take place in the course of the 10th month.

8th month, 14th day.—An interview took place with the English at the residence of the Daimio of Taira. It was said that the English were enraged at our lending Tsushima to the Russians.

8th month, 20th day.—An interview took place with the French at the residence of the Daimio of Taira.

8th month 21st day.—There being a report that the Mito *rōnins* were about to attack Yokohama in boats, the Daimios were notified of it.

8th month 21st day. The appointments of Midzuno Chikugo no kami and Kuwayama Sayemon no Jo, as ambassadors to Europe, was cancelled, and Matsudaira Iwami no Kami appointed instead.

8th month 22nd day. An interview took place with the Americans at the residence of the Daimio of Taira.

8th month 23rd.—The French had an interview, chiefly respecting the buildings on Gotenyama, it was said.

8th month 24th day.—Every person connected with the defence of Tozenji in the 5th month, from the Daimios down to the private guards, were rewarded by the Government.

8th month 25th day.—The Russians who had been staying in Tsushima went away.

In this month severe measures were taken in Mito for the arrest of the *rōnins*.

9th month 3rd day.—Notice was given that permission was granted for blank discharges of firearms for practice within *yashikis* either within or without the castle moats.

9th month 7th day.—The Dutch had an interview at the residence of the Daimio of Taira. The subject of it was said to be the return of Siebold to his country.

9th month 10th day.—Siebold was informed that his services were no longer required.

9th month 11th day.—An interview took place with the French at the residence of the Daimio of Taira. The subject of it was said to be the despatch of envoys to Europe.

9th month 16th day.—The English had an interview as above.

9th month 18th day.—The Americans had an interview as above.

9th month 26th day. Notice was given of the contributions to be paid towards the repairs of river banks in the various provinces.

10th month 9th day.—An interview took place with the Dutch at the residence of the Daimio of Taira.

10th month 10th day.—The Daimio of Fukui was relieved of the defence of Yokohama and Kanagawa and charged with that of Forts No. 2 and 6 at Shinagawa. The Daimios of Himaji and Matsushiro who had been charged with the defence of these forts were now ordered to undertake the defence of Yokohama and Kanagawa.

10th month 13th day.—The Daimio of Hagi came to Yedo at an irregular time. His reason for doing so was to present a memorial tending to the good of the Empire.

10th month 16th day.—An interview took place with the English at the residence of the Daimio of Taira. On this occasion the English brought with them guards carrying lances without sheaths.

10th month 20th day.—The Princess Kadzu set out from Kioto. She arrived in Yedo on the 15th of the 11th month and was lodged at the residence of Lord Shimidzu.

10th month 23rd day.—Notice was given that if foreign ships came to ports not yet opened to them, an inquiry should be made into the circumstances, and a report forwarded to Government.

10th month 24th day.—It was notified that the "Vaccination Office" would in future be called the "European Medical School."

10th month 24th day.—An interview took place with the Americans at the residence of the Daimio of Taira. The question of the English escort and many other subjects were said to have been discussed.

11th month 5th day.—The Americans had an audience at which they presented a letter from their President. This letter was said to be the reply about the delay in opening the ports of Osaka, etc.

11th month 20th day.—It was notified that Yasuda Tetzuo of the Kagoshima Han was buying mulberry branches for the purpose of manufacturing silk wadding.

11th month 21st day.—The Shogun paid his respects to the Mikado's Envoy.

11th month 21st day.—A grant of 10,000 dollars was made to Henōken's mother.

11th month 25th day.—An entertainment was given to the Mikado's Envoy.

11th month 26th day.—An interview took place with the English at the residence of the Daimio of Taira. The subject was said to be the opening of Hiogo and the other ports.

11th month, 27th day.—An interview took place with the French. The subject was said to be the sending of Envoys to Europe.

11th month, 28th day.—The Government declined to make a Treaty with Denmark.

11th month, 29th day.—An interview took place with the Americans at the residence of the Daimio of Taira.

This month the Mikado was secretly informed that the Daimio of Kagoshima was about to send troops to Kioto.

12th month, 1st day.—A notice was issued commanding that the prices of commodities should be lowered.

12th month, 3rd day.—Midzuno Chikugo no kami despatched Hattari Kuchi to inspect the Bonin Islands. He returned on the 20th day of the 3rd month of the following year.

12th month, 7th day.—The chief *yashiki* of the Daimio of Kagoshima was destroyed by fire. This was probably not unintentional.

12th month, 11th day.—The Princess Kadzu left the residence of Lord Shimidzu for the Castle.

12th month, 13th day.—Siebold went to Nagasaki from Yokohama.

12th month, 22nd day.—Takenouchi Shimotsuke no kami and his fellow Ambassadors left for Europe in an English ship.

12th month, 23rd day.—An interview took place with the English at the residence of the Daimio of Taira.

## JUJITSZ.

WHILST taking my afternoon ramble the other day, and following whithersoever my footsteps led me, wrapt in meditation as is my wont, I was suddenly startled from my musings by the sound of a drum, coming, seemingly, from amongst the clouds. A phenomenon so extraordinary immediately arrested my attention, and, after some examination of the heavens, I discovered that the sound was the work of a performer who was seated upon the summit of a tower, constructed of poles tied together in a cunning manner with ropes of straw. It forthwith occurred to me that this man might be an eccentric whom desire for notoriety had prompted to proclaim his whereabouts with so much noise, or who, tired of the obscurity to which a deficiency of talent or a want of opportunity had condemned him, had resorted to such means to distinguish himself from the crowd of mediocrities around him, and perchance also having heard of the custom amongst the foreigners of "each man blowing his own trumpet," had accepted the idea literally and, in default of a knowledge of that instrument, contented himself with beating his own drum instead. Whilst engaged in regarding this lofty musician, and wondering how we plodders appeared to him from hiserie, I was suddenly carried along by a crowd which was proceeding towards a matted tabernacle, and presently found myself face to face with a person who demanded from me the sum of half-a-boo. Having deposited the prescribed coin in the greasy palm of the dirty-faced but smiling collector, who barred the entrance with one arm whilst the tender of my coin seemed yet doubtful, I was made free of the sanctuary and found myself within the building. This I noticed was constructed of the same materials as the tower outside, on the top of which the Muezzin (I have since learnt) is engaged in summoning to the games such as have money and leisure enough to be diverted.

I have often observed that the Japanese are very skillful in constructing such temporary edifices by means of poles and ropes. This particular one was covered in with matting of so flimsy a nature, however, as not to exclude the rain which was beginning to fall, and, to justify the remark of my next-at-hand sight-seer, a buxom young house-wife in her holiday silks, of which she was very careful, that "for all the good the roof was, one might as lief be outside." I was forcibly reminded thereby, (having ever an errant fancy) of the unlucky Irishman, who, fresh from his bogs had for the first time visited the Metropolis of his country and, overcome by a longing to ride in a chair, had, in his perplexity as to how to accomplish his desire, sought counsel from a wag in whose company he happened to have journeyed to Dublin. His wish was gratified by this prince of hoaxers, who handed him with much ceremony into a chair, which in the course of age and service, had lost its bottom, and slamming the door, desired the bearers to take the gentleman at their quickest pace to his destination. The novelty of the situation pleased the farmer at first, until his course leading him thro' a muddy street, and his bearers quickening their pace to a trot, he found his stockings becoming bedabbled with mire and the mud getting into his shoes. By this time satiated with magnificence, he had time to analyse his sensations, and he came to the conclusion as he used to say when relating his adventures to his fireside admirers, that "faix and only for the honour and glory of the thing, riding in a chair was mighty like walking," and so it was, my fair philosopher, under that matted roof "mighty like" being out in the rain. The area of the building, excepting a square raised portion in the centre for the performers, was divided with that servility to form so characteristic of the Japanese, into mat-shaped portions for the spectators. It is remarkable how this parallelogramism, this six-feet-by-three-odness, enters into all their calculations of space. It is highly probable that Locke's definition of infinity would force itself on their minds in the form of an endless multiplication of mats, one's mind revolts at this interminable tyranny—(this rectangular methodicality), the raised space alluded to—still a multiple of mats—was canopied with scarlet cloth, two of the four pillars supporting it being also red and the other two white. At each pillar sat a solemn judge to

see fair play, and apparently as blind as Justice. The two white pillars supported each a bucket of water, and a box of salt. A herald proclaims the names and qualifications of the coming combatants, and a pair of ragged wrestlers, stepping forward, show themselves for a moment, and then, as if by mutual consent, approaching each his bucket, help themselves liberally to salt and water. These little preliminaries over, they set to work with much zeal, apparently to tear each other's clothes, already sufficiently ragged. For, seemingly, no other purpose could possibly be served by such aimless wrestling as is compassed by their knowledge of the art.

During the struggle the umpire, armed with an elaborate fan ornamented with scarlet silk tassels—apparently his badge of office—follows them about the arena; now encouraging, now advising, and anon separating the combatants as occasion may demand. When they are equally matched and exhaust one another without an advantage to either side, he stops the bout, and assures his audience that he will take care of the youths until to-morrow when they may renew the fight. Pairs of wrestlers succeeded one another in quick succession, the manoeuvres being the same in each case, but notwithstanding their want of skill I was much pleased to observe that some very pretty bruising were occasionally the result of the meetings.

Wearying of the monotony of the performance I was about to take my departure, when my attention was arrested by the sound of a woman's voice, and on turning to see from whence it proceeded, I perceived that a female herald was proclaiming the advent of the next pair. She had hardly finished, when there leapt into the arena a woman of singular and forbidding presence, dressed in a pair of loose and ragged trowsers and a sleeveless shirt open at the bosom. She looked, as she stuck her arms akimbo and showed her blackened teeth in ghastly grin, a very demon. Her antagonist, a man of stature, towered in front of her, and I trembled for her fate in his hands. My feelings, however, were reversed, when I observed her, as answering his shout of defiance with a guttural howl, in as low a key as she could command, she projected herself at him and seizing him by the throat—whilst unawares it seemed to me—flung him on his back in a trice. She varied this manoeuvre by pitching him over her shoulder and across her hip, and finally wound up the performance by jumping on his patient prostrate body. Events so extraordinary induced me to bestow on the combatants the closest scrutiny, by which I became convinced that the magnanimity and innate gallantry of the man forbade him to put forth his strength against a woman, and I was the more pleased at this discovery inasmuch as he had received some hard knocks at the game, and was not a little growled at whenever he fell.

Some posturing of *samurai* with sword in hand followed, when satiated with Jujitsz, I turned my face towards home. The rain was now a steady downpour, and the man on the tower, by this time soaked to the skin and unable to extract a note out of his flabby parchment even if he had the energy to try, had desisted from his efforts and was coming down.

Yedo.

## ASIATIC SOCIETY OF JAPAN.

The first Annual Meeting of the Asiatic Society of Japan was held in room No. 19, at the Grand Hotel, on Wednesday, the 8th October, 1873, at 8.30 p.m.

On taking the Chair, the President, R. G. Watson, Esq., explained the reasons which had led to the deferment of the annual meeting till the present time; which was, however, in fact, the true anniversary of the Society's commencement of actual work. He called on the Secretary to read the minutes of last meeting—which were approved; and also the Report of the Council of the Society—which was as follows:—

## REPORT.

In presenting their First Annual Report, the Council of the Asiatic Society of Japan are checked in the congratulations which they had hoped to present to their constituents, by the necessity for announcing the heavy loss sustained by the destruction, in a recent fire, of the printed matter intended for the first number of the Society's journal.

The loss however is not irretrievable, since it will be possible

to reproduce most of the articles, intended for publication; though not without a delay of some few weeks. This will somewhat retard our entering into relations with other Societies of similar character, and obtaining their publications in return for our own; but no great harm to the Society need be feared from this slight check to our progress: certainly none will be felt if we are stirred up to greater determination that the objects we have in view shall be the more vigorously prosecuted.

As evidence that interest has not been lacking, the Council refer to the following List of Papers read before the Society at its regular Meetings during the past twelve months.

- 1.—On the Loo Choo Islands, by Mr. Satow.
- 2.—On the Hyalomesa Mirabilis, by Dr. Hadlow.
- 3.—On the Streets and Street-Names of Yedo, by Mr. Griffis.
- 4.—On the Ascent of Fujiyama, by Mr. Hodges.
- 5.—Five Short Papers on the language of Loochoo, by Japanese Students.
- 6.—Notes of a visit to the Mulgrave Islands, by Officers of H. M. S. *Barossa*.
- 7.—On the Geography of Japan, by Mr. Satow.
- 8.—On Cyclones in Japan, by Lt.-Com. Nelson. U.S.N.
- 9.—On Russian Descents in Saghalien, by Mr. Aston.

The prospect of receiving valuable Papers during the coming twelve-month is good; and with the confidence that their successors will find little difficulty in carrying on the operations of the Society, the present Council beg to resign their offices.

Fifty-nine members have been added to the Society since the first Meeting at which it was organized; the whole number at the present time being—Resident Members 64, Honorary 2, Corresponding 3. One has died and 5 are absent.

The newly-established German Asiatic Society of Yedo has courteously presented us with a copy of their Proceedings; and the Royal Asiatic and Geographical Societies of London have—through the good offices of Dr. Hadlow, promised to exchange their publications for ours.

A commencement has been by ourselves towards the establishment of a Library and Museum, by the presentation of some few books and specimens—but this part of our operations requires a Building of our own before it can be expected to flourish.

The balance now in the Treasurer's hands to the credit of the Society is \$303.75.

On behalf of the Council,

EDWD. W. SYLE,  
Hon. Sec.

It was moved by Sir Harry Parkes and seconded by Mr. Bellamy—

That the Report of the Council be accepted, and the thanks of the Society be tendered to them for their services during the past twelve months.

On motion of Mr. W. H. Smith, seconded by Mr. Aston, it was resolved—

That the following gentlemen be the office-bearers of the Society for the coming year:—

President.—J. C. Hepburn, Esq., M.D.

Vice-Presidents.—Rev. S. R. Brown, D.D.,  
Sir Harry S. Parkes, K. C. B.

Treasurer.—R. B. Baker, Esq.

Recording Secretary.—A. Bellamy, Esq.

Corresponding Secretary.—Rev. Ed. W. Syle.

Curator and Librarian.—H. Pryer, Esq.

Council.—E. Satow, Esq.

A. J. Wilkin, Esq.

W. G. Howell, Esq.

Bayly Done, Esq., M.D.

R. H. Brunton, Esq.

Mr. Watson having announced the above result and spoken a few valedictory words, expressive of his satisfaction at having filled the office of the first President of the Society, vacated the Chair, which was then taken by Dr. Brown V. P.

A Paper, communicated by the Rev. J. Edkins, of Peking, on "The nature of the Japanese Language, and its Possible Improvement," was read by Mr. Satow.

A brief discussion followed; in the course of which the Secretary demurred to Mr. Edkins' objections against the use of *kami* as a translation of the word "God," in which demur the Chairman Dr. Brown, emphatically concurred, and added that the suggestion contained in the Paper of importing into the Japanese language English prepositions would make great confusion.

In adopting the large amount of Chinese which is found in their language, as at present used, the Japanese had performed their difficult task in the best way; i.e. by arranging the Chinese words in Japanese order. In schools, at the pre-

sent time, Chinese words are now taught,—not Chinese construction: also, the Arabic numerals have been introduced.

Mr. Watson remarked that in Persian, which was a pure but meagre language, the same process had been employed. A large amount of Arabic words had been introduced, but the syntax is Persian.

Mr. Satow feared that the carrying out of Mr. Edkins' proposals, would result in the spread of nothing better than "pidgin" Japanese.

Mr. Aston considered the proposed scheme quite Utopian. No such thing ever has been accomplished, as changing a language by authoritative enactment. Changes in a language must be effected by the influence of writers of genius.

On motion of Mr. Howell, seconded by Sir Harry Parkes, it was resolved—

That the thanks of the Society be returned to Mr. Edkins for his suggestive Paper; and that it be recommended to the Council to place his name on the list of Corresponding members.

The Secretary announced, as New members, Professor D. Murray, C. W. Lawrence, Esq., and Rev. W. B. Wright.

It was also moved by Mr. Syle and seconded by Mr. Watson—

That the Council be requested to take into consideration the subject of providing suitable accommodation for the Society's Library and Museum.

A specimen (contributed by Mr. Quin of H. B. M. Consulate, Nagasaki) was exhibited of what appeared to be petrified bamboo-grass.

The following notice of an International Oriental Congress, at Paris, was read; and Rev. Jas. Summers (formerly of Kings College London, now Professor in the Mombusho, at Yedo) explained that the Organization was chiefly the result of the exertions of Professor de Rosny.

"An International Congress of Orientalists will hold its sittings in the great amphitheatre of the Sorbonne in Paris, from the 1st till the 9th of September next. Its purpose is to create personal relations among men interested in Oriental affairs. The following subjects have been set down for discussion:—1. What portions of Japanese literature would it be most useful to translate at this moment, and what are the philological resources for undertaking the publication? 2. Would it not be useful to establish a uniform orthography for the transcription in Europe of all Japanese texts? 3. What are the documents of a nature to facilitate the understanding of the special scientific, literary, and industrial works of the Japanese? 4. What is the nature of the actual movement of Japanese civilisation, and of its relations with European civilisation? 5. What are the characters of Japanese art at the different epochs, and what method is to be followed for studying them? 6. In what measure has actual Japanese literature, strongly saturated as it is with European ideas, interest for Europe? And may it be thought that the progress realised by the Japanese savants will be of a nature to contribute to the scientific movement of the Eastern nations?"

## Extracts.

### THE IMPERIAL MINT.

WE extract the following from the Report of Major Kinder Master of the Imperial Mint, to H. E. the Minister for Finance.

#### RECEIPT OF BULLION.

The following details relative to the receipt of bullion have been supplied by the Commissioner of the Mint, the chief of the bullion and accountant's department:—

#### AMOUNT OF GOLD OF STANDARD FINENESS IMPORTED INTO THE IMPERIAL MINT DURING THE YEAR.

Imported by.	Ounces Troy, at 900 Standard.
Japanese .....	384,268 53
Chinese .....	21,517 34
Other foreigners .....	72,206 53
Imperial Government .....	832,303 91
Total for 1872-73 ..	1,310,296 81
Total for previous year .....	858,226 21
Increase 1872-73 .....	452,070 10

#### DESCRIPTION OF GOLD BULLION IMPORTED FROM THE PUBLIC DURING THE YEAR.

Description.	Ounces Troy.
Gold bars of unknown fineness .....	336,581 24
Gold leaf .....	25,229 32

San Francisco bars.....	70,286	14
American eagles.....	26,857	12
English sovereigns.....	1,283	70
Other foreign coins.....	182	50
	460,420	73

**AMOUNT OF SILVER OF STANDARD FINENESS IMPORTED  
DURING THE YEAR.**

Imported by.	Ounces Troy, at 200 Standard.
Imperial Government .....	2,432,375 91
Total for previous year .....	4,767,175 79
Decrease 1872-73 .....	2,334,799 88

**COINAGE.**

In the year ending 31st July, 1873, the following coins have been struck and passed for issue by the Director, as shown by bullion office returns:—

Denominations.	Number.	Value.
Gold 20 Yen .....	3,251	65,019
10 Yen .....	1,005,917	10,059,169
5 Yen .....	2,524,810	12,624,057
2 Yen .....	506,152	1,012,301
1 Yen .....	1,402,068	1,402,068
	5,442,198	25,162,614
Silver 1 Yen .....	None.	None.
50 Sen .....	3,937,009	1,968,952
20 Sen .....	6,344,426	1,268,883
10 Sen .....	4,658,132	465,813
5 Sen .....	5,768,541	288,426
	20,709,008	3,992,074
Total.....	26,151,206	29,154,688

**GOLD COINAGE.**

Some trifling alterations have taken place in the diameter of the coins, as follows, resulting in a great improvement in the appearance, as well as preventing the undue destruction of dies:—

**DIAMETERS OF GOLD COINS.**

Denominations.	Old Measure- ment. English Inches.	New Measure- ment. English Inches.
20 Yen .....	1-37	No alteration.
10 Yen .....	1-16	1-13
5 Yen .....	-97	-87
2 Yen .....	-72	-69
1 Yen .....	-55	-50

The increased number of gold pieces struck amounts to 3,251,942, while the decrease in the number of dies worn out is 1,023, this saving resulting from the altered diameters of the coins and the improved quality of the steel, combined with greater care on the part of the workmen.

Last year, to coin 2,190,256 pieces, 2,024 dies were used.

This year, to coin 5,442,191 pieces, 1,001 dies were used.

**SILVER COINAGE.**

The coinage of silver has been limited to the production of subsidiary coins, in which considerable improvements have been effected. The weight of each piece has been increased as follows:—

50 Sen... ..	From 193.0 grains to 208.00 grains.
20 Sen... ..	72.2 " " 83.20 "
10 Sen... ..	82.6 " " 41.60 "
5 Sen... ..	19.3 " " 20.80 "

The design of this coinage has been changed, so as to indicate the value in large Japanese characters on the reverse, whilst on the obverse the value has been introduced in Roman characters. The diameter of the piece has been adjusted as follows:—

**DIAMETERS OF SILVER COINS.**

Denominations.	Old Measure- ment. English Inches.	New Measure- ment. English Inches.
50 Sen .....	1-25	1-22
20 Sen .....	-93	-90
10 Sen .....	-72	-72
5 Sen .....	-61	-56

**COPPER COINAGE.**

The copper coinage, for the production of which the preparations are nearly completed, will consist of the following pieces, viz:—

Denominations.	Diameter. English Inches.	Weight. Grains.
2 Sen .....	1-25	220
2 Sen .....	1-10	110
1 Sen .....	-87	55
1 Rin .....	-62	14

The alloy will consist of:—98 parts; copper 1 part; tin 1 part.

On these coins also the value will be indicated in large Japanese characters on the one side, and in Roman letters and numbers on the obverse.

**GOLD & SILVER MELTING DEPARTMENT.**

During the current year the following weights of gold and silver bullion have been melted into bars:—

Denominations.	Ounces Troy	Operative Loss per Mille.	
	Ounces.	Parts.	Parts.
Gold ... ..	3,468,316	58	-05
Silver ... ..	6,429,144	94	1-68

The losses will be considerably reduced by the unreclaimed metal in old crucibles, ashes, &c.

**GOLD AND SILVER PREMELTED.**

Denominations.	Ounces Troy	Loss per Mille.	
	Ounces.	Parts.	Parts.
Gold ... ..	437,744	17	-87
Silver ... ..	2,607,972	39	2-74

The higher losses on premelted bullion result from the impure state in which bullion is sometimes sent to the Mint.

**COAL.**

Mr. Gowland, Chemist and Metallurgist of the Imperial Mint states of the coal of this Country:—

The amount of sulphur and of ash present in the coal used in the copper refinery, and in the various metallurgical operations of the Mint, being of great importance, determinations of these impurities have been made in several kinds of Japanese coal.

The following are the results:—The samples were dried at 100° cent before analysis:—

	(1.)	(2.)	(3.)	(4.)	(5.)
Ash .....	12.760	6.487	10.595	9.877	9.557
Sulphur...	-654	-435	-461	-588	-383

**THE WORKMANSHIP OF THE MINT.**

The accuracy of make of the coinage of the Mint may be judged by the following tables which furnish the results of the annual test assay, made on the 4th September by order of H. E. Okuma Shigenobu, Minister of Finance. The coins were indiscriminately selected for this purpose.

Denomination	Date of Selection.	Weight.	Standard Weight.	Deviation Allowed.
20 Yen.....	None.	...	...	...
10 Yen.....	Nov. 2, 1872	257.28 grs.	257.2 grs.	0.5 grs.
5 Yen.....	Dec. 18, 1872	128.4 "	128.6 "	0.5 "
5 Yen.....	Jan. 6, 1873	128.2 "	128.6 "	0.5 "
5 Yen.....	May 25, 1873	128.7 "	128.6 "	0.5 "
5 Yen.....	July 26, 1873	128.6 "	128.6 "	0.5 "
2 Yen.....	Dec. 23, 1872	51.25 "	51.44 "	0.25 "
2 Yen.....	June 27, 1873	51.4 "	51.44 "	0.25 "
1 Yen.....	Jan. 25, 1873	25.82 "	25.72 "	0.25 "

A thousand pieces of each description of coin were then selected from the various packets, and carefully weighed:—

Denomination.	Weight of 1,000 Pieces.	Standard Weight of 1,000 Pieces.	Deviation Allowed on 1,000 Pieces.
20 Yen—Gold	None.	...	...
10 Yen .....	535.72 oz.	535.83 oz.	0.1 oz.
5 Yen .....	267.91 "	267.91 "	0.075 "
2 Yen .....	107.1 "	107.1 "	0.05 "
1 Yen .....	53.58 "	53.58 "	0.025 "
50 Sen—Silver	433.30 oz.	433.33 "	0.15 oz.
20 Sen .....	173.34 "	173.30 "	0.1 "
10 Sen .....	86.64 "	86.66 "	0.05 "
5 Sen .....	43.32 "	43.33 "	0.05 "

**A HAPPY FAMILY.**

(Saturday Review.)

Anybody who has observed the manner in which the present Ministry, from the very first day of their entrance into office, have set themselves to conduct public business, will not be greatly surprised to find that the result has been not only to produce a dangerous degree of heat in the official machinery at various points of contact, but to throw some parts of it out of gear altogether. The disclosures of the last week or two as to the internal condition of various departments of Government and the relations between different classes of officials are quite unprecedented. Never before, we should think, has the administration of the country fallen into such a hopeless state of deadlock and bewilderment. The confusion, jarring, and discord, the personal squabbles and official antagonisms are such as to make one wonder, not indeed that extravagant contracts should be made off hand without anybody being responsible for them, or that large sums of money should be misappropriated

at pleasure by subordinate officials, but that anything like administration should be carried on at all. It would seem to be the merest accident that Mr. Scudamore did not carry his appropriations further, and that a great many other officials did not take the opportunity to supply their own, or what they chose to suppose to be the public, wants, by following Mr. Scudamore's example. It is not only in one, but in a number of departments, that we find disorder and anarchy. One day we have the War Office proposing a vote which the Treasury has refused to sanction. Another day it is the First Commissioner of Works who protests against the autocracy of the Chancellor of the Exchequer; and the Board of Trade and the Treasury are also on bad terms. The Secretary of the Treasury complains that important business is transacted behind his back, and the Chancellor of the Exchequer retorts that a Secretary who does not know the difference between a minute and a memorandum, and who presumes to think he has authority to write a minute, must not expect to be consulted. As for the poor Postmaster-General, he is left to moon about by himself, nobody taking any notice of him except the porter told off to take him his lunch, until suddenly a great scandal explodes, and then he is dragged forward as a scapegoat. Mr. Monsell happens to take a personal interest in the Savings Bank system, and he seems, in his innocence, to have imagined that his position would impart a certain weight to his recommendations on the subject. He sends in a long report to the Treasury, and finds some months afterwards by pure accident that Mr. Lowe and Mr. Scudamore have settled quite a different plan between them, without even sending him word that they had done so. It is easy to say, and it is certainly true, that no man of the least spirit would submit to be used in this way; but it should also be said that no Minister with the faintest perception of the obligations of official intercourse would expose a colleague to this humiliation, or tamper with the discipline of the public service by treating directly with subordinates, and ignoring the responsible heads of offices. It appears that the Chancellor of the Exchequer and the First Commissioner of Works are not on speaking terms, but it may be doubted whether their relations are any the less pleasant on that account.

These things, it must be remembered, are not mere slips by the way; they are part of a regular system of doing business. It seems to be taken for granted that an earnest Ministry can have no time for conventional civilities, and that in fact they would be rather derogatory to its serious character, as savouring of the levity of the unregenerate Palmerstonian period. It was Mr. Ayrton who hit upon the characteristic plan of substituting curt memoranda for the old style of letters, with their surplussage of "Sir" and "Your obedient servant," in the transaction of the work of his department; but in this he was only carrying out the spirit of the Ministry, whose perfect righteousness could brook no compromise with formal courtesy. If an abuse had to be checked, or an economy enforced, it must be done in the most abrupt and summary way, and without the slightest regard for the feelings of the probably innocent persons who were affected by the change. This was the error which Mr. Childers committed at the Admiralty. Whether or not his reforms were judicious and indispensable, it is impossible to defend the dogmatic haste and harshness with which they were enforced. And much the same thing has happened in almost every branch of the Government. The traditions of the public service led those who were connected with it to suppose that they would be treated with the sort of civility and consideration which is usual in the intercourse of gentlemen; but this, it seems, is a form of snobbishness which is no longer to be tolerated. It is enough for a "master among his slaves," as Mr. Ayrton once described himself, to be heard by the crack of his thong, and quill-drivers have no more right to look for civil words than architects and market-gardeners. If they get the market-price for their labour, let them be content. Some excuse may perhaps be found for Mr. Ayrton in the disclosures of the present week. Possibly, when he rushed out so savagely upon poor Dr. Hooker, he may himself have been suffering acutely from the treatment of the Treasury; and if Dr. Hooker had only taken his revenge on an under-gardener's boy, the circle would have been complete. We have always held that the appointment of Mr. Ayrton to an office for which he was so notoriously and grotesquely unfit showed a great want of consideration for those who were in any way associated with that department, and for the public interests involved. But nothing could be more indefensible than the dogged persistence with which Mr. Ayrton has been retained in office after he has taken every means to prove his outrageous incapacity. An odd contrast may be remarked between Mr. Ayrton's angry protest against the dictation of the Treasury on

Wednesday, and the meek and confiding acquiescence in the superior wisdom of Cabinet Ministers which he exhibited in regard to the Park Rules at the beginning of the Session. Of course there can be no room for question as to the principle on which subordinate officers must act. They are liable to be overruled by their superiors, and it is for them to consider whether, under the circumstances, they can conscientiously remain in office. If Mr. Ayrton has been snubbed, he should recollect that he laid himself open to it by taking upon himself to ignore the Treasury and to make a road without asking its consent.

In one of Sir Arthur Helps's books there is a proverb of his own invention, which we would earnestly recommend to the attention of the Government as a subject of meditation during the recess. It is this:—"Always make the four salaams every day to your 'friends'" meaning, of course, that it is dangerous to dispense with the usual forms of courtesy even with your most intimate companions. These forms are really not so idle as some members of the Government would seem to suppose. There is not much saving, either of time or of stationery, in dispensing with the "Sirs" and "obedient humble servants," and in cutting down orders to their hardest and curtest form; and the effect of such communications on those who receive them does not invariably tend to inspire zeal. It has been pleaded by a popular writer that Henry VIII. might have been a better man in a world without women, and it is possible that the present Ministry might succeed in transacting business more smoothly and pleasantly if they could be relieved from the embarrassment of having to make allowance for human nature. Mr. Gladstone and his colleagues have occasionally appeared to forget that public officials are their own "flesh and blood," as well as the masses of workingmen. It is impossible that a great body of officials of all grades, having many of them delicate and responsible duties to discharge as affecting each other, can be kept in good order, and in that easy state of mind which is indispensable to hearty work, without a scrupulous observance of the courtesies of personal intercourse. After all, it should be possible to be heroic without being rude and unmannerly.

AN International Congress of Orientalists will hold its sittings in the great amphitheatre of the Sorbonne at Paris, from the 1st till the 9th of September next. Its purpose is to create personal relations among men interested in Oriental affairs. The following subjects have been set down for discussion:—1. What portions of Japanese literature would it be most useful to translate at this moment, and what are the philological resources for undertaking the publication? 2. Would it not be useful to establish a uniform orthography for the transcription in Europe of all Japanese texts? 3. What are the documents of a nature to facilitate the understanding of the special scientific, literary, and industrial works of the Japanese? 4. What is the nature of the actual movement of Japanese civilization, and of its relations with European civilization? 5. What are the characters of Japanese art at the different epochs, and what method is to be followed for studying them? 6. In what measure has actual Japanese literature, strongly saturated as it is with European ideas, interest for Europe? and may it be thought that the progress realized by the Japanese savants will be of a nature to contribute to the scientific movement of the Eastern nations? The subscription for becoming a member of the Congress is fixed at 12 francs. The office of the Congress are 40, Rue de Rennes, Paris.

VEGETABLE PHYSIOLOGY.—Professor Joseph Bohm has communicated to the Academy of Sciences of Vienna some curious and interesting observations in vegetable physiology. He has found that young plants produced from seeds germinating in pure oxygen gas of ordinary density speedily die, although they continue to consume oxygen to as great an extent as when they are growing in atmospheric air. The young plants thrive, however, in pure oxygen when the density of the latter is reduced so as to represent only a pressure of about six inches of mercury, or when pure oxygen of ordinary density is mixed with four-fifths of its volume of hydrogen. Professor Bohm has also investigated the action of carbon upon the growth and greenness of plants, and found that an intermixture of only two per cent. of carbonic acid in the air in which plants are growing suffices to retard the formation of green colouring matter (chlorophyll), and that the process is almost or entirely suppressed in an atmosphere containing 20 per cent. of this gas. No germination of seeds took place in an atmosphere consisting of one-half carbonic acid. From his experiments the Professor concludes that either the atmosphere of our planet was much richer in carbonic acid than at present in early geological periods, especially during the formation of coal deposits, or the plants of those periods, in their relation to carbonic acid, must have been very differently constituted from their existing descendants.

## ARRIVALS.

Oct. 12, *Golden Age*, American steamer, Coy, 1,870, from Shanghai and Ports, October 4th, General, to P. M. S. S. Co.  
 Oct. 12, *Volga*, French steamer, Flambeau, 960, from Hongkong, October 4th, Mails and General, to M. M. Co.  
 Oct. 15, *Amoy*, Swedish barque, Hessing, 283, from Nicolaiweky, October 15th, in ballast, to Captain.  
 Oct. 16, *Nil*, French steamer, Samat, 1,010, from Hongkong, Oct. 9th, Mails and General, to M. M. Co.  
 Oct. 17, *Medina*, British steamer, Shaw, 688, from London via Kobe, General, to D. Sassoon & Sons.  
 Oct. 18, *Ariel*, American steamer, Newell, 1,736, from Hakodate, Oct. 15th, General, to P. M. S. S. Co.

## DEPARTURES.

Oct. 11, *New York*, American steamer, Furber, 2,119, for Shanghai and Ports, General, despatched by P. M. S. S. Co.  
 Oct. 12, *Relief*, American steamer, Corning, 795, for Hakodate, General, despatched by P. M. S. S. Co.  
 Oct. 14, *Menzaleh*, French steamer, Mourrut, 1,008, for Hongkong, Mails and General, despatched by M. M. Co.  
 Oct. 16, *Laokawassa*, American corvette, Capt. Macaulay, 1,800, for Shanghai, October 14th.  
 Oct. 16, *Bellona*, German steamer, Schultz, 708, for Foochow, October 15th, General, despatched by Simon, Evers & Co.  
 Oct. 16, *Morro Castle*, American barque, Jewett, 404, for New York, Oct. 15th, Tea and Curios, despatched by Walsh, Hall & Co.  
 Oct. 18, *Governolo*, Italian corvette, Capt. Accini, 1,000, for China.

## PASSENGERS.

Per American steamer *New York* for Hiogo.—Messrs. F. Low, E. Centle, M. McLagan, H. Busch, Mr. M. Ritchie, E. R. Smith, and 4 Japanese, and 75 in the steerage. For Nagasaki.—Mr. Mangum, O. L. Fischer, Mr. Short and child, and 40 in the steerage. For Shanghai.—Miss Tyler, Miss Wade, Messrs. Freque, E. C. Kirby, Mr. and Mrs. Collins, C. B. Collins, Genl. Bridge, Miss Winn, Dr. S. K. Brown, Dr. Van Haugh, Yong Wing, J. Rouse, Lieut. G. L. Atkinson, U. W. Hyde, A. C. Jones, Geo. Accles, Jos. C. Randolph.  
 Per French steamer *Volga*, from Hongkong.—Mr. and Mrs. De-wars, Mr. and Mrs. Berger and infant, Mr. and Mrs. Clarke and child, M. Isoudo, Messrs. Hakamura, Yada, Nourakami, Suise Muro, H. Caset, M. Katuro, Chisuma, Carada, Madame Rosenthal, 11 Quarter-masters of French Marine, M. Guillemé, and H. Asama.  
 Per American steamer *Golden Age*, from Shanghai. For Yokohama.—Mr. and Mrs. F. C. Hashell, Rev. Pallasy, H. Thorburn, Wm. Hunter, Wm. Tanaba, 5 Japanese, 3 Europeans, 9 Chinese and 67 Japanese. For America.—E. Chaplin.  
 Per French steamer *Menzaleh*, for Hongkong.—Messrs. Bell, Lance, and Gumsberg. For Saigon.—Messrs. Simon and Dubais. For Batavia.—Mr. E. Hayami. For Marseille.—M. Chattilini.  
 Per French steamer *Nil* from Hongkong.—Messrs. Cada, H. E. Terashima, Vichi, Kauley, Okahossi, P. Sarda, Mitoys, Nakashima, Kiraki, Guiraud, J. M. Sakon, and Coumay.  
 Per P. M. S. S. *Ariel*, from Hakodate, October 15th: Lady Parkes Governoress, 5 Children and 8 Servants, Captain Blakiston, Captain Bridgford, Mr. Dairoku and Wife. Steerage.—Mr. Rouch, 50 Japanese and 4 Chinese.

## CARGOES.

Per American steamer *Golden Age*, from Shanghai.—  
 Treasure 40 packages, ..... Value \$846,258.75.  
 Per French steamer *Menzaleh*, for Hongkong:—  
 Silk..... 394 bales.

## REPORTS.

The American steamer *Golden Age* reports left Shanghai, Oct. 4th, 9.19 a. m., clear weather with fresh N. E. winds, passed U. S. flagship *Hartford*, Oct. 5th, 8.30 a. m., U. S. ship *Tantic*, 9.15 a. m. same day Company's steamer *Costa Rica* Oct. 6th, 12 a. m. all bound for Shanghai; arrived in Nagasaki, 8.38 a. m. same day. Left Oct. 7th, 12 a. m. rainy weather with N. E. winds, exchanged signals with Co's steamer *Oregonian*, 10.28 a. m. same day, for Nagasaki; arrived in Hiogo, October 8th, 5.36 p. m. Left again, October 10th, 7.35 p. m., pleasant weather; passed an unknown steamer bound southward, at 7.50 a. m., Oct. 11th; and Company's steamer *New York*, 11.50 p. m. same day, and arrived in Yokohama, Oct. 12th, 7.23 a. m.

The French steamer *Nil* reports pleasant weather during the passage.

The British steamer *Medina* reports strong easterly winds during the passage.

The P. M. S. S. *Ariel* reports left Hakodate on the 15th October, at 12.30 p. m.; throughout light winds and smooth sea. Arrived at Yokohama October 18th, at — a. m.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, OCTOBER 18TH, 1873.

THE STEAMERS *Volga* and *Nil* from Hongkong arrived here on the 12th and 16th inst. respectively. The latter, only, conveyed London Mails of the 29th August.

The *Menzaleh* sailed hence on the 14th inst. for Hongkong.

The *Medina* (str.) arrived on the 17th inst. from London *via* Kobe.

The *Golden Age* brought \$846,258.75 treasure from Shanghai.

The *Menzaleh's* Silk cargo consisted of 394 bales.

**COTTON FABRICS.**—The continued sales of *Shirtings* have reduced stocks to an unusually low amount and supplies are unequal to the pressure of the present demand. During the closing week the sales reported exceed 40,000 pieces, and settlements to arrive, it is understood from China, have been concluded of some 22,000 pieces of 8 and 8½ lbs. weights at good prices. Some trifling sales of *T-Cloth* have been made at continued low rates, and *Black Velvets* have been disposed of at a somewhat easier figure. A little business has been done in *Taffachelass*. The market for Cotton Fabrics has undoubtedly acquired a more vigorous feeling, but without as yet perceptibly affecting any other branch than that of *Shirtings*, which from paucity of stocks and diminished shipments, joined to the opening of the usual market at this season, are likely to go to higher figures and to afford remunerative returns.

**YARNS** have been in less favour during the past week and sales reported do not exceed 370 bales, rates being but little changed.

**WOOLLENS AND WOOLLEN FABRICS.**—We are unable to record any better feeling in the market for these goods. The demand has again fallen off and no change for the better can be reported in prices.

**IRON AND METALS.**—The stocks of both *flat* and *round* iron are again rapidly accumulating, and prices have a decided tendency downwards. In *nail-rod* there has been no change. For *hoop* iron there is a small demand, but stocks are inconsiderable:—*sheet* is difficult of sale. The settlements consist of 100 tons of *flat* and *round* iron; 150 tons of *nail-rod*; and 50 tons *hoop* at quotations subjoined.

**SUGAR.**—We have no change to report in the state of this market, which continues firm at our last quotations.

There have been no sales and no arrivals.

**PUBLIC AUCTION.**

The Undersigned has been favored with instructions from

**H.E. KANDA TAKAHIRA,**

*Kami of Hiogo Ken (Governor of Hiogo),*

TO SELL BY

**PUBLIC AUCTION,**

NEAR THE EASTERN CUSTOM-HOUSE,

AT 2 P. M.,

On Saturday, 1st November,

**OIL**

**PRESSING MACHINERY,  
COMPLETE.**

Consisting of:

- 1 Steam Engine and Boiler of 6 H.P. nominal, complete, and with Double Set of Grate and Bars.
- 1 Set of Edge Runners and Bed-stone, with latest improvements.
- 1 Set of Seed Crushing Rolls, complete.
- 1 Steam-Jacketed Heating Kettle.
- 2 Self Acting Hydraulic Pumps and Presses equal to a pressure of  $1\frac{1}{2}$  tons per square inch—say 100 tons.
- 1 Set (8) Leathered Horsehair Mats.
- 1 Set (16) Woollen Meal Bags.
- 1 Set of Spare Leather for Hydraulic Presses, and 2 Sets for the Pumps.
- Leather Belting to drive the Various Machines.
- 1 Oil Pump for lifting the Oil from the underground to the Clearing Tank.

The above is capable of producing 2,500 to 3,000 lbs. of Oil per day.

The Drawings and Specifications can be seen at the office of the undersigned, who will give all further information regarding this machinery.

## MISCELLANEOUS.

## KEATING'S COUGH LOZENGES.

**THIS UNIVERSAL REMEDY** now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may be found on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes.

## KEATING'S BON BONS OR WORM TABLETS

**A PURELY VEGETABLE SWEETMEAT**, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL OR THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles of various sizes by all

Chemists.

**CAUTION.**—The public are requested to observe that all the above preparations bear the Trade Mark as herein shown.

THOMAS KEATING, London  
EXPORT CHEMIST AND DRUGGIST.

Indents for pure Drugs and Chemicals carefully executed.

## THE GREATEST WONDER OF MODERN TIMES! HOLLOWAY'S PILLS.

**THESE** famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

## THE GREAT CURE ALL! HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diphtheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

## THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1872, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873.

52 ins.

## Goodall's Quinine Wine.

(Prepared with Howard's Quinine.) Highly recommended by many eminent Physicians, to be the best and cheapest Tonic yet introduced to the Public, and has proved an invaluable and agreeable Stomachic to all suffering from General Debility, Indigestion, and Loss of Appetite. In large Bottles, at One and Two Shillings each. Prepared by.

GOODALL, BACKHOUSE & CO., LEEDS, ENGLAND.

*The Food Journal*.—An honest and useful preparation. *The Anti-Abolition Review*.—A valuable Tonic, and has become popular from its intrinsic goodness. *Arthur Hill Hassell, M.D.*—We have tested this preparation, and can recommend it for its purity. *The Lancet*.—The samples of Goodall's Quinine Wine we have examined have been of excellent quality, and remarkable for unprecedented cheapness.

August 16th, 1873.

### CAUTION.

*Jars and Bottles should invariably be destroyed when empty, to prevent the fraud of refilling them with native productions.  
Goods should always be examined upon delivery, to detect any attempt at substitution of articles of inferior brands.  
Every Cork is branded with Crosse & Blackwell's name.*

**CROSSE & BLACKWELL**

PURVEYORS TO THE QUEEN.

SOHO SQUARE, LONDON.

At the Paris Exhibition of 1867, THREE Prize Medals were awarded to CROSSE & BLACKWELL, for the marked superiority of their productions.

Yokohama, May 27, 1872.

12ms.

**SHIRTS—ENGLISH MAKE.**

**ALEXANDER GRANT & Co.,**

5, OAT LANE, WOOD STREET, LONDON,

**SHIRT MANUFACTURERS,**

Their well known makes supplied to the WHOLESALE and SHIPPING Trades only. Price Lists on Application.

**MANUFACTORY—LONDONDERRY.**

Yokohama, September 27, 1873.

26 ins.

**TO ALL BOOKSELLERS AND BOOKBUYERS.**

**NOTICE.**—The following CATALOGUES of Messrs. CASSELL, PETTER, & GALPIN'S PUBLICATIONS are now ready, and may be procured from every Book Store:—

1.—**CASSELL'S EDUCATIONAL CATALOGUE**, containing a List of Works suitable for all classes of Schools, including these Books which have been adopted by School Boards in England and in the Colonies, as well as by other Educational bodies.

\* \* This List also supplies information as to CASSELL, PETTER, & GALPIN'S specialities in the way of Material for School use—such as—

Colour Boxes, Mathematical Instruments | Microscopes, Drawing Instruments, &c.

2.—**CASSELL'S COMPLETE CATALOGUE**, containing a List of the following Works issued by CASSELL, PETTER, & GALPIN:—

Fine Art Volumes, Children's Books, Educational Works, Serial Publications, Dictionaries, Religious Literature, Bible, History, Natural History, Poetry, Travel, Hand-books, and Miscellaneous.

3.—**CASSELL'S CLASSIFIED LIST OF BOOKS**, containing a complete List of CASSELL, PETTER, & GALPIN'S Publications, classified according to their value, from 6d. up to Twenty Pounds.

\* \* Copies of the above Catalogues can be obtained on application at the Office of the "China Mail," Hongkong.

**FOR SALE.—ELECTROTYPES OF WOOD ENGRAVINGS**, to the number of 70,000. Full particulars on application to CASSELL, PETTER, & GALPIN, Ludgate Hill, London.

CASSELL, PETTER, & GALPIN, LONDON, PARIS, AND NEW YORK.

27th September, 1873.

8ins.

### CAUTION.

**BETTS'S PATENT CAPSULES.**

—:O:—

The public are respectfully cautioned that BETTS'S Patent Capsules are being Infringed.

BETTS'S name is upon every Capsule he makes for the leading Merchants at home and abroad, and he is the ONLY INVENTOR and SOLE MAKER in the United Kingdom.

Manufactories:—1, Wharf-road, City-road, London, and 1, Boulevard, France.

Yokohama Oct. 3, 1872.

## BIRTHS.

At Kaisegakko, Tokio, on the 10th October, the wife of  
ERWIN KNIPPING, Esq., of a Daughter.

At Yokohama, on the morning of the 8th October, the wife  
of Mr. C. V. MARTINHO MARQUES, of a son.

On the 13th instant, at No. 2 Bluff, the wife of A. J. WIL-  
KIN, Esq., of a daughter.

On the 17th instant, at No. 61, the wife of Mr. C. J.  
FRISCHLING, of a Daughter.

## Summary.

SINCE the publication of our last summary the following  
mail arrivals and departures have taken place. Arrivals:—  
*Bombay*, on the 9th instant, from Hongkong; *Great Republic*,  
on the 10th instant, from San Francisco; *Volga* and *Nil*, on  
the 12th and 16th instant, respectively. The departures have  
been the *Menzaleh*, for Hongkong on the 14th instant, and the  
*Bombay* for the same port on the 21st.

THE prospects of trade, in which we announced a considerable  
improvement in our last Summary, continue moderately favour-  
able. A tendency to lay in stocks—to some extent, no doubt,  
speculative—has brought a large number of native buyers into  
the market who have purchased certain staple articles very  
freely and have imparted a firmer tone to business in imports.  
The stocks of Shirts have been largely reduced by recent  
transactions and it has been found in some cases advantageous  
to import from Chinese ports in order to allay the pressure of  
immediate demand. Silk is eagerly purchased and is gradually  
attaining higher prices. Tea is in less favour and in the ab-  
sence of a brisk demand is likely to afford some advantage to  
buyers.

THE remains of H. E. Sawa Nobuyoshi, Minister Elect to  
the Court of St. Petersburg, were interred on the 7th instant, at  
Yedo, in the presence of the relatives of the deceased, the  
Prime Minister and other officials of the country and the vari-  
ous Representatives of Foreign Powers. The Japanese cere-  
monial was observed on the occasion.

SANJO, the Prime Minister of Japan has had a serious attack  
of illness which affords grave reason for apprehension.

THE Dowager Empress of Japan visited Yokohama on the  
18th instant, and attended by her suite, drove through several  
of the streets of the settlement.

MR. DE LONG, Representative of the United States in Japan  
has had an interview with H. M. the Mikado at which he took  
formal leave and introduced his successor, the Hon. J. A. Bing-  
ham, to His Majesty. We publish translations of the addresses  
made on the occasion.

A NOTIFICATION published by Mr. Oye Taku on the subject  
of a registration of Japanese in foreign employment has been  
withdrawn. The text will be found among our Notes.

A MARRIAGE has been celebrated at Nagasaki between a  
Chinaman, a native of a Singapore and a British subject, and  
a young Japanese girl. This is said to be the first mixed-mar-  
riage ceremony performed in Japan, and has received the express  
sanction of the Japanese Government.

THE Japanese silk-merchants, availing themselves, of the  
briskness of the demand, have notified to foreigners that the  
allowance of 1 lb. per bag on silk will be reduced to a  $\frac{1}{2}$  lb. in  
future, this being its true weight. The merchants allege that  
the further allowance of  $\frac{1}{2}$  lb. is necessary to correct the loss  
arising from the desiccation of the staple *in transitu* and in the  
London warehouses, and a meeting will be held this day to obtain  
an expression of opinion and to secure, if it be possible, an  
united action on the part of foreign purchasers.

A BOAT-RACE which has for some weeks past been eagerly  
looked forward to, took place on the 9th instant. A prize of five  
silver cups was offered to the winning crew by Howard Church  
Esq., and was competed for by crews of Englishmen, Americans  
and Scotchmen. The race was won by the Scotch crew who  
distanced their nearest rivals by a length-and-a-half.

AN intimation has been received by Mr. Consul Robertson  
that the Royal Humane Society has been pleased to award its  
medal to Mr. Dowson in consideration of his courageous at-  
tempt to rescue a boat's crew of Japanese coolies from drown-  
ing in February this year.

THE attention of the public and of the insurance offices has  
been called to a quantity of American petroleum which has  
been recently introduced into this country of a lower standard  
than is compatible with safety. Some specimens have been  
found to give off a gas which exploded when the oil was heated  
to 85 degrees.

MR. MARSH gave the third of his Public Concerts on 8th  
instant to a very full house. The performance was on the  
whole successful.

THE Athletic Association has made preparations for its forth-  
coming Autumnal Sports which are to take place next month.  
The Society has spent a considerable sum in laying down a run-  
ning path and in building a grand-stand, dressing rooms for the  
members, etc.

No intimation has been yet received of the opening of the  
Simonseski to foreign trade.

A PAPER by the Rev. Mr. Edkins was read before the Asiatic  
Society of Japan on the 8th inst. His views as to the possible  
modifications of the Japanese language were considered unwise  
and visionary and failed to meet the approval of the meeting.

THE Kaisai-Gakko or Chief Educational College of Yedo was  
opened by H.M. the Mikado on the 9th instant. We publish in  
our columns a full account of the proceedings on this occasion.

It is stated that Mr. Kirby, defendant in the suit of Devine  
v. Kirby has lodged an appeal against the decision of Acting-  
Assistant-Judge Hannen.

A CRICKET match between "Land" and "Water" was played  
on the ground of the Yokohama Cricket Club on the 15th  
instant, and ended in the defeat of the former by an over-  
powering majority.

A FRESH examination of the *samurai* who committed an un-  
provoked attack upon Inspector Blockley of the Government  
Railway Department has recently been held in the presence of  
H. B. M. Vice Consul and several officers of the Department at  
Yedo. The result is not yet known.

THE "Club Germania" gave its first dramatic representation  
of the season on the 18th instant. The performance was in  
every respect successful.

EXTENSIVE negotiations for rice shipments are said to go  
forward in the southern provinces, and the scarcity of the crop  
in Java is supposed to favour the prospect of remunerative  
returns in European markets.

THE weather during the past fortnight has been more rainy  
than is usual at the present season.

## RECONSTRUCTION.

IT would be curious and interesting to know what are the views held at this moment by the most thoughtful and sagacious Japanese statesmen, respecting the existing polity of this country; but of one thing we may safely assure ourselves, which is that they cannot possibly be satisfied with it. Great as is the necessity for an administrative reform which shall combine the forces of the different departments and compel them to more harmonious action under one head, this necessity is as nothing compared with that of reconstituting society upon some political basis strong enough to bear the weight of the future superstructure which it is the object of the reformers to rear upon it. In making the few following remarks upon this weighty subject, we shall begin by frankly acknowledging the great difficulties which the treatment of it presents to Europeans as ignorant as we are of that deposit of ideas on which the old polity rested, and by which its stability, at least up to the time of the Revolution, was assured. Of these foundationary ideas we know little more than the outline, and there are perhaps not half a dozen Europeans living who could throw more than a very dim light on them. We know, of course, pretty well, what were the relations of the two foci of the ellipse which may be held metaphorically to have represented the respective positions and forces of the Mikadoate and the Shogunate. But we know very little of what has become of the fragments of that vast body of aristocracy which was dismembered by the great convulsion of 1868. We do not know how many of these fragments, or—to pursue our astronomical simile—these asteroids, fell into and were absorbed by the great central body. We do not know how far those which were not so absorbed are liable to the attraction of other and antagonistic forces, and so few are our data for determining the value of these unknown quantities, that we can barely form a hypothesis, much less a theory, of the whole system.

And yet it is impossible to imagine that the condition into which affairs settled down—the rough working order into which they were brought by the very necessity of getting them into working order—can be otherwise than provisional. Revolutions do, apparently, like cyclones, travel according to certain laws, some of which have perhaps been dimly apprehended by political philosophy. But he would be a bold man who would venture to predict, in a country like this, what edifices have been destroyed beyond the power of reconstruction, what boundary lines have been irrevocably washed away by the fury of the waves, or how far those waves have permanently gained upon the shore lines which hitherto confined them. Yet, granting all this uncertainty, we shall hardly do wrong in making some few general reflections upon the question at issue, and offering them to our foreign or native readers for what they may be worth.

In the first place, it must be greatly doubted whether such an entire destruction as we have seen in this country, of the old feudal system, and the aristocratic foundations on which it rested, was not far too sweeping a measure for a nation which had not, at least at that time, the slightest tendency to democratic institutions as such. We say as such, because though the revolution may have marched on parallel lines with popular institutions, any such ideas as those known to us as democratic could never have entered into the minds of the people of this country. For, what has this sweeping measure left between the Throne and the people? A bureaucracy alone, which may be a force, indeed, but is in no sense an institution. And what kind of a force is

it? Surely rather one of repulsion than of attraction. It is purely mechanical in its operation; it breeds no respect, much less any veneration; it appeals to no national sentiment and reposes on no historical tradition; it neither moves the heart nor excites the imagination. The old aristocratic institutions had precisely the opposite effect, and though the real unification of the Empire was impossible so long as, in virtue of them, each Daimio had the almost sovereign power which inhered in his rank, they were still a bulwark of prodigious strength to the Throne, inasmuch as popular discontent could expend itself with almost any extent of fury upon the representatives of any given clan or daimiate, without the slightest ripple of this discontent breaking at the foot of the Throne itself. Under such circumstances the Son of Heaven had but to make, in one of those time-honoured formulæ which rather exalted his office than acknowledged a fault, the unforced admission that the eternal principles of government had somewhere or somehow been neglected, to rebuke all those concerned in the dissatisfaction, and to throw all the blame of it upon them, whether they were the authors or victims of it. And in view of the superstitious reverence in which his person and office were held, this admirable expedient of averting from either the displeasure of the people, was quite consistent with a stable though an unprogressive government. It is quite true that no people who had once admitted into their minds the ideas of rights and liberties as belonging to themselves, and of responsibilities as inseparably attaching to the Head of State, could long be satisfied with such a mode of response to their appeals. But such ideas were unknown here, possibly are unknown to this day, and though one of the problems of the future will assuredly consist in having to deal with them, it is easy to understand how the old polity cohered perfectly well during the period of their non-existence. But these superstitious ideas of reverence are evaporating under the heat produced by the increased intellectual friction of the day, the foundations of the Throne have descended from heaven to earth, and that Throne requires supports and guards unnecessary to it in earlier times. The unscientific Parsee may worship the Sun, but the philosopher whose telescope and spectroscope have convinced him that it a vast globe of minerals emitting hydrogen gas in a state of combustion, and probably of much the same constitution as our own Earth, is little likely to do so. The presumable theory of the Government is that the bureaucracy, which constitutes its machinery, is the means by which the mind and intentions of the Sovereign are made operative upon the condition of the people. But this involves the reflection of the errors of the Government upon the person and office of the Sovereign, and contravenes the safe and preservative theory so useful in our own constitution that "The King can do no wrong." It cannot be well that errors such as must be made by the wisest councils should be attributed to the Sovereign, and yet this is what actually takes place in Japan at this moment, the existence of the highest council notwithstanding.

The two causes which are most likely to produce discontent in this Empire are the heavy taxation and the excessive number of the officials employed in the machinery of Government. In this case Japan presents at this moment a striking analogy with the condition of France before the Revolution of 1789. The first of these causes may be modified gradually as more enlightened commercial legislation, the abolition of those monopolies which prevent the free development of trade, and the cessation of expensive experiments, give relief to the Treasury. The

country has neither made nor saved as much money as it might have made and saved, and it has spent, and is even now spending, more money than it can afford without distress. Yet there is no great danger in this, provided the fact is recognised, and financial reforms are made in order to bring the expenditure down to the level of the revenue. The excessive employment of officials, however, is a more serious evil, and threatens to neutralize many of those benefits which a wiser commercial policy would bring in its train. The poverty of this country, a fact which cannot be too constantly insisted upon as an incentive to wiser commercial legislation, has undoubtedly been caused by the enormous number of men who constituted the retinues of the Daimios, and who were not only not producers adding to the wealth of the country, but were too often destroyers,—not alone idle consumers of the fruits of other men's labour, but agents in the destruction of wealth, and too often, perhaps, of the very instruments by which wealth was created. These men are still the curse of the country, though they have transferred their allegiance from their old masters to the Sovereign. If employed, they do little more than harm; if unemployed, they are isolated atoms of revolutionary discontent, liable to combine under circumstances favouring such combination, and to thwart the work of the Government at every turn. They fasten on to every new enterprise by which wealth might be created or saved, and may be compared to those *entozoa* the existence of which in the animal body is wholly incompatible with health and vigour. We have suggested a comparison in this respect with France before the Revolution, and the best authorities agree that more harm was done to trade and agriculture by the wretched ambition which there took the form of the passion for place, than even by the repressive operation upon trade of the French guilds, or, what was worse still, the immense taxation of the people, and the exemption from that taxation accorded to the nobles and placemen.

To these existing causes of discontent, whatever be their actual force, we must add the effect of the new ideas, derived from external sources, which are beginning to germinate in the national mind, and which, though they may be sound and excellent in many respects, are so far revolutionary, that they are suggestive of change and unsettle the faith of men in the existing order of things. Nor must it be supposed that even an entire success on the part of the Government in raising the condition of the country by wise reforms, and the extension by educational measures of the horizon of the people's thought, are necessarily sources of security and guarantees of peace. To recur to the analogy of France before the Revolution, it must be abundantly clear to any student of the causes and antecedents of that vast event, that the very means taken to relieve the people were precisely those which excited them to revolt. The fiscal avidity of the guilds, the vexations incident to the collection of the *taille*, the injustice and insensibility of the land-owners, the ambition of the Parliament, the rapacity of the rich, the lavish expenditure of preceding reigns and the odious means used to raise the money necessary for it, the malversation of funds destined by the Government, or, we should more properly say, by the King, for Public Works—all these evils, denounced in words put by men as wise as Turgot into the mouth of the King himself, were distinctly enumerated to the people as those which the Government was instructed and intending to abolish, and this enumeration, so honest and benevolent, served only to stir up in the minds of those to whom it applied, a burning sense of their wrongs and of hatred

against the authors of them. It cannot be well that there should be no bulwark against which feelings of this nature, should they arise with the general march of affairs, should first beat, before touching the steps of the Throne.

We have on two or three occasions spoken of the danger to this country arising from its proximity to America, and we must not omit mention of this as among the facts which a wise statesman will bear well in mind in reconstructing the political fabric in this country. America is the land of free institutions, but also of dangerous experiments; of progress, certainly, yet of shallow legislation, and the domination of the wise by the ignorant. Turn and twist the question as we may, it resolves itself into this, and while we say it in no spirit of unkindness or detraction, it must be acknowledged that there is more in the present condition of affairs in that country to make us fear than hope. The art of government—at once the noblest and most difficult of arts—is there handed nominally over to the people, but is in point of fact, taken out of their hands by the most ignorant and unscrupulous class of men that ever usurped the functions and controlled the machinery of government. But the prosperity of the country arising from its enterprise and resources, the religious character of its people, the admirable spirit of the laws they have inherited, their own law-obeying instincts, their freedom from poverty or the ills arising from a pressure of population, their material comfort, and the almost boundless space over which the discontented experimentalist can roam, combine to cloke the inherent defects of a system, the conditions of the success of which have not been fulfilled by any society of men the world has yet seen. But the young Japanese who are imbibing American ideas, either at first or second hand, cannot but be moved by such freedom and such prosperity, and will infallibly reproduce in this country the ideas in which, as they conceive, they have their origin. "He who will go about to persuade a multitude," says Hooker "that they are not as well governed as they ought to be, will never want attentive listeners, nor grounds on which he can enforce his teaching." To these young men the old aristocratic institutions of the Empire will appear unredeemed follies, and they will justly rejoice, as, indeed, we do, at their fall. But they cannot be expected to know, as they have had no opportunity of seeing, the support given to a Throne by a wisely constituted aristocracy, and may not realize the necessity for supplying the gap which exists at present in this country between the Throne and the people. The Ambassadors, however, who have lately returned from Europe, have seen there how compatible such institutions are with the freedom of the people, with all that is wisest in Government, and most stable in a political fabric. They will have seen in England that an aristocracy can exist which is at once active, useful, and unambitious, in any sense in which its ambition can injure the Throne, while this activity and usefulness are turned to the best purposes of government.

The legitimate object of an aristocracy is to preserve the people from the oppression of that Throne of which it is yet the best, most solid, and most legitimate support, and to guard them against the calamities of a revolution; and the chief argument for its maintenance is that the privileges established apparently in the sole interest of those who possess them, do constitute the best security that can be found for the tranquillity and prosperity even of those who are without them. It is quite true that the old aristocracy of this country presented, for the most part, a type of the weakest and most decrepit inanity, the best proof of which is afforded by the circumstances which

attended its fall,—circumstances surrounded, indeed, with an illusory halo of patriotic magnanimity, but declaratory of an actual weakness to which history affords no parallel. But its ruins afford perfectly legitimate, possibly the only legitimate materials out of which it could be reconstructed, and it is in that direction that we must look for its re-appearance, at however distant a date.

The general reflections which we have made on this subject, and the analogies we have introduced, have been suggested by the history of nations far more highly developed in their political and social institutions than the Japanese,—nations which have risen to heights, and sounded depths, of which the mind of this people is utterly ignorant. But human nature, its wants, passions, follies, its strength and weakness, is the common measure on which all such reflections and analogies must be based, and the permanent quantity of which the science of government must take chief cognizance in the solution of its vast problems. It is to the knowledge of this human nature that such speculations as these, desultory and defective as we frankly acknowledge them to be, are addressed; and it is conceivable that they may have some slight value at a time when the statesmen of this country must be debating over institutions examined in the large spheres of their recent experience, and the lessons taught by which they may be seeking to adapt to the future wants of this country.

The destruction of the old institutions of Japan was sudden and complete, and the future prosperity of the country depends upon their reconstruction on a basis, and in a form, in harmony with higher aspirations and more complex conditions. The lessons taught by history will not, under these circumstances, be disregarded by wise men.

#### THE OPENING OF THE NEW POLYTECHNIC SCHOOL BY THE MIKADO.

THE new buildings erected for the Kai Sei Gakko, or Polytechnic School, which we have described elsewhere, were begun in April last, and were finished in August. The Mikado had consented to open the new edifice in person, and the day fixed for the ceremonies was Thursday, the ninth day of October.

The most elaborate preparations had been made to render the opening of this, the finest building devoted to educational purposes in Japan, as grand and impressive as possible. The front of the edifice was festooned with evergreens decked with gay flowers. In every window of the second story, flags of Japan were displayed with those of the four leading nations of civilization, Great Britain, the United States, France and Prussia; a high flag-staff was erected from which the national flag of Japan floated, and another large one, having the Chinese character *kai* (civilization), printed upon it, was hung from the balcony above the portico. An arch of evergreens, filled with artificial flowers, was erected within the gate. Every blade of grass appeared to have been rooted up from the street. The ditches were cleaned and the streets swept along the entire road from the school to the Palace, a distance of several miles. So smart and trim did everything look, and such appeared to be the beneficial sanitary effects of the Mikado's coming that the foreigners living in the dirty wilderness of Tokei began to wish that the Mikado would pay frequent visits through all the unwholesome streets of the capital.

Thursday, October 9th, was fair in its coming, and delightful in its presence. It was one of those lovely days which the dweller in Japan appreciates most after long weeks of rain. Lest the scholars should possibly be late,

since they had about one hundred yards to walk, they were awakened at four o'clock a.m.

The "politeness of Princes" was in arrears of twenty minutes; the Emperor was to have been at the school gate at 8 a.m. At 8.20, two troopers, the advance of the Mikado's body-guard, swept round the watched corner, and with reversed lances rode towards the end of the avenue. A moment or two more, and all the pennons of the company were in sight. The Imperial carriage occupied the centre. The students of the Polytechnic School and School of Foreign Languages were ranged along the street on either side, the foreign Professors stood at the south end of the entrance, and the officers of the Education Department at the north. Within the grounds, stood the Japanese high officers, and the Mikado's band of twelve musicians, having wind instruments, with which they saluted His Majesty and tortured the foreigner's ears for the space of several minutes. All the Japanese officials, from the Minister to the gate-keeper, were in foreign costume, and it was remarked that they looked better in dresscoats, high hats, and white neckties on this occasion, than they usually do.

The Emperor, having alighted from his carriage, entered the building and sat down in the reception room prepared for him. Mr. Tanaka, Acting Minister of Education, then advanced and presented His Majesty with copies of the plan of the buildings and the order of studies. Mr. Ban, the Chief Director of the Imperial College, handed the key to His Majesty, who then read a speech in which he expressed his high gratification at what had been done, and his great pleasure at being present on the occasion of opening the Polytechnic School; expressing his belief that as education was the true, and the best means of elevating the people and developing the nation, he desired that such education as the Polytechnic School was designed to foster, should be encouraged and stimulated by his officers, who should explain his wishes to all the people. Prof. David Murray, the Chief foreign officer of the Mom Bu Sho, then made a very appropriate speech, congratulating His Majesty, and pledging his best endeavours to advance the interests of education in Japan.

The principal exercises of the day were to be held in the amphitheatre or chemical lecture room, which lies at the east end of the central wing. In this room the students of the Polytechnic School were to recite and perform experiments before His Majesty and officers. A procession was formed, and proceeded to the room in which chairs had been arranged, that for His Majesty being made of fine gold-lacquered wood, with cushions of gold brocade.

The Emperor, on his visit to the old school buildings in May of the previous year, was dressed in the old Kiôto costume of loose wide robes of crimson and white silk, with a head dress of black and gold. On the present occasion, he wore a gorgeous full-dress suit of European pattern. His tightly-fitting surcoat was of dark cloth, almost hidden under a stiff mass of gold embroidery. It extended a little below the hips. A gold-embroidered belt clasped his waist, and sustained a gold-mounted sword and scabbard. His hair was cut and parted in foreign style, and a full moustache darkened his upper lip. His trowsers were of fine white stuff, with wide stripes of gold embroidery down the sides, and were held beneath his boots by straps. His cocked-hat was very long, with white down or feathers in the middle, and a row of chrysanthemums, worked in gold, adorned either side. His *tout ensemble* was excessively gorgeous, almost dazzling. He walked with grace and ease, and throughout the exer-

cises seemed to observe everything with an intelligent interest. At his left sat the Prince Fushimi no Miya. Among the Japanese magnates present, we noted Sanjo, Prime Minister; Goto, the head officer of the *Sa In*; Itaraki, Oki, and Eto, counsellors, or *sanji*; Yamaoka, the chief officer of the Ko Bu Sho; Saigo the hero of many battles in the civil war, and now acting Commander-in-Chief; and several other officers of the third and fourth rank, besides many of the fifth and sixth. None of the foreign ministers were present.

The students of the English department came first in order. Saito, a young student in the Legal section, who has studied English only two years and a half, read in a clear voice, and without a single error in pronunciation, a well-written essay on the idea of Law, as understood by civilized nations. After reading his essay in English, he translated it into Japanese. Three students, Hasegawa, Mambu and Sugiura, from the Scientific section, then made nine or ten experiments in chemistry and natural philosophy. Some of these required careful manipulation, but all were performed with perfect success, with a single exception, which could not be called a failure. The French students followed with different experiments, which were done in a manner that reflected credit upon their able instructor Prof. X. Maillot. The English students have had one lecture and two recitations in chemistry and physics respectively for over a year, the French for about eight months, and the German for less than six. In place of the students, Dr. Ritter, the German professor of chemistry, made several fine experiments. Everything passed off, without any failures or accidents, except the letting fall of a bottle of ammonia-water by a not over-careful assistant. The escape of the pungent gas into the room caused, for a time, a general reddening of faces, tingling of nasal nerves, and pulling out of handkerchiefs among the Japanese officers in one quarter of the room, but no harm was done to any one.

The Emperor rose after these performances, and proceeded to the reception room, where he rested awhile. He next visited the library, apparatus room, &c., inspecting the books, maps, instruments, &c. The class-rooms were rather too freshly redolent of lacquer and varnish to be inspected fully, though these were looked at. Gymnastic exercises, by the students, then took place in the Gymnasium grounds, His Majesty occupying a covered seat while watching them. These over he walked to his carriage, entered it, and returned to the Palace.

The foreign professors, invited guests, Japanese high officials, and all the officers then proceeded to partake of a collation in the refectory. The floral decorations here were in good taste, and the Hall wore a gay and bright appearance. About one hundred gentlemen sat down at the board, and after partaking of the fruits, &c., all rose to drink to the health and prosperity to His Majesty, the Mikado. After the collation, the company broke up, and the buildings were thrown open to public inspection. Many thousands of people visited them during the day.

The smooth working of all the parts of the programme reflects great credit upon the Directors and their assistants, and especially upon Mr. Tanaka, the Acting Minister of Education who had the chief direction of affairs. Yet we would venture to suggest, that when so many foreigners are present on such occasions, a foreign, as well as a Japanese Master of Ceremonies is a necessity. The need of one on Thursday was most signally shown at several points in the execution of the programme.

However, we do not wish to mar our description of the significant event of the opening of the Polytechnic School

by His Majesty the Mikado, by any adverse criticism. We know that it has taken much patience and faithful labour to produce the results summed up on Thursday last, and we too congratulate His Majesty and His servants in the Mom Bu Sho, both Japanese and foreign, on the auspicious opening of the Polytechnic school, and wish it all the solid and abiding prosperity which it deserves.

#### ROADS.

THERE can be little doubt that one of the greatest dangers to which the leading men in the Japanese Government are exposed is the variety of advice to which they are obliged to listen. They are urged on one side that it is the duty of the Japanese as a nation to maintain fleets and armies and to vie with other nations in the excellence of these; while, on the other side it is demonstrated to them that what the country most requires and what should chiefly occupy the attention of the Government and almost entirely usurp its finances, are those internal improvements which will elevate its people and develop its resources. In matters of education they have the missionary enthusiast who declares that every kind of prosperity will be a necessary accompaniment of the adoption of Christianity, and the materialist who sees no advantage that can accrue from a proposal to him so visionary and unpractical. The Revd. Mr. EDKINS in his paper read before the Asiatic Society at its last meeting, gives it as his opinion that a renovation of the native language by the admixture with it of English words, and by its reconstruction on the English model, would be worth more to the people than hundreds of steamers and thousands of miles of railway. It was plainly enough shewn at the meeting that in itself Mr. EDKINS' proposal was impracticable, but his statements are on that account none the less dangerous to the Japanese. They have not the experience necessary to form correct judgments, and are as easily led into some flighty and visionary scheme as they may be convinced by sound reasoning. They are further inclined hastily to adopt radical changes, and without having the strength or solidity of character necessary to carry out any extensive work, are always aiming high. Thus the improvements which have already been effected in Japan are, with one or two exceptions, of a very shallow and unsubstantial nature. It is true we have eighteen miles of railway open with the prospect of twenty miles more in a few months; we have a telegraph to Nagasaki, which, from the obstructiveness of the Japanese officials, is almost continually interrupted; some parts of the coast are tolerably well lighted, though much more remains to be done; Yokoska dock is completed, but extensive repairs on ships or works of any great extent cannot be executed there, and the Ōzaka mint has been established. But these are all the works having any semblance to utility or solidity which have been accomplished. On the other hand, the colonization of Yezo is a failure; the sending of students to America and Europe has not been attended with success; the results obtained by the various educational establishments are up to the present superficial and unimportant; the obstructions to the development of trade still remain; the mineral and other products of the country are still locked up; no means of communication have been made throughout the country; the rivers leading to the great trading capitals are unimproved; still do the same difficulties exist in landing or discharging cargo at the open ports; still are the native steamers navigated and engineered by incompetent and ignorant men; and still are the roads leading through the country, and the through-

fares in the principal towns, rutted quagmires which are a disgrace to any nation having the smallest pretensions to civilization.

Without wishing to advise, and with all deference to those who may differ from us, we are of opinion that while a proper and well-organized system of education is all important to the elevation of the people of Japan, no more effective means could be taken to open up the resources of the country, to increase its prosperity and wealth, or to render it more agreeable as a residence than a radical and sweeping improvement in the internal communications of the country. To say this is almost to repeat a hackneyed truism, but it is one which has been almost entirely ignored in Japan. The resources of this country, like those of all other countries, are spread throughout its length and breadth. Thus, in the provinces of Shinano and Echigo we have petroleum without any proper means of bringing it to the localities where it would be principally consumed; coal exists at one place, iron in another, and there is no way of getting the two together; it is almost practically impossible to use building material in any part of Japan except that found in the locality in which the building is to be erected, on account of the difficulties of transportation; and no large export trade can ever be done from the country until some means are taken for the transportation of the produce of the interior to the sea ports.

Whether railways or roads are the most suitable means of improving the internal communication of the country, is a question which we do not think requires a moment's consideration. Roads are not antagonistic to railways, they are rather necessary adjuncts to them. The construction of a railway, so far from destroying the usefulness of a road, increases the necessity for it—and very often renders the construction of a new one imperative. Therefore, although the construction of railways throughout the country would no doubt be a useful and beneficial, though an expensive work, we are of opinion that on account of the ease, rapidity and cheapness with which they could be made, and the means which they would afford for the transit of merchandise or passengers, whatever may be done hereafter no work would now be of such immediate or lasting advantage to this country as the construction of well-made macadamized roads. Roads are the paramount and at the same time most feasible undertaking to which the Japanese Government should turn its attention. Railways will naturally follow in due course.

But the construction of roads seems so easy of accomplishment that it is just one of those matters which the Japanese, with that extraordinary self-sufficiency which characterizes them, are likely to imagine they are conversant with and capable of executing without any external aid, whereas, in point of fact, it requires great engineering skill to lay out a road with gradients to suit the different localities, and great experience to select and to lay in their proper positions the different materials which should form its surface. The difficulties of road-making may be understood when we recall the fact that up to 1820 the roads of England were in a most unsatisfactory state, and that it was not till MACADAM introduced his system that they were got into anything approaching their present condition. It would be absolutely necessary for the success of the undertaking, therefore, that it should be put into experienced and professional hands, and the Government has now several engineers in its service who could be entrusted with it.

The following is an extract from a report of a Committee of the House of Commons in the year 1811, and we

think we cannot conclude this article in any better way than by giving it, feeling sure that the advantages which are described there as likely to accrue in England from good roads will, to almost the same extent, be felt in Japan.

"The many important advantages to be derived from amending the highways and turnpike roads of the kingdom need hardly be dwelt upon. Every individual in it would thereby find his comforts materially increased and his interest greatly promoted. By the improvement of our roads every branch of our agricultural, commercial and manufacturing industry would be materially benefited. Every article brought to market would be diminished in price; the number of horses would be so much reduced that by these and other retrenchments, the expense of five millions would be annually saved to the public. The expense of repairing roads and the wear and tear of carriages and horses would be essentially diminished; and thousands of acres the produce of which is now wasted in feeding unnecessary horses would be devoted to the production of food for man. In short the public and private advantages which would result from effecting that great object the improvement of our highways and turnpike roads are incalculable: though from their being spread over a wide surface and available in various ways, such advantages will not be so apparent as those derived from other sources of improvement of a more restricted and less general nature."

#### DEVINE *versus* KIRBY.

IT has been represented to us by the Counsel for the Defendant that we have done an injury to his client in making certain comments upon the case *DEVINE v. KIRBY* after notice had been given that an appeal would be made from the decision of the Acting Assistant Judge, and have committed a contempt of Court by so doing. We must plead guilty to the latter charge, as the notice of appeal—wholly unknown to us—was lodged on the Thursday of the week at the close of which our article appeared, and cannot hesitate to express our regret both to the Court and to the Defendant in the action for our mistake.

A more careful analysis of the evidence, a perusal of the letters on both sides, and a more accurate knowledge of the case than could have been gained by the reading, however careful and unbiassed, of the report of it, would have materially altered our views of the feelings and temper under which Mr. KIRBY acted. This being the case, and as we neither had, nor could have had, any other view than to represent both parties to the action with entire impartiality, we willingly express this conviction, together with our regret that some of the comments we made were calculated to produce impressions against Mr. KIRBY which the evidence and correspondence did not fully warrant.

#### THE IMPERIAL COLLEGE, TOKAI.

THE Kai Sei Gakko, formerly called Nan Ko, is situated in the north-western part of the city of Tokai, just outside of the Castle circuit and near the celebrated gate called Shitotsubashi Go Mon. The name given to the College, by the Japanese, and said to have been bestowed by the Mikado, means literally "Civilization-making School." In a circular announcing the change from Nan Ko to Kai Sei Gakko, it was given out that the title Kai Sei Gakko means, "The College devoted to the revival of learning, and the reformation of knowledge, in which the sciences hitherto unknown in Japan shall be studied." The name of the school has, however, been so often changed, that the foreigners, who are less affected with the mania for change, prefer to retain the name first given to it by the foreign principal, and still call it "The Imperial College in Tokai."

This institution, which is now under the care of the Education Department, originated as "an office for the examination of foreign books" in the time of the Shōgun. After the civil war and revolution, the Government made it a school of foreign languages. The Rev. Guido F. Verbeck, then in charge of the Nagasaki school, was called to the superintendency; and from an humble beginning of two teachers, one French, and the other English, the College now numbers over six hundred picked students, with six German, six French, five American, and five English teachers.

The buildings hitherto in use are mere sheds ranged in

rows, but during the present month, the new edifice, built since April last, will be opened by the Mikado in person, and the higher classes, in each of the three departments, constituting the Shem Mon Gakko, or Polytechnic School, will enter and occupy it. The lower classes, constituting the Middle School, will continue to recite in the old buildings.

The new College buildings are so different from the old, and so far surpass any structure formerly devoted to instruction, that a detailed description of them may not be without interest.

The edifice has a frontage on Shitotsunbashi avenue of three hundred and twenty-four feet. It is built in the form of a trident, the front being the base, and the long wings forming the tines. Each of the three wings is 192 feet long. The buildings are two-storied, and are twenty-five feet high from earth to eaves. The architecture is very plain but substantial-looking. The front is covered with white plaster, with which the green venetians contrast pleasantly. The central portico which is the officer's and teachers' entrance, and the side porticoes for the students' use are pleasing additions to the main edifice. The grounds are tastefully laid out, and in addition to the evergreens, there is a mound in the centre composed of densely growing dwarf pines. A flag-staff with cross-rest, and the guys, so necessary in this country, will float both the national, and the "educational" flags. A neat stone wall and coping, white paling fence, and a handsome painted gate, with carved posts and a central lantern, and a porter's lodge complete the front view of the new Imperial College.

On the ground-floor front, are the foreign superintendent's, native directors', librarians', clerks, etc., etc., rooms. These are carpeted, curtained, and properly furnished. In the centre wing, are the recitation rooms, laboratories for the professors of physics and chemistry respectively, and the amphitheatre or lecture-room, with circular rows of ascending seats. The north and south wings respectively, are to be occupied by the French and German departments.

The rooms on the second floor front are assigned to the officers of inspection, and are nicely furnished. The wings are occupied by the students; eight being assigned to a room, which is large enough to allow the proper number of cubic feet of space to each person. The total number of rooms is seventy-six. They are warmed either by grates or stoves, burning coal. Rigid regulations concerning the use of petroleum are enforced, and the students are to be drilled so as to vacate the house in a rapid and orderly manner, in case of a fire.

Between the wings of the main edifice, and communicating by covered passage, are two one-storied houses which are the servant's quarters.

Beyond the end of the central wing stand the refectory and kitchen. The former communicates with the northern and southern wings by a covered passage way. It is two-storied. On the lower floor, is the dining room. The main features of the kitchen, which is sixty feet long, and thirty feet wide, are three huge rice-boilers, and the furnaces for cooking. The dining room is ninety feet long, twenty-four feet wide, and ten feet high. The tables and benches are of plain wood. The usual native table-furniture of chop-sticks, lacquered rice and soup bowls, cup of soy, &c., are found on every table. On the second floor of this building are more bed rooms.

The bath house is situated not far from the kitchen. In this, are partitioned boxes for depositing clothes, a huge bath-tub for hot-water, a copper boiler, cold-water vats, &c. Only the students belonging to the Polytechnic school are fed and clothed by the Government. Below this grade, students must pay a monthly stipend of seven riô. The Polytechnic School is the goal of every under-class scholar, and the thought of it, his spur. The students rise at half past five a.m. and breakfast at six. The morning session is from eight to twelve o'clock, and the afternoon from one to two o'clock. Five hours are devoted to foreign learning, and one to Japanese and Chinese reading, writing and translation.

One hour's exercise, in walking, or gymnastics, alternately, is given to the students. Both kinds of exercise are taken in classes. In the former, the students must not scatter or mix indiscriminately along the streets, but

keep together, and within sight of each other. In gymnastics, they have trained native instructors. After their return in doors, they eat supper, and then devote themselves to their tasks till bed time which is at half past nine. These hours vary slightly according to the season; but eight hours for sleep, six for recitation, three for exercise and meals, and seven for preparation of studies is considered to be the proper distribution of time.

The general health of the students is good, though not equal to the average observed in English and American schools. A sick-bay, or small hospital, is attached to the college, and is under native doctors and nurses. Very serious cases are sent to the large government hospital, so as to be under the care of the German surgeons.

Japanese diet is the staple food of the students. Meat is allowed them once every other day. The students wear a neat uniform consisting of a blue cloth cap, black alapaca coats and white trousers for summer; blue swiss jackets and grey trowsers, with sack overcoat, in winter.

The regular holidays are Sundays, the first day of each month, the national festivals, and the foreign public holidays. The total number of holidays, however, is less than in Europe or America. On Saturday evenings, and before holidays, they are allowed to be out until nine p.m. They are strictly forbidden to drink any kind of distilled or fermented liquors, to go out at night, to visit the Yoshiwara, or to go to tea-houses and amuse themselves with singing girls. During the summer holidays of one month, and the winter holidays of two weeks, they are permitted to live out of the schools, at home or at hotels.

Almost every province in the Empire is represented in the College, Satsuma, Choshu and a few others have but a small proportion, but Kaga, Yechizen, Mito and some others are largely represented. Those pupils who had foreign instructors in their native cities, i.e., those who started with a foreign, and not with a native teacher, are now the most advanced pupils. This fact holds good to such an extent, that a professor can, in general, without knowing the antecedents of a class of boys pick out the students who had foreign teachers in the beginning. Some of the young men now in the first classes have been studying under foreign teachers steadily for four years, though most of them for less than that period. Very nearly all the students are of the *samurai* class. Some were formerly *katamoto*, *daimiô*, or their near relations, and one of the students in the French department is an uncle of the Mikado. Most of these once titled youths illustrate most signally the old adage, "there is no royal road to learning." By far the two brightest students in the College hail respectively from Hizen and Yechizen, and are ordinary *samurai*.

Some idea of the range of studies may be obtained by an examination of the roster. In the English department of the Polytechnic School, for instance, there are four classes. Two of these will pursue the Legal, and two the Scientific course. The principal studies of the Legal course, are Law, Latin and Modern History. In the Scientific Course, Chemistry, Physics and Mathematics are the chief studies. The following is the programme followed during the last six months.—

#### SCIENTIFIC SECTION.

Studies.	Hours per week.	Text books used.
History	4	The Student's Hume.
Latin	3	Andrews Latin Grammar and Reader.
Law	3	Dictations from Pomeroy's Introduction to Municipal Law.
Political Economy	3	Perry's Polit. Economy.
English Grammar	2	G. Brown's Eng. Gram.
" Composition	2	Quackenbos' First Book of Eng. Composition.
Arithmetic	2	Felter's Arithmetic.
Geometry	1	Robinson's Geometry.
Algebra	1	" Algebra.

Logic is studied three hours a week, and Guizot's "History of Civilization" is read one hour a week, by the first Law class. In the second class, Geography takes the place of Logic, and the students have more practice in English instead of Guizot.—

SCIENTIFIC SECTION.		
<i>Studies.</i>	<i>Hours per week.</i>	<i>Text books used.</i>
Chemistry	3	Barker's, Roscoe's and Hooker's <i>Chemistries</i> .
Algebra	3	Robinson's <i>Algebra</i> .
Physiology	3	Huxley and Youman's.
Geometry	3	Robinson's <i>Geometry</i> .
Physics	2	Ganot's, Quackenbos' and Steele's, (Native teacher.)
Drawing	3	
Book-keeping	2	
Mechanics	1	Peck's <i>Mechanics</i> .
Trigonometry	1	Robinson's <i>Trigon</i> .
English conversation	2	
composition	1	

The second class, in place of Mechanics, and Book-keeping, have more practice in English.

The above is an outline of the organization, character, and course of studies pursued in the Polytechnic school, the highest seat of academical learning in the land. We shall present, in a future number, the same summary and details of the "Middle school," which ranks next in order. We refrain from any comment upon what we have set forth, as the object of this paper is simply to state facts. Whatever opinions may be expressed concerning the fitness of the schedule of studies in use in the Imperial College, it should be distinctly understood that the allotment of *seven elementary, and five special, studies, all in foreign languages*, to boys of from fifteen to twenty years of age, is *not* the work, nor is it done by the advice of, the professional teachers of the Imperial College.

#### MERCHANTS AND MERCHANT CONSULS.

In continuation of our article of the 27th ultimo respecting Consuls and Merchant Consuls we have procured the following list of *Professional Consuls in JAPAN*, which so far as we have the means of knowing is a complete one.

Great Britain.—Consuls at Yokohama, Hiogo, Nagasaki and Hakodate.

Vice Consuls at Yedo, Osaka and Niigata.  
These officers also act as Consuls of the Austro-Hungarian Monarchy.

Italy.—A Consul and a Vice Consul at Yokohama.

France.—A Consul at Yokohama.

(\*) Germany.—A Consul General at Yokohama and a Vice Consul at Hiogo.

(\*) Russia.—A Consul General at Yokohama and a Consul at Hakodate temporarily attached to the Consulate General.

(\*) Spain.—A Consul General at Yokohama.

United States.—Have *paid* (but not professional) Consuls at Yokohama, Hiogo and Nagasaki.

#### LIST OF Merchant CONSULS AT YOKOHAMA AND YEDO.

* Switzerland... Consul General	} Yokohama.
Denmark..... do.	
Hawaii..... do.	
Netherlands... Consul	
Belgium..... Vice Consul	} Yedo.
† Peru..... Consul General	
† Portugal..... Consul	
‡ Germany..... do.	
Greece..... do.	

#### JAPANESE NOTES.

A recent number of the *Dajōkan Nisshi* contains an account of the maltreatment by savages of some Japanese sailors who were cast away in the spring of this year on the inhospitable coast of Formosa.

It appears that a junk manned by four men belonging to a port in Bitchiu sailed from Tamashima in that province with a cargo of salt and matting on the 28th November last, for Owase in Kishiu, where the cargo was disposed of and a fresh one taken in consisting of joss-

(\*) The Consuls General of the countries marked thus (\*) are also diplomatic agents.

† Is Chairman of the Consular Body.

‡ Is Consul General for Japan.

|| Is also Consul for Yokohama.

Has no jurisdiction.

|| Has no treaty with Japan.

stick powder and dried mushrooms. Having quitted Owase on the 9th January, they anchored at Nigishima off the same province, and started again on their voyage on the 14th. A gale sprang up immediately which lasted till the 18th, during which time the junk was blown far out to sea in a southerly direction, so that those on board entirely lost their reckoning. After drifting about for some days, they sighted a steamer on the 4th February, and lighted a fire with matting in order to attract attention. The steamer responded to the signal, and approached close to them, but after stopping her engines for a moment, proceeded on her voyage to the great disappointment of the castaways. After this they contrived to hoist a sail, and put the junk before the wind. On the 3rd of March they descried an island far away in the offing, the sight of which somewhat revived their spirits, although they had been absolutely without food for the last four days. About four o'clock in the afternoon of the following day they reached land, at a place in Formosa called Maboké. Twenty or thirty beings of strange appearance surrounded them, and robbed them of their property against which proceeding they endeavoured to expostulate, but the crowd increased to two or three hundred people, who carried off the whole of the cargo, broke up the junk, stripped the castaways naked, and appeared to be about to murder them. All they managed to save was a single old garment for each, the junk-pass, a five *riō* note, and a charm from the temple of Kampira in Sanuki. Fortunately an old native took pity on them, and carried them off to his house, where they obtained food and shelter. The family of this old man consisted of five persons besides himself. There were many huts in the neighbourhood, constructed (says the account) with something resembling bamboo leaves. The soil seemed rich, and was planted with barley, it seemed far superior to the soil of Bitchiu. The locality was large, and well-wooded. About ten o'clock in the morning of the 9th, they were escorted by their protector to a place called Kanéba, some four miles further, where they found three houses occupied by Chinese, with one of whom they found shelter for a night. In company with this man they returned to Maboké on the following day to endeavour to recover their property, but the natives refused to surrender it, and they returned without having effected their purpose. They stopped two nights longer with the Chinese, who forced them to saw wood by threatening to tie them up, although they made signs to them that they were too tired to work. On the 12th March, a Chinese named Ansen came and carried them off to a place called Bakarao. Between Kanéba and Bakarao they passed several places inhabited by the aborigines, some of whom had pity and gave them food, while others mounted their backs and insulted them by striking them on the head. Bakarao, where they stopped about a hundred days, is occupied by Chinese and aborigines in common, the latter being about twice as numerous as the former. Most of the Formosans were armed with swords, spears and match-locks, but for all that the Chinese seemed the more powerful, and made the natives work for them. Ansen had all along seemed to say that as soon as the barley was harvested, he should go to Kiyō to sell it, and would hand the castaways over to the Japanese officials at that place, and out of gratitude they cheerfully worked for him, tending cattle, cutting wood, and cultivating the ground. On the 14th June they embarked with Ansen from Bakarao and arrived on the 20th at Kiyō, where they stopped two nights. Some officials of Taiwanfu came and carried them to the office of the local authorities, where they remained nine days. Here a Japanese named Fukushima Reiské gave them ten dollars. On the 30th they returned to Kiyō, where they embarked for Foochow on the 5th July in a steamer. The Chinese authorities there gave them food, clothes and money and sent them to Yedo by steamer under the escort of two officers.

#### JAPANESE PAPER.

THE following article affords a very excellent and, apparently, complete account of the various descriptions of paper manufactured in this country, and is translated, by permission of the "Deutsche Gesellschaft für Natur

and Völkerkunde Ostasiens," from their Transactions for July, 1873 :—

In the manufacture of paper the Japanese have for centuries past employed the bark of the *Bronssonetia Papyrifera*, which flourishes in almost every district of the country. Old roots, cut into lengths of about 3 inches, are placed in the ground in such manner as to leave about half an inch projecting above the surface. These roots throw out shoots in the first year of about one foot in length, growing in the second to a length of from two to three feet, and in the third somewhat over four feet. In their fourth year they attain a height of six and, in some cases, even as great as nine to twelve feet. In the tenth month of each year the shoots are cut close to the roots. In the following year each branch throws out five new shoots and thus, in the course of five years, a thick bush is obtained the branches of which may be suitably employed in the manufacture of paper.

The boughs obtained in winter afford the best quality of material. They are cut in lengths of two feet six or seven inches and subjected to wetting sufficiently long to permit of their rind being easily removable by the fingers.

When this process is complete the bark is dried loose, so that the knots should offer no impediment, tied up in bundles and hung upon poles in the air. The drying is found to require two to three days, though if the wind be strong twenty-four hours prove sufficient.

The bundles are then rinsed for, at least, twenty-four hours in running water, so as to remove the inner fibre from the outer bark and the former is scraped upon a knife fixed upon a straw mat until its complete separation is effected. The dark outer bark, known as *saru kawa*, is used in the preparation of coarser descriptions of paper, such, for example, as *chiri gami* and *kigo suki*.

Paper, properly so-called, is made from the inner fibre known as *sosori*.

For this purpose the fibre is tied up in bundles weighing thirty-two pounds, thoroughly washed in a running stream and placed in tubs filled with water. The water is subsequently allowed to run off from the latter and the remaining moisture pressed from the fibre by means of heavy weights. The latter is then boiled with a preparation of the ashes of buck-wheat hulls, being meanwhile continuously stirred with wooden staves, and this process continues until the boiling water from below is distributed throughout the mass of pulp through the holes with which the lower part of the staves is furnished.

In the event, however, of the pulp not boiling some *kobai* or ordinary lime is added although the colour of the paper suffers from this materially.

The fibre thus prepared is then for the second time immersed in running water in a basket, and left there for such time as may be necessary to cleanse it thoroughly from all impurities. After its removal from the water it is stretched upon a plank of either oak or cherry-wood, some five feet long by three in width and four inches thick, and well beaten with a square mallet, three feet in length, for about twenty minutes. It is then rolled up in large balls from which it is detached as required.

In the course of its manufacture a certain quantity of *tororo* is added to the mass of pulp. This is prepared from the root of the "*Hibiscus Manihot*" which is removed from the ground in the fifth month, peeled, lightly beaten and boiled to the consistency of a moderately thick paste which is strained when required for use. In Summer rice-water is added for the same purpose. The Winter manufacture, known as *kidzuki*, is more highly esteemed from the fact of its not being exposed to the attacks of the worm.

The pulp prepared either with *tororo* or rice water is then treated in precisely the same manner as is usual in Europe.

The leather-paper is prepared from the *Tosa Senka* paper, its substance being obtained by uniting several thicknesses together. After being saturated with the oil obtained from the *zenoki*, (*Celtis Willdenowiana*), the parts are pressed together in heavy wooden presses, and the sheets dried and covered with an outer coating of licker.

The materials for clothing manufactured from paper are prepared in the province of Sendai from a description known as *Shifu*. This paper is cut into wide or narrow strips according as the substance required be fine or

coarse, twisted with the fingers and then reeled. The threads are subsequently twisted upon the wheel and are prepared either alone or in conjunction with silk. The material is washable and is esteemed exceedingly durable.

In the preparation of crape-paper a moistened sheet of stout paper is stretched upon a wooden cylinder upon which the design has been engraved. It is then stripped off and dried. By another method the damp sheet receives a mechanical pressure while on the cylinder. Both procedures impart a *crépé* appearance and elasticity to the paper.

In addition to the *Bronssonetia Papyrifera* the *Edgeworthia Papyrifera* is also employed in the manufacture of paper.

The following is a specification of the various descriptions of paper in the collection of the "German Asiatic Society" :—

- 1.—Hankire, made in Suruga : used for letter paper.
- 2.—Hanshi, made in Suruga : do. do.
- 3.—a Noure, made in Suruga : do. do.
- 3.—b Hosho gami, made in Igo : used for women's writing paper.
- 4.—Kobanshi, made in Suruga : used for pocket handkerchiefs.
- 5.—Wata atzu, made in Suruga : used for bags.
- 6.—Chirigami, made in Suruga : used for pocket handkerchiefs.
- 7.—Hankire, made in Kai : used for letter paper.
- 8.—Hankire, made in Hiuga : writing paper.
- 9.—Hankire, made in Tsikugo : do. do.
- 10.—Ochiaie, made in Tsikugo : used for furniture.
- 11.—Hankire, made in Musashi : writing paper.
- 12.—Hankire, made in Musashi : do. do.
- 13.—Wadoshki, made in Musashi : do. do.
- 15.—O gazenshi, made in Musashi : do. do.
- 16.—Schkichi, made in Musashi : used in writing poetical compositions.
- 17.—Tansake, made in Musashi : do. do.
- 18.—Uda-chiri, made in Musashi : used for sugar-bags.
- 19.—Hoso-kawa, made in Musashi : used for account-books.
- 20.—Tanagawa doshi, made in Musashi : for writing and furniture paper.
- 21.—Katamen, made in Musashi : used for various purposes.
- 22.—Yomokawa, made in Musashi : used for bags.
- 23.—Riomen-ben-gami, made in Musashi : used for bags.
- 24.—Hankire-ben-gami, made in Idzu : writing paper.

 34.—Takenanga nishi kami, made in Tosa: do. do.  
 35.—Iro mo toi kami, made in Higo: do. do.  
 36a.—Hanemo toi no kami, made in Higo: do. do.  
 36b.—Hanemo toi no kami, made in Higo: do. do.  
 37.—Kanakano kami Jokokami, made in Higo: used for ornamenting small boxes.  
 38.—Hanemotoi tchotcho, made in Mino: used for women's hair ornaments.  
 39.—Kinshia mino kami, made in Mino: do. do.  
 40.—Becco kami, made in Ozaka: do. do.  
 41.—Mange djimo, made in Yedo: do. do.  
 42.—Ochiri, made in Tchikugo: used for hangings.  
 Besides these there are one hundred and thirty-seven other descriptions of hangings made in Echizen, Tosa, Setzu, Yamashiro and Yedo.
- B II. LEATHER-PAPER.—(Toile cirée ?)*
- 1.—14 from Shimoduke.  
 15.—20 " Hitadji.  
 21.—22 " Issé.  
 23.—32 " Yedo.  
 34.—43 " Karasu yama.  
 44.—46 " Mito.
- Besides several descriptions of oiled-paper for rain-coats, &c. from Yedo, tobacco pouches, &c., &c.

## REVIEW.\*

WE believe that we only endorse the public verdict on all the books of dialogues and sentences which have appeared previously to the publication of Mr. Satow's book when we say that they have been without exception conspicuous failures. Most of them are exceedingly inac-

\* *Kuaira Hen.* Twenty-five Exercises in the Yedo Colloquial, for the use of students, with Notes. By Ernest Satow, Japanese Secretary to H. M. Legation in Japan. Yokohama, Lane, Crawford & Co. 1873.

curate, and even the few which are moderately correct are, for want of proper notes and explanations, almost useless to the learner. In the case of a language so different in its idiom and construction from our own as Japanese this is a fatal defect. In both these respects "*Kuwa Hen*" is an immeasurable advance upon its predecessors, and the student has now within his reach a manual on the thorough correctness of which he may place implicit reliance, and which contains all the explanations which he can possibly require.

The *Kuwa Hen* is in three parts. The First Part contains a series of Japanese sentences and dialogues printed in the Roman character with the English translation on the opposite page. The sentences become gradually more difficult as the work advances, but for the average student they might with advantage have been made even more progressive. Books of this kind are usually very dull reading, and the authors of them are sometimes driven to great straits in order to make them interesting. Most of us can call to mind one in which there was an attempt to relieve the natural dryness of the subject by witty remarks and by the dramatic interest excited in the sayings and doings of two imaginary personages into whose mouths the sentences were put. Mr. Satow's dialogues have a more legitimate interest. Many of them were composed in the first instance by native scholars, and contain lively pictures of Japanese life and manners. Those who care nothing for the Japanese language may read with interest the dialogues on A Fire, on Travelling, on the New Year, and the Discussion between a foreign Consul and a native official on the subject of a broken contract. These dialogues are all the more readable, as they are translated in good, idiomatic English, the literal translations being banished to their proper place among the explanations in the second part. By the plan of having them first composed in Japanese and then rendered into English, their value to the student is much enhanced, as translations from English are apt to be stiff and unidiomatic, while innumerable expressions common in daily life, but which have no counterpart in English, are necessarily omitted.

Perhaps the most valuable portion of Mr. Satow's book is the second part, which not only contains all the explanations which the least advanced student is likely to require, but is a rich mine of information respecting the idioms and grammar of the spoken dialect of Yedo. The student who has thoroughly mastered this part need fear little further difficulty with the grammar and construction of the spoken Japanese.

The Third Part of the *Kuwa Hen* contains the Japanese of the dialogue in the native character, the first fourteen dialogues being printed in Hiragana only, the remainder with an admixture of some of the more common Chinese characters. This is a great improvement on the old plan of employing the almost useless Katakana for this purpose.

Most readers of the *Kuwa Hen* will be glad that Mr. Satow has not yielded to his desire to omit altogether the version in Roman characters contained in Part I. The labour of familiarizing the eye with a set of strange characters is no doubt very irksome, and as it is possible, after some practice with a native teacher, to pronounce correctly the transliteration contained in Part I., we fear that many learners will be tempted to shirk the trouble of mastering the native syllabary, and to confine themselves to the version in Roman letters. At the same time, it cannot be too strongly impressed on the genuine student that his best plan is, as Mr. Satow advises, "to work with the Japanese text alone, even at the expense of some extra labour at first." The native spelling throws much light on the grammar, and if the student intends ever to get beyond a phrase-book, it will be necessary for him sooner or later to learn the native character, to a knowledge of which he can have no better or more convenient guide than these exercises in their Japanese form.

We hope the publication of Mr. Satow's book will be another inducement to residents in Japan to undertake in earnest the study of the spoken language. The almost insuperable difficulties which beset it not many years ago have been in a great measure removed, and at present there is really nothing to prevent any one who devotes a little diligence to the task from acquiring a very serviceable knowledge of the language.

## A CHRONICLE OF THE CHIEF EVENTS IN JAPANESE HISTORY FROM 1844 TO 1863.

(Continued.)

### 1ST YEAR OF MANYEI, (1860).

1st month, 2nd day.—An Italian ship came to Yokohama.

1st month, 6th day.—Denkichi, of the province of Kii, Interpreter to the English was murdered in Yedo by some person unknown.

1st month, 18th day.—Kimura Settsu no kami Katsurintaro (the present Minister of Marine) and others started for America in the ship *Kanrinmaru*.

1st month, 15th day.—The Daimio of Taira was appointed Roju.

1st month, 18th day.—Shimmi Buzen no kami and his fellow—ambassadors left for America in American ship.

1st month, 20th day.—It was notified that the Koban marked *Ho* should be current at the rate of 3 rios and  $2\frac{1}{2}$  bus., the gold bu. with the same mark at  $3\frac{1}{2}$  bus., the Koban marked *Shi* at 2 rios  $2\frac{1}{2}$  bus and the gold bu, with the same mark at  $2\frac{1}{2}$  bus.

1st month, 28th day.—Notice was given of the discontinuance of the European military exercise, and also of practising the European style of drumming.

2nd month, 4th day.—Orders were sent to Fuchu that the Korean envoys were to come in the year 1866.

2nd month 5th day.—An Englishman and a Dutchman were cut down at Yokohama by some persons unknown.

2nd month, 6th day.—An interview took place with the English at the residence of the Daimio of Tatsuno. Another interview was held on the 18th. The subject of these interviews was said to be the above mentioned murders of foreigners.

2nd month, 18th day.—There was fighting among the Samurai in Mito on account of the giving up of the Imperial rescript.

2nd month, 18th day.—Russians went by land from Yokohama to Hakodate.

2nd month, 25th day.—At Yokohama one of the Japanese night-patrol was shot by a foreigner.

2nd month, 27th day.—The Shōgun had the front of his head shaved, (in token of his attaining his majority.)

3rd month, 3rd day.—Sano Takenoske of the Mito Han, Arimura Jizayemon of the Kagoshima Han and fifteen others attacked the Daimio of Hikone (better known as Ii Kamon no kami) at Soto Sakurada and killed him. The mourning for him was kept secret and was not notified. (The Japanese law then was that if man was from any cause decapitated, his son could not succeed him in the family estates and honours).

3rd month, 9th day.—A Satsuma man arrested a Mito man named Kaneko Magojiro at Yokka ichi in Ise and delivered him to the Shōgun's Government.

3rd month, 11th day.—Notice was given that the number of guards at the Castle gate would be made the same as it was up to 1855.

3rd month, 13th day.—The Daimio of Kagoshima while in Chikugo on his way to Yedo turned back and went to his own province.

3rd month, 15th day.—The Shōgun summoned the Daimios to the Castle and explained to them that on account of foreigners of all countries having take up their residence in Yedo, and also on account of the affair at Soto Sakurada, they must take steps to guard against mischief.

3rd month, 23rd day.—At Osaka Takahashi Taichiro, Shōzayemon and Kawasaki Magojiro committed suicide; Yamazaki Riōzō and two others were arrested.

3rd month, last day.—The Daimio of Hikone was released from the duties of the office of Tairo (see 3rd month 7th day).

Intercalary 3rd month, 1st day.—The name of the period was changed to Manyei.

Intercalary 3rd month, 1st day.—The Daimio of Sekiyado was again appointed Rōju.

Intercalary 3rd month, 1st day.—Some Yokohama merchants flung a petition into the *Kago* of the Daimio of Tatsuno denouncing the secret schemes of the foreigners.

Intercalary 3rd month, 5th day.—The title-deeds of the Daimios were renewed to them as usual.

Intercalary 3rd month, 6th day.—The Daimios who had charge of the defence of Yokohama were warned that there was danger of an attack by *rônins*.

Intercalary 3rd month, 11th day.—Matsunaga Hanroku committed suicide in the guard-house at the front gate of the Castle, probably from apprehensions excited by the affair of the Daimio of Hikone.

Intercalary 3rd month, 17th day.—Owing to the scarcity of soy, wax, grain, clothing and silk, it was notified that supplies of these articles should be sent to Yedo.

Intercalary 3rd month, 20th day.—It was notified that men-of-war would guard the Yokohama sea.

Intercalary 3rd month, 29th day.—An interview with the English took place at the residence of the Daimio of Taira. It was said that the subject of the interview was the foreign residence on Gotenyama.

4th month, 3rd day.—The defence of Shinagawa was entrusted to the Daimio of Tokushima (Awa).

4th month, 7th day.—Mourning was proclaimed for the Daimio of Hikone. On the 28th the succession was granted to his son.

4th month, 28th day.—The Daimio of Nishio ceased to hold the office of Roju.

5th month, 4th day.—An interview took place with the English at the residence of the Daimio of Taira about the buildings for foreigners on Gotenyama and about building houses for merchants at Shinagawa.

5th month, 6th day.—Kimma Settsu no kami and his colleagues returned from America.

5th month, 24th day.—A Portuguese ship came to Shinagawa. Interviews were held with them at the residence of the Daimio of Taira on the 2nd and 18th of the 6th month. A Treaty having been concluded with them, they went away on the 19th.

5th month, 26th day.—Sakura Yukiye an unattached *samurai* and Shima Onari were thrown into prison. They were probably the remainder of the Kiôto prisoners.

5th month, 26th day.—Ono Tomogoro of the Kasama Han had the honour of an audience of the Shôgun.

6th month, 4th day.—Midzuno Tosa no kami, a dependant of the Daimio of Wakayama was commanded to retire from public life and to live in seclusion. It was said that the reason of this was that being the Shôgun's maternal grand-father he had been concerned in the plot.

6th month, 18th day.—The Mikado issued an important command for the expulsion of the barbarians. Okubo Osumi no kami was despatched to Yedo with it. He delivered it to the Shôgun on the 1st day of the 7th month.

6th month, 21st day.—An interview took place with the English at the residence of the Daimio of Taira.

6th month, 23th day.—The Daimio of Okazaki was appointed Roju.

7th month, 4th day.—The Americans went to the Castle and had an audience of the Shôgun. It was said that the ceremonies observed the previous year were modified.

7th month, 6th day.—Interviews took place with the Americans on this day and on the 18th at the residence of the Daimio of Taira.

7th month, 9th day.—The Englishmen went to the Castle and had an audience.

7th month, 11th day.—Notice was given that vaccination for small-pox would be performed at the vaccination office.

7th month, 11th day.—The Daimios of Takamatsu, Hikone, Koriyama, Matsuyce, and Kuana, were ordered to guard Kiôto strictly, and the Daimios of Yedo, Takatsuki Leze and Sasa yama to guard the entrances to Kioto.

7th month, 18th day.—The English went to Suruga. On the 26th they ascended mount Fuji.

7th month, 20th day.—A Prussian ship arrived at Shinagawa. An interview took place with them on the 22d at the residence of the Daimio of Taira, and also on the 15th and 18th of the 8th month. The Prussians went away without being allowed to conclude a Treaty.

7th month, 21st day.—The French went to the Castle and had an audience.

7th month, 26th day.—A German ship came to Shinagawa.

7th month, 29th day.—Anenokôji, a lady of the Shôgun's Court went to Kioto. It was said that the object of her Mission was the Shôgun's marriage to Princess Katsu.

8th month, 3rd day.—The Daimio of Kagoshima was informed that he would afterwards receive orders respecting the visit of the Loochoo envoys.

8th month, 15th day.—The old Daimio of Mito died. He received the posthumous name of *Rek-kô* or "The zealous noble." On the 26th the sentence of strict seclusion passed on him was recalled.

8th month, 22nd day.—Territory in Saghalien was granted to the Daimio of Ono.

8th month, 27th day.—Thirty-seven Sammai of the Mito Han went to the residence of the Daimio of Kagoshima, and made a statement of their views; on the 5th day of the 7th month of the following year they were allowed to return to the residence of the Daimio of Mito.

This month the English and French took the northern capital of China.

9th month, 4th day.—The sentences of seclusion passed upon the old Daimio of Nagoya and on Lord Hitotsubashi were rescinded, but they were warned not to present themselves before the Shôgun.

9th month, 7th day.—The sentences of seclusion passed upon the old Daimio of Kakegawa, upon Hongo Tango no kami and upon Ishiko Tosa no kami were rescinded.

9th month, 13th day.—Hayashi Dôkai of the Kokura Han was appointed physician to the Shôgun.

9th month, 16th day.—The Daimio of Ogaki was presented with a saddle and stirrups and a dress suitable to the season in recognition of his good government of his province.

9th month, 18th day.—An interview took place with the Americans at the residence of the Daimio of Taira.

9th month, 20th day.—The Daimio of Mito was informed that it was unnecessary for him to give up the Imperial rescript.

9th month, 28th day.—Shimmi Bugen no kami and his colleagues returned from America.

—Prince Suke was proclaimed heir and successor to the throne of the Mikado.

10th month, 4th day.—Interviews took place with the Americans at the residence of the Daimio of Taira on this day and on the 15th. The subject of them was said to be the land question.

10th month, 27th day.—Odzuki Shinsai of the Sendai Han was appointed Chief of the vaccination office.

11th month, 1st day.—It was notified that the Princess Katsu would be given in marriage to the Shôgun.

11th month, 5th day.—The conduct of foreign relations was entrusted to the Daimio of Taira alone. (Andô Tensuima no kami).

11th month, 5th day.—Hori Oribe no Shô committed suicide. It was said that he intended his death as a remonstrance against the entire change of policy in respect to Kiôgo and to foreign countries.

11th month, 6th day.—Notice was given that there was no objection to the sails of war vessels being made of white material, and to the use of crests on them.

11th month, 9th day.—The Shôgun returned to the chief buildings of the Castle.

11th month, 13th day.—An interview took place with the Prussians at the residence of the Daimio of Taira. On the 18th another interview took place and a provisional Treaty was concluded.

11th month, 16th day.—An interview took place with the French at the residence of the Daimio of Taira.

11th month, 19th day.—On account of Princess Katsu being given in marriage to the Shôgun, the Court nobles jointly received a present of 15,000 rios.

11th month, 20th day.—An interview took place with the English at the residence of the Daimio of Taira.

11th month, 21st day.—Orders were given to the Daimios of Fukuyama Nishio, Amagasaki, Shinjo, Kameyama and Kôrigaya to protect the foreigners of all countries. A report that a band of *rônins* was about to attack the foreigners was the cause of this measure. These Daimios were repeatedly changed afterwards, but all these changes are not noticed here.

11th month, 29th day.—The old Daimio of Tatsuno ceased to hold the office of Roju. He afterwards retired from public life.

12th month, 5th day.—The American interpreter Heuskin was cut down in Yedo by some persons unknown.

12th month, 6th day.—The English and French left Yedo and went to Yokohama. On the 21st of the 1st month they again came to Yedo. From this time forward they kept going backwards and forwards and did not live quietly in one place.

12th month, 11th day.—An interview took place with the Americans in the residence of the Daimio of Taira. Another interview was held on the 27th. The subjects were the murder of Heuskin and the postponement of the opening of Yedo, Osaka, Hiogo, and Niigata.

12th month, 15th day.—The Daimio of Sekiyado received a gift of 10,000 Kokus. The Daimio of Murakami was ordered to exchange villages so as to increase his revenue by 10,000 Kokus. Rewards were also given to all the building-officers who rebuilt the Castle.

12th month, 28th day.—The Daimio of Kameyama was appointed Rôju.

This month the Mikado presented 50 pieces of gold to the inhabitants of the province of Yamashiro.

#### 1ST YEAR OF BUNKIU (1861).

1st month, 4th day.—An Imperial edict was issued. It was occasioned by the neglect to refer the Prussian Treaty for the Mikado's approval.

1st month, 9th day.—On this day and on the 16th and 25th interviews took place with the Americans at the residence of the Daimio of Taira.

1st month, 10th day.—Two French ships came to Shinagawa.

1st month, 21st day.—Notice was given to the wards to display flags (with the streets' names) at their guard-houses. It was said that the foreigners requested this.

1st month, 24th day.—The Government received information that a band of *rônins* had committed outrages in Sawara, in the province of Shimôsa.

1st month, 29th day.—Orders were given for the arrest of all *rônins* in the eight provinces round Yedo.

2nd month, 3rd day.—On this day and on the 17th and 22nd interviews took place with the English at the residence of the Daimio of Taira. It was said that the interviews which took place at this time had chiefly reference to the Minister's residence, the opening of Hiogo and Tsushima, and the bands of *rônins*.

2nd month, 3rd day.—Russians came to Asaumi ura in Tsushima ostensibly with the object of repairing their ship.

2nd month, 3rd day.—The Daimio of Mito's address to Government in which he promised to arrest the *rônins* was circulated for the information of the Daimios.

2nd month, 7th day.—An English ship came to Shinagawa.

2nd month, 9th day.—A Russian ship came to Shinagawa. She left on the 5th of the 3rd month.

2nd month, 9th day.—Okabe Sanjuro of the Mito Han was arrested at Yedo.

2nd month, 9th day.—Sumiga Timoske and Nakajima Kimpei of the Mito Han were arrested at Sakai.

2nd month, 23rd day.—The Americans proceeded to the Castle, it was said in order to offer their congratulations on the new year.

2nd month, 28th day.—The name of the period was changed to Bunkiu.

2nd month, 29th day.—An interview took place with the Americans at the residence of the Daimio of Taira.

2nd month, 29th day.—Notice was given of a loan of money to the Hatamotos' retainers on account of the rise in prices.

About this time numerous reports were received by Government from Shimos that the *rônins* intended to expel the barbarians. It was also said that several hundred men had formed a camp at Akagisan in Kodzuke.

3rd month, 1st day.—The English Minister Alcock suddenly left for Hongkong.

3rd month, 4th day.—Russians came to Masugawa in Tsushima and erected houses.

3rd month 15th day.—Notice was given of a delay in the marriage of the Princess Kadzu.

3rd month 15th day.—Caps made in foreign fashion were prohibited.

3rd month 17th day.—There was a great thunderstorm at Yedo.

3rd month 22nd day.—The Daimio of Taira was order-

ed to increase his revenue by an exchange of villages to the amount of 10,000 kokus.

3rd month 23rd day. There was a performance of *No* and *Kiogen* in honor of the Shogun's return to the chief building of the Castle.

3rd month 23rd day.—It was notified that priests who had broken their vows, women of a strange trade (meaning prostitutes not belonging to the Yoshiwara), and others would be deported to Yezo.

3rd month 24th day. Takenouchi Shimotsuke no kami, Kuwayama Sayemon no Jo, and Kiogoku Hiogo were appointed envoys to western countries.

3rd month 26th day.—A notification was issued enjoining zeal in the acquirement of the arts of war and learning and recommending economy.

3rd month 27th day.—Shiwonoya Kozo of the Yamagata Han and Wakayama Sokichi of the Iwamura Han were admitted to an audience of the Shôgun.

3rd month 27th day.—An interview took place with the Americans at the residence of the Daimio of Taira. The subject of it was said to be the despatch of ambassadors to western countries.

4th month 12th day.—The Russians shot a Japanese servant named Yasugoro at Tsushima. On the 13th they again committed an outrage.

4th month 12th day.—An English ship visited the bay of Fuchu in Tsushima. She went away on the 14th.

4th month 19th day.—Oguri Bungo no Kami and Mizoguchi Yasogoro were despatched to Tsushima, where they arrived on the 7th of the 5th month. They had an interview with the Russians on the 10th, and returned immediately.

4th month 19th day.—The Mikado raised the Princess Kadzu to the rank of *Naishimo*.

4th month 28th day.—From this day English ships anchored at Shimonoseki in Nagato, at Kadoshima in Bugen and other places. The Englishmen landed at several places, and on the 15th of the 5th month, they buried a man at Kusuwara. They then went away, but it was said that they came and took away the body in the course of the 10th month.

It was said that in the course of this month an autograph letter of the Shogun was sent to Russia, England, France and all the other countries, respecting the delay in the opening of the ports of Yedo, Osaka, Hiogo and Niigata.

5th month day.—The Englishman Alcock came to Hiogo. He returned to Yedo by land along the Tokaido, arriving on the 27th.

5th month 14th day.—An interview took place with the English at the residence of the Daimio of Taira. The subject of it was said to be the surveying of the Japanese seas.

5th month 15th day.—The Dutchman Siebold came to Yedo. He was taken into the Government service and was lodged in the Conference House at Akabane. In the course of the fourth month he had come to Yokohama and lived there.

5th month 19th day.—Midzuno Chikngo no Kami was appointed envoy to the countries of the West.

5th month 28th day.—Mayegi Shimpachiro, Ariya Hanya and twelve others of the Mito Han attacked Tozenji, and wounded two Englishmen. They fought with the Hatamoto's men and with the soldiers of the Daimios of Koriyama and Nishio. There were killed and wounded on both sides.

In the last ten days of this month, a comet appeared in the northwest.

6th month 3rd day.—An interview took place with the Dutch at the residence of the Daimios of Taira.

6th month 4th day.—An interview took place with the English at the same place.

6th month 5th and 13th days.—Interviews were held with the English chiefly respecting the Tozenji affair, it was said.

6th month 16th day.—Shogimo Government ordered the Daimios to arrest the survivors of the band who had broken into Tozenji.

6th month 16th day.—The Daimio of Mito was commanded to maintain strict order within his territory.

6th month 19th day.—It was notified that merchants might build large ships if they chose.

6th month 20th day.—Oguri Bungo no Kami and his colleagues arrived in Yedo from Tsushima. On the 28th they were ordered to proceed there a second time. They did not go, and were dismissed from office on the 26th of the 7th month.

6th month, 20th day.—The Daimios of Nagoya and Wakayama were summoned to the Castle to discuss the Mito question.

6th month, 21st day.—The Daimios of the Tamari Nomura were summoned to the Castle to discuss the Mito question.

6th month, 23rd day.—An interview took place with the French at the residence of the Daimio of Taira.

6th month, 24th day.—The Daimios of Shinjo, Kuana, and Matsuyama were commanded to defend the foreign settlement at Kanagawa.

In the course of this month Nagai Uta, of the Hagi Han went to Kioto by order of the Daimio of Hagi (Choshu) and laid before the Mikado arguments for throwing open the country. It was said that the Mikado expressed his admiration, saying at the same time that there would be a special decree on the subject.

About this time Swiss and Danes came to Yokohama and asked for commerce.

7th month 2nd day.—It was notified that leave had been granted to the English to survey the Japanese seas. On the 11th English ships left Yokohama and surveyed the coasts of the provinces.

7th month, 4th and 6th days.—English ships came to Yokohama under the command of Hope.

7th month, 9th day.—An interview took place with the Americans at the residence of the Daimio of Taira respecting the foreign settlement.

7th month, 10th day.—An interview took place with the English at the same place, respecting the Russians who were staying at Tsushima, it was said.

7th month, 10th day.—Officials were ordered to examine the sea shore at Shiba and Tsukiji in order to discover a suitable place for the erection of foreign residences.

7th month, 11th day.—Orders were given for the erection of residences for the foreigners at Gotenyama. They were commenced on the 17th day of the 11th month.

7th month, 16th day.—Until the buildings on Gotenyama should be completed, the foreign Ministers went to live at Yokohama, and after this they passed back and forward frequently.

7th month, 20th day.—Nonoyama Tango no kami and Ogasawara Settsu no kami were ordered to Tsushima. They left on the 2nd day of the 8th month, and returned to Yedo on the 13th day of the second month of the following year.

7th month, 26th day.—Kaneke Magojiro, Ozeki Washichiro, Mori Gorokuro, Okabe Sanjuro, Hasuda Ichigoro, Moriyama Hei no Suke, and Sugiyama Yaichiro of the Mito Han were executed for the murder of the Daimio of Hikone. Ten others had already died.

8th month, 6th day. The English made presents to the defenders of Tôzeuji in the 5th month.

8th month, 11th day.—The Daimio of Saga presented to Government three cannon.

8th month, 12th day.—The Mikado commanded that steps should be taken to prevent the English surveying ships from coming to Ise or Shima.

8th month, 13th day.—It was announced that the Princess Kadzu would be given away in marriage (to the Shôgun) in the course of the 10th month.

8th month, 14th day.—An interview took place with the English at the residence of the Daimio of Taira. It was said that the English were enraged at our lending Tsushima to the Russians.

8th month, 20th day.—An interview took place with the French at the residence of the Daimio of Taira.

8th month 21st day.—There being a report that the Mito *rônins* were about to attack Yokohama in boats, the Daimios were notified of it.

8th month 21st day. The appointments of Midzuno Chikugo no kami and Kuwayama Sayemon no Jo, as ambassadors to Europe, was cancelled, and Matsudaira Iwami no Kami appointed instead.

8th month 22nd day. An interview took place with the Americans at the residence of the Daimio of Taira.

8th month 23rd.—The French had an interview, chiefly respecting the buildings on Gotenyama, it was said.

8th month 24th day.—Every person connected with the defence of Tozenji in the 5th month, from the Daimios down to the private guards, were rewarded by the Government.

8th month 25th day.—The Russians who had been staying in Tsushima went away.

In this month severe measures were taken in Mito for the arrest of the *rônins*.

9th month 3rd day.—Notice was given that permission was granted for blank discharges of firearms for practice within *yashikis* either within or without the castle moats.

9th month 7th day.—The Dutch had an interview at the residence of the Daimio of Taira. The subject of it was said to be the return of Siebold to his country.

9th month 10th day.—Siebold was informed that his services were no longer required.

9th month 11th day.—An interview took place with the French at the residence of the Daimio of Taira. The subject of it was said to be the despatch of envoys to Europe.

9th month 16th day.—The English had an interview as above.

9th month 18th day.—The Americans had an interview as above.

9th month 26th day. Notice was given of the contributions to be paid towards the repairs of river banks in the various provinces.

10th month 9th day.—An interview took place with the Dutch at the residence of the Daimio of Taira.

10th month 10th day.—The Daimio of Fukui was relieved of the defence of Yokohama and Kanagawa and charged with that of Forts No. 2 and 6 at Shinagawa. The Daimios of Himeji and Matsushiro who had been charged with the defence of these forts were now ordered to undertake the defence of Yokohama and Kanagawa.

10th month 13th day.—The Daimio of Hagi came to Yedo at an irregular time. His reason for doing so was to present a memorial tending to the good of the Empire.

10th month 16th day.—An interview took place with the English at the residence of the Daimio of Taira. On this occasion the English brought with them guards carrying lances without sheaths.

10th month 20th day.—The Princess Kadzu set out from Kioto. She arrived in Yedo on the 15th of the 11th month and was lodged at the residence of Lord Shimidzu.

10th month 23rd day.—Notice was given that if foreign ships came to ports not yet opened to them, an inquiry should be made into the circumstances, and a report forwarded to Government.

10th month 24th day.—It was notified that the "Vacination Office" would in future be called the "European Medical School."

10th month 24th day.—An interview took place with the Americans at the residence of the Daimio of Taira. The question of the English escort and many other subjects were said to have been discussed.

11th month 5th day.—The Americans had an audience at which they presented a letter from their President. This letter was said to be the reply about the delay in opening the ports of Osaka, etc.

11th month 20th day.—It was notified that Yasuda Tetzuzo of the Kagoshima Han was buying mulberry branches for the purpose of manufacturing silk wadding.

11th month 21st day.—The Shogun paid his respects to the Mikado's Envoy.

11th month 21st day.—A grant of 10,000 dollars was made to Hensen's mother.

11th month 25th day.—An entertainment was given to the Mikado's Envoy.

11th month 26th day.—An interview took place with the English at the residence of the Daimio of Taira. The subject was said to be the opening of Hiogo and the other ports.

11th month, 27th day.—An interview took place with the French. The subject was said to be the sending of Envoys to Europe.

11th month, 28th day.—The Government declined to make a Treaty with Denmark.

11th month, 29th day.—An interview took place with the Americans at the residence of the Daimio of Taira.

This month the Mikado was secretly informed that the Daimio of Kagoshima was about to send troops to Kioto.

12th month, 1st day.—A notice was issued commanding that the prices of commodities should be lowered.

12th month, 3rd day.—Midzuno Chikugo no kami despatched Hattori Kūchi to inspect the Bonin Islands. He returned on the 20th day of the 3rd month of the following year.

12th month, 7th day.—The chief *yashiki* of the Daimio of Kagoshima was destroyed by fire. This was probably not unintentional.

12th month, 11th day.—The Princess Kadzu left the residence of Lord Shimidzu for the Castle.

12th month, 13th day.—Siebold went to Nagasaki from Yokohama.

12th month, 22nd day.—Takenouchi Shimotsuke no kami and his fellow Ambassadors left for Europe in an English ship.

12th month, 23rd day.—An interview took place with the English at the residence of the Daimio of Taira.

#### THE NATURE OF THE JAPANESE LANGUAGE, AND ITS POSSIBLE IMPROVEMENT.

*By the Rev. J. EDKINS, of Peking. Read before the Asiatic Society of Japan, October 9th, 1873.*

THE comparison of Japanese with kindred languages may be expected to yield most interesting results. The field is a new one and its riches are therefore unknown. Why not try what it will yield?

The methods of inquiry are now better than they used to be, and in the present state of our knowledge they are not difficult to apply. Philology, is now a recognized science; comparative philologists by limiting themselves almost exclusively to one family of languages have left the more to be learned by inquirers in new fields. We have grammars and dictionaries of the Chinese, Mongol and Manchu languages on the one side, and of the languages and dialects spoken on the islands of the Eastern Archipelago and of the Pacific Ocean on the other. By placing them in juxtaposition it is not difficult to assign to the Japanese language its true place in the world of speech.

The Japanese then is not in immediate sisterly relation to the Chinese because it is polysyllabic and places the verb at the end of the sentence; nor is it Polynesian or Malay because its adjectives do not follow their substantives; nor does it place the genitive after the nominative. Polynesian grammar like Chinese grammar requires the verb to come before the word it governs. Not so the Japanese. The verb is rigidly attached to the end of the sentence and marks the conclusion instead of the commencement of action.

The place of the verb in Japanese is highly unnatural and seems very much opposed to simplicity and good sense. But it is far from being uncommon in languages. The native of Tartary, be he Turk, Mongol or Manchu always pays rigid obedience to the same law. He must by the necessity of his syntax say "The Lama prayers recites," "the shepherd the flock leads," "the boy a horse rides." He cannot alter the position of the nominative or objective noun or of the transitive verb. So it is also in Japanese. For the human mind to resign itself to the control of so inconvenient a law is a decisive proof of intellectual inferiority. It does not belong to the speech of nations with creative genius. There can be no just or well-founded hesitation in calling the Japanese a sister language to the Turkish, Mongol and Manchu when it is remembered that this and similar laws reign in the domain of its syntax.

There is often visible a congruity between the history of nations and the languages they speak. Poets, historians and philosophers have all of them owed not a little to the languages they used. Greatness in literature is impossible to those who have not been born to the use of an elevated language. Hence all the Japanese have attained they owe to the assiduous cultivation of borrowed literature. Unfortunately when they adopted the Chinese writing and books they made no improvement in the native syntax, and after 1600 years the laws of the collocation of words are as objectionable as they were in the

infancy of the language. There has been none of that boldness in innovation which might have modified the grammar, shortened the words in the native vocabulary, struck out much of the painfully extensive honorific element, and revolutionized the syntax.

We had in the Anglo Saxon a very good basis for our living English tongue. But before A.D. 1,300 it was practically impossible for great writers to achieve an immortality. The infusion of French modifying elements beginning from the Norman conquest, and of Hebrew originated by the intense study of our Sacred Records modified and moulded our language to a form which might suit the genius of Shakspeare.

The Japanese pedagogue does not permit similar modifying influences to come into the sphere of his thought and produce improvement in his language. He admits new words to any extent but the grammatical framework of the language remains. In translating Chinese he alters the order of words to suit his own syntax, instead of allowing the Chinese syntax to improve his own.

But what will these islanders now do with English? It will be well for the intellectual progress of Japan if under this new impulse which forces the native mind onward in the path of educational improvement, it should become conscious of a power to renovate the native language. This would be worth more to the people than hundreds of steamers and thousands of miles of railways. The English language is much more fitted than the Chinese, to improve the Japanese language. There is more freedom in its syntax, and by its polysyllabic structure it is more akin to the Japanese and perhaps better able to lend to it elements of lasting utility.

The question mooted by Mori the Minister to Washington is of high importance in a way perhaps which did not strike his own mind. The substitution of English for the native language appears to many persons an impossibility, and therefore the proposition is regarded as absurd. But if the question be modified so as to refer particularly to the renovation of the native language by contact with European speech it becomes highly practical and interesting.

The position of Japanese in language as a cousin of the Tartar modes of speech and with them of the Tamul and other languages of South India, may be decided by the place assigned to the verb as already remarked. This may be regarded as a characteristic unique, uniform and conclusive. But it carried with it other laws such as the following case marks must be suffixes. And why? These case suffixes are themselves chiefly verbs. It is the law of the position of the verb which originates and necessitates the law of the position of case marks. The one law embraces the other. Treat the case mark as a verb and its proper place is after its noun. *Kara* "from" and *made* "to" must then be looked for among verbs meaning for example to begin and terminate action. Among Chinese roots we have *kai* to open, *k'i* begin, *pit* to end. To some such roots I should look for the origin of these Japanese case marks.

Another group of case marks, those which indicate the nominative, genitive and accusative, are more correctly regarded as demonstrative pronouns. The Japanese and Mongol usage in regard to these are the same, as may be seen by comparing them. In accounting for their origin there need be no great difficulty felt. Take the old English, John Smith his book. *His* has in modern English become abbreviated into an *s*. The principle would be the same if *he* were used instead of *his*. Probably no genitive particle in any language has any other origin than this. Bopp explains genitives in this way, and his system in this respect serves as well for the Eastern Asiatic languages as for those which he examined.

We may go farther than this. The growth of the European verb tree may be illustrated from Japanese and kindred languages. The European languages are the most perfect and finished in the world. Rudimentary forms are therefore more lost to view in Latin and Greek Grammar than in the more primitive speech of Eastern Asia where the verb is in a sort of chrysalis condition. As the caterpillar changes into the chrysalis and then into the butterfly, and the leaf into the bud and then into the flower, so the bare and unornamental forms of Chinese grammar are seen passing into the crude transitional

state assumed by the verb in Japanese and Mongol, previous to their European development, embracing those varieties of voice, mood, tense and person which strike us by their precision, richness and beauty. By dissecting the verb in its intermediate condition as in Japanese, Tartar or Tamul, we can trace much of the process by which the European verb was formed.

In the European or Sanscrit verb there is no more interesting point than the formation of the past tense indicative from the participle. One of the ways in which this is done is easily seen in colloquial Japanese. In Mr. Aston's "Colloquial Grammar," he says "the *ta* of the past tense is a shortened form of *taru*, which is itself contracted from *te aru te* being the termination of the participle and *aru* the verb to be." The crucial point here to be noticed is that the past tense indicative is formed from the participle. So in English the past indicative loved is formed from the participle loved, by the instinctive effort of language which is always striving after the attainment of greater precision and variety of idea.

But the question is asked, how does the participle receive an indicative sense? It may be by dropping the last word. Thus in Mongol *yaboju boi* *he is having gone* becomes in colloquial use *yabaji* *he is gone* and sometimes *he went*. In this easy way a participle or gerund becomes indicative. Sometimes we cannot trace such a loss or a last word. Thus in Greek *elegon*, *he said* from *legōn*, *legon*, *saying*. We may then invite attention to a law described in Mr. Aston's Grammar of written Japanese by which verbs assume two forms according as they are complete in action or not. The form of completed action occurs in the last place and has a peculiar suffix. The form of incomplete action wants this suffix, and its place is earlier than the last. The law appears in Mongol with greater distinctness. A special suffix *kaan* belongs to the category expresses completed action.

In the Mongol expression *bi martaju boi* *I have forgotten* we have a pronoun *bi*, *I*, and two verbs, one meaning *to forget* and the other *to be*. The verb *to be* is in its primitive radical shape and corresponds in sense and use nearly to the Japanese *aru* and *mas*. Etymologically it is more closely connected with *mas*, than with *aru* *b* and *m* being interchangeable letters.\* The suffix *ju* in *martaju* was probably at an earlier stage a sort of case suffix used like the Japanese *ni* in a like position, that is when attached to verbs. It gradually assumed the character of a participial or gerund suffix. In the modern colloquial Mongol the final verb *boi* is omitted and *martaji* (which is the same as *martaju*) is a past indicative, *I have forgotten*. So the participle or gerund grows out of the law of position by which, when verbs are used together, completed action claims the last place and incomplete action an earlier place. Let us call this the first stage of metamorphosis. The participle or gerund takes in the next place as a suffix an old verb (for example *ju* that is *de*) which has become transformed into a case mark. So far there are two stages of formation. Then the participle becomes transformed into a past indicative. This is a third stage.

Grammar is the work of the human mind operating systematically on linguistic elements within its reach in an instinctive and unconscious manner. One language shews some special process better than others. Take the expression in Hepburn's Dictionary, *Hanashi wo kiki ni itta*, *he has gone to hear what is said*, *kiki* *hear* with the suffix *ni* *to* is a verb in the supine in a crude state where the suffix is still disconnected with the verb to which in favourable circumstances it may subsequently become indissolubly allied. The book Mongol, has a true supine ending in *re*. It is an instance of a noteworthy fact, viz, that the grammar of the Tartar languages is more advanced than that of Japan, and possesses a verb tree more like that of European grammar. All languages are in a state of transition from one state to another guided by the principles which are peculiar to them. It is possible for them to be improved by the adoption of new principles. Those who have the control of education and

literature wield a power which should always be used for the progressive improvement of languages. Without this aid languages deteriorate and pass into decay.

If we understand the place held by the Japanese language and estimate rightly the value of its special principles of development, it appears undoubtedly possible to improve it by the adoption of suitable educational methods with the aid of English speaking teachers and of the Government department of public instruction; the Mombusho.

When fifteen hundred years ago the Chinese language was brought over to Japan and taught in schools, no effort was made to introduce changes into the native grammar. The Chinese and Japanese Buddhists taught Buddhism. The object of attention and admiration to the Japanese youths of the time was the literature of China, no attempt was made to translate the Buddhist books or those of Confucius into Japanese tongue. It was the task of the educator to teach both in the Chinese language. The consequence was that Chinese words and phrases were imported into the Japanese language wholesale. The Japanese medium of thought remained in all its grammatical categories unchanged. Nothing but the use of numeratives between numbers and nouns, such as the word *ban* in *ictic ban nie*, *the first article*, and perhaps some few other unimportant additions, was gained to the grammar. The old stiffness of the laws of position was still retained. This is much to be regretted, a fine opportunity was lost of altering the grammar for the better.

Now that the Mombusho has undertaken to establish instruction in English throughout Japan, another such opportunity for modifying the inconvenient principles of the native grammar is afforded: a vigorous effort now made to correct vicious principles of grammar, and introduce the germs of solid improvement on a sound philological basis would open a new path of progress to the language.

There is no good reason for the verb always coming last or for the case marks being always suffixes. Why not attempt to restrain and modify these capricious limitations? I would propose the introduction of the English prepositions, *from*, *to*, *by*, *with*, and would recommend that teachers should not allow them to be placed after their nouns. It should be the duty of the teacher in schools to enforce English syntax, so as to accustom the youth of the country to think in the European manner, and to the adoption of our order for the words.

The method here recommended for use is the reverse of "pigeon English." The characteristic of that jargon is that it uses English words in a Chinese order. The Japanese in learning Chinese were guilty of the same mistake, they read Chinese in a Japanese order. They would have done better if they had adopted the Chinese grammar with the Chinese words. Had they early insisted in native schools on reading Chinese in its order instead of altering it as they now do into a Japanese order, they would long since have introduced into their native tongue principles from which their language would have derived the greatest benefit. By this time the whole nation would have been accustomed to freedom in the place of the verb and of the case marks. There would then be a better prospect of progress in the formation of a good native literature.

The introduction of English words into the Japanese language should also by all means be encouraged. It is not an opprobrium to a vocabulary to be rich in words, derived from various sources. Poverty in a vocabulary indicates poverty in ideas. Our English words are instinct with the life of modern science, art, and learning. The appetite of the Japanese youth for foreign words and knowledge is a happy circumstance and should be gratified. Thus their language will be enriched and may achieve some thing more in the world than it has yet been able to do under the painful restrictions to which it has been subjected. Let it not be said that the vocabulary will become heterogeneous in character. Is not our own English eminently so? All languages are liable to this charge if carefully examined. If we take the Japanese vocabulary as it is and compare it with the Chinese and Mongol, it is seen to be of the most composite character. I do not here refer to Chinese words introduced such as *konnichi to-day*, *sakoban last evening*; I speak of the native part of the vocabulary.

\* B in Mongol frequently corresponds to m in Japanese, as in the following examples *biye* or *beye*, *body* Jap. *mi*.  
*Bedere* *hu* to seek Jap. *motome*.  
*Basa* and, also Jap. *mo*.  
*Buri* all, altogether Jap. *mattai* or *mattaku*.

Thus *nma* horse is the Chinese *ma*, and Mongol *mori* with *u* prefixed; *sakana*, fish, is the Mongol *dagas* with the *d* changed to *s*. This tendency to sibilate appears in the Japanese syllabary very distinctly. What but this has introduced irregularity into the *t* series and changed *ta*, *ti*, *tu*, *te*, *to*, into *fa*, *chi*, *tsu*, *te*, *to*? The same principle of sibilation which since the invention of the Japanese syllabic *kana* ten centuries ago has expelled *ti*, *tu*, *di*, and *du*, from the list of sounds and introduced *chi*, *tsu*, *ji* and *dzu* in their place, operated at an earlier period to change the (Hebrew *dag* and) Mongol *dagas* into *sakana*. So also *shita* below is in Mongol *dôtai*; *soroi* to agree, correspond, be a match for is in Mongol *taraho*.

I give some examples from Japanese words beginning with *k*. The Mongol equivalent is *h* or *g*. *Kutsi*, shoes gotai; *kitsui*, fierce, strong, *huchu*; *kayeru*, return home, *hairehu*; *oki*, great, *ihe*; *huldehu*, freeze, *kori*; *koto*, thing, here; *kotoba*, speech, language, *hele*; *kotaye*, return answer, *hairehu*; *kuro*, black, *hara*; *kawa*, river, *gol*; *katai*, hard, *hatago*; *katana*, knife, sword; *hadogor*, sickle; *okure*, behind, *hotai*.

In identifying these words let it be assumed that the letters *l* and *r* both come out of *t* or *d*. This is in language so common a phenomenon that it is needless to prove it here.

In making a comparison of words throughout the vocabulary, the following changes of letters come to view.

The Japanese *k* corresponds to *h*, *k* and *g* of other languages. The Japanese *h*, *f* and *b* correspond to the *b*, *p* and *f* of other languages.

The Japanese *ts*, *ch*, *sh*, *z*, *s*, *j*, and *r* belong to the *t* and *d* of other languages, together with the *s*, *l*, and *r* of those languages. The Japanese *w* and *p* may usually be referred to *g* and *d* respectively.

The Japanese *m* at the end of the root very often corresponds to the final *ng* of Chinese roots.

The Japanese initial *m* corresponds often to the *b* of other languages. In modern Japanese *m* becomes *n* when final.

The Japanese vocabulary if compared with constant reference to these correspondences of letters will be found to have very little of purely native growth.

Thus *hosoi* is *petit*.

*hitots* is the Turkish *bir* one and the Eng. *first*.

*hineri* is the Chinese *pien* to plait, twist.

*futatsi* is the English *both*.

*samui*, cold, is the Chinese *shwang*.

*same*, to wake, is the Chinese *sing*.

*sama* shape, form, is the Chinese *chwang*.

*sumeru* clear is the Chinese *ts'ing*.

*sumi* to end is the Chinese *chung*.

Enough has been said to shew that if any one undertook to prove that the native Japanese words are of home growth he would have a hopeless task. The examples adduced are most of them beyond cavil.

Such being the state of the Japanese language, there is no reason why the process of enriching the vocabulary should not be allowed to continue. This is only to do what has been before, whether before or after the beginning of Japanese history. They were once a Tartar people who came by way of Corea into the beautiful islands they now inhabit. They drove the Ainos, a people originally as shewn by their hair of a much more northerly home, into north Nippon and afterwards into Yesso, and proceeded to develop their legends and their grammar till they reached their present form. When the unassisted progress made by the native mind in the formation of religious myth and of the formulæ of Japanese speech had proceeded to the extent of which they were capable, the Chinese language and system of thought appeared on the scene. The effect was most remarkable. A system of instruction was established which resulted in the introduction into the language of many thousands of foreign words and expressions. This was the work of school training in the hands of Japanese masters and assisted by the government. At the present day we find in the common talk of the people, including the uneducated men and the women of all classes, Chinese expressions which may be counted by thousands. This striking fact clearly shows the effect of schools in modifying popular speech.

In accounting for this remarkable adoption of Chinese words and phrases the aid of Buddhism must not be over-

looked. Religion is always a powerful factor in modifying language. For three centuries the *Go on*, the pronunciation of Chinese words common among the Buddhist monks, prevailed exclusively in Japan. Early in the seventh century Japanese students were sent to the Chinese capital in the province of Shensi to study the Chinese language more thoroughly and to bring back books and information bearing on the Confucian religion. The Japanese at that time were so enamoured of every thing Chinese that they adopted it in the most wholesale manner and never thought of an alphabet for themselves till late in the eighth century. There was no one to undertake to alter the Japanese language and the attempt was never made. When at last the alphabet was invented, its chief use was to aid pupils in learning the sense of the Chinese books and the sounds of the characters. As, however, most pupils never learned Chinese thoroughly, a mixed written language grew up resulting in the native literature which has since come into existence.

To foresee what, if left to themselves, would be done by the Japanese in regard to English is not difficult. They would treat English books as they have been accustomed to treat Chinese books. They would introduce the *kana* into English works to assist students. The native order of words would still be retained and an immense number of new words would be added to the vocabulary.

This course so highly to be deprecated they may be induced to avoid. The advice, example and reasoning of foreign teachers, may persuade them to learn English in a more enlightened way, and more thoroughly than they have done Chinese. In schools where English is taught a mastery of the grammar and the pronunciation should be made a *sine quâ non*. No vicious pronunciation or erroneous syntax should by any means be allowed. When the Mombusho according to its present programme proceeds to appoint native schools for an English education throughout the country, particular pains should be taken that the teachers appointed are qualified to give instruction and enforce correctness in these two particulars.

The consequence of this will be that the principles of European grammar will become familiarized to the juvenile mind of the country. The syllabary will also be greatly enlarged. There is in the English language a very great variety of syllables. By their adoption the Japanese syllabary would be more than doubled in capacity. Their acquisition of the letter *l*, of *th*, of *f*, would be a great gain. They would have a vast number of compound initials such as *str*, *pl*, *kl*, *tl*, *pr*, *kr*, *tr*. The lost syllables *ti*, *di*, *tu*, *du* and others would be restored. Finals such as *m*, *rn*, *rd*, *ld*, *lt*, *ks*, *ps*, *nd* and many others would be added. By such means a very poor syllabary would become rich. The enunciation of the native of Japan would become as full of energy, variety and expressiveness as our own. He would become master of two languages the one spoken by him from a child, marked by perverse laws for which no good reason can be given, and a syllabary soft and melodious, indeed, but wanting in force, range, and adaptability; the other cultivated, scientific and untrivial for compass, flexibility and variety.

Let us suppose that in all the 40,000 or 50,000 schools intended to be established by the Mombusho really good English were learned by the boys, could not something decidedly valuable be then done for improving the native language? An immense number of words will soon be added to the vocabulary. The most assiduous care should be taken that they be correctly pronounced. In the departments of religion, science, navigation, politics, and all the arts of the west the importation of new words should be encouraged. For example the word *God* is so far superior to the Japanese term *kami*\* that it would be well to adopt it at once by the unanimous determination of all who are interested in the spread of Christianity among the vivacious people of these lovely islands.

The importation of new words however will not be enough. The native grammar requires to be expanded and the syntax remodelled. This can only be accomplished by the resolute and enlightened handling of those

\* The word *kami* at first meant the souls of ancestors, and afterwards the gods of the Shinto religion, which are in fact the souls of ancestors deified. The Buddhists and Romanists have both avoided the term *kami*. The Protestant Missionaries would do well to imitate their caution. Christian theology seems to require a better word for the Divine Being.

who, whether natives or foreigners, have charge of the new system of education. I mention here several particulars which appear to be important.

1.—The introduction of English prepositions to be used interchangeably with the Japanese post positions; such are, in, up, from, to, by with, above, below, etc. Such words should keep their own position before the noun while the corresponding Japanese words retain their place after the noun.

2.—The directive adverbs up, down, in, out, above, below, should be introduced as appendages to verbs. It is found very convenient by Chinese, Polynesians and Englishmen to be able to indicate the direction of a verb's action by these and similar words *e. g.* press up, press down, press through.

3.—The article should be introduced. It has been found of great use in English, French, Greek and other of the most perfect languages spoken by man.

4.—The relative pronoun should be introduced. The Japanese interrogative *dare* would form a good base for it, but perhaps the English *who, which, that*, would in the circumstances of the country be better.

5.—The English syntax in regard to verbs should be carefully followed. There could be no better guide than the Bible because of its Hebraistic cast of expression. For example: "In those days came John the Baptist preaching in the wilderness of Judea." To accustom the Japanese youth to place the verb "came" before "John" and "preaching" before the words "in the wilderness," would be of the greatest benefit to them, because, though contrary to native rules of grammar, it is according to the law of nature and is authorized by the usage of languages of the best type.

6.—The introduction of the genitive with *of* would also be a benefit; adding greatly to flexibility and agreeably varying the expression of native thought. They might learn to say "The Ko of the Mikado" as a variation of *Mikado no ko*. As these changes found place in the language the present imperfect literature of the country might be ameliorated and elevated. Poetry with sweet, rhyming measures would become possible. The orator's eloquence might be exhibited in assemblies of the people. Government despatches and epistolary correspondence would undergo a beneficial renovation.

Perhaps, however, English teachers will consider that their task is done if they teach good English to pupils. They will not readily be persuaded that it is part of their work to improve the native language. It is the only aim of this paper to point out the importance of the object in view, and offer some suggestions as to how it should be done in the hope that educators will take it into consideration.

The government has great power on account of the submissiveness of the people. In China the improvement of the native language by foreign educators is utterly impracticable. It is not so in Japan. The institutions of the country are in the hands of the Government. The gradual abandonment of a Chinese education by the Japanese would open their minds to a true philosophy, and allow of a much more useful education being imparted to the youth of both sexes than that which they now receive. But this object might not be gained by the sacrifice (as suggested by Mori Ambassador at Washington) of the native language.

Instead of abandoning the native language in favour of English, it should be enriched by large additions and the extension of its idioms after the European type of language. The more able pupils in schools will learn to speak English thoroughly. For an inferior class books should be provided by a commission under the superintendence of foreign educators and of the Mombusho. For them a new idiom should be furnished on some such system as that recommended in this paper for a judicious amalgamation of the English and Japanese idioms. The rules of this amalgamation should not be left to chance and caprice. They should be adopted with forethought and with due attention to the principles of philology.

There is no more ill-founded prejudice than that which takes for granted the equality of languages in excellence and in suitability for literary development. A good literature never can grow out of a poor language, and consequently all languages are found to be poor which have

not a good literature. The best languages in modern Europe are the English, the French, and the German just as the literatures of England, France, and Germany are also the best in Europe. So the Japanese language and literature are both poor, the literature being the reflection of the language.

Of course it would be better for the Japanese to improve their own language than for the foreign educators to undertake the task. But they will probably not do it without foreign help. It is also a problem beyond their competence in the present state of things. It would be an achievement worthy of the foreign educator, in the most practical and scientific age the world has ever known, to take in hand the Japanese language and mould it into a shape which should adapt it for the production of a fine literature, and for all the noble uses to which a well-constructed language can be devoted.

There never was a nation more willing than the Japanese to make changes if they only knew how, and except in regard to our religion they have shown a truly liberal desire for knowledge of all kinds. Through a false impression they are for the time opposed very unwisely, to the teaching of our religion. This limitation to their liberality they will probably soon abandon. When they have done so they will prove themselves to be deserving of our fullest sympathy and aid.

## OUR NEIGHBOURHOOD.

### PART I.

*Hominem pagina nostra sapit.*—MARTIAL.  
Men and manners I describe.

"Our Neighbourhood" is situated in a retired and quiet suburb of the ancient city of Yedo. It is a quaint and straggling village in which the evidences of Western civilization have not displayed themselves as yet. An air of great antiquity clings around the place. The houses, built of heavy timbers, and roofed with ponderous tiles, green with the moss of ages, are long since out of perpendicular and seem to stand at ease, and, as they lean towards one another, they look like a group of old and friendly neighbours in grave and quiet conversation. Not that they are all so old and grave-looking either. See that trim little fireproof storehouse, shining in its black lacquered coat like a neat young Quakeress in satin. No wonder that the rollicking-looking silk-mercer's opposite has cocked his gabled roof at her in that knowing fashion when she was varnished up last year, and—for all one knows to the contrary—the house at the corner which is falling in two may have split its old sides laughing at the monstrous pretensions of the silk-mercer.

Then the barber's shop, (a saucy-looking little houselet between two giants), with its screen of bamboo rods for the sunny days, which tinkle musically as they strike against one another in the breeze—there's a pert air of confidence about the barber's which seems to say "I'm a weak little thing of a house it's true, but for all that I'm not a bit afraid of you big fellows. And indeed, I don't believe you could get on without me, you old tottorers. You'd surely fall together, and hurt your old selves, if I did not prop you up. I know very well that the huge crossed-beams between you above my roof are meant to keep you apart and are not protecting arms for little me, as you'd have folks believe—so none of your patronising airs, if you please, Sirs."

The main street of "Our Neighbourhood" has a cloistered appearance about it, from the projecting verandahs on each side thereof. It is always damp in the summer time; fungi sprout luxuriously, and it is here that the moss lies thickest on the roofs. An air of repose habitually pervades the place. Nay, when the summer sun is hottest, and the drowsy hum of the bee and the shrill chirp of the cricket is loudest, and the stone mason, laying aside his mallet and chisel, and the blind priest intermitting his monotonous chant, follow the example of their neighbours and stretch themselves in slumber, stagnation would best describe the state of the venerable thoroughfare. Nothing stirring save, perhaps, a surly dog as he snaps in his sleep and snarls at a persistent horse fly, or an uneasy cat upon a roof, looking for a shaded spot with a breath of wind playing on it whereon to take her nap.

The street, however, is alive to-day, for the funeral of a Per-

son of Quality is winding its way along and has attracted all the residents from their houses to see it pass. There stands the old grey-haired *Momban*, who lives alone amongst the dreadful-looking implements which, ranged about his doorway, should be enough to deter from entering the thief they are meant to catch; but which are now as obsolete as the *Momban* himself, or the ponderous gate of the *Nagaya*, which he is supposed to guard, and which is never opened, and leads to—nowhere. The waggish stonemason has left his work to have a look, and, perhaps elated with the prospect of a headstone, is cracking an unseasonable joke with the rice-merchant next door.—The surly clog maker—the *saké* man—the fried-oels woman—the umbrella maker, and even the blind priest, are all out and speculating on the condition of the deceased.

The object of their curiosity looks like a huge bride-cake, as it is being borne along shoulder-high by four men who step together, and change places with great precision when their shoulders ache on a signal from one of the foremost bearers. It is all in virgin white, square as to the body, but rounded off into a blunt pyramid above, which is topped with a gilded ball, the four pagoda-shaped corners being also topped with yellow metal which glistens in the sun. A scolloped vallance, (each scolloped ornamented with a gilt paper leaf), depends from where the pyramid begins, and a similar one appears beneath the first. A hollow piece of bamboo at each corner of the coffin, and attached to the trestle on which it is borne, is filled with sprigs of a tree called *shikimi*. Full a hundred men are decently following in the coffin's wake. They are very quiet and have a subdued and mournful look, which is not without its effect on the spectators. Of these from twenty to thirty are dressed in blue *kamishimo* or winged dresses, the two nearest the coffin, however, excepted, who are dressed in brown, (or tea colour as it is called), and every man carries a *makizashi*, (or short sword), stuck in his belt, the handle of which is carefully wrapped round with *hanshi*.

And now the funeral cortège has passed out of sight. The last follower has turned the corner, and the neighbours, hitherto straining their eyes in one direction and speaking in whispers, have turned round and formed themselves into groups. But the effects of this momentary interruption gradually passing away, these soon break up, and the good folk dispersing to their usual avocations leave "Our Neighbourhood" as placid as a mountain tarn when the ripple from the summer breeze has lost itself upon the shore.

Yedo, 6th October, 1873.

#### JUJITSU.

WHILST taking my afternoon ramble the other day, and following whithersoever my footsteps led me, wrapt in meditation as is my wont, I was suddenly startled from my musings by the sound of a drum, coming, seemingly, from amongst the clouds. A phenomenon so extraordinary immediately arrested my attention, and, after some examination of the heavens, I discovered that the sound was the work of a performer who was seated upon the summit of a tower, constructed of poles tied together in a cunning manner with ropes of straw. It forthwith occurred to me that this man might be an eccentric whom desire for notoriety had prompted to proclaim his whereabouts with so much noise, or who, tired of the obscurity to which a deficiency of talent or a want of opportunity had condemned him, had resorted to such means to distinguish himself from the crowd of mediocrities around him, and perchance also having heard of the custom amongst the foreigners of "each man blowing his own trumpet," had accepted the idea literally and, in default of a knowledge of that instrument, contented himself with beating his own drum instead. Whilst engaged in regarding this lofty musician, and wondering how we plodders appeared to him from hiserie, I was suddenly carried along by a crowd which was proceeding towards a matted tabernacle, and presently found myself face to face with a person who demanded from me the sum of half-a-boo. Having deposited the prescribed coin in the greasy palm of the dirty-faced but smiling collector, who barred the entrance with one arm whilst the tender of my coin seemed yet doubtful, I was made free of the sanc-

tuary and found myself within the building. This I noticed was constructed of the same materials as the tower outside, on the top of which the Muezzin (I have since learnt) is engaged in summoning to the games such as have money and leisure enough to be diverted.

I have often observed that the Japanese are very skilful in constructing such temporary edifices by means of poles and ropes. This particular one was covered in with matting of so flimsy a nature, however, as not to exclude the rain which was beginning to fall, and, to justify the remark of my next-at-hand sight-seer, a buxom young house-wife in her holiday silks, of which she was very careful, that "for all the good the roof was, one might as lief be outside." I was forcibly reminded thereby, (having ever an errant fancy) of the unlucky Irishman, who, fresh from his bogs had for the first time visited the Metropolis of his country and, overcome by a longing to ride in a chair, had, in his perplexity as to how to accomplish his desire, sought counsel from a wag in whose company he happened to have journeyed to Dublin. His wish was gratified by this prince of hoaxers, who handed him with much ceremony into a chair, which in the course of age and service, had lost its bottom, and slamming the door, desired the bearers to take the gentleman at their quickest pace to his destination. The novelty of the situation pleased the farmer at first, until his course leading him thro' a muddy street, and his bearers quickening their pace to a trot, he found his stockings becoming bedabbled with mire and the mud getting into his shoes. By this time satiated with magnificence, he had time to analyse his sensations, and he came to the conclusion as he used to say when relating his adventures to his fireside admirers, that "faix and only for the honour and glory of the thing, riding in a chair was mighty like walking," and so it was, my fair philosopher, under that matted roof "mighty like" being out in the rain. The area of the building, excepting a square raised portion in the centre for the performers, was divided with that servility to form so characteristic of the Japanese, into mat-shaped portions for the spectators. It is remarkable how this parallelogramism, this six-feet-by-three-ness, enters into all their calculations of space. It is highly probable that Locke's definition of infinity would force itself on their minds in the form of an endless multiplication of mats, one's mind revolts at this interminable tyranny—(this rectangular methodicality), the raised space alluded to—still a multiple of mats—was canopied with scarlet cloth, two of the four pillars supporting it being also red and the other two white. At each pillar sat a solemn judge to see fair play, and apparently as blind as Justice. The two white pillars supported each a bucket of water, and a box of salt. A herald proclaims the names and qualifications of the coming combatants, and a pair of ragged wrestlers, stepping forward, show themselves for a moment, and then, as if by mutual consent, approaching each his bucket, help themselves liberally to salt and water. These little preliminaries over, they set to work with much zeal, apparently to tear each other's clothes, already sufficiently ragged. For, seemingly, no other purpose could possibly be served by such aimless wrestling as is compassed by their knowledge of the art.

During the struggle the umpire, armed with an elaborate fan ornamented with scarlet silk tassels—apparently his badge of office—follows them about the arena; now encouraging, now advising, and anon separating the combatants as occasion may demand. When they are equally matched and exhaust one another without an advantage to either side, he stops the bout, and assures his audience that he will take care of the youths until to-morrow when they may renew the fight. Pairs of wrestlers succeeded one another in quick succession, the manoeuvres being the same in each case, but notwithstanding their want of skill I was much pleased to observe that some very pretty bruising were occasionally the result of the meetings.

Wearying of the monotony of the performance I was about to take my departure, when my attention was arrested by the sound of a woman's voice, and on turning to see from whence it proceeded, I perceived that a female herald was proclaiming the advent of the next pair. She had hardly finished, when

there leapt into the arena a woman of singular and forbidding presence, dressed in a pair of loose and ragged trowsers and a sleeveless shirt open at the bosom. She looked, as she stuck her arms akimbo and shewed her blackened teeth in ghastly grin, a very demon. Her antagonist, a man of stature, towered in front of her, and I trembled for her fate in his hands. My feelings, however, were reversed, when I observed her, as answering his shout of defiance with a guttural howl, in as low a key as she could command, she projected herself at him and seizing him by the throat—whilst unawares it seemed to me—flung him on his back in a trice. She varied this manœuvre by pitching him over her shoulder and across her hip, and finally wound up the performance by jumping on his patient prostrate body. Events so extraordinary induced me to bestow on the combatants the closest scrutiny, by which I became convinced that the magnanimity and innate gallantry of the man forbade him to put forth his strength against a woman, and I was the more pleased at this discovery inasmuch as he had received some hard knocks at the game, and was not a little growled at whenever he fell.

Some posturing of *samurai* with sword in hand followed, when satiated with Jujitz, I turned my face towards home. The rain was now a steady downpour, and the man on the tower, by this time soaked to the skin and unable to extract a note out of his flabby parchment even if he had the energy to try, had desisted from his efforts and was coming down.

Yedo.

#### ASIATIC SOCIETY OF JAPAN.

The first Annual Meeting of the Asiatic Society of Japan was held in room No. 19, at the Grand Hotel, on Wednesday, the 8th October, 1873, at 8.30 p.m.

On taking the Chair, the President, R. G. Watson, Esq., explained the reasons which had led to the deferment of the annual meeting till the present time; which was, however, in fact, the true anniversary of the Society's commencement of actual work. He called on the Secretary to read the minutes of last meeting—which were approved; and also the Report of the Council of the Society—which was as follows:—

#### REPORT.

In presenting their First Annual Report, the Council of the Asiatic Society of Japan are checked in the congratulations which they had hoped to present to their constituents, by the necessity for announcing the heavy loss sustained by the destruction, in a recent fire, of the printed matter intended for the first number of the Society's journal.

The loss however is not irretrievable, since it will be possible to reproduce most of the articles, intended for publication; though not without a delay of some few weeks. This will somewhat retard our entering into relations with other Societies of similar character, and obtaining their publications in return for our own; but no great harm to the Society need be feared from this slight check to our progress: certainly none will be felt if we are stirred up to greater determination that the objects we have in view shall be the more vigorously prosecuted.

As evidence that interest has not been lacking, the Council refer to the following List of Papers read before the Society at its regular Meetings during the past twelve months.

- 1.—On the Loo Choo Islands, by Mr. Satow.
- 2.—On the Hyalonema Mirabilis, by Dr. Hadlow.
- 3.—On the Streets and Street-Names of Yedo, by Mr. Griffis.
- 4.—On the Ascent of Fujiyama, by Mr. Hodges.
- 5.—Five Short Papers on the language of Loochoo, by Japanese Students.
- 6.—Notes of a visit to the Mulgrave Islands, by Officers of H. M. S. *Barossa*.
- 7.—On the Geography of Japan, by Mr. Satow.
- 8.—On Cyclones in Japan, by Lt.-Com. Nelson. U.S.N.
- 9.—On Russian Descendants in Saghalien, by Mr. Aston.

The prospect of receiving valuable Papers during the coming twelve-month is good; and with the confidence that their successors will find little difficulty in carrying on the operations of the Society, the present Council beg to resign their offices.

Fifty-nine members have been added to the Society since the first Meeting at which it was organized; the whole number at the present time being—Resident Members 64, Honorary 2, Corresponding 3. One has died and 5 are absent.

The newly-established German Asiatic Society of Yedo has courteously presented us with a copy of their Proceedings; and the Royal Asiatic and Geographical Societies of London have—through the good offices of Dr. Hadlow, promised to exchange their publications for ours.

A commencement has been by ourselves towards the establishment of a Library and Museum, by the presentation of some few books and specimens—but this part of our operations requires a Building of our own before it can be expected to flourish.

The balance now in the Treasurer's hands to the credit of the Society is \$303.75.

On behalf of the Council,

EDWD. W. SYLE,  
Hon. Sec.

It was moved by Sir Harry Parkes and seconded by Mr. Bellamy—

That the Report of the Council be accepted, and the thanks of the Society be tendered to them for their services during the past twelve months.

On motion of Mr. W. H. Smith, seconded by Mr. Aston, it was resolved—

That the following gentlemen be the office-bearers of the Society for the coming year:—

President.—J. C. Hepburn, Esq., M.D.

Vice-Presidents.—Rev. S. R. Brown, D.D.,

Sir Harry S. Parkes, K. C. B.

Treasurer.—R. B. Baker, Esq.

Recording Secretary.—A. Bellamy, Esq.

Corresponding Secretary.—Rev. Ed. W. Syle.

Curator and Librarian.—H. Pryer, Esq.

Council.—E. Satow, Esq.

A. J. Wilkin, Esq.

W. G. Howell, Esq.

Bayly Done, Esq., M.D.

R. H. Brunton, Esq.

Mr. Watson having announced the above result and spoken a few valedictory words, expressive of his satisfaction at having filled the office of the first President of the Society, vacated the Chair, which was then taken by Dr. Brown V. P.

A Paper, communicated by the Rev. J. Edkins, of Peking, on "The nature of the Japanese Language, and its Possible Improvement," was read by Mr. Satow.

A brief discussion followed; in the course of which the Secretary demurred to Mr. Edkins' objections against the use of *kami* as a translation of the word "God;" in which demur the Chairman Dr. Brown, emphatically concurred, and added that the suggestion contained in the Paper of importing into the Japanese language English prepositions would make great confusion.

In adopting the large amount of Chinese which is found in their language, as at present used, the Japanese had performed their difficult task in the best way; i.e. by arranging the Chinese words in Japanese order. In schools, at the present time, Chinese words are now taught,—not Chinese construction: also, the Arabic numerals have been introduced.

Mr. Watson remarked that in Persian, which was a pure but meagre language, the same process had been employed. A large amount of Arabic words had been introduced, but the syntax is Persian.

Mr. Satow feared that the carrying out of Mr. Edkins' proposals, would result in the spread of nothing better than "pidgin" Japanese.

Mr. Aston considered the proposed scheme quite Utopian. No such thing ever has been accomplished, as changing a language by authoritative enactment. Changes in a language must be effected by the influence of writers of genius.

On motion of Mr. Howell, seconded by Sir Harry Parkes, it was resolved—

That the thanks of the Society be returned to Mr. Edkins for his suggestive Paper; and that it be recommended to the Council to place his name on the list of Corresponding members.

The Secretary announced, as new members, Professor D. Murray, C. W. Lawrence, Esq., and Rev. W. B. Wright.

It was also moved by Mr. Syle and seconded by Mr. Watson—

That the Council be requested to take into consideration the subject of providing suitable accommodation for the Society's Library and Museum.

A specimen (contributed by Mr. Quin of H. B. M. Consulate, Nagasaki) was exhibited of what appeared to be petrified bamboo-grass.

The following notice of an International Oriental Congress,

at Paris, was read; and Rev. Jas. Summers (formerly of Kings College London, now Professor in the Mombusho, at Yedo) explained that the Organization was chiefly the result of the exertions of Professor de Rosny.

"An International Congress of Orientalists will hold its sittings in the great amphitheatre of the Sorbonne in Paris, from the 1st till the 9th of September next. Its purpose is to create personal relations among men interested in Oriental affairs. The following subjects have been set down for discussion:—1. What portions of Japanese literature would it be most useful to translate at this moment, and what are the philological resources for undertaking the publication? 2. Would it not be useful to establish a uniform orthography for the transcription in Europe of all Japanese texts? 3. What are the documents of a nature to facilitate the understanding of the special scientific, literary, and industrial works of the Japanese? 4. What is the nature of the actual movement of Japanese civilisation, and of its relations with European civilisation? 5. What are the characters of Japanese art at the different epochs, and what method is to be followed for studying them? 6. In what measure has actual Japanese literature, strongly saturated as it is with European ideas, interest for Europe? And may it be thought that the progress realised by the Japanese savants will be of a nature to contribute to the scientific movement of the Eastern nations?"

## Law Report.

GAIMUSHO, YEDO.

CLAIMS AGAINST THE OLD HANS.

Judge HANSEN and Mr. TAMONO, Commissioners.

CABELDU v. EWASAKI HAN.

October 3rd.

The hearing of this case before the Commission was this morning resumed.

B. Cohen, examined by Mr. Dickens: I am a merchant at Kobe. I remember selling goods to the officers of Ewasaki Han, in March, 1871. One was Yamasaki Shozo, and the other Yoshida. Merchandise was sold on account of the Han to the value of \$3,700; \$700 cash, and balance secured by a promissory note. The seal of the chief officer was on it. I telegraphed to Osaka, and received a reply that Shozo was the head man, and authorised to buy goods. The promissory note, however, was never paid. Through the Consul, the Vice-Governor of Osaka said that the contract was in order, but that I should have to wait for my money. A few days after, the Shusanji of the Han arrived, and, at the Custom House, gave me a new note at fifty days for the amount due. On the termination of this time, the money was paid. The balance was paid by order on the Oriental Bank Corporation, given me by the Vice-Minister of Finance.

Tawaraya Manjiro, examined by Mr. Ness: I never went to Cabeldu's place at any time to purchase goods. I met him first at the Foreign Office. Senzo brought a contract to my house, and asked me to seal it, which I did. I made a contract with Cohen. Senzo signed the document, as produce agent for the Han. I signed merely as a witness. I did not think that I was liable for the goods purchased, if the Ewasaki Han failed to pay for them. Senzo told me that the contract was on behalf of the Han; but I afterwards found out that it was a piece of cheating on his part. I also learned some time after that he had absconded. After my house was sold to pay Cabeldu, there still remained \$500. I made a second contract to pay this, but I don't know now where it is.

Cross-examined by Mr. Hill: I held the position of Sanji at Kobe, from 1871 to July of this year. I examined the claim of Cabeldu when it was made. It would depend on the circumstances of the case, in the event of the principal not being able to pay, the guarantor would be liable. According to Japanese law, the principal was bound to pay up to the last; then came the surety. If the sureties make a second contract to pay alone, the former contract is null and void.

This closed the case for the plaintiff.

Asabea, examined by Mr. Hill: I am at present teacher in a school in Hiogo. In 1871, I was a foreign judicial complaint officer in the Hiogo Ken. Cabeldu's complaint was brought before me. Tawaraya Manjiro said that he could not see how, as a simple witness, he was liable to pay the demands of Cabeldu. Shozo was to have been examined, but he had absconded. A document was made out in lieu of the original one, according to the terms of which the two parties, Manjiro and Cabeldu, had arranged the affair amicably. In the event of the guarantor taking over the claim, the principal's claim becomes invalid. According to Japanese law, if the property of the principal is not sufficient to pay the sum total, the guarantor then becomes answerable in all cases for the remainder.

Court adjourned to 1 p.m.

Examination resumed: Cohen's contract was signed by Senzo, who said that the goods were for Ewasaki Han, as well as Cabeldu's. I have always understood that Senzo was an official of Ewasaki Han.

Mr. Hill here handed in to the Commission the promissory note given by the Daisanji and Shosanji of the Han, to Mr. Cohen.

Ritamura Yaskadz, examined by Mr. Hill: I know nothing of the claim paid by the Government to Mr. Cohen. When the hans were changed into kens, an order was issued by the Finance Department, calling for copies of all debts due by the different hans to foreigners; and the claim of Cohen was among those sent in by the Ewasaki Han.

Cross-examined by Mr. Ness: I do not know whether the Government has paid any other claims. I believe that the Han said that the document in question had been changed.

Senzo, examined by Mr. Hill: I was, the year before last, in the service of Ewasaki Han. I wrote this document, but I know nothing of the piece of paper attached. Shozo's seal was attached by me, in addition to the three others. It was on a blank piece of paper, which I attached to the document to make it appear in proper form. I did so on my own motion. Cabeldu told me he wanted Shozo's seal attached to the contract. Shozo was in confinement at the time, so I attached a blank piece of paper, with a seal which had been given to me to facilitate the purchasing of goods the year previous. I did not get the piece of paper from Shozo. Several times, when Shozo wished to purchase anything, he told me that I had no authority whatever to purchase or transact business for the Han. I entered into a transaction with Cohen. Shozo was first; I was second. I was certainly under the impression at the time I purchased the goods from Cabeldu that they were for myself; and I endeavour to make him understand so, he being a foreigner. Shozo was in confinement. I don't think he knew that I had the piece or paper I have before mentioned. I do not think that I used deception either to Cabeldu or Manjiro.

Cross-examined by Mr. Ness: The goods that were purchased from Cohen were used by the Han; those purchased from Cabeldu I sold through a Kobe merchant. The proceeds of the goods purchased from Cohen were applied to the Han; whilst those arising from the sale of the goods purchased from Cabeldu were spent by myself. The seal was given to me for the purpose of making contracts, but I ought to have retained it.

Yamasaki Shozo, examined by Mr. Hill: I was, in 1871, Kussui of the Ewasaki Han, at Osaka. I knew nothing whatever of this document until I heard of it from the Foreign Bureau at Kobe, in connection with the complaint. I did not make, or authorise any one to make, this contract. I never made contracts in this way; the paper and everything should be different. None but myself had power to make such contracts.

Cross-examined by Mr. Ness: I recollect giving my seal to Kinzo on a piece of paper, merely as a sample of the seal that would be attached to a document. I have been examined by the Judicial Board. I never said that I had given my seal on slips of paper to do business with Adrian & Co. My seal was only a specimen, and should not have been used on a contract. I ought to have got the seal back from Kinzo; but I was busy.

Mr. Ness requested that a copy of the depositions taken before the Judicial Board should be handed in to the Commission.

This witness's evidence closed the case for both parties.

Court adjourned to Tuesday next.—*Japan Herald*.

## Extracts.

### THE IMPERIAL MINT.

WE extract the following from the Report of Major Kinder Master of the Imperial Mint, to H. E. the Minister for Finance.

#### RECEIPT OF BULLION.

The following details relative to the receipt of bullion have been supplied by the Commissioner of the Mint, the chief of the bullion and accountant's department:—

#### AMOUNT OF GOLD OF STANDARD FINENESS IMPORTED INTO THE IMPERIAL MINT DURING THE YEAR.

Imported by.	Ounces Troy, at 900 Standard.
Japanese .....	384,268 53
Chinese .....	21,517 34
Other foreigners .....	72,206 53
Imperial Government .....	832,303 91
Total for 1872-73 ..	1,310,296 31
Total for previous year .....	858,226 21
Increase 1872-73 .....	452,070 10

#### DESCRIPTION OF GOLD BULLION IMPORTED FROM THE PUBLIC DURING THE YEAR.

Description.	Ounces Troy.
Gold bars of unknown fineness .....	336,581 24
Gold leaf .....	25,229 32
San Francisco bars .....	70,286 14
American eagles .....	26,857 12
English sovereigns .....	1,283 70
Other foreign coins .....	182 50
	460,420 72

**AMOUNT OF SILVER OF STANDARD FINENESS IMPORTED  
DURING THE YEAR.**

Imported by.	Ounces Troy, at 200 Standard.
Imperial Government .....	2,432,375 91
Total for previous year .....	4,767,175 79
Decrease 1872-73 .....	2,334,799 88

**COINAGE.**

In the year ending 31st July, 1873, the following coins have been struck and passed for issue by the Director, as shown by bullion office returns:—

Denominations.	Number.	Value.
Gold 20 Yen .....	3,251	65,019
10 Yen .....	1,005,917	10,059,169
5 Yen .....	2,524,810	12,624,057
2 Yen .....	506,152	1,012,301
1 Yen .....	1,402,063	1,402,068
	5,442,198	25,162,614
Silver 1 Yen .....	None.	None.
50 Sen .....	3,937,009	1,968,952
20 Sen .....	6,341,426	1,268,883
10 Sen .....	4,658,132	465,813
5 Sen .....	5,768,541	288,426
	20,709,008	3,992,074
Total .....	26,151,206	29,154,688

**GOLD COINAGE.**

Some trifling alterations have taken place in the diameter of the coins, as follows, resulting in a great improvement in the appearance, as well as preventing the undue destruction of dies:—

**DIAMETERS OF GOLD COINS.**

Denominations.	Old Measurement. English Inches.	New Measurement. English Inches.
20 Yen .....	1-37	No alteration.
10 Yen .....	1-16	1-13
5 Yen .....	-97	-87
2 Yen .....	-72	-69
1 Yen .....	-55	-50

The increased number of gold pieces struck amounts to 3,251,942, while the decrease in the number of dies worn out is 1,023, this saving resulting from the altered diameters of the coins and the improved quality of the steel, combined with greater care on the part of the workmen.

Last year, to coin 2,190,256 pieces, 2,024 dies were used.

This year, to coin 5,442,191 pieces, 1,001 dies were used.

**SILVER COINAGE.**

The coinage of silver has been limited to the production of subsidiary coins, in which considerable improvements have been effected. The weight of each piece has been increased as follows:—

50 Sen .....	From 193.0 grains to 208.00 grains.
20 Sen .....	72.2 " " 83.20 "
10 Sen .....	82.6 " " 41.60 "
5 Sen .....	19.3 " " 20.80 "

The design of this coinage has been changed, so as to indicate the value in large Japanese characters on the reverse, whilst on the obverse the value has been introduced in Roman characters. The diameter of the piece has been adjusted as follows:—

**DIAMETERS OF SILVER COINS.**

Denominations.	Old Measurement. English Inches.	New Measurement. English Inches.
50 Sen .....	1-25	1-22
20 Sen .....	-93	-90
10 Sen .....	-72	-72
5 Sen .....	-61	-56

**COPPER COINAGE.**

The copper coinage, for the production of which the preparations are nearly completed, will consist of the following pieces, viz:—

Denominations.	Diameter. English Inches.	Weight. Grains.
2 Sen .....	1-25	220
2 Sen .....	1-10	110
1 Sen .....	-87	55
1 Rin .....	-62	14

The alloy will consist of:—98 parts; copper 1 part; tin 1 part.

On these coins also the value will be indicated in large Japanese characters on the one side, and in Roman letters and numbers on the obverse.

**GOLD & SILVER MELTING DEPARTMENT.**

During the current year the following weights of gold and silver bullion have been melted into bars:—

Denominations.	Ounces Troy	Operative Loss per Mille.
	Ounces. Parts.	Parts.
Gold .....	3,448,316 58	-05
Silver .....	6,429,144 94	1-68

The losses will be considerably reduced by the unreclaimed metal in old crucibles, ashes, &c.

**GOLD AND SILVER PREMELTED.**

Denominations.	Ounces Troy	Loss per Mille.
	Ounces. Parts.	Parts.
Gold .....	437,744 17	-87
Silver .....	2,607,972 39	2-74

The higher losses on premelted bullion result from the impure state in which bullion is sometimes sent to the Mint.

**COAL.**

Mr. Gowland, Chemist and Metallurgist of the Imperial Mint states of the coal of this Country:—

The amount of sulphur and of ash present in the coal used in the copper refinery, and in the various metallurgical operations of the Mint, being of great importance, determinations of these impurities have been made in several kinds of Japanese coal.

The following are the results:—The samples were dried at 100° cent before analysis:—

	(1)	(2)	(3)	(4)	(5)
Ash .....	12.760	6.487	10.695	9.877	9.657
Sulphur .....	-654	-435	-461	-588	-383

**THE WORKMANSHIP OF THE MINT.**

The accuracy of make of the coinage of the Mint may be judged by the following tables which furnish the results of the annual test assay, made on the 4th September by order of H. E. Okuma Shigenobu, Minister of Finance. The coins were indiscriminately selected for this purpose.

Denomination	Date of Selection.	Weight.	Standard Weight.	Deviation Allowed.
20 Yen .....	None.	...	...	...
10 Yen .....	Nov. 2, 1872	257.28 grs.	257.2 grs.	0.5 grs.
5 Yen .....	Dec. 18, 1872	128.4 "	128.6 "	0.5 "
5 Yen .....	Jan. 6, 1873	128.2 "	128.6 "	0.5 "
5 Yen .....	May 25, 1873	128.7 "	128.6 "	0.5 "
5 Yen .....	July 26, 1873	128.6 "	128.6 "	0.5 "
2 Yen .....	Dec. 28, 1872	51.25 "	51.44 "	0.25 "
2 Yen .....	June 27, 1873	51.4 "	51.44 "	0.25 "
1 Yen .....	Jan. 25, 1873	25.82 "	25.72 "	0.25 "

A thousand pieces of each description of coin were then selected from the various packets, and carefully weighed:—

Denomination	Weight of 1,000 Pieces.	Standard Weight of 1,000 Pieces.	Deviation Allowed on 1,000 Pieces.
20 Yen—Gold	None.	...	...
10 Yen .....	535.72 oz.	535.83 oz.	0.1 oz.
5 Yen .....	267.91 "	267.91 "	0.075 "
2 Yen .....	107.1 "	107.1 "	0.05 "
1 Yen .....	53.58 "	53.58 "	0.025 "
50 Sen—Silver	433.30 oz.	433.33 "	0.15 oz.
20 Sen .....	173.34 "	173.30 "	0.1 "
10 Sen .....	86.54 "	86.66 "	0.05 "
5 Sen .....	43.32 "	43.33 "	0.05 "

**Notes of the Fortnight.**

On the afternoon of Tuesday, the 7th instant, the remains of the late Sawa Nobuyoshi, Minister elect of Japan to the Court of St. Petersburg, were consigned to their resting place in the Temple of Dendzū-In, in the outskirts of Yedo. The ceremonial observed on the occasion was interesting and impressive, and as perhaps many of our readers may not yet have taken part in a Japanese funeral ceremony, we do not doubt that they will be interested in the following brief account of what took place on the occasion referred to.

The hour fixed for the mourners to meet at the house of the deceased Minister was 2 P.M., and at that hour precisely the funeral train left the house for the cemetery. The distance to be traversed between the two places was considerable, but the weather fortunately was fine. The deceased being a Kiōto nobleman of the Mikado's Court, his funeral was attended by the Prime Minister and by a long-train of Kugés and attendants. As the deceased had likewise formerly been Minister for Foreign Affairs, and was much esteemed by foreigners for his attainments and amiability, his funeral was likewise attended by nearly all of the Foreign Ministers at this Court, in-

cluding Sir H. Parkes, Mr. Berthémy, Mr. De Long, Mr. Von Brandt and Mr. Butzow, and by many of the junior members of the Legations and Representatives of the Consular Corps, and many other foreigners.

At two o'clock the procession left the residence of Sawa, but it was not until nearly half-past three that it reached the Temple of Dendzû-In. It was preceded by a detachment of Japanese troops with reversed arms, but without military music. After these came a succession of mourners in the ancient Japanese costume,—then the body of the deceased, carried by bearers on a plain wooden catafalque, behind which immediately followed the son of the deceased seated alone in his carriage. This in turn was followed by three other carriages, in two of which were the ladies and children of Sawa's family, and in the third some Japanese in Court costume. The son of the deceased was clothed in white with the exception of some black garments; the ladies were clothed entirely in white, their hair being spread out in one broad band, after the manner followed by the ladies of the Court. One of these ladies, who was presumably the wife of the deceased, could not contain her emotion as the procession moved slowly along, but etiquette apparently required all present to observe unmoved composure.

After the family of the deceased came the carriages of the Prime Minister and of the Foreign Representatives and others, many of those present preferring to accompany the slow procession on foot.

On arriving at the Temple, the catafalque containing the body was carried to a wood platform in the middle of which it was placed. The platform stood at one end of a court-yard with a large open space in the middle. To the right of this were ranged in line the Japanese mourners; on the other side the Europeans. Both were seated. On the Japanese side the front bench nearest the coffin was occupied by the eldest son of the deceased; behind were the ladies and children of Sawa's family, and to their left were Japanese in European mourning costume or in Court mourning attire. The Prime Minister stood throughout.

On the body having been placed on the platform, whilst low Chinese music sounded, some attendants brought large bunches of flowers which they placed in front of it. After this, other attendants in Court costume and having their mouths covered with crape, brought successively many offerings of fish, fowls, vegetables and fruits, which were in turn placed on small white tables surrounding the bier. This part of the ceremony having been completed, a Kugé noble stepped forward, followed by six gentlemen wearing the Kiôto Court costume, and having bent himself before the coffin of the deceased, read slowly a prayer or invocation from a scroll before him, the chief mourners bending their heads meanwhile, after which he retired from view followed by his six supporters. The Father Nicholai, the Missionary of the Russian Church, stepped forward and pronounced in Japanese a short funeral oration on the deceased; after which Sawa's eldest son went slowly to the gate of the Temple and having applied cold water to his eyes, mouth and hands, took from the hands of an attendant a funeral garland with white flowers, which he reverently placed on his father's bier, bending his head low, seemingly being engaged in prayer for some instants. He was followed in this ceremony by the ladies and children of Sawa's family and next by the Prime Minister, Sanjo, and all the Japanese present, after which the Foreign Ministers and others paid a similar last tribute of respect and affection to the memory of an upright, amiable and enlightened Japanese noble, whose premature death is deeply regretted on all sides.

THE *Japan Gazette* supplies the following report of the speeches which were made at the last interview of Mr. De Long with H. I. M. the Mikado.

"YOUR MAJESTY,

Having been relieved from my duty here, I come to bid farewell.

In the name of the President, the Government, and the people of the United States, I beg to announce the earnest and united wishes of all for the health, well being, and continued prosperity of Your Majesty and the people of Japan.

I beg to assure Your Majesty that it is the most earnest wish and desire of the President of the United States to have ever continued the existing ties of amity which united that Government to Japan in such close relations. I beg to bespeak in the name of the President, and in my own behalf, Your Majesty's confidence and support (so kindly yielded to me in the past), to be bestowed in turn upon the honorable and most distinguished gentleman who will succeed me.

His age, his great experience in public life, and his long service in the highest official circles of the United States Government, thoroughly qualifies him to meet in council with Your Majesty's Ministers.

It is my proud privilege to now state that during the entire period of my service here, I have met with nothing but kindness and courtesy at the hands of Your Majesty's Ministers; and having received repeated proofs of Imperial favour I turn away with no feelings but those of gratitude and reverence for Your Majesty, respect and esteem for the ministry, and kind regards for the Japanese people.

Venturing for a moment beyond the possibly proper limits of an adieu, I beg to say that my Government and people, rejoicing at the adoption by Japan of the policy of the Western States, hail with peculiar pride and pleasure the release of Japanese converts to Christianity from their bonds of captivity and their being allowed to return to their homes: and the removal of the edicts against Christian teaching and practices, as a friendly concession to the opinions of those nations in alliance with Your Majesty.

The recent action of Your Majesty's Government in earnestly joining with Western Powers in their efforts to suppress the 'Coolie Trade': the recent negotiation of a Treaty of Peace and Amity with China: thus helping to break down his barriers of seclusion: whilst Your Majesty's noble and distinguished Ambassador led the way to the presence of the Chinese Emperor: and the indicated policy of Your Majesty to compel the barbarian inhabitants of countries adjacent to Japan to treat with kindness and mercy distressed travellers cast upon their shores; all bespeak such a kindred sentiment to that prevailing amongst nations in the West that I venture to speak the thanks of the American people to Your Majesty.

The action of Your Majesty in sending forth to the nations of the earth the most distinguished Councillors, has met at the hands of those nations with such a hearty response that no words of mine are needed to picture the gratitude this action has to Your Majesty's allies.

The sending out of young noblemen as students to learn and bear back with them a correct knowledge of the customs, manners and policy of Western States, also assures all concerned that the time is near when this lovely and picturesque Empire shall be as free for trade, travel and residence to the citizens and subjects of Western States as are those lands to Your Majesty's subjects.

God speed the hour that shall behold a consummation of these wishes. When it comes none will rejoice more with Your Majesty than will the American people.

Whilst the sure foundations were being laid for these developments I have been permitted to enjoy the confidence and association of Your Majesty's Ministry. I now step on one side to be henceforth no actor in this scene; but through life I shall ever remain a most friendly and interested spectator.

With all due humility I now bid Your Majesty adieu.

REPLY OF HIS MAJESTY TO MR. DE LONG.

"It is with much pleasure that I have heard on the eve of your departure the assurances you give me of the good wishes which the President of the United States vouchsafes for the prosperity of this country.

I doubt not your successor will meet with the same goodwill and confidence that has ever been extended to you.

It is a source of much gratification to me to know that the intercourse between my Ministers and yourself has never ceased to be mutual agreeable.

I fully appreciate the statements you make in praise of acts of this government but which I apprehend are possibly overrated; although it has been my constant aim to lead my people toward a higher grade of civilization.

I shall never forget your friendly sentiments for my country; and I am pleased to hear that they will remain unchanged after your departure.

I sincerely hope that you may ever enjoy the blessings of health—especially during the long voyage that lies before you."

Mr. De Long's successor the Hon. John A. Bingham was

than introduced to His Majesty and delivered the following address, to which the usual reply was made.

"Your Majesty,

Obedient to the instructions of my Government and to my own sense of duty as well, it shall be my endeavour by good offices to strengthen, so far as I may be able, the friendship now happily subsisting between Your Majesty's Government and my own to advance the interests of each.

It is a pleasure to me to say that I but obey the instruction of the President who has commissioned me, when I assure Your Majesty that you have the good will of the President and people of the United States of America, and their best wishes for the prosperity of Your Majesty and of the people of Japan. The people whom I represent are not unmindful of the trust and confidence uniformly manifested by Your Majesty's Government towards the Government and cities of the United States.

Thanking Your Majesty for the distinguished consideration shown me and sincerely desiring that this growing Empire of the East may continue to advance with the advancing civilization of the age, I have the honour to place in Your Majesty's hands my letter of credence signed by the President and authenticated by the great seal of the United States of America."

THE Dowager Empress, attended by her suite, arrived in Yokohama on the 17th instant and drove through some of the streets of the settlement.

WE observe that the Japanese Government have been distinguished in the prize list of the Vienna Exhibition by "Honourable Mention" (a Diploma) for the lighting of their coasts, a fact creditable and gratifying both to the Government and the Department over which Mr. Brunton presides.

THE correct text of the notification about which so much has been said and written this week is as follows.

The servants in the employ of foreigners at this port not having hitherto been registered, the number of vagrants has greatly increased, almost beyond control.

Permission has been granted to Sudzumura Yozo and two others to establish a business for the supply of servants.

All persons wishing to go into the service of foreigners had better make application to the above.

Those who have countrymen or friends willing to become their sureties must apply with a writing duly sealed, and countersigned by their Kocho (wardmaster) to the officer in charge of Koseki (registration) at the Machiguaisio and procure a Kansatz (ticket).

Anybody found hereafter in service without a Kansatz will be liable to investigation.

Let every body remember and observe this order so that there may be no misunderstanding.

(Signed) OYE TAKU,  
Kanagawa Ken Gon no Kami.

29th of 9th month, 6th year Meiji.

POSTSCRIPT.

Employers already engaged must apply as above stated with writing sealed by their fathers or brothers and countersigned by the wardmaster, and then they can obtain a Kansatz from the Machiguaisio.

It will be seen that this differs from the translation published in the *Japan Gazette* and republished by ourselves on the following day, in as far as it is recommendatory and not obligatory. But even in this form it is highly objectionable, and the Governor of Kanagawa made the only amends in his power for the publication of it by cancelling it directly its full bearing and the just and indignant protests of the foreign public were brought to his notice.

WE believe that the announcement made in the *London & China Express* that the port of Simonoseki will shortly be opened to foreign trade is at the present moment premature.

WE are gratified to be able to announce that the Royal Humane Society has been pleased to award its medal to Mr. Dowson in consideration of his distinguished humanity and courage in rescuing a number of Japanese coolies from drowning in February last. The medal has been forwarded to Mr. Consul Robertson for presentation.

MR. EDKINS' paper on the Japanese language which was read on the evening of the 8th inst. at the meeting of the Asiatic Society, fell into terrible hands, and was torn to pieces without an effort. Mr. Satow humorously proposed that instead of making the changes suggested by Mr. Edkins, the "pidgin Japanese" spoken at Yokohama should become the recognized instrument of the nation's thought. Mr. Aston said that Mr. Edkins' paper recalled to him the schoolboy line

Patres conscripti took a boat and went to Philippi.

We are compelled by old instincts to finish the stanza:—

Omnes drownederunt  
Qui swim away non potuerunt.  
Excipe John Periwig  
Qui clung to the tail of a dead pig.

And it must be confessed that Mr. Edkins seems to regard changes in a language as a matter which can be regulated by a few learned or even visionary gentlemen who may dispose of them at will from a study table. But it is not so. The idea of introducing English prepositions into Japanese at the will of an Educational Council is absurd. "With," "from," "by," "to," "at," are delightful and useful words to us, and Mr. Edkins would have them introduced without circumcision or baptism bodily into Japanese by an Imperial Order in Council. (His scheme involves little less). Is it conceivable that he thinks any such scheme feasible? What nation will abandon its prepositions? Imagine a Greek of the old days coming to England in the time of the earlier Henrys and saying. "Ye barbarians, to what intent do ye persevere with the customs of your illiterate forefathers and retain such words as "through" and "against" and "towards" and "with" and "from." Know ye not that we, who are as Gods in comparison with you, say "dia" and "pros," and "epi," and "meta" and "para?" Will ye remain in your blindness, or be deaf to the heaven-sent language we offer you?" The chances are that our rude forefathers would have said:—"God hath senden us non but goode. Thou wol have us make obeissance and do feste reverence and thi commaundement obeye. Pardy, we wil it not!" Where, under these circumstances, would have been the prepositional scheme?

Mr. Edkins is a very bold fisherman, and, to do him justice, he has landed many a good fish. But every now and then it comes to an up-and-down tussle between him and his salmon, and on the last two occasions when the public has had the advantage of seeing the struggle, the fish has certainly had the best of it and dragged the man into the water.

THE *Japan Herald* states that in consequence of the protest of the British Authorities against the absurd result of the trial of the *samurai*, who assaulted Inspector Blockley a fresh examination has been instituted. This took place on the 14th instant, in the presence of H. B. M. Vice Consul and some of the Railway Authorities and the enquiry was to have been resumed yesterday.

WE all know the dangers of level crossings on Railways, and have been startled by the numerous and appalling accidents which have occurred through their means. The Board of Trade Authorities in England will now allow no level crossing on a new Railway if the road can by any possibility be carried over or under the Railway by means of a bridge. There is a level crossing on our Yokohama and Yedo Railway about one mile from Yokohama, on the road leading to the new town on this side of Kanagawa station, over which there is an immense traffic both of jinrickshas, horses and foot-passengers. The following paragraph from the *Pall Mall Gazette* will illustrate the care which is paid to level crossings in England and how accidents still occur on them.—

The narrow escape of the Irish night mail on Saturday last from a fearful accident exhibited a new variety of the dangers incident to "level crossings." The spot which was so nearly the scene of a catastrophe was a place named Weeping Cross, about a mile and a half from the Stafford station. The turnpike-road here crosses the line, but "everything," we are told, "which human ingenuity could devise" had been done for the safety of trains and passengers along the turnpike road. The crossing is furnished "with one of Lea's patent gates, and Saxby and Farmer's interlocking apparatus." About half-past ten on Saturday evening a farmer living near Stafford was returning to that town in a pig accompanied by his two sons and a relative. On arriving at Weeping Cross the horse, hearing the Irish mail approaching, took

fright, rushed at the "patent gate" and defeated the "interlocking apparatus" by clearing the gate at a bound, breaking loose at the same time from the rig, the occupants of which jumped out. No sooner had they done this than the Irish mail came up, and the engine struck the horse and threw it with great violence against the patent gate, which it broke in two. The horse was killed on the spot, and on the engine arriving at Stafford the buffers were found to be covered with blood. So great was the shock that for a few seconds the engine-driver and fireman imagined that the train had left the rails, and were about to jump off. Fortunately, however, the engine soon steadied itself, and neither driver, fireman, nor passengers sustained any injury beyond a severe shaking. It appears to us, however, that "human ingenuity could devise" a gate which a frightened horse would be unable to leap over.

Instead of the crossing above mentioned having "everything which human ingenuity could devise," it has only a couple of pairs of flimsy Japanese gates which, when opened, instead of shutting across the Railway, leave it perfectly unprotected. A restive horse or cow which takes fright may therefore without obstruction bolt along the line and almost inevitably cause an accident. The gatekeepers, also, seem to have only an indistinct notion of their duties, and when traffic should be allowed to cross the Railway and when not. We recently heard of a gentleman wishing to cross it with a carriage and pair of ponies; he knew there was a train about due, but he was not aware whether it had passed or not. The flimsy gates, however, were not closed across the road and he proceeded; but just as he got his ponies halfway across the line the gatekeeper rushed up and seized their heads with what intention the driver of the ponies could not divine. But he, imagining that the train had not yet passed and that the gatekeeper wished to prevent his crossing the line until it had passed, lashed the ponies forward and fairly across the line. Shortly afterwards the train whisked past. Such a state of matters should not be allowed to go on unaltered, and we are sure that we have only to direct the attention of the Director and Chief Engineer of the Railway to the manner of managing this crossing, to have it immediately corrected.

We recently published an article pointing out the uses and dangers of Petroleum, and we now deem it right to place before our readers, more pointedly, the actual risks which they run in burning in their house lamps or having stored in contiguity to their dwellings, petroleum oils which have not been thoroughly purified. In all European countries—and notably so in America—the most stringent regulations are enforced to prevent the use of petroleum oil in the least dangerous. Oil imported to Yokohama from America has presumably undergone the proofs instituted by the authorities in that country; but we are in position to state as a matter of fact that most of the oil lately received is far below the American standard, and is of a most inflammable and dangerous nature.

The standard in America by which oil is tested is that it should not emit an inflammable vapour when heated up to 100 degrees Fahrenheit or under. In England 100 degrees is fixed by act of Parliament as the limit of safety, but the scientific men who have investigated the matter recommend no oil to be used which has a flashing point under 130 degrees. Various specimens of the American Kerosene recently imported have been tried and they give off a gas which explodes when they are heated to 85 degrees. Therefore, when we consider that the temperature of our rooms in summer is often above this, and that the oil reservoirs of our lamps are seldom less, the amount of danger which we incur by using such oil may be imagined. We think this an opportune moment, owing to the large quantities of petroleum now here, to impress upon our local authorities the necessity of some action being taken, both in regard to the manner of storing petroleum or inflammable liquids of any kind in the settlement, and, also, in regard to some test being applied to the quality of the oils imported for public use. But we are free to confess that although this is a matter affecting the public safety we have little hope of our representations being followed by any practical or useful measures. To point out irregularities in the conduct of local affairs in Yokohama is to create despondency in ourselves. Our complaints are generally speaking shelved and our protests ignored, and we have always more or less a feeling of insecurity, discontent and discomfort. So if we now point out that there exist no regulations for the storage of petroleum, that it is left to the conscientiousness of those importing it

to store it in such quantities and in such places as they choose, and that no means are taken to discover its quality, whether it is safe to allow the public to use it or whether it is as explosive as nitro-glycerine, we are not sufficiently sanguine to imagine that our representation will have any effect whatever on the authorities to whom the safety of the Yokohama Public is entrusted. We are, however, glad to be able to draw attention to the subject and indulge a hope that our remarks may be of some ulterior benefit.

WE question if even Mr. Mori can conscientiously endorse the following which may be seen posted in a street in Shanghai:—

"Notice.—The undersigned SHOP has turned inside house and everything has removed To SELL there untill new house is built in this corner. Y. H. Kiyogo & Co., Shanghai, 11th August, 1873."

THE Athletic Association have not been idle we find. They have caused to be formed under the superintendence of one of their most energetic members an excellent running path at the Rifle Range, a quarter of a mile in its total length with 150 yards on either side perfectly straight. Enclosed by the path, they have had about 130 yards so levelled as to fit it for hurdle races, and their arrangements comprise a dressing-room for the members and a "Grand-stand" for the accommodation of visitors. Much credit is due to this little Association which would seem to be struggling against a very general indifference to physical education and to be doing good work within its limited scope.

ATTENTION has been called to an inconsistency between the following paragraph (which first appeared in the *Japan Weekly Mail* of the 4th instant, and was subsequently reprinted in the *Japan Mail* of the 8th instant), and the silk report embodied in the "Commercial Intelligence" of the latter journal.

An idea appears to exist among the *Graineurs* that some half million of cards, out of those reserved by the Japanese Government for home use, will be available for export. We possess, however, the best authority for stating that this rumour is entirely destitute of foundation.

Under the head of "Commercial Intelligence" we wrote as follows:

On the 20th ultimo, it was officially intimated by the Finance Department that "no permission had been granted by the Japanese Government to export any portion of the silk-worms' eggs cards reserved for the home use."

Had it mentioned either the quantity reserved for home use or the quantity at which the export is decidedly to be limited that notification would have thrown some light on the subject; but it mentions neither the one nor the other, and the question remains precisely where it stood before.

What we know from the best Japanese sources is this: 1st that the total production of this year has been 2,400,000 cards; 2nd that the consumption of Japan not exceeding 600,000 leaves a surplus of 1,800,000 cards. Of this surplus we are semi-officially given to understand that only 1,300,000 are to be stamped by the Government for export.

What we do not know is whether the balance viz about 500,000 cards is to be finally included in the home reserve or in the export. Under their notification of 29th September the Government remain free to do either, and the calculated ambiguity of their language is the cause of the unsettled state of the market.

The first paragraph, which was intended as a denial to the report of an Italian newspaper that the Government had authorised 560,000 cards out of those reserved for home use to be exported by Japanese merchants, was written under a strong impression that the export of cards for the present season had been, by overt official declaration, fixed arbitrarily at 1,300,000. When the foregoing report was furnished the writer's attention was drawn to this erroneous impression and to the incongruity involved in the retention of the paragraph. But in the haste of preparing the fortnightly paper for the outgoing Mail it was overlooked, and has thus been unguardedly retained. That there was any intention in this is best refuted by the following unambiguous language of the Summary:

The *Graineurs* are greatly perplexed: a Government notification states that no portion of the reserve of silk-worms' eggs will be allowed for export, but as it is not definitely pledged to reserve any fixed quantity, the buyers are without any basis upon which to calculate the value of the cards. We discuss the point fully in our silk report.

IN regard to the note in the *Japan Gazette* of Tuesday evening on the case of Devine v. Kirby, it is almost needless, though perhaps right, to say, that we had no idea that Mr. Kirby had

lodged an appeal against the decision of the Assistant Acting Judge until made aware of it by the note in question.

IN reference to a note in the *Japan Gazette* of Tuesday evening upon an article which appeared in the *Japan Weekly Mail* of the 5th instant on the case of Devine v. Kirby, it is only necessary to state that what appeared to the writer of that note an "attack upon Mr. Kirby" was an opinion formed solely upon the report of the case, written with no more knowledge of Mr. Kirby on the part of the writer than is inevitable in a small place like this where both have resided for some years, an absolute ignorance even of the person of Mr. Devine, and without the slightest bias towards either party. Any such bias we should hold to be an absolute disqualification for commenting upon the question at issue between these litigants, and we cannot but express great surprise that such an imputation as that referred to should have been made.

THE foreign dealers in silk continue as disunited as ever, and have fallen once more an easy prey to the combination and organization of the native silkmen.

It had become a custom of the trade to weigh the silk to the buyers in shirting bags, for which an allowance of 1 lb. per bag was made by way of compensation for the dampness which always exists to a greater or less degree in silk as it arrives from the country. It is true that the actual weight of the shirting bags being only about  $\frac{1}{2}$  lb., there was apparently a small profit accruing to the buyer; but that compensation was very far from being sufficient to meet the losses in weight which occurred at the place of destination in Europe.

Suddenly the native silkmen, without waiting to come to an understanding on the subject with the foreign Houses, have withdrawn even the small compensation alluded to above, and insist upon the actual weight of the shirting bags being deducted instead of 1 lb. per bag as heretofore. In strict justice no one can object to such a proceeding. But then what are the foreign Houses to do with regard to the dampness of the silk, which, this season in particular, has been greater than for many years past?

Several firms have already submitted unresistingly to the new arrangement. The silk market is just now much excited: many want to buy as much as they can and are afraid of being shut out by the native dealers if they decline to comply with their terms. We are even told that a dispute on this subject has been submitted to the British Consul, who will have to investigate the matter, and we hope that the result will be such as to bring about, once for all, a fair understanding between the buyers and sellers.

THE Cricket match which took place on the 15th at the grounds of the Yokohama Club between Land and Water, terminated in favour of the latter side, which obtained 189 runs against the 85 of their antagonists with, moreover, five wickets to spare.

THE race on the 9th inst. between three crews of the Y. A. Rowing Club for five Silver Cups presented by Howard Church, Esq., was one of the best contested and fastest races that has taken place in Yokohama, and Mr. Church can congratulate himself on having given an incentive to rowing here which we trust will not die out. Before giving an account of the race we would make a few remarks on the three crews whose names and weights are added below. The Scotch crew, as we have already said, have been the favourites since the training began, both on account of the heavy men composing it, and of their not having had to make a change in the boat since the commencement of their training. Their "stroke" is we believe the most persevering rowing man here, pulling a very powerful oar, and they adopted the use of sliding seats which no doubt gave them a slight advantage over the English crew. The only disadvantage they laboured under was the indisposition of No. 3, who, being the oldest man in the three crews and having been a long time in the East, found the hard training almost too severe for him. The result, however, proved that he has plen-

ty of "go" left in him still. The English crew were a good, even crew, but far too light to compete with the Scotchmen, averaging, as will be seen by the weights given below, more than one stone per man lighter. It must be admitted that they showed they had not spared hard work and strict training to bring themselves up to the mark and make such a close race with their more powerful opponents. They had also, within a fortnight of the race, to change their "bow," through sickness, which must have largely told against them.

The American crew were a heavy crew as compared with the English, and had the advantage of the lightest boat and the best oar in Yokohama for their stroke; and we can safely say that had they had another fortnight's training, would not have let the Scotchmen win by much, if at all. They were most unfortunate in the illness during the last week of No. 3, who showed great pluck in taking his place in the boat, and pulling in such a hard race. Their stroke deserves great praise in bringing his crew up so well, and it is with much regret that we hear he is leaving the settlement as we can ill afford to lose so accomplished an oarsman.

The race is described in a few words. The three crews shortly after 3 p. m., paddled up to the starting post, and at about 3.30 p. m., got away to a good start; the English crew taking the lead with a quick stroke, Scotch next, pulling well together with a good long swing, the Americans holding their own well, till half the course was accomplished, when the Scotch, maintaining the same steady stroke, gradually gained on the English, and just before reaching the P. M. S. S. Co.'s wharf drew ahead of them; the English then put on a good spurt and again drew up on the leading boat, but could not keep it up for long and the Scotchmen drew away from them with each stroke, only quickening the last half dozen and taking their boat in a length and a half ahead of the English, who, in their turn, were half a length ahead of the Americans.

Time 6 min. 27 sec.

The water was as smooth as glass, and the weather everything that could be desired.

MR. MARSH'S Concert on the evening of the 9th inst. was the source of some disappointment, on account of the absence from it of one or two attractive features which the first published programme promised. But no one felt the disappointment more than Mr. Marsh, and no protest can be made when illness interferes.

The Concert opened with an adaptation of Beethoven's first trio for pianoforte, violin and violoncello. The whole work would have been far too long for any but an audience prepared by previous acquaintance with Beethoven's music to follow it, and much as we dislike these mutilations, there is no doubt that the performers did well in presenting only such parts of the work as gave a fair idea of its various subjects, without following them through their more difficult ramifications. The old trouble, too, of finding an amateur who can do any sort of justice to such music, and sustain his part in company with the finished execution of professional musicians, had also to be faced, and, in view of this, we were easily reconciled to the course adopted. And yet the trio presents Beethoven in so sweet and genial a mood, that had there been any one capable of running abreast of the two stronger players, we can

hardly help thinking it would have made some new disciples for the great master. It is written in his early manner, before a larger knowledge had brought the doubt to which knowledge leads, and the melancholy which is the inseparable concomitant of that doubt. It was born of a time when love had no pangs and ambition no disappointment, before the ingratitude he experienced from one to whom he gave his whole heart, and the death of that precious sense which was perhaps more exquisitely developed in him than in any one of our race, had embittered his soul and clouded the brighter visions of his early life. In it he seems to rejoice in the beauties of external nature, and if a thread of melancholy appears here and there in the tissue, it is only that suggested by the impossibility of an entire absorption of the soul into the spirit he was worshipping. Here we no more have the Beethoven of the first and the later quartets, the Rudolf trio or the C minor symphony, than we have the Shakespeare of Hamlet, Lear, and Measure for Measure in A Midsummer Night's Dream or As You Like It. None of the intense and melancholy subjectivity of Beethoven's later works appears in this trio. The *Adagio* is pure and tender beyond description, almost beyond rivalry, and but for the exigency which deprived the audience of it, the *trio* which follows the *scherzo* would have shewn the composer in his very happiest frame of mind.

Webbe's Glee for three voices "Winds Gently Whisper," followed the Trio, and, but for one little flaw in the early part, it went pretty fairly. Yet we dare not praise a performance which was below the powers of the three singers. When the best possible is done, there is nothing to be said. But a little more practice would have made this beautifully-written glee more perfect. Mr. Pearson sang Prince Poniatowski's song, "The Yeoman's Wedding," with something less than his accustomed accuracy, and though the Prince is confessedly a good musician, his little work has no particular merit. Mr. Marsh's Fantasia on the harp from subjects of Strauss was, of course, beautifully played; but the harp does not make "man's music." It was very well for Orpheus in the woods. Its appeal, to our mind, is purely sensuous, and "the smallest flower that blows" is more powerful than it to awaken the thoughts which lie "too deep for tears." Macfarren's song "My Own, My Guiding Star" is prettily written, as was everything that Macfarren wrote, and was pleasantly given by Mr. Townley, but it belongs to a school which is rapidly losing its hold on musicians, and the world will be no great loser when the stratum to which it belongs is fossilized. A *concertante* duet for piano and flute followed, and was extremely well played by Mr. Marsh and Mr. Wagner. Both parts are written with great grace and knowledge of artistic effect. All Benedict's peculiar power of ornamentation, a power which, unlike that displayed by ordinary ornamentation, is almost creative in his hands, is visible in it, and Mr. Marsh reproduced this with great effect. Bucher wrote like a master of his instrument, and we think Mr. Wagner never played here to better advantage than in rendering this music. Mr. Black brought the first part of the Concert to a close with "Die Fahnenwacht," the song by which Pischek, years ago, carried the English public by storm. We are not in the humour of the Athenian who cast his oyster shell against Aristides because he was tired of hearing him called The Just, but we have a certain jealousy which makes us extreme in marking anything which Mr. Black does amiss, and we do not know that we can pay him a better or juster compliment than by saying so. But if he had sung his song in English he would have better pleased the two divisions of his audience who cannot and who can understand German. The former would have accepted gratefully the not inelegant translation of the German words, and the latter would have been spared the only pain which it is possible Mr. Black could give them. German in this respect is not like Italian. A very slight knowledge of the latter is quite enough to prevent any glaring error in pronouncing it in singing, (though our insular Italian is not attractive,) but this is not the case with German. He who cannot speak it cannot sing it, and it is abundantly clear that Mr. Black cannot speak it. But he delivered the music with combined fire and tenderness, and carried off his audience, as he alone of all our musicians can.

The second part opened with Bishop's "Hark! 'Tis the

Indian Drum"—a dear old thing which can never be revived without being admired, but which has not a particle of nap left on it. It is like one of "remnants of the palæozoic age" used by the members of the "Society upon the Stanislaw." We do not say that it could have the effect upon an audience which the "chunk of old red sandstone" had upon "Abner Dean of Angels." But if the audience had, after its very excellent delivery—a point it enjoyed in common with the missile in question—curled up on the floor, and been no more interested in the subsequent proceedings, we could not have felt any surprise.

The interest was, however, to be revived by an excellent performance on the violoncello by Mr. Chapman, of Paquet's Andante and Bolero, "*Souvenir en Espagne*." The great Belgian player who wrote it would, as we know, have been pleased to hear his music so well played in this distant country, and we hope Mr. Chapman's stay here may conduce to the cultivation of an instrument which is, of all others, the instrument for the amateur and the gentleman. His handling of it is that of a master, and we should be glad to think that some musical aspirants would place themselves under his efficient guidance. Mr. Townley sang his second song "Love's Request" with more effect and spirit than his first, but his voice requires a little more power to fill so large a room. Mr. Ludwig followed with a solo upon the zither by which he deservedly earned an *encore*. A little more certainty of intonation is still requisite before he can do entire justice to the pretty and touching little instrument of his choice. Of its peculiar powers we spoke on a previous occasion, and it is curious to see how far these powers transcend those of the harp, an instrument of infinitely higher rank, more perfect in its mechanism even than the piano-forte, and to compare which with the zither is enough to make Bochsá or Chatterton turn in their graves. Yet the knot will rise in the throat under the influence of the one as it never does at the appeal of the other. Even the cold Englishman who only knows Switzerland or the Tyrol as a tourist, how deep so ever his love of them, experiences that craving and hollowness of heart at the sound of this little instrument which drive the Swiss to a melancholy madness when away from their country. It seems to pierce like a red-hot silver wire, and has an altogether strange power over those emotions which depend upon the memory for their activity.

Mr. Black followed with "Bonnie Prince Charlie" which was redemanded and redemanded—and no wonder. Mr. Black is without compeer in Scotch national songs. He revives recollections—now grown very dim—of Wilson's powers in the same direction. We detest the Stuarts, but should assuredly have lost all constitutional principles under the influence of such songs. Spohr's song, "The Huntsman, Soldier and Sailor," was then sung by Mr. Anderson, the beautiful violoncello accompaniment being played by Mr. Chapman. The song is curiously free from Spohr's mannerism, and we doubt if it could possibly be recognized as his work but for the *obligato* string accompaniment, which is very masterful. It is the small work of a great—we have been taught to think a very great—master, and shows how even in *minimis* the indestructible quality of genius will assert itself.

M. Michel then performed a solo on the *cornet à piston* with pianoforte accompaniment on the subject of the "*Carnival de Venise*," with excellent effect. He is a great proficient on his instrument, and the Settlement owes him more obligations as the leader of the amateur wind band which did so much towards enlivening the Bluff Gardens during the summer, than all may be aware of. The applause he earned was thoroughly well deserved. The Concert was brought to a close by Mr. Black's singing of the Sardinian National Air "*Signor, che sei nel ciel*."

The Duke of Genoa, under whose patronage the Concert was given, was absent on account of indisposition. His presence would have been appreciated at a concert projected in his honour, and the programme of which was not arranged without a view towards the illustration of the music of his country.

The Concert, on the whole, was somewhat tedious, and showed but little solid advance upon previous performances. But it was redeemed by two or three good points, and these sent the audience away in good humour.

Yet "the banner with the strange device" should hang over the proscenium of the theatre.

#### THEATRICAL.

THE first representation given by the "Theater Verein" of the Club Germania was held in the theatre of the Club on Saturday evening the 18th instant.

The previous performances of this little Society had evidently formed a favourable impression as, notwithstanding the violent showers of rain which commenced to fall at dusk and lasted during the evening, an overflowing audience was present on this occasion, and the available space proved only sufficient to accommodate those who were undaunted by the weather. As it was there was room, sitting or standing, for all.

"Engliach," the first piece performed, is one of those light *levens de rideau* designed to exhibit some of the monstrous peculiarities of the *genus* Engländer, which thanks to Levassor, held the French stage for years and may still be popular in Germany. *Edouard Gibbon*—the typical English-man, who in this case appears to superadd misogyny—being urged by his father to marry hurries away from home to escape that worthy gentleman's importunities. To Hamburg, however, his father's letter follows him still urging compliance, and he resolves to put a summary end to the difficulty by marrying the first woman he may meet! Fortune throws *Adèle Treuher*, a handsome young widow, in his path and he pursues her, resolved to gain her hand. She takes refuge from him in a hotel and enlists the sympathies of an elderly banker, who pretends to be her husband in order to terminate the Englishman's assiduous attentions. But here the well-known national resource is of service to the latter, who, protesting that the lady is too fair and too youthful for her mature partner, offers to buy her, a position which is somewhat complicated by the presence of the banker's wife who, overhearing the proposal, demands separation from her husband and professes her affection for the Englishman. *Edouard* is about to enforce his demand with pistols, but fortunately meeting *Adèle* induces her to commiserate his position and to relieve its difficulties by agreeing to become his wife.

Frau Rolandina sustained her rôle of *Adèle* with her accustomed grace and vivacity, and though the character was not perfectly sympathetic did every justice to her embarrassing position and acted with much good taste and archness. To Herr Anderson we can scarcely accord the same praise. His *Edouard* was *compassé* enough in the earlier part of the drama, but he became somewhat too vigorous in action and gesture as the story was developed, whereas tradition (we do not say nature, for that is quite another thing) demands that his impassiveness should continue and even increase with the inward emotion. But he presented a very fair stage Englishman from an amateur's point of view and performed creditably. It is needless to add that he wore the nankeen suit without which it is well-known that no Englishman ventures upon the Continent, and that he was accompanied by a groom answering to the name of John. Herr Pietsch's representation of the banker was thoroughly good and consistent, and the embarrassment which his good nature leads him into was most amusingly portrayed. The other parts were very adequately filled.

"*Camouflet*" undoubtedly affords more genuine material for comedy. The hero meets his tailor at a party and runs away from him. A carriage in which he takes refuge conducts him to the house of *Baron von Villedeuil*, who is absent at a ball but soon returns accompanied by his wife. A little jealous scene occurs between them and the *Baroness* resolves to put her husband's constancy to the test. *Camouflet*, by whom she is at first alarmed, appears to offer a fitting instrument for the purpose. She succeeds in exciting her husband's attention and jealousy and he challenges *Camouflet* to fight. But this leads to explanations and the latter proves to be the bearer of a letter of recommendation to the *Baron*, and asks him to procure him employment. *Baron von Villedeuil* however is resolved to administer a little corrective lesson to his wife. He sends *Camouflet* to the garden with instructions to feign that they are fighting a duel and retires behind a curtain to watch the effect of the ruse upon his wife who, attracted by the

noise, reenters the room. She imagines that she hears her husband fall and swoons away. But she recovers to find him safe and out of danger, and the comedy finds a happy dénouement in the mutual satisfaction of the married pair, the restoration of confidence and the appointment of *Camouflet* to a substantial post.

Frau Rolandina's rendering of *Hermann* was eminently successful and this lady may be complimented upon the admirable consistency of her representation. Not less must we praise the care and taste which marked her dressing of the part which displayed her somewhat buxom charms to the utmost advantage. The rôle was, indeed, most happily played. We were somewhat afraid of Herr Lubeck on his first entrance, but this was soon dispelled. He imparted abundant humour to his characterisation of the unlucky hero, whose mischances he represented in a vein of genuine comedy and gave to the part its full breadth of fun. Herr von Zwavelstein was a satisfactory and gentlemanly representative of *Baron von Villedeuil*, and the slight part of *Joseph* was rendered by Herr Recker with that attention to dramatic minutiae which gives such completeness of effect to the representations of the continental stage.

The Public are much indebted to the "Theater Verein" for a very agreeable evening's entertainment, and we are glad to learn that we shall, at no distant date, have an opportunity of witnessing the second of a series of performances which has been so successfully inaugurated.

#### HIOGO.

It has been our bad fortune to discover that there are a number of counterfeit ten rio kinsatz in circulation. Since the severe measures put in force by the Imperial Government a couple of years ago, when the wholesale forging of one-rio satz was found out, no suspicion attached to various notes, which have passed from hand to hand with perfect freedom. We were astonished to be told on application at the Mitsui bank that the existence of this fraudulent paper has been known to the authorities for some time past, but that no steps have yet been taken to make the fact public. The imitation is printed on a very inferior paper, and most of the strokes in the engraving are heavier than in the genuine satz. There is also a want of regularity in the design. After this any one who receives any ten-rio satz in payment would do well to send them to the Mitsui bank for verification.—*Hiogo News*.

As a curiosity in the shipping news of this port, we may mention that Wednesday last, the 1st instant, witnessed the arrival of an American barque, the *James S. Stone*, direct from New York,—the first ship so far as we know that has ever done so—and the departure of the British ship *Taiting*, for Falmouth with rice,—the first time that kind of cargo has ever been loaded here direct for England since the granting of the recent permission to export grain.—*Ibid*.

The officers and crew of the American brigantine *Admiral*, wrecked in Singu Bay, arrived in Kobe yesterday. The cargo and everything else worth saving from the vessel, with the

exception of the masts, have been placed in junks for transport hither, and the said masts will no doubt follow at the earliest opportunity. The men report most favorably of the treatment they have received at the hands of the Japanese. As an instance of the violence of the storms in Singu Bay, we may mention that though the wreck was ten yards from the breakers on the occasion of the visit of the steamer *Augusta* three weeks ago, the sea has already thrown her up one hundred yards farther.—*Ibid.*

## NAGASAKI.

An interesting marriage took place at the British Consulate, yesterday, the 3rd instant, at 11 A.M. A Japanese girl of 16 summers named Ohayi Isobi, of Yenokesu matchi this city, was married to Beng Teck, a Chinaman, who was born, educated, and became a British subject at Singapore, and was therefore married under the British law.

This is the first marriage of a Japanese according to the European ceremony, in this city, and as far as we are informed the first case of the kind in Japan.

The friends of the girl obtained a permit for this marriage from the Government authorities at Yedo.—*Nagasaki Gazette.*

During the storm on Thursday a Japanese woman was struck by lightning at Mogi and instantly killed. It appears that she was with three friends in a boat anchored near the shore.—*Ibid.*

## CHINA.

The report of the Union Insurance Society of Canton shows a balance in hand on the 30th June, of \$129,037, in addition to the sums of \$250,000 representing the paid-up capital of the Society, \$250,000 the amount of its Reserve Fund, and \$25,000 the reserved third of profit attaching to the dividend declared in March last. The net premia earned since the 1st July are estimated at \$130,000. The claims paid since 30th June, and the further losses to date are estimated at \$171,000, which includes the *Drummond Castle*, *Singapore* and *Alethea*. The Directors propose a second interim dividend of \$150 per share, which would absorb \$37,500, a further sum of \$18,750 being set apart for apportionment amongst contributing shareholders in conformity with the provisions of the articles of association.—*N. C. Daily News.*

The building of the new fortress above the Taku villages or towns still continues, and every other day we see large numbers of boats passing down from the interior with large government bricks for the raising of the new fortress walls and forts. Li-Hung-chang lately engaged the services of a Prussian gunner to teach his officers the use of the Krupp guns, and he is at present engaged on that work, in the Taku forts. The gunboat (Chinese) which was lately dispatched to Corea, has not yet returned to Tientsin.—*Ibid.*

On Friday last, an investigation took place at the offices of Messrs. Adamson, Bell & Co., into a chop of Tea, brought by that firm from the Teheun Tai Hong, which, while being prepared for shipment to the Colonies, was found to contain in all the packages a greater or less quantity of inferior dust, grit, and other spurious matter. The parcel was examined carefully, in the presence of Mr. Pelham F. Warren, appointed by H. B. M. Consul, and two native Officers appointed by the Chinese Board of Trade, by Messrs. Hickling and Haslam, who decided that the Chop was "unmerchable," and that the inferior dust was designedly packed for the Teamen, near the bottom of the package, in such a way that in the ordinary course of inspection, the difference would most likely have escaped observation. The officers of the Yamen were very anxious to come to some arrangement on the spot, admitting that the owner was in fault, but Messrs. Adamson, Bell & Co., replied that the matter was entirely in the hands of H. B. M. Consul out of their control. We await the decision with much interest.—*Foochow Herald.*

## Shipping Intelligence.

## ARRIVALS.

Oct. 7, *Tamerlane*, British ship, Ken, 768, from Sydney N. S. Wales, August 30th, Coal, to Wilkin & Robison.  
Oct. 8, *Governolo*, Italian corvette, Captain Accinni, 900 tons, 8 guns, from Hakodate, October 4th.  
Oct. 9, *Bellona*, German steamer, Schultz, 707, from Hongkong, September 27th, General, to S. Evers & Co.  
Oct. 9, *Bombay*, British steamer, Davies, 1,325, from Hongkong, September 29th, Mails and General, to P. & O. Co.  
Oct. 10, *Great Republic*, American steamer, Howard, 4,345, from San Francisco, September 16th, Mails and General to P. M. S. S. Co.  
Oct. 12, *Golden Age*, American steamer, Coy, 1,870, from Shanghai and Ports, October 4th, General, to P. M. S. S. Co.  
Oct. 12, *Volga*, French steamer, Flambeau, 960, from Hongkong, October 4th, Mails and General, to M. M. Co.  
Oct. 15, *Amoy*, Swedish barque, Hessing, 283, from Nicolaiwesky, October 15th, in ballast, to Captain.  
Oct. 16, *Nil*, French steamer, Samat, 1,010, from Hongkong, Oct. 9th, Mails and General, to M. M. Co.  
Oct. 17, *Medina*, British steamer, Shaw, 688, from London via Kobe, General, to D. Sassoon & Sons.  
Oct. 18, *Ariel*, American steamer, Newell, 1,736, from Hakodate, Oct. 15th, General, to P. M. S. S. Co.  
Oct. 19, *Gordon Castle*, British steamer, Holmes, 1,280, from London via Hongkong, Oct. 10th and Aug. 21st, General, to Cornes & Co.  
Oct. 19, *Costa Rica*, American steamer, Williams, 1,917, from Shanghai and Ports, October 12th, General, to P. M. S. S. Co.  
Oct. 19, *James S. Stone*, American barque, Phinney, 710, from Kobe, October 14th, General, to Van Der Heyde & Co.  
Oct. 19, *Japan*, American steamer, Freeman, 4,351, from Hongkong, October 11th, Mails and General, to P. M. S. S. Co.  
Oct. 20, *John Nicholson*, British ship, Grierson, 685, from Newcastle, N. S. W. August 21st, Coal, to P. M. S. S. Co.

## DEPARTURES.

Oct. 8, *Quang Se*, British steamer, McLachlan, 1,759, for San Francisco, Mails and General, despatched by P. M. S. S. Co.  
Oct. 10, *Maud*, British steamer, Britton, 707, for Kobe, General, despatched by Simon Evers & Co.  
Oct. 11, *Great Republic*, American steamer, Howard, 4,345, for Hongkong, Mails and General, despatched by P. M. S. S. Co.  
Oct. 11, *New York*, American steamer, Furber, 2,119, for Shanghai and Ports, General, despatched by P. M. S. S. Co.  
Oct. 12, *Relief*, American steamer, Corning, 795, for Hakodate, General, despatched by P. M. S. S. Co.  
Oct. 14, *Menzaleh*, French steamer, Mourrut, 1,008, for Hongkong, Mails and General, despatched by M. M. Co.  
Oct. 16, *Lackawanna*, American corvette, Capt. Macauley, 1,800, for Shanghai, October 14th.  
Oct. 16, *Bellona*, German steamer, Schultz, 708, for Foochow, October 15th, General, despatched by Simon Evers & Co.  
Oct. 16, *Morro Castle*, American barque, Jewett, 404, for New York, Oct. 15th, Tea and Curios, despatched by Walsh, Hall & Co.  
Oct. 16, *Governolo*, Italian corvette, Capt. Accini, 1,000, for China.  
Oct. 19, *Anaide*, German barque, Nohmen, 370, for Hakodate, Ballast, despatched by L. Haber & Co.  
Oct. 21, *Bombay*, British steamer, Davies, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.

## PASSENGERS.

Per British steamer *Araca*, for Hongkong.—Mr. and Mrs. Shand, and child, Mr. Lovel, Mrs. Hearne, I-hingami, and Achew.  
Per British steamer *Quang Se*, for San Francisco.—Mrs. Yane, Major Kinder, and 17 in the steerage. For New York.—W. S. Smith U. S. N., Lt. C. H. Black U. S. N., and 3 steerage.  
Per British steamer *Bombay*, from Hongkong.—Rev. Mr. and Mrs. Summers, 3 children and infant; Messrs. J. E. Day, Robt. Campbell, C. Newton, G. Impey, H. Bristow, S. Cross, R. Walter, and T. Smith.  
Per American steamer *Great Republic*, from San Francisco.—Messrs. J. H. Bull, U. S. N., R. O. Caumody, U. S. N., F. W. Greenleaf, U. S. N., F. W. Dickens, U. S. N., G. Nagashima and servant, C. Homura and servant, W. W. Hyde, M. Isuda, Jas. McFarlane, Mrs. M. Kingsland, Messrs. Alexis Janin, F. M. Wilbur, O. H. Glover, W. Anderson and wife, E. S. Smith, Mrs. C. Debar. For Shanghai.—Capt. J. Rouse, Mr. J. H. Burnett, Rev. C. A. Stanley, wife and 3 children, Mr. Yung Wing, Mr. George Eccles, Miss Addie Tyler, Miss Nellie Wade. For Hongkong.—Mr. H. G. Kunhardt, Don Juan Sevilla, Mr. S. Profumo.  
Per American steamer *Great Republic* for Hongkong.—1 European, in the second class.  
Per American steamer *New York* for Hongkong.—Messrs. F. Low, E. Centle, M. McLogan, H. Busch, Mr. M. Ritchie, E. R. Smith, and 4 Japanese, and 75 in the steerage. For Nagasaki.—Mr. Mangum, C. L. Fischer, Mr. Short and child, and 40 in the steerage. For Shanghai.—Miss Tyler, Miss Wade, Messrs. Freque, E. C. Kirby, Mr. and Mrs. Collins, C. B. Collins, Genl. Bridge, Miss Winn, Dr. S. K. Brown, Dr. Van Haugh, Yung Wing, J. Rouse, Lieut. G. L. Atkinson, U. W. Hyde, A. C. Jones, Geo. Eccles, Jos. C. Randolph.  
Per French steamer *Volga*, from Hongkong.—Mr. and Mrs. De-wars, Mr. and Mrs. Berger and infant, Mr. and Mrs. Clarke and child, M. Isoudo, Messrs. Hakamura, Yada, Nourakami, Suisse Vuro, H. Cazet, M. Katuro, Chisuma, Canada, Madame Rosenthal, 11 Quarter-masters of French Marine, M. Guillermé, and H. Aeamu.

Per American steamer *Golden Age*, from Shanghai. For Yokohama.—Mr. and Mrs. F. C. Haskell, Rev. Pallasly, H. Thorburn, Wm. Hunter, Wm. Tanaka, 5 Japanese, 3 Europeans, 9 Chinese and 67 Japanese. For America.—E. Chaplin.

Per French steamer *Menzaleh*, for Hongkong.—Messrs. Bell, Lance, and Gumsberg. For Saigon.—Messrs. Simon and Dubais. For Batavia.—Mr. E. Hayami. For Marseilles.—M. Chaitilini.

Per French steamer *Nil* from Hongkong.—Messrs. Coda. H. E. Ternshima, Vichi, Kauley, Okahossi, P. Sarda, Mitoya, Nakashima, Kiraki, Guiraud, J. M. Sakon, and Coumay.

Per P. M. S. S. *Ariel*, from Hakodate, October 15th: Lady Parkes, Governess, 5 Children and 8 servants, Captain Blakiston, Captain Bridgford, Mr. Dairoku and Wife. Steerage.—Mr. Rouch, 50 Japanese and 4 Chinese.

Per American steamer *Costa Rica*, from Shanghai and Ports. For Yokohama.—Mr. and Mrs. C. L. Grant, Mr. and Mrs. Swaby, Mr. Kinder, Miss Fielding J. Pitman, A. G. Wood, J. D. Carroll, C. H. Beveridge, C. A. Flinders, F. Coit, A. Lenzy, L. Polano, E. R. Smith, L. R. Goldsmith, W. McRitchie, E. Powys, Gini Vlangoly, Mr. Damon, and 61 Japanese. For America.—Rev. E. P. Capp and wife, Mr. M. Crossette and C. J. Edridge.

Per American steamer *Japan* from Hongkong.—Messrs. Lehman and Leftert in the Cabin, 6 in the steerage, and 302 Chinese.

Per British steamer *Bombay*, for Hongkong.—Messrs. D. Iffanger, T. K. Shaw, Rosuin, Leong Chung Shing, children and 2 servants, Charles Poor, William Dayman, Henry Jeffrey, John Lewis, Aug. Lardiere, L. Spieler, G. Howell, and 3 Chinese.

### CARGOES.

Per British steamer *Zecca*, for Hongkong:—

Silk..... 844 bales.

Per American steamer *Golden Age*, from Shanghai.—

Treasure 40 packages..... Value \$846,258.75.

Per French steamer *Menzaleh*, for Hongkong:—

Silk..... 394 bales.

Per American steamer *Costa Rica* from Shanghai and Ports.

Treasure..... \$483,625.

Per British steamer *Bombay*, for Hongkong:—

Silk..... 910 bales.

### REPORTS.

The German steamer *Bellona* reports: after leaving Hongkong had heavy rain and fog with strong N. E. gales all along the coast of China while crossing towards Van Diemen Strait on the 3rd inst. experienced a very severe gale from the N. E. with a high cross sea; during which the after wheel, was carried away by a sea—and the two men that were steering nearly washed overboard: one seaman fell off the awning boom at the same time on his head, and was so severely hurt he had to be taken to hospital yesterday.

The American steamer *Great Republic* reports left San Francisco September 16th, at 12.20 p. m. October 2nd, lat. 35 54 W. long. 173 40 E. communicated with steamer *Colorado*, all well; have had strong breezes from S. W. and W., with heavy westerly swell to Oct. 6th, thence to port fresh N. E. winds and fine weather; arrived Yokohama Oct. 9th, at 12.40 p. m.

The American steamer *Golden Age* reports left Shanghai, Oct. 4th, 9.19 a. m., clear weather with fresh N. E. winds, passed U. S. flagship *Hartford*, Oct. 5th, 8.30 a. m., U. S. ship *Yantic*, 9.15 a. m. same day Company's steamer *Costa Rica* Oct. 6th, 12 a. m. all bound for Shanghai; arrived in Nagasaki, 8.38 a. m. same day. Left Oct. 7th, 12 a. m. rainy weather with N. E. winds, exchanged signals with Co's steamer *Oregonian*, 10.28 a. m. same day, for Nagasaki; arrived in Hiogo, October 8th, 5.36 p. m. Left again, October 10th, 7.35 p. m., pleasant weather; passed an unknown steamer bound southward, at 7.50 a. m., Oct. 11th; and Company's steamer *New York*, 11.50 p. m. same day, and arrived in Yokohama, Oct. 12th, 7.22 a. m.

The French steamer *Nil* reports pleasant weather during the passage.

The British steamer *Medina* reports strong easterly winds during the passage.

The P. M. S. S. *Ariel* reports left Hakodate on the 15th October, at 12.30 p. m.; throughout light winds and smooth sea. Arrived at Yokohama October 18th, at — a. m.

The American steamer *Japan* for first three days out had severe weather; after leaving the China Coast experienced pleasant weather, up to Port.

The American barque *James S. Stone* experienced strong N. E. after leaving Kobe, latter part southerly winds and rain.

## COMMERCIAL INTELLIGENCE.

## Fortnightly Summary, Per "Japan," via San Francisco.

YOKOHAMA, OCTOBER 22ND, 1873.

THE following Mail arrivals and departures have taken place since the publication of our last Mail issue. Arrivals:—*Bombay*, on the 9th instant, from Hongkong; *Great Republic*, on the 10th instant, from San Francisco; *Volga* and *Nil*, on the 12th and 16th instant, respectively. The departures have been the *Menzaleh*, for Hongkong, on the 14th instant, and the *Bombay* for the same port on the 21st.

The *Bellona* (str.), *Medina* (str.) and *Gordon Castle* (str.) have arrived out, and the cargoes of the *Indus* and *Diomed* are also to hand.

The silk shipments of the past fortnight amount to 1,302 bales.

**COTTON FABRICS.**—The sales of Shirtings reported during the closing fortnight amount to some 75,000 pieces of all weights. Prices have been gradually augmenting and the quotations which we subjoin represent the present range of price demanded for the various brands. Stocks are much reduced and sales to arrive—it is said from China—have been made at better prices. The demand has not extended to other descriptions of Cotton fabrics which continue more or less neglected or unproductive of profit, although some small sales continue of *Black Velvets* and *Taffachlass*. The sales of *T-Cloth* are unimportant.

**YARNS.**—Sales during the fortnight are about 900 bales. They exhibit but slight variation from previous quotations and the demand is reported to have slackened except in Nos. 38 to 42 which are in demand but of which stocks are very low.

**WOOLLENS.**—Of all descriptions are reported exceedingly inanimate and there is but little business doing.

**IRON AND METALS.**—The stocks of both *flat* and *round* iron are again rapidly accumulating, and prices have a decided tendency downwards. In *nail-rod* there has been no change. For *hoop* iron there is a small demand, but stocks are inconsiderable:—*sheet* is difficult of sale. The settlements consist of 100 tons of *flat* and *round* iron; 150 tons of *nail-rod*; and 50 tons *hoop* at quotations subjoined. Stocks consist of about 19,000 piculs.

**SUGAR.**—We have no change to report in the state of this market, which continues firm at our last quotations.

Deliveries amount to 10,000 piculs. Stocks are reported at 50,000 piculs.

## COMMERCIAL INTELLIGENCE.

(Continued.)

**SILK.**—The telegrams received in the course of the fortnight reporting an improved market and some advance in prices at home, led to an active enquiry on this side; prices gradually advanced about \$20 and they close firm at the present quotations.

Settlements since the 8th instant are 950 bales of Hanks and 150 of Oshiu. The stock is reduced to 800 bales and good, fine-sized hanks are extremely scarce.

**SILKWORM'S EGGS.**—Total arrivals since the beginning of the Season are 820,000 cards. Total settlements amount to 530,000 cards against 1,000,000 last year at the same time. We quote:

Joshiu, ... ..	\$2.50 to \$3.50	Oshiu, ... ..	\$2.50 to \$3.50.
Bushiu, ... ..	2.40 to 2.80	Koshiu, ... ..	1.80 to 2.10.
Sinchiu, ... ..	2.50 to 3.25	Goshiu and other sorts, ... ..	1.70 to 2.00.

The Japanese ask \$3.75 to 4 for extra Oshiu and Joshiu, and being fully aware that the greater part of the shipments of this season must be made before the end of October, they are very firm and there is but little prospect of lower prices during the interval.

**TEA.**—During the earlier part of the past fortnight a considerable amount of briskness existed in this market, and some settlements of Good Medium and Fine grades took place. But the demand has not been sustained and in the last week transactions have been upon a much more restricted scale.

Arrivals have been more abundant though far from attaining the amount usual at the present season.

The tendency to refrain from operating is strengthened by the tone of advices from the United States, and a reduction of the prices at present demanded by holders may be looked for in the early part of next month.

The *Quang Se* hence on the 8th instant, took hence 412,240 lbs. for San Francisco, and the *Morro Castle*, 382,513 lbs. for New York. The total export from Iiogo, amounts to 1,745,500 lbs. made up to the 17th instant.

## BIRTH.

On the 21st instant, at No. 216, Bluff, Mrs. JOHN GRIGOR, of a daughter.

## Notes of the Week.

THE week has been sharply divided into three days of business and three days of pleasure: the first, with no great success, if we read their augury aright; the second, with entire enjoyment, due in no small degree to the absolute perfection of the weather which more than justified, even enjoined, abstinence from work. The meeting of the Silk buyers finds its report and comment elsewhere, and the chronicle of the races likewise. The Tartan stable carried off most of the prizes, a result neither undeserved nor unanticipated.

At Yedo there is much rumour of impending changes in the Cabinet, though their nature has not transpired. One of the daily papers which certainly has never gained any credit for the accuracy of its information, and which in one of the matters it treats this week, the illness of the Prime Minister, is certainly wrong in saying that his health has utterly given way, reports an intended expedition to Corea to demand a reparation for insults offered to Japan, and an acknowledgement of the old tributary relations which existed between the two countries, in default of which 40,000 Japanese soldiers are to be sent to enforce these demands. Something of the weight of reports of this nature may be estimated from the phraseology in which they are couched; and when we are told that a rumour "is about to leave the chrysalis of uncertainty, and to develop into an actual fact" (? should not this be grub or moth) we may fairly presume it has passed through some mind not of the class to which state secrets are usually entrusted. No one need be ignorant of the number of men in the Japanese Army, as we recently gave full particulars of it and the provinces in which its various divisions were stationed; and no one who remembers this and reflects upon the present internal condition of the country, whether political or financial, will for one moment credit the statement that an expedition on such a vast scale is purposed.

As if nonsense of this kind were not enough, the same journal has the following paragraph in its issue of Friday evening.

"There are *events* (the italics are ours) of marked importance under the Imperial notice to-day, which may have a great effect upon the policy of the Empire. We do not feel justified in further alluding to them at present, except to express our belief that on the course His Majesty may decide upon with regard to them, will depend the progress or retrogression of the nation."

This paragraph has evidently come from the same hand which produced the confused entomological metaphor given above, and though we rarely occupy ourselves in noticing silly tittle-tattle of this kind, it is only right to put the public on its guard against it, and no better means of doing this can be found than exposing it to a second reading.

It also appears to us very reprehensible to associate the name of the First Person in the Realm with decisions of the nature of that referred to, though the fact of its having been done in this public and indiscreet manner is a curiously apposite illustration of the arguments contained in an article entitled "Reconstruction" in our last issue. Although it cannot very well remonstrate against writing of this nature, the Japanese Government has fair reason to complain of it. Whatever may be the form in which the Imperial sanction is given to such or such

a line of policy, the Mikado is assisted by his Council of State under whose warrant the Executive is put in motion, and the good or evil resulting from this policy cannot be openly attributed to the Head of the State without producing those evil consequences which we so earnestly deprecated in the article above referred to.

It is to be lamented that Mr. Goble has furnished the opponents of Missionary effort in this country with a fresh excuse for their antagonism, and ourselves with a fresh illustration of the statement we recently made that due care was not always exercised by the Missionary Societies in regard to the men they send abroad to teach and convert pagan nations.

In a letter which appeared in the *Herald* of Wednesday evening signed "T. J. Richmond," Mr. Goble appears as the sturdy champion of some lawless character who had made off with property which did not belong to him, and who, having taken refuge, if we understand the letter rightly, in one of those houses which marks Mr. Goble's entire renunciation of the things of this world, was assisted in his concealment or escape by his landlord.

We believe that Dr. Nathan Brown, a resident missionary of some eminence in the Baptist body which has commissioned Mr. Goble, is his nominal superior. Is Dr. Brown aware of the disgrace brought by scandals such as that to which we have referred upon the whole missionary body in this country?—scandals with which, however, it would be a monstrous injustice in any way to identify them. These are things which cause good or sober men infinite pain, and we sincerely trust that a courageous and rigid investigation of the facts of this case will be made, in their own protection, by the missionary body, in order that the Society of which Mr. Goble is so distinguished an instrument may come to some sound conclusions in regard to the efficacy of the means they are adopting in Japan to secure the spread of the Christian faith. It was quite as much by his example as by the sublimity of his teaching that the Founder of our religion produced the impression of his divinity, "and inspired the hearts of men with an impassioned love, which, through all the changes of eighteen centuries, has shewn itself capable of acting on all ages, nations, temperaments and conditions, which has not only been the highest pattern of virtue, but the strongest incentive to its practice, and has exercised so deep an influence that it may truly be said that the simple record of three short years of active life has done more to regenerate and soften mankind than all the disquisitions of philosophers and all the exhortations of moralists. This has indeed been the well-spring of whatever is best and purest in the Christian life."

Thus, Mr. Lecky. It is for Mr. Goble to enquire with himself how far success has attended any such efforts as he may have made to mould his conduct upon this model and illustrate the doctrines and example of this teacher—a matter in which we ourselves are concerned, and to which we have referred, solely on the ground that Mr. Goble is one of a body of men entitled to high respect, whose lives are devoted to the advancement of this country, and whose influence largely depends upon the reputation of those with whom they are associated, if only by a common avocation.

We have the best authority for contradicting the reports which have been freely circulated with regard to the gravity of the illness of the Prime Minister. He is convalescent, and will be able shortly to resume his official duties.

Judge Hannen and Mr. Tamono, Commissioners for the investigation of the claims against the old *Hans*, have been engaged during the past week upon the case of Messrs. E. C. Kirby & Co. v. Tonami Han which was adjourned from the 3rd instant. The evidence was closed on the 20th instant.

It is observable that some of the leading Fire Insurance Offices are abolishing such of their minor regulations as were calculated to cause unnecessary trouble to their constituents. The following clause recently added to the advertisement of one of these offices is adduced in proof of this, though we may add that this is not the first example of the kind.

"Concurrent Insurances require endorsement on the Policies of this Company only when specially called for by the Agents."

WE were afraid long ago that the team with the high-peaked collars would bring some trouble upon the Catholic Mission, and though we did not make it the subject of public mention, we must now be permitted to say that we privately represented in the proper quarter the objections to which it was open. It has now caused an accident, fortunately attended with no serious result, to an old resident in the Settlement, and has become the subject matter of some published correspondence the necessity for which we had far rather have seen avoided.

The excellent and courteous President of the Mission and the good fathers over whom he presides, have had less to do with this very grave nuisance than is generally imagined, the Chinese contractor being, as we imagine, the real offender. But the equipage is French, it is constantly seen under the conduct of one of the priests, it is used for the conveyance of building material for a Catholic establishment, and, under these circumstances, the Mission must not be surprised to find itself identified in the public mind with a nuisance which has been the cause of as much annoyance to itself as to the residents, though perhaps of a different character. Admitting that the materials have to be brought up the Bluff hill, cannot this be done in the early morning before there is any carriage or horse traffic on the road? This would seem capable of easy arrangement.

The Public must certainly be protected against avoidable sources of danger, and the presence of this team has been proved to be one. It is also far from desirable that the worthy and amiable gentlemen attached to the Mission should be identified with a public nuisance, or be betrayed into any line of conduct in connection with it which every one who has the privilege of their acquaintance must feel to be exceptional.

THE following finding by the Court of Enquiry, instituted at the request of Captain Bernard to investigate the circumstances attending the casualty which occurred to the P. & O. Company's Steamer *Madras* on the 1st September, is taken from the Hongkong Government Gazette of the 20th September.

Hongkong, 10th Sept.

The following finding is published in the *Gazette* of the 20th:—

1.—We find that the British steamship *Madras*, official number 31, 143, left Hongkong at 10.36 a. m. on the 1st September, 1873, with mails, treasure, cargo and passengers, bound for Yokohama, and that at 12.45 p. m. on the following day, when off the East end of Namoa Island, in latitude 23 deg. 23 min. 25 sec. N., and longitude 117 deg. 9 min 10 sec. E., she struck on some submerged object, as to the nature of which no sufficient evidence is before the Court. It is clear the vessel's way was not stopped, that there is no danger marked on the charts at the spot in question, and that in taking soundings immediately after the casualty, no bottom was found at eighteen fathoms.

2.—We find that the vessel sustained injuries to the fore compartment, which immediately filled. The members of the Court learn with satisfaction that the fore bulk-head remained watertight.

3.—We find that the master observed all necessary precautions, and exercised a wise discretion in taking the vessel into Swatow, where he beached her, discharged the cargo, and executed temporary repairs, which enabled him to bring her to Hongkong, where he arrived on the 6th instant.

4.—We find that no blame whatever attaches to the master, Isaac Bernard, or to the officers, of the ship, and the certificate of competency, No. 16,710, of the said master, is returned to him accordingly.

5.—We consider that it is of the utmost importance that the spot where this casualty occurred should be carefully surveyed at the earliest opportunity, and we suggest that the attention of H. M. Naval Authorities be called to the subject.

Given under our hands at Hongkong, this Nineteenth day of September, 1873.

C. MAY, First Police Magistrate.

ALFRED LISTER, Acting Harbour Master, &c.

T. G. LANSTRAD, Un-official Justice of the Peace.

E. H. CAIRNS, Government Marine Surveyor.

#### THE SILK-TARE DISPUTE.

OUR readers will find elsewhere the report of the meeting of the Chamber of Commerce of Yokohama, which was held on the 22nd instant. The Committee appointed to confer with the Japanese Silk Guild lost no time in submitting to the latter the resolutions which had been adopted with a view to put the silk trade of this place upon an uniform and stable basis. The native silkmen very soon after sent in their reply, and few people will be surprised to hear that they decline to comply with the desires of the foreign buyers. They adhere to the decision they had come to of deducting the actual weights of the shirting-bags or baskets in which silk is weighed off; they consent to the tare for papers and strings being fixed at  $2\frac{1}{2}$  per cent as before; but they strongly demur to the proposed allowance of one per cent to the buyer by way of compensation for dampness. In a word, the Guild take a little more than they had a few days ago, and give nothing.

It is important to notice that the refusal of the Guild to allow the one per cent asked for by the foreign buyers is grounded on the fact that the actual weight of the papers and strings of hank Silks is  $1\frac{1}{2}$  to  $1\frac{1}{4}$  per cent, whilst they consent to a deduction of  $2\frac{1}{2}$  per cent. Consequently, the difference of about  $\frac{1}{2}$  per cent conceded by them to the buyers is, to their mind, a sufficient compensation for dampness. But that assumption is purely gratuitous.

The allowance of only  $\frac{1}{2}$  per cent for dampness is considered by the buyers as being at all times insufficient to meet the losses in weight which occur in the transit of the Silk from this to Europe, more especially in seasons as wet as this has proved. We have no doubt that the loss in weight by conditioning at Lyons, or in other Continental markets, will not be less than 3 per cent on the average of this season's shipments. We therefore consider the refusal of the native Guild to make the allowance of one per cent demanded by the buyers not only as unreasonable but unjust, the more so as, having gained their point of deducting the actual weights of the shirting bags or baskets, they were bound in equity to give the foreign houses a set-off in some other way.

The rejection of the moderate terms proposed by the foreign Houses to the native Silkmen is very much to be regretted. Such a denial shows forcibly the indisposition of the Japanese traders to meet us in a fair way of business. Like all Oriental nations, they consider that yielding upon any point is evidence of weakness; they feel

strong in their organization, and are determined to carry their advantage to the utmost.

We cannot help acknowledging with sorrow that the victory gained by the native Silkmen over the foreign Houses is pregnant with sad consequences. They have tried their combination against our disunion and, at short intervals, have been twice successful. Who can tell how soon a fresh attempt may be made of forcing upon us still other disadvantageous terms? Should such an attempt be made (and we have little doubt that ere long it will come to pass) the same result may be looked for, viz, a signal defeat on our side. We wish we could comfort ourselves with the conviction that in the collisions which must, now and then, unavoidably arise between us and the Japanese on commercial questions, the foreign Houses were doing all that lies in their power to insure success. Would we could lay that flattering unction to our souls!

On the contrary one, at least, of the best means of resisting our clever opponents, has been by us—or some of us—recklessly thrown away. We mean to say that if the foreign houses had consented, for three or four days only, to suspend their operations in silk until the question in dispute had been settled, their unanimity of purpose might have materially assisted them in obtaining from the native dealers the terms which they required. But the idea of combining against the Japanese was too much for some of them. Better go to the wall than fetter or bind themselves in any way; and to the wall they have gone accordingly, and with them those who would have shown more firmness, but found too little support to hope for victory.

It is very sad, too, to notice with what little alacrity the appeal made by the Chairman of the Chamber of Commerce was responded to. The attendance at the meeting was so thin that one might have thought the question to be discussed had scarcely any importance at all. We suspect that a good many of the silk buyers had never looked at the matter in its proper light. We sincerely trust we may be mistaken, but we are strongly convinced that they will hereafter have bitter cause to regret their supineness and indifference. The Japanese are not the men we take them for if they permit the commanding position they have acquired to be easily taken away from them. What their feeling on the subject is may be guessed from an expression dropped by one of the members of the Guild in their interview with the Committee of the Chamber of Commerce. "We," said he, "have not to take into consideration what these gentlemen propose to us. We are the sellers; it is therefore for us to state on what terms we intend to dispose of our produce, and it is for them to accept or reject them, as they please." The remark does not savour of much knowledge of political economy; it might, besides, be turned against the speaker with a vengeance, in the question of imports; but the latter subject is equally as tender as that of exports, and we have too much on our hands now to feel tempted to enter into a new field, at least for the present. But, be that as it may, it now behoves the foreign buyers to think of what they are to do under the circumstances in which the silk trade is at present situated.

Will they rest content with the check they have suffered, and yield submissively to the terms dictated to them by the native traders? Or will they make fresh efforts to retrieve their standing, and show the Silk Guild that, they also, have a will of their own, and that they do not mean to put up with a mere refusal of the just and reasonable proposals they have made?

#### THE CHAMBER OF COMMERCE AND THE SILK GUILD.

THE following is a translation of the reply which has been received by the Sub-Committee appointed to confer with the Japanese Silk Guild upon the subject of deduction and tare.

"On the 22nd instant, you came to the Kiito Aratame Kaisha on the part of the Chamber of Commerce of Yokohama. We have well understood what you spoke about and have consulted the silk owners of the various provinces. There is one point we cannot grant, which is that upon the net weight of the silk sold, after deducting all tares, one per cent shall be allowed to the buyers as a compensation for dampness.

For the weight of papers and strings of Hank silk  $2\frac{1}{10}$  per cent are deducted; but in reality there is only  $1.6/10$  or  $1.7/10$  per cent. The balance is therefore a compensation for dampness. Consequently we cannot allow the buyers the one per cent extra you ask for.

Should you accept this point we shall grant you the others.

Please consult the Chamber of Commerce and give us a reply.

NEBARA SIRROZAIMON. } on duty for this month at the  
SUZUKI YASSUKE. } Kiito Aratame Kaisha."

#### A CHRONICLE OF THE CHIEF EVENTS: IN JAPANESE HISTORY FROM 1844 TO 1863.

(Continued.)

##### 2ND YEAR OF BUNKIU, (1862).

1st month, 1st day.—The mirror of the shrine at Kasugayama in Yamato broke without cause into three pieces. It was also said that strange things had occurred at Usa and Otokoyama.

1st month, 14th day.—Ohashi Junzō and others of the Utsunomiya Han were thrown into prison for having urged Lord Hitotsubashi, it was said, to excite a civil war.

1st month, 15th day.—A Shimotsuke man named Kōda Genzō along with five others attacked the Daimio of Taira outside the Sakashita gate. The Daimio was wounded, but made his escape; his six assailants were slain.

1st month, 20th day.—Thirty-two persons were arrested for hearing a discourse of the religion of Jesus in the French chapel at Yokohama. They were afterwards pardoned.

2nd month, 5th day.—The Daimio of Hagi had an audience in which he explained his views as to the state of the realm. He also gave friendly information to the Rōju.

2nd month, 11th day.—The marriage ceremony of the Princess Kadzu took place. She was styled Midai, (term applied to a Shōgun's wife).

2nd month, 12th and 16th days.—Interviews took place with the English at the residence of the Daimio of Taira, respecting the coming of the new Minister St. John Neale, it was said.

2nd month, 18th day.—The Kuges had an audience upon the occasion of their return to Kioto.

2nd month, 18th day.—More than ten samurai of the Kurume Han ran off from their province and went to Kioto.

2nd month, 20th day.—The audience to the English fixed for this day was put off. In the evening there was an interview at the residence of the Daimio of Taira at which the discussion turned upon the place where the Minister should stand when presented.

2nd month, 22nd day.—An interview took place with the English at the residence of the Daimio of Taira.

2nd month, 23rd day.—The English Minister Alcock returned home accompanied by Fuchinobe Tokuzō and Moriyama Taichiro. It was said that their going was connected with the postponement of the opening of Hiogo and the other ports.

3rd month, 6th day.—The Daimio of Obama received an increase of 10,000 kokus to his revenue.

3rd month, 15th day.—The Daimio of Okazaki ceased to hold the office of Rōju. The Daimios of Yamagata and Matsuyama were appointed to that office.

3rd month, 16th day.—Several tens of Kagoshima men ran away from their province to Kioto.

3rd month, 18th day.—More than ten men of the Oka Han ran away as above.

3rd month, 19th day.—The Shōgun was present at a display of military exercises at the military School.

3rd month, 23rd day.—Sugita Gempen of the Obama Han had an audience of the Shōgun.

3rd month, 26th day.—Nagai Ūta of the Hagi Han went to Kioto, at the instance, it was said, of the Yedo Government.

3rd month, 27th day.—An interview took place with the Americans at the residence of the Daimio of Taira.

3rd month, 28th day.—The Americans had an audience, on the occasion, it was said, of Harris's return to his country.

In the course of this month numerous *samurai* of the Kiushiu Han ran away to Kioto. In the fourth month, several hundreds assembled at Osaka.

About this time a merchant junk was sent to China. She returned in the 9th month.

4th month, 7th day. There was an interview with the Americans at the house of the Daimio of Taira. The subject of it was said to be the return of Harris and the arrival of the new Minister Winchester (a mistake for Pruyn ?)

4th month, 8th day.—The French had an interview as above.

4th month, 8th day.—At Kochi, the "*yōnin*" Yoshida Genkiichi was murdered by several Samurai of that Han who thereupon ran away to Kioto.

4th month, 9th day.—Asano Iga no kami set out from Kioto. He arrived at Yedo on the 19th and reported the condition of affairs at Kioto.

4th month, 10th day.—A relation of the Daimio of Kagoshima named Shimadzu Idzumi (afterwards called Shimadzu Saburo) proceeded with 600 soldiers to Osaka. On the 15th he entered Kioto.

4th month, 11th day.—The Daimio Taira ceased to hold the office of Rōju.

4th month, 13th day.—Harris returned to America.

4th month, 15th day.—The Daimio of Fukuoka returned home from Harima when on his way to Yedo.

4th month, 18th day.—The Rōju were sent for to Kioto.

4th month, 19th day.—The Americans went to the Castle and had an audience.

4th month, 23rd day.—Shimadzu Idzumi caused eight men of the same Han who differed with him in opinion to be cut down at Fushimi.

4th month, 25th day.—The old Daimio of Nagoya and Lord Hitotsubashi were pardoned all their previous offences and summoned to an audience of the Shōgun. The Daimio of Fukui and the old Daimio of Kōchi were allowed to appear again in public.

4th month, 28th day.—The heir of the Daimio of Hagi went to Kioto.

4th month, last day.—Prince Awata, and Lords Takatsuka, Konoye, Iohijō, Koga, and Made no Koji were allowed to appear again in public.

5th month, 3rd day.—The Daimio of Wakamatsu was ordered to attend to the affairs of Government.

5th month, 7th day.—The old Daimio of Nagoya, Lord Hitotsubashi and the old Daimio of Fukui were summoned to an audience; the old Daimio of Fukui was ordered to assist in the conduct of affairs.

5th month, 8th day.—The Daimio of Sekiyado was despatched to Kioto.

5th month, 9th day.—Lord Tayasu was relieved of the duties of guardian (to the young Shōgun).

5th month, 21st day.—An interview was held with the English at the residence of the Daimio of Matsuyama.

5th month, 22nd day.—All the Daimios were summoned to the Castle where the Shōgun in person, in view of the present critical respect of affairs, invited them to send in written statements of their views.

5th month, 22nd day.—Ohara Sayemon no Jo left Kioto as Imperial Envoy guarded by Shimadzu Saburo. He arrived in Yedo on the 7th day of the 6th month.

5th month, 23rd day.—The old Daimio of Tatsuno was again appointed Rōju.

5th month, 26th day.—The Daimio of Murakami ceased to hold the office of Rōju.

5th month, 27th day.—The French had an audience.

5th month, 27th day.—The Daimio were informed that the Government would return to the policy pursued previous to Kanyei (1624).

5th month, 28th day.—It was notified that all arrangements respecting the Castle precincts would be the same as formerly, and that the additional guards and suite would be discontinued.

5th month, 29th day.—Ito Gumbai of the Matsumoto Han killed two Englishmen at Tozenji. He then committed suicide.

6th month, 1st day.—The Daimio were confidentially informed that the Shōgun was about to visit the Mikado.

6th month, 1st day.—Lord Kujo ceased to hold the office of Kwambaku; Lord Konoye was appointed to it.

6th month, 2nd day.—The Daimio of Sekiyado ceased to hold the office of Rōju.

6th month, 5th day.—It was notified that it was unnecessary to report the passage of Uji tea (on its way to Yedo to the Shōgun,) and that in other respects needless trouble should be avoided.

6th month, 7th day.—The Daimio of Hagi left Yedo for Kioto where he arrived on the 2nd of the 7th month.

6th month, 8th day.—Notice was given that a man-of-war would be sent to survey the seas off Shima, Ise and Owari.

6th month, 10th day.—The Imperial Envoy Ohara Sayemon no Jo had an audience of the Shōgun on this day and also on the 13th, 18th and 29th. He was said to have urged the employment of Lord Hitotsubashi and to have proposed important reforms.

6th month, 13th day.—An interview with the English was held at the residence of the Daimio of Matsuyama, about the Tozenji affair, it was said.

6th month 14th day.—The Dutch left Yedo and went to Yokohama. The English and Americans did the same on the 15th, and French on the 16th. It was said that they left because they were afraid of being murdered.

6th month 15th day.—Notice was given of the abolition of the offices of Building Commissioner and Assistant Building Commissioner.

6th month 18th day.—Uchida Tsunejiro, Sawa Tarozayemon, Ito Gempa and Hayashi Kenkai were sent to Holland to study.

6th month last day.—The office of Shoshidai was taken from the Daimio of Obama, and given to the Daimio of Miyadzu.

Measles were prevalent at this time. Many persons died of this disease.

7th month 1st day.—Ohara Sayemon no Jo had an audience of the Shogun, when the latter replied to the Imperial message.

7th month 6th day.—Lord Hitotsubashi was again declared heir to the Shogunate, and was appointed guardian to the Shogun.

7th month 6th day.—The Daimios were informed that they might travel by sea if they pleased.

7th month 6th day.—Ohashi Junzo of the Utsunomiya Han was given over to the charge of his Daimio. He died on the 9th.

7th month 9th day.—The old Daimio of Fukui was charged with the Supreme control of affairs. On the 28th of the 10th month he was installed in office.

7th month 15th day.—At night there was a shower of shooting stars.

7th month 16th day.—At an audience held in the study, the Hagi Daimios father and son urged on the Shogun the necessity of harmony between the Kuges and the military chief.

7th month 20th day.—Yasui Chuhei of the Obi Han had an audience of the Shogun.

7th month 21st day.—At Kioto the runaway clansmen murdered a retainer of Lord Kujo named Shimada Sayemon Gontayu. On the 23rd they exposed his head at Shijōgawara.

7th month 23rd day.—Interviews were held with the English on this day and on the 27th at the residence of the Daimio of Matsuyama. The subject of them was said to be the numerous changes which had taken place.

It was said that in this month the English, French, etc. consented to the postponement of the opening of Yedo, Osaka, Hiogo and Niigata. In the last ten days of the

month a comet appeared in the north-west.

8th month 3rd day.—The Daimio of Kagoshima was ordered to punish his retainer Horijiro according to the law.

8th month 9th day.—The late Lord Sanjo was made Udaijin.

8th month 12th day.—Ohara Sayemon no Jo had an audience of the Shogun.

8th month 16th day.—Ohara Sayemon no Jo was entertained at Hamagoten.

8th month 16th day.—The Daimio of Sekiyado was deprived of the addition to his revenue of 10,000 koku, and the Daimio of Taira was compelled to restore the villages he had exchanged for others. Both were ordered to retire from public life and to confine themselves to their houses.

8th month 18th day.—The heir of the Daimio of Hagi arrived at Yedo. On the 24th, he had an audience of the Shogun and delivered to him a letter from the Mikado which was said to recommend that dignities should be conferred on the late Daimio of Mito and that (political) offenders since 1858 should be pardoned.

8th month 18th day.—Rionoske younger brother of the Daimio of Kumamoto arrived at Kioto.

8th month 20th day.—Chigusa Shosho, Iwakuro Chujo, and Tomi no Koji Nakatsukara no Tayu were ordered to retire from public life and to remain in strict seclusion.

8th month 21st day.—Lords Nakayama and Okimachi Sanjo were ordered to refrain from appearing in public.

8th month 21st day.—Murokata Koan of the Ashimori Han was appointed physician to the Shogun.

8th month 21st day.—Shimadzu Saburo set out from Yedo. At the village of Namamugi his followers cut down four Englishmen. On the seventh day of the following month he arrived at Kioto.

8th month 22nd day.—Ohara Sayemon no Jo set out from Yedo. He stopped at Shinagawa and resumed his journey on the 24th. He arrived at Kioto on the 6th day of the following month.

8th month 22nd day.—There was an interview with the Americans and Dutch at the residence of the Daimio of Matsuyama on the subject of the Namamugi affair, it was said.

8th month 22nd day.—Ishikawa Yoshio of the Sendai Han was appointed physician to the Shogun.

8th month 23rd day.—Shimmi Ise no kami was sent as the Shogun's representative to offer prayers at the tomb of the old Daimio of Mito.

8th month 24th day.—The Daimio of Miyazaki ceased to be Shoshidai, and that office was conferred on the Daimio of Nagoka.

8th month, 25th day.—Lord Koga was ordered to retire from public life and to remain in strict seclusion.

8th month, 25th day.—The Daimio of Kôchi went to Kioto.

8th month, 28th day.—Kitahara Riôzô of the Hagi (Choshu) Han went to Yokohama to kill foreigners. He was arrested by the authorities of the Han, and committed suicide.

8th month, 29th day....An interview took place with the Americans and Dutch at the residence of the Daimio of Matsuyama. On the forenoon of the last day of the month a similar interview took place. In the afternoon an interview took place with the English. All these interviews were about the Namamugi affair, it was said.

At this time the Mikado issued numerous private orders to Daimios.

(To be continued.)

"HISTORIA IMPERII JAPONICI GERMANICÉ  
SCRIPTA AB ENGELBERTS KAEMPFER.  
LONDINI, 1727."

Read before the Asiatic Society, of Japan, on the 22nd  
October, 1873, by R. G. WATSON, Esq.

The work which I propose to bring before your notice this evening in the form of a *précis* is divided by its author into five books, to which are added in an appendix six separate papers on scientific or political subjects, the whole being illustrated by a series of carefully-drawn and carefully-engraved plates.

I propose in speaking of it to follow the order of the subjects to which the books and papers are severally devoted, and as it may be difficult to compress so elaborate a work, in however elementary a manner, into the compass of one lecture, I shall as far as possible confine myself simply to expressing the leading views and observations of Mr. Kaempfer, without attempting to illustrate them by the observations of later writers on the subjects to which he refers. I do not doubt that on a future occasion a comparison will be instituted by one of our members, showing how far the notes and conclusions of Kaempfer have been borne out or otherwise by the labours of the present generation in the same scientific field.

Before proceeding to an examination of the contents of the work before us, I may refer for a moment to the circumstances under which it came to be written.

Dr. Kaempfer, who was born at Lemgow in Westphalia in the year 1651, adopted the medical profession and, having gone to Sweden, accepted the post of Secretary to a Swedish Legation proceeding to Persia.

His desire of foreign travel not having been satisfied by his journeys in Russia and Persia, he joined the service of the Dutch East India Company, and sailed from Ormur in the Persian gulf for Batavia in 1688. He in turn quitted Batavia for Siam and Japan in May 1690, arriving at Nagasaki on the 24th of September of the same year, and remaining in the Japanese dominions until November 1692. The work before us is consequently the result of his industry and observations during a period not exceeding two years and two months, he being then between 39 and 41 years of age. The difficulties he had to encounter were such as to deter most men from attempting to struggle with them, but Dr. Kaempfer's German laboriousness and perseverance enabled him to bequeath to posterity a result of his twenty-six months' residence in this empire, the value of which, as a whole, as a historical and scientific record, it would be difficult to exaggerate, and the interest attaching to it is enhanced by the circumstances under which his enquiries were undertaken.

Of the five Books into which Dr. Kaempfer's History is divided, the First, which includes eleven chapters, after giving an account of the author's voyage from Batavia to Siam, and of the Siamese court and capital, proceeds to a general statement of the political and geographical features of Japan, of its products, natural history, revenue and system of government, together with some speculations as to the origin of the Japanese race.

Dr. Kaempfer, as I have stated, landed at Nagasaki in September 1690 and was there received with the usual jealous precautions then observed. We were, "he says, "no sooner come to an anchor, but we had two Japanese guardships put on both side sides of us, which the night "long went the rounds with great diligence. All the "Chinese junks that put to sea that day were each "them attended by a guardship until they got out of the "harbour into the open sea. Not far from our ship we "saw a fleet of forty pleasure-boats coming to an anchor, "being the usual pompous train of a great man who had "been on a voyage. \* \* \* This little fleet made a fine "show with its many lights at night. \* \* \* On the "top of the neighbouring mountains stand guard-houses "with guards in them, who with their spying-glasses are "observing whatever happens at sea, of which they give "immediate information to the government, and by this "method they had notice of our arrival already two days "before. We dropt anchor at about 300 paces from the "city, and as far from Decima, the habitation of the "Dutch on a separate island formed purposely near the "shore without the city. Then came to us two gentle- "men of the governor's with many subordinate clerks, "interpreters and soldiers, who called on all those that "were newly arrived and made them pass in review be- "fore them one after the other, viewing everyone from "top to toe, and writing his name, age and business, with "a pencil on paper. Besides this about six persons more "were examined concerning our voyage, whence we "came, when we set out, etc., etc.—the answers were "carefully written down. The review being over, sol- "diers and clerks were put into every corner, and the "whole ship with her cargo taken as it were in possession "by the Japanese. The boat and skiff were left to our

"men, only for this day, in order to look to our anchors. But pistols, cutlasses, etc. were taken into custody, the gunpowder packed in barrels. In our voyage everyone was obliged to give his prayer-bible and other books of Divinity to the captain, who hid them from the Japanese until our return. \* \* I went on shore to Decima, on which occasion one is obliged to take out a passport from the Japanese ship-guard and on return another from the land-guard to that on board." Such was the jealous reception which Dr. Kaempfer met with at Nagasaki from the laboriously-trifling Japanese of those days: such were the humiliations to which the Dutch Trading Company was willing to submit. (p.p. 56-58.)

The 4th Chapter of this 1st Book is devoted to a general geographical account of Japan. The land known to Europeans under that word has for its natives several names—the most common *Nipon*, sometimes pronounced *Nifon*—the foundation of the Sun, from *Ni*, Fire, (in a moresublime sense, the Sun,) and *pon*, ground or foundation. Other names are (1) *Tenka* (*Subcelestial Empire*), (2) *Fi no Motto* (Root of the Sun), (3) *Awadissima* (a terrestrial soom island (p. 59) to which term a fable is attached), (4) *Disinkokf* or *Cami no Kuni* (the country of the gods), (5) *Akittima*, (6) *Tontsio* (the true morning), (7) *Sio* (all i. e. all the Japanese islands), *Jamatto* and several others.

This Empire lies "between the 31st and 42nd degrees northern Latitude. The Jesuits place it between 167° and 175° 30' of Longitude. It extends to N. E. and E. N. E., being irregularly broad, tho' pretty narrow in comparison with its length, which is supposed to be two hundred German miles (English miles) in a straight line from the end of *Fisen* to the extremity of *Osiu*. It may, says Kaempfer, in different respects be compared to Great Britain and Ireland, being divided by corners and forelands, arms of the sea, great bays and inlets, and forming several islands, peninsulas, gulfs and harbours."

So far, I think, Dr. Kaempfer's description will be recognized to-day as being an accurate one, but by the light of modern enquiry I am enabled, on the authority of Mr. Satow, to correct Dr. Kaempfer's next assertion, in which he states that the first and largest island of Japan is called *Nipon*—that name being, and I am told, only applicable to the entire empire. "The 2nd island is *Saikokf*, the Western country. It is also called *Kiusiu* or the country of nine, being divided into nine provinces. The third island lies between the first and second. It is nearly square, and, being divided in four provinces, the Japanese call it *Saikokf* or the country of Four Provinces. These three large islands are encompassed with an almost inconceivable number of others. All these islands have been divided, in the year of Christ 590, into seven large tracts of land—called *Yokositzido*. In 681 they were sub-divided into 66 provinces," to which number two formerly belonging to the Corea *Iki* and *Trussima* were afterwards added. These 68 provinces have been broken up into 604 lesser districts. The borders of this empire are its rocky mountains, coasts and a tempestuous sea, which by means of its shallowness admits none but small vessels and even those not without imminent danger.

Amongst the neighbouring countries subject to the Emperor of Japan are specified by Dr. Kaempfer.

(1) The Islands of *Riuku* or *Liquejo*, the inhabitants of which style themselves subjects of the Prince of *Satsuma*.

(2) *Tsiosiu*, the third and lowest part of the Corea, governed by the Prince of *Iki* and *Trussima*.

(3) The island of *Yezo*, governed for the Emperor by the Prince of *Matsumae*, whose own dominions form part of *Osiu*. (p. 61-62.)

With reference to a recent discussion at one of our meetings, it may be of interest to know that Kaempfer considers the *Liukiuan*s, judging from their language, to be of Chinese extraction.

Under the head of the second of the three above-named dependencies of Japan (the Corea), an account is given of the invasion of the Korean peninsula in the reign of *Tai-ko*—a seven years war, which resulted in the temporary reduction of Corea.

*Yezo* is spoken of as a Japanese possession "out of

their own empire." It was invaded and conquered by *Foritomo*, the first secular monarch (p. 64). *Yezo*, says Kaempfer, is so thoroughly full of woods and forests, that it produces nothing of use to the Japanese besides pelts and furs and the famous fish *karasaki*, which is esteemed a great delicacy. The Japanese, he says describe the inhabitants of *Yezo* as "a strong but savage people, wearing long hair and beards, well-skilled in the management of bows and arrows, as also in fishing, the greatest part living almost solely on fish. They describe them further as very dirty and nasty, but, adds the author, "this accusation is not so strictly to be relied on, since the Japanese are themselves so nice and superstitious in washing, &c., as to have found the same fault with the Dutch." The language of *Yezo* is said to resemble that of the Corea.

In the following chapter (the third) we have the names and subdivisions of the several provinces of Japan, and notes respecting its revenue and government.

Of the provinces above referred to five are designated the *five Provinces of the Imperial revenue*, being so called, because their revenue is particularly appropriated for the support and maintenance of the Imperial Court. It amounts to 148 *man* and 1,200 *kokf* (*koku*) of rice (a *man* contains 10,000 *kokf*\* and a *kokf* 8,000 *bags*).

The Five Provinces in question are:—

- 1.—*Jamasijro* or *Sansju*.
- 2.—*Jamatto* or *Wosju*.
- 3.—*Kawatzji* or *Kasui*.
- 4.—*Idsumi* or *Sousju*, and
- 5.—*Sitzu* or *Tsinokuni*.

Of the 7 large tracts of land, into which the Japanese Empire was divided by the Emperor *Siusiu*, the first is—

(1) *Tookaido* or *South Eastern Tract*. The *Tookaido* includes 15 Provinces.

Iga	} The revenues of these 15 provinces are 494 <i>mankokf</i> .
Isie	
Tsima.	
Owari.	
Mikawa.	
Tootomi.	
Surungo.	
Kai.	
Idsu.	
Sangami.	
Musasi.	
Awa.	
Kedsusa, Simoosa, and Fitata.	

(2) The 2nd of the 7 Tracts is the *Toosando* or *Eastern mountainous Tract*. This comprises eight large provinces, namely:—

Oomi	} The revenues of these 8 Provinces amount to 563 <i>mankokf</i> .
Mino	
Fida.	
Sinano.	
Koodsuke.	
Simoodsuke.	
Mutsu, and Dewa.	

(3) The *Foku Rokkudo*, or *Northern Tract* has 7 Provinces, namely:—

Wackasa.	} Revenues of these 7 Provinces amount to 243 <i>mankokf</i> .
Jetsiasen.	
Kaga.	
Noto	
Jetsiu	
Jetsingo.	
Sado.	

(4) The *Sanindo* i. e., the *Northern mountainous* or *cold tract* has eight provinces, namely:—

Tamba.	} The yearly revenues of these 8 Provinces amount to 123 <i>mankokf</i> .
Tango	
Isima	
Imaba.	
Tooki.	
Idsumo.	
Iwami, and Oki.	

\* Note 1 *koku*=3334 lbs. Therefore 148 *man* and 1,200 *koku*, i. e. 1,481,200 *koku*=lbs. 493,728,884 being the revenue above mentioned.

(5) The *Sanjodo*, or *Southern mountainous* or *Warm Tract*, has likewise 8 Provinces, namely :—

Farima.	} The revenues of these 8 Provinces amount to 270 mankokf.
Mimasaka	
Bidsen	
Bitsju.	
Bingo.	
Aki.	
Suwo, and Nagata.	

All of the above-mentioned five tracts form part of the main island, which Dr. Kaempfer calls *Nipon*, but which Mr. Satow asserts to have no especial distinguishing name.

We now proceed to the island of *Kiusiu*.

The 6th large Tract of land is called *Saikaido*, or the *Western Coast Tract*.

It is composed of nine provinces, namely :—

Teikudsen,	} The revenues of these nine provinces amount to 344 Mankokf.
Teikungo,	
Budsen,	
Bungo,	
Fidsen,	
Figo,	
Fiugo,	
Oosumi,	
and Satsuma,	

An island of the third magnitude, which lies between the two former, and is called *Sikokf* or the *Country of Four* (provinces), together with the neighbouring island *Awadsi*, N. E. of *Sikokf*, and the great province *Kijnokuni*, which stands out from the continent of *Nipon*, make up the 7th large tract of land, called

(7) *Nankaido*, or the Tract of the Southern coasts. It is composed of six provinces, namely :—

Kijnokuni,	} The revenues of these six provinces is 140 Mankokf.
Awadsi,	
Awa,	
Sanuki,	
Ijo,	
and Tosa,	

There remain, to complete Dr. Kaempfer's category of the Japanese dominions, the two above-mentioned islands of *Iki* and *Tsussima*, which were conquered from the Corea.

Under each of the above mentioned names of provinces Dr. Kaempfer enters more or less into detail with regard to the formation, climate productions and subdivisions of the district he is describing (see pages 70 to 81). The entire revenue of Japan he states to be 2,328 *man* and 6,200 *kokf*, according to the above distribution. Another estimate from a Japanese author makes the revenue of the country to be rather less—that is to say 2,257 *mankokf*. The former estimate, at the value of 16 shillings per *koku* would represented in our money a revenue of £18,628,960.

With respect to the nature of the Government of the country the author shortly states that "the whole empire is governed by the emperor with an absolute and monarchical power and so is every province in particular by the Prince who under the Emperor enjoys the government." The Emperor can disgrace or exile even the greatest princes, or can deprive them of their lives and dominions, according to his pleasure. Of the *Daimios*, the princes of *Satsuma* and *Kanga*, respectively, are said to be the most powerful in the empire.

The lords of smaller districts, called *Siomio*, such as those of *Goto* and several others are only permitted to reside for six months of each year in their hereditary dominions. The other six months they must pass at the Imperial Court, where their wives and families are detained all the year round as hostages. Some of these smaller districts are Crown lands or have been taken from the Princes by way of punishment. One of the chief political manners of the Court has always been to lessen the power of the *Daimios*.

The 6th Chapter of the 1st Book is devoted to the author's opinion respecting the origin of the Japanese. He gives two stories or legends tending to the view that the Japanese are of Chinese descent, which two stories he immediately afterwards proceeds to refute, expressing his own dissent from this theory. Having done so he next sets up a theory of his own, to which I shall presently refer. Dr. Kaempfer founds his chief argument against the Japanese race being descended from the Chinese in

the difference betwixt their respective languages. He considers that on proper enquiry the Japanese language would be found to be entirely pure (p. 84). A native of Japan, he says, does not understand any of the three Chinese dialects of *Nanking*, *Tsiakju* and *Fokju*. The Chinese language is, he adds to the Japanese people what Latin is to the people of most European countries. The Japanese language is entirely different from the Chinese in two essential properties—construction and pronunciation, and there is therefore no room to think that one of these two nations gave birth to the other. He here enters into some details respecting the construction of the two languages respectively, and having done so he remarks that it is needless to give himself and his readers the trouble to prove Japanese different from Korean or Fatsan as no one ever pretended to derive the descent of the Japanese from one or other of these two nations.

Of Dr. Kaempfer's arguments founded on the different manner in which certain letters of the alphabet are pronounced in China and Japan respectively, I would only say that he does not seem to me sufficiently to take into account the difference which climate is known to effect on the pronunciation of words even by people of the same race. Many English words for instance are pronounced in certain parts of America quite in another way to that in which we pronounce them in England, and South American Spanish also is something very different to listen to from the Spanish of Castille. I believe it is thought that the origin of this difference in both cases is chiefly to be traced to the influence of climate in contracting or expanding the throat. Another of Kaempfer's arguments against the identity of the two races, the Chinese and the Japanese, is the dissimilarity of their respective religions.

Another is the difference between the characters anciently used by either people.

(To be continued.)

## OUR NEIGHBOURHOOD.

### PART II.

In tenni labor.—VIRGIL.—Georg. IV. 6.

Though rude the subject, it deserves our pains.

THE *Saké*-shop is, without doubt, the house of most pretensions in "our neighbourhood." Not that there is only one *saké* shop, for there are several; but the big one at the corner, wherein resides the Worshipful the Mayor, exceeds so much in size and solidity all the other wine-shops, that in comparison with it they seem mere pretenders, contemptible outsiders, little pettifogging retailers of drams to be drunk on the premises—shadowy nonentities on whom the definite article would sit as incongruously as a new hat upon the head of a beggar. The *saké* shop, on the other hand, built round a fire and robber-proof godown, which towers substantial-looking in the middle of the less solid but more ornamental looking circumference, is like a goodly apple, sound from core to rind. It is in a commanding position too, occupying the angle formed by the forking of the main street into two minor thoroughfares, and is visible at all points to the bibulous whom business or pleasure may have decoyed into "our neighbourhood." The house, on the principle perhaps that "good wine needs no bush," does not display one, although most of the smaller shops are garnished with that emblem, which in such instances is carefully fashioned into a ball composed of twigs of a tree called *tsugi*. One very out-at-elbows establishment, however, the proprietor of which, as might be expected, is remarkable for his neglected and unkempt appearance, is contented with a ragged bough. This is in a side street, fortunately, and so does not outrage the decencies of the main thoroughfare. The master of the *saké* shop has a grave and solemn deportment as becomes a civic authority and a respectable merchant. He seems to spend his time in smoking and warming his hands over a *hibachi*. He trims the charcoal fire, occasionally, and now and then pours out for himself a cupful of hot water which he sips in a thoughtful and abstracted manner. He is always well-dressed and clean-shaven and wears his hair in the old fashion, and he's a good customer to the little barber, who treats him with great deference accordingly.

The accounts are kept by a *banto* or clerk, who sits behind a little rail, and rattles his *soroban* unceasingly. Within the smallest limits conceivable he has everything he requires to hand. Account books of every shape and size hang within easy range. Behind him is the strong box, with drawers and cup-boards ornamented with fantastical designs in iron-work, of the flimsiest description, however, and which, tho' supposed to give an appearance of great strength, could not resist the most infantile and inexperienced of burglars. Before him is his little table, scarce twelve inches high, which supports his inkstone, *soroban*, small coin, *kinsatz*, pipe and spectacles; whilst to his left hand and packed away into a corner, stand the inevitable *hibachi*, kettle, tea-pot and tea cups. He's never in a hurry, and will calculate your change to a fraction of a *tempo* whether you will or not.

In addition to the *banto* there is the shop attendant, whose duties are multifarious: a glance at him will discover, even to the most casual observer, that he is a character. He's always in a bustle, and serves his customers in a most snappish and disagreeable manner. Whether it be snatching out a spigot and drawing off the *saké* into a square-shaped measure, or dashing salt into the scale, he's equally ferocious. Perhaps he relies on such a demeanour to economise his time by driving away the gossips. Certain it is that purchasers never loiter long in the *saké* shop, and the business might not prosper were it not well known that here the best of wine and the fullest of measures are to be obtained. Are not the rows of carefully-matted tubes branded with the choicest brands? Is it not a tradition in the neighbourhood that the tapster is better acquainted with the virtues and qualities of every brew than any man living? Can any man hold forth more learnedly on *hanasakari*, the flower in full bloom, the prince of wines,—the *Yebiss dai*, with the red carp saltant stamped upon the cask—the *Ôtari*, with the character *dai* beside it, and the representation of a target pierced through the centre with an arrow—the *Musô ichi*, or unrivalled, and the *Fukobôtan*? Does he not carry on his daily work beneath a sign whereon may be deciphered that “here may be procured the *san toku shu*,” or *saké* of three virtues, which keeps out the cold, appeases the hunger, and wraps in sleep him that drinketh thereof? He's a quaint-looking fellow, truly, is our tapster! He has as many sides and angles as a prism. Regarded from the right, he is a man of intelligence and ability, his eye is piercing and his look bright. From the left, however, he's a blank and whimsical absurdity, all is vacuity. His wandering, aimless orb is ever skimming helplessly about, lighting upon nothing, but fluttering like a swallow at sea. Address yourself to his right side, and you find yourself in conversation with a man of parts; cross over to the left and you feel inclined to adopt an infantile syllabary and humour him as a *crétin*. Observe him by the front aspect, and you are face to face with a riddle. You find yourself ever wandering from right to left and back again over the bridge of his nose, and wondering why he was so constructed. His harlequin visage is a medley of judge and jester. On occasion, however, his left eye seems to do good service. See him peering into the bungle of a *saké* bucket—how he flashes his right eye into the gloom and as he turns the vessel round and round:—how eagerly he seems to follow any detected impurity as it bobs about, and looks as if he longed to stab it with his sharp nose! On such occasions his unattached and roving eye keeps guard outside. How it swoops down the side street—circles back again—delays for a moment over the master—skims past the *banto*—hovers over the *saké* tubs—flutters for a second or two on the lacquered buckets let out for presentation purposes, which lie upon the shelf in the corner—gets entangled in the cobweb and finally darts out of the door again who can tell whither! In truth it's a wonderful eye, that left eye of his!

Temper notwithstanding, the tapster is not an unpopular man. “Our neighbourhood” is proud of him, although few people are intimate with him. He is looked upon as a philosopher and his sayings are retailed. He's exclusive as to his acquaintance, but he has his cronies too. The stone-mason is his best-beloved gossip, and rarely does a day pass that does not discover the two in converse sweet. See, here he

comes, swaggering down the main street, his face still red and body steaming from his bath. The day's work is done. It is the cool of the evening, and the tapster is sitting at the door enjoying his pipe, a fine opportunity for a talk. “Good evening to you, fine weather, but still hot” He's down on his heels, now, pipe filled and lighted. The two smoke for a little time in silence, but gradually the pipe of the tapster goes out and musingly he commences:—“There are many things in this world which I cannot understand, and one of the most inexplicable to me is the pleasure that some people take in making others drink *saké* against their wills. What a face of disgust the invited one displays—how he collects his eyebrows into a frown, and contrives to spill his liquor when his would-be entertainer has turned his back. If he tries to escape by running away, he is seized and brought back again.—If he gives way unresistingly to the temptation, observe the results: no matter how nice a fellow he may naturally be, he becomes all at once a repulsive maniac. However healthy until now he was, he becomes before your eyes a patient afflicted with a grave disorder, and lies upon the floor forgetful of the past and future. The day of merry-making ends in misery: the next day is no better; he still lies there, his head is racked with pain, he cannot eat a morsel, he's more dead than alive, forgets all that passed the previous day, and his public and private business are both neglected.—Is it not a cruel thing to reduce a man to such a state? It is opposed to the laws of hospitality and justice.

“Then again, look at the confirmed drunkard. How he laughs and talks without reflection! What a sight he is, as he reels along with cap on one side—his *obi* loose and dress disordered. His *hakamas* are hitched up and shine exposed, his whole appearance is so ridiculous that in such a state his friends are unwilling to recognise him. In the tea-house, again, he stares insolently, laughs loudly, squeezes the hands of the waiting women, forces fish into their mouths and himself eats in a disgusting manner, and probably he winds up by dancing and singing, and shouting at the top of his voice. Nay you may even see old priests who, overcome by wine, are so far forgetful of decency as to bare their shoulders and disclose their dirty bodies to the lookers-on. Why should this *saké* be called by many the chief of the hundred drugs? In my opinion it were much more fitly designated the origin of the ten thousand diseases. Well and truly has Shakka spoken when he said that ‘the man who induces another against his will to partake of *saké* shall be born again hereafter, five hundred times, into a being without hands.’”

The stone-mason, however, who is not averse to a cup now and again with a friend, notwithstanding his habitual deference to the opinion of his friend, mildly urges that “there is something to be pleaded in favour of strong drink” and that “the subject ought not to be too hastily considered.” “See how,” he observes “see how the circling wine cup wakes the ‘ten thousand pleasures’ on a moonlight night or snowy morning when friends, gathered round the fire, tell tales with hearts to which care is a stranger. And when one's loneliness and melancholy are invaded by the advent of a friend, how one's bosom expands under its genial influence! Who will refuse a gift of fruit and wine from ‘behind the curtain’? Who is insensible to the comforts of a small snug room in winter time when the snow is on the ground and the wind howling without, the kettle bubbling on the fire and by your side an intimate friend? Under such circumstances is it not right pleasant to have a fill of *saké* without which your enjoyment is not complete? Remember that the proverb says ‘drink and sing while you may, for one inch before you reigns black night.’”

Yedo, 21st October, 1873.

#### ASIATIC SOCIETY OF JAPAN.

A Special Meeting of the above Society was held in room No. 19, at the Grand Hotel, on Wednesday, the 22nd October 1873, at 8.30 p.m., the chair being taken by Vice-President Sir Harry S. Parkes, K. C. B.

After reading of the minutes of the last meeting, a Paper by

Captain Descharmes, of the French Military Mission, on "The Warm Springs of Kusatsu" was read by Mr. Howell.

In the paper the writer enters into details of the nature of the country passed through on the journey from Yedo to Kusatsu, a distance of 46 to 47 miles, and describes in a precise and interesting manner the geographical features of the district lying between the two points, at the same time describing the character of the road traversed and the many objects of interest on the way, with a minuteness that cannot fail to be appreciated by any who may have made the journey and interesting to those who may contemplate it.

The various properties, temperatures and conditions of the springs are explained at length, and accounts given of the high reputation of the waters at the present time and for centuries past among the Japanese.

A list of the diseases benefited by waters and their mode of treatment was appended to the paper, but being of a purely technical nature it was not considered necessary to read it at the meeting as it would, perhaps, not be generally interesting and would, in due course, appear on the publication of the paper.

Mr. Watson, having remarked upon the great care and trouble taken by Mr. Howell in the translation of the paper:—

Mr. Satow considered that the thanks of the meeting were due to Captain Descharmes for his kindness in giving the paper, and thought it would be well if other travellers would, in the same way, make notes of their experiences and afterwards publish them for the information and benefit of the public at large.

In this Sir Harry Parkes fully agreed, suggesting that all tourists should give to the society narratives of their travels, which should be kept where access might be had to them by visitors to this country, who would learn and see more of all that is so interesting in Japan if they had any means of ascertaining "What to see and how to see it." He considered that the thanks of the community were due to Captain Descharmes for bringing to their notice a place within such easy access, with a climate essentially such as Europeans require in the summer months, and at which much benefit might be derived in a sanitary point of view.

The Chairman concluded his remarks by moving a vote of thanks to Captain Descharmes for the very interesting paper he had given to the Society, and to Mr. Howell for his care and pains taken in the excellent translation thereof, which was seconded by Mr. Watson and carried unanimously.

A second paper was then read by Mr. Watson on "Dr. Kämpfer's History of Japan," a work published in Germany in the year 1727 and containing an exhaustive account of Dr. Kämpfer's travels in and about Japan, from September 1690 to the year 1692, and his studies of the country and its people during that period. Considering the little that was known of Japan at that time the work is regarded as one of great merit. The general geographical description of the country is accurate, though modern researches correct some statements set forth, more especially regarding the island of Nippon.

The author dissents from the theory of the Japanese being descended from the Chinese or Koreans, considering them to be of an entirely different character and asserting them to have been originally descended from Babylon, whence he brings the nucleus of the race by the shortest and fastest possible route, without apparently an impediment of any kind, to the shores of the land they were destined to people. He enters to a considerable extent into the histories of the former Emperors of Japan, histories which are, in the main, simply legends, dating back thousands of year before the birth of Christ and even before the creation of the world; the histories of the Mikados, their customs and ceremonies and those of the court; the form of religion of the country; and much valuable and interesting information is given concerning the animal and vegetable life and the mineral products of the country.

At the conclusion of the paper Mr. Satow, who considered the public were much indebted to Dr. Kämpfer at the present time for the work placed before them, corrected certain statements which appear therein with reference to the revenues of the country, which should rather be considered as its products.

Sir Harry Parkes, after passing compliments upon Mr. Watson's interesting abstract, remarked that Dr. Kämpfer had evidently derived his information from a very close observance of the Japanese character; but although we were much indebted to him, he could not be considered a perfect authority, especially in his theory of the Japanese descent from Babylon. It would be well for all interested in the subject to read the Doctor's work and compare it with the present state of affairs.

The Revd. Mr. Syle moved a vote of thanks to Mr. Watson for the paper he had just read, referring to the interest always taken by him in the Society and the services he had rendered it as its first President, and regretting that it would so soon lose his valuable co-operation.

Admiral Shadwell seconded the motion which was carried unanimously, and there being no further business before the meeting, it separated.

#### YOKOHAMA GENERAL CHAMBER OF COMMERCE.

A meeting was held on the afternoon of the 22nd inst. at 3 o'clock for the purpose of considering some changes in the Silk trade which had been recently introduced by the native dealers.

The Chair was occupied by A. J. Wilkin, Esq.

Mr. J. M. Jaquemot drew attention to the importance of the question which they were met to discuss and submitted to the meeting the following resolution which, with an alteration suggested by Mr. Geisenheimer, was adopted:—

"That in order to check the tendency of the Japanese Silk Guild to over-ride arbitrarily the established usages of the trade, the foreign houses are invited not to enter into any transactions in silk, upon other conditions than the customs of the trade ruling hitherto, until an understanding has been arrived at between a committee appointed by the Chamber of Commerce and the native silk dealers."

THE second Resolution was moved by Mr. F. Geisenheimer:

That a committee of three be immediately appointed by the Chairman of the Chamber, to communicate with the native silk dealers; and in order to facilitate an understanding, as also to establish the customs of the trade upon an uniform and sound basis, the committee be empowered to make to the said Silk Guild the following proposition: That for the weight of paper and strings of hanks, as it actually is at present, the tare be fixed at 2½ per cent.; that 1 per cent. upon the net weight of the silk sold be taken as a compensation for dampness; and that no other allowance be taken from the sellers."

Having been duly seconded and approved by the unanimous sense of the members present the Meeting separated with the usual vote of thanks to the Chairman.

#### YOKOHAMA AUTUMN MEETING.

First Day, Thursday, October 23rd.

THE Autumnal Meeting of 1873, was inaugurated yesterday under the happiest auspices. At an early hour of the forenoon the usual movement of Japanese set in the direction of the Race Course, succeeded later on by the European residents to whom the bi-annual meeting is a strictly observed festival. The attendance was on the whole good, and the band of the *Iron Duke*, which played in the intervals of the races, contributed largely to the pleasures of the occasion.

The racing commenced at 12.30 P.M., the first race run being

##### 1.—THE YOKOHAMA PLATE.

Value \$100. For China Ponies. Winners at last meeting excluded. Weight as per scale. Entrance \$5. Once round.

Mr. Alfred's	...	...	Edgar	...	...	1
Mr. Edward-Ola's	...	...	Carrots	...	...	2
Mr. Lloyd's	...	...	Daybreak	...	...	3
Mr. Arejay's	...	...	Arrow	...	...	0
Mr. Douglas'	...	...	Loup Garou	...	...	0

Five ponies started. *Carrots*—notoriously a difficult pony to start—gave some trouble in getting off. All lagged in going up the hill, *Carrots*, however, being in the van. At this point, *Edgar* made good his running, and at the half mile post ran abreast of *Carrots*. On reaching the turn at the quarter post *Edgar* bolted in the direction of the outer rails—most of the other

ponies following his lead. He cantered in, winning easily by a clear length in advance of *Carrots*. Time 2m. 32sec.

## 2.—THE MAIDEN STAKES.

Value \$100. For Japan Ponies that have never won a race. Weight as per scale. Entrance \$5. Half a Mile.

Dr. Wheeler's ...	...Zephyr ...	1
Mr. John Grigor's ...	...Monte Cristo ...	2
Mr. Edward-Ola's ...	...Akambe ...	3
Mr. Nicolas' ...	...Lodi ...	0

The four running ponies got away to a good start. On approaching the "straight" *Lodi* and *Monte Christo* who had, up to this point, kept well together, "bolted"—*Zephyr*, who ran in blinkers, hugging the inner rail, availed himself of the chance thus offered and was landed a winner by about a length. Time 1m. 7sec.

## 3.—THE CLUB CUP.

Value \$100. For China Ponies. Weight as per scale. Entrance, \$5. One Mile.

Mr. Lloyd's ...	...Crusader ...	1
Mr. Edward-Ola's ...	...Khiva ...	2

*Crusader* and *Khiva* alone started for this race. *Khiva* took up the running and led to the half mile at which point *Crusader* came up with him. At the quarter post the latter shot ahead and won with ease by several lengths. Time 2m. 24sec.

## 4.—THE YEDO CUP.

Presented by F. O. Adams, Esq. For Japan Ponies that competed for this event at the Spring Meeting, 1873, and for ponies that have never run previous to this meeting. To be won at two consecutive meetings by the same pony or ponies, the property of the same owner. Weight 10st. 7lbs. Entrance, \$5. Three quarters of a mile. Entrance fees to go to the winner, excepting when the Cup is won, then Entrance fees to go to the Second Pony.

Mr. Nicolas' ...	...Ma-lhtotz ...	1
Dr. Wheeler's ...	...Zephyr ...	2
Dr. Wheeler's ...	...Boreas ...	3

All these ponies started after some little trouble with *Monte Christo*. *Boreas* (who was in blinkers) bolted, as usual, at his favourite spot and failed in the sequel to make good his loss. *Mahtotz* took the lead and, though *Zephyr* was urged to the utmost, retained it, winning by two lengths.

The Cup, offered by Mr. Adams, was presented to the winner by Mrs. Hannen. Time 1m. 45sec.

## 5.—THE VISITORS' CUP.

Presented. For China Ponies. Winners at this meeting 7lbs. extra for each race won. Weight as per scale. Entrance, \$5. One mile and a half.

Mr. Lloyd's ...	...Crusader ...	1
Mr. Edward-Ola's ...	...Polo ...	2

Only *Crusader* and *Polo* started, the former carrying 7 lbs. penalty. On ascending the hill *Polo* was urged forward and took the lead, winning the race with ease. Time 3m. 39sec.

## 6.—THE NIPPON CHAMPION.

Value \$150. For Japan Ponies. Weight as per scale. Entrance \$10. One mile.

Dr. Wheeler's ...	...Typhoon ...	1
Mr. Nicolas' ...	...Ma-lhtotz ...	2

*Typhoon* and *Boreas* got off well together. In ascending the hill *Typhoon* took the lead and held it. He came in an easy winner. This was one of the fastest mile races run by a Japanese pony. Time 2m. 16½sec.

## 7.—THE NANKIN CUP.

Value \$100. For China Ponies. Weight as per scale. Winner of No. 3 excluded; of No. 5, 4 lbs. extra. Entrance, \$5. Three-quarters of a Mile.

Mr. Alfred's ...	...Dibs ...	1
Mr. Lloyd's ...	...Calabar (lt. Spite) 2	
Mr. Edward-Ola's ...	...Carrots ...	3
Mr. Shepard's ...	...Yankee Doodle ...	0

This was perhaps the best contested and most interesting race of the day. *Yankee Doodle* took the lead at the start yielding, after a little, to *Dibs* and *Calabar*. *Dibs* won easily in a canter.

Time 1m. 14sec.

## 8.—THE PRESS CUP.

Presented. For Japan Ponies. Winner of No. 6 excluded. Winners at this meeting of one race 4lbs., of more than one race 7lbs. extra. Weight as per scale. Entrance, \$5. Three quarters of a mile.

Mr. John Grigor's ...	...Tim Whiffler ...	1
Mr. Lloyd's ...	...Friar Tuck ...	2
Dr. Buckle's ...	...Massaki ...	3

*Friar Tuck* gave some little trouble when about to start and on the fall of the flag *Boreas* would not move. *Tim Whiffler* took up the running and the lead and came in an easy winner. Time 1m. 44sec.

## 9.—THE SCURRY STAKES.

For all Ponies. A Sweepstake, with \$50 added from the fund. China Ponies, 11st.; Japan Ponies, 10st. Entrance \$5. One quarter of a mile.

Mr. Douglas' ...	...Loup Garou ...	1
Dr. Wheeler's ...	...Simoom ...	2
Mr. Lloyd's ...	...Calabar (lt. Spite) 3	

A false start occasioned by *Arrow's* impetuosity. *Simoom* did not start well but in a little time made good his position, going off with *Calabar* and *Loup Garou*. The latter, however, had the advantage of *Simoom* and came in a winner by a neck. The performance of *Loup Garou* was better than might have been expected under the circumstances of his long sea trip.

## Second Day, Friday, October 24th.

There was a much larger assemblage on the Race Course, and more especially in the enclosure, yesterday. The band of the *Iron Duke* was again in attendance and performed a selection of popular music. The first race of the day was

## 1.—THE BLUFF CUP.

Value \$100. For China Ponies. Winners on first day excluded. Weight as per scale. Entrance, \$5. One mile.

Mr. Lloyd's ...	...Chanticleer ...	1
Mr. Edward-Ola's ...	...Carrots ...	2
Mr. Edward-Ola's ...	...Polo ...	3

*Chanticleer* had the advantage at the start, but was passed by *Carrots* and *Polo* who made the running to the half-mile post. *Chanticleer* here came up with them and, on reaching the trees, secured the inside position and made the race his own. Time 2m. 20sec.

## 2.—THE AMERICAN CUP.

Value \$150. Presented. For Japan Ponies. Weight as per scale. Two ponies from opposing stables to start, or no race. Entrance, \$10. Three-quarters of a mile.

Dr. Wheeler's ...	...Typhoon ...	1
Mr. Lloyd's ...	...Friar Tuck ...	2
Mr. John Grigor's ...	...Tim Whiffler ...	3
Mr. Nicolas' ...	...Lodi ...	0

*Tim Whiffler* went off at a false start and made the complete round of the race course. He continued to give trouble even when brought to the post for the second time. *Typhoon* won easily. *Friar Tuck* second. *Lodi* was prevented by an accident from starting. Time 1m. 50½sec.

## 3.—THE ITO CUP.

Presented. For China Ponies. Weight as per scale. 7lbs. extra for each race won at this meeting under a mile. Entrance, \$5. Half a mile.

Mr. Edward-Ola's ...	...Carrots ...	1
Mr. Lloyd's ...	...Crusader ...	2
Mr. Douglas' ...	...Loup Garou ...	3

*Loup Garou* here made the running during the greater part of the race, but was subsequently overtaken by *Carrots*, who in his turn yielded to *Crusader*. *Carrots*,

however, was pushed forward, and after a hard struggle was landed a winner. Time 1m. 4½sec.

#### 4.—THE CHALLENGE CUP.

Value \$150. For China Ponies. Weight as per scale. Two ponies from opposing stables to start, or no race. Entrance, \$10. Two miles.

Mr. Lloyd's	...	...	Chanticleer...	...	1
Mr. Edward-Ola's	...	...	Polo	...	2

*Polo* and *Chanticleer* only. The latter horse was favourite and came in a winner by more than two lengths. Time: 1st mile, 2m. 22sec.; 2nd mile 5m.

#### 5.—THE STIRRUP CUP.

Value. \$75. For all Ponies not entered in any other race, excepting Nos. 1, 3, and 4, on third day. China Ponies, weight as per scale. Japan Ponies, 10st. 2lbs. Entrance, \$5. Last pony to pay second pony's entrance fee. Once round.

Mr. Osborne's	...	...	Seismograph	...	1
Mr. Sandwith's R.M.	...	...	Kingcraft	...	2
Mr. John Grigor's	...	...	Haut-ton	...	3
Mr. Lessey's	...	...	Dawn	...	0

*Kingcraft* could not be restrained and caused a bad start, leaving *Dawn* at the post. On reaching the top of the hill he was overtaken by *Seismograph*, who took up the running and with perfect ease made the race his own. *Mark Tapley* did not start. Time 2m. 26sec.

An objection to the start was raised by Mr. Lloyd on the ground that the second flag had not dropped. This point, however, was not entertained by the Stewards and his objection was overruled.

#### 6.—THE STOREKEEPERS' PLATE.

Value \$150. Presented by the Storekeepers of Yokohama. For China Ponies. Weight as per scale. Winners at this meeting of one race, 4lbs., of more than one race, 10lbs. extra. Three Ponies from opposing stables to start, or no race. Entrance, \$5. One Mile and a quarter.

Mr. Lloyd's	...	...	Crusader	...	1
Mr. Shepard's	...	...	Yankee Doodle	...	2
Mr. Edward-Ola's	...	...	Khiva	...	3

Only three horses started for this race. *Yankee Doodle* led off to the half-mile post at which point *Crusader* came up with him. A good race here ensued, but *Crusader* proved too strong and came in a winner with ease. Time 3m. 3sec.

#### 7.—THE EXCHANGE CUP.

Presented. For Japan Ponies. Weight as per scale. Winner of No. 8, first day, excluded. Winners of one race 7 lbs., and more than one, 10 lbs extra. Entrance, \$5. One Mile and a quarter.

Mr. Lloyd's	...	...	Friar Tuck	...	1
Dr. Wheeler's	...	...	Typhoon	...	2
Mr. Nicolas'	...	...	Mahtotz	...	3
Dr. Buckle's	...	...	Swop	...	0
Dr. Wheeler's	...	...	Zephyr	...	0

*Typhoon* went away with the lead followed by *Mah-totz*, and making the running as far as the half mile post. Here *Friar Tuck* caught up *Typhoon* and made the race his own from the quarter post. The extra weight appeared, to tell upon *Typhoon*. *Mah-totz* came in, a good third. Time 2m. 57sec.

#### 8.—THE HANDICAP PLATE.

Value \$100. For China Ponies. To be handicapped after race No. 6 has been run. Ponies entered for previous races, and not running, to be handicapped up to top weight. Entrance, \$5. Three-quarters of a Mile.

Mr. Lloyd's	...	...	Calabar (lt. Spite)	...	1
Mr. Alfred's	...	...	Dibs	...	2
Mr. Shepard's	...	...	Yankee Doodle	...	3
Mr. Edward-Ola's	...	...	Carrots	...	0

This was a well contested race, *Calabar* coming in a winner by about two length followed by *Dibs*. Time 1m. 39sec.

#### 9.—JAPAN WELTER.

Sweepstake, with \$50 added. For Japan Ponies. Winners at this meeting 10lbs. extra. Weight, 12st. Owners up. Non-starters to pay a fine of \$5, and fines to go to second pony. Entrance, \$5. Half a Mile.

Dr. Wheeler's	...	...	Boreas	...	1
Mr. John Grigor's	...	...	Tim Whiffler	...	2
Dr. Buckle's	...	...	Massaki	...	3
Mr. Sharp's	...	...	Vanguard	...	0

A false start occurred caused by *Massaki*. *Boreas* led off and maintained the lead throughout. Time 1m. 6sec.

### Correspondence.

#### ENGLISH GRAVES IN NORTH CHINA.

TO THE EDITOR OF THE *Japan Weekly Mail*.

YOKOHAMA, 23rd October, 1873.

SIR,—During a recent visit to the North of China I was much shocked at the state of the English graves, near Tientsin and Taku, of my countrymen who were killed or died during the China campaign of 1860 and the subsequent occupation. These graves present a lamentable contrast to those of the French, who, I believe, stipulated with the Chinese Government, when they evacuated the North, that their cemetery should be kept in due repair, and this they take care to see properly carried out. The English cemetery, on the contrary, is under water for the greater portion of the year, the wall has been carried away by gradual depredations, the tomb-stones, of which there are only a few yet standing, are in a great measure washed away, and in a few years there promises to be nothing left to mark the spot where lie the gallant men who fell in the war. With a very little expense this cemetery could be raised to the same level as the foreign concession, and would thus be secured against the effects of inundations which have become periodical. Hardly a vestige remains of the first Taku cemetery, and the second, near the South fort, has only been rescued from similar obliteration by the liberality of a few Taku pilots of different nationalities who, to their honour, have voluntarily walled the cemetery in, repaired the monuments, and endeavoured as far as they could to restore their fading inscriptions.

How is it that we English seem so careless about this matter? Mr. Wade, our present Minister at Peking, was formerly an officer in the Army, and might be expected to bestow some thought on the graves of his brother soldiers. But I hear that no remonstrance has been made to the objections raised by the Chinese Authorities at Ningpo to the monument erected to the gallant French and English officers and men who were killed in the storming of the city in 1864, and which is to be removed to the cemetery instead of remaining where it is. Now this monument was erected within sight of the achievements of these men, and though its presence may possibly now be disagreeable to the Chinese who would be glad to forget that but for the services then rendered them the present dynasty might no longer be the masters of China, it is hardly well for us to connive at this ingratitude. I should have been glad to see evidence of a determination to do more honour to our countrymen and our allies who fell in China during those critical times, and I regret that this spirit seems to have no representative at the capital.

By no people in the world is more respect paid to their dead than by the Chinese, and those who profess to understand their character, even if no other feelings influence them, should be careful that the disregard on our part of customs and humanity, does not operate unfavourably upon our national reputation.

I must be pardoned for drawing public attention to this matter. Many of the graves are those of brother officers with whom I served, and their memory is little honoured by the neglect into which their resting places have been allowed to fall.

I am,  
Sir,  
Your obedient Servant,

JOHN PITMAN.

## Law Report.

### ITALIAN CONSULAR COURT.

Before F. BRUNI, Esq., Acting Consul. OCT. 18, 1873.  
NAGAI SINSKE v. F. MEAZZA.

This was an action brought for the recovery of \$3,781, remainder of the payment for 4,837 silkworm egg cards (annuale), sold or consigned to the defendant at different periods in the year 1870.

To the demand of the plaintiff, however, the defendant pleaded that 1874 of said cards were covered with eggs of a quality different to those bargained for, to wit, polivoltine instead of annual. In consequence, he prayed the Court to absolve him from the payment of the residue of the price agreed on, \$3,881; and further, that the Court would see fit to order that he should be reimbursed all moneys already unduly paid, with compensation and costs.

The plaintiff, Yamashita Yosaburo, representing Nagai Sinske, head of the house of Osciya & Co. The pursuer was assisted by officers of the Judicial Court of Kanagawa Ken.

Sig. Ferdinand Meazza, merchant of Milan, at present residing in Yokohama, was the defendant.

Both parties to the suit were present in Court.

Sigs. Joseph Consonno and Gatano Agrati were appointed assessors.

On proceeding to consider the case before the Court, seeing that Sig. Meazza had entered no plea against the existence and validity of his obligations towards Nagai Sinske, and that plaintiff and defendant recognised the exact terms of the agreement between them:

That the plaintiff or deputy of Nagai Sinske had not contested the identity of the cards produced in Court by the defendant, as forming part of those on which defendant's liability rested;

Seeing that it is proved by the marks on the backs of the said 1,784 cards affixed by the Italian authorities delegated to the office in the communes where they were cultivated, and by the cocoons which have been procured from them, that they were all of a polivoltine quality;

That the complaints addressed to defendant from the different cultivators among whom were divided the cards in dispute, tend to establish his case; as well as the verbal testimony of Signor Hippolyte Parravicini, cultivator himself of some fifty of said cards, and mayor of the commune of Tornavento, where many of them were farmed;

Seeing that the plaintiff has been unable to prove that the cards, of which specimens have been presented to the court, and which he had recognised as part of those previously sold to the defendant, had really been covered with annual silkworm eggs;

Taking into consideration that the price paid for the said cards by the defendant, and received by the plaintiff, a very high price at that period even for annual silkworm eggs, clearly proves on both sides that it was a question of buying or selling annual eggs; and that for the rest it was this quality Signor Meazza agreed, by his written obligations, to purchase;

Seeing that Nagai Sinske, through his clerk, in the year following that in which the contracts were made, gives evidence of having been aware of the bad success of the greater part of the silkworm eggs sold to the defendant in the preceding year, offering to reimburse him, as in seen by the written attestation of M. Jean Stannig, of the Japanese Chirogiro, and above all, of that of M. Van der Polder, who, as Japanese interpreter, could not be mistaken in regard to the exactitude of the terms used by the *bando* of Nagai Sinske, as the latter would now wish it to be supposed;

That in Italy the bad success of the silkworm eggs imported at that time by the defendant was notorious; and that, besides the documents cited, it is proved by many of the principal silkworm egg merchants who come annually to Japan; Seeing that the plaintiff has proved nothing impeaching the authenticity or veracity of the documents produced by the defendant; and that, in regard to written or verbal depositions, he advances nothing but his own verbal denial, and without bringing forward a single document or other evidence in support of the truth of his assertion;

Taking into consideration the fact that the plaintiff has maintained that he knows how to distinguish annual from polivoltine eggs, he must have known perfectly the nature of those he was selling to the defendant,—the more so as he had put on the cards the usual red stamp, as a guarantee of the quality called annual, and that this shows a want of fair dealing;

That no notice can be taken of the remark made by the plaintiff that Signor Meazza having examined and chosen the cards, the seller ought for this reason to be absolved from all responsibility

towards the buyer, seeing the special character of the merchandise in question; as well as from results arising in regard to the period at which they were bought;

Seeing that it is admitted by the two parties to this action that the price paid by Signor Meazza for 1,884 cards was to be \$6,852, of which the defendant, having already paid \$2,571, pays fully for all the consignments of cards bought, although all had given good results, and that without prejudicing the question of consequential damages demanded by the defendant;

Further, legally, the seller is always bound to guarantee the thing sold from hidden flaws or defects, which render it unfit for its destined use, or which so diminish its value that the buyer, had he known of them, would not have bought it, or would have offered a lower price for it. Such is precisely the terms of the agreement made by the parties in dispute, according to which Nagai Sinske was to guarantee the annual quality of the silkworm eggs sold to Meazza;

It being understood that wherever the *actio redemptoria* takes place, in the event of hidden defects in the article sold, the seller is always bound to restore the value he has derived from it; and it being proved that, in the present case, the seller knew of the polivoltine quality of the eggs on the cards sold, for he has deceive himself in this respect, he is also bound to restore a part of the purchase-money, as well as to pay consequential damages to the buyer;

It is legally understood that a contract is not valid when the object therein stipulated is different from what was intended. Taking this view, Sig. Meazza is not bound to pay the remainder of the purchase money of the 1,784 cards covered with eggs of a quality different to those agreed upon in the contract.

Taking into consideration the 78 articles of the law regulating the Italian Consular Service, and 239 of the Regulation for the execution of the said law; as well as articles 80, 104, 252, of the Commercial Code, and articles 1,104, 1,123, 1,124, 1,131, 1,137, 1,408, 1,500, 1,501, 1,502, of the Civil Code;

The Court pronounces the following judgment:—

1stly, the Court absolves the defendant, Ferdinand Meazza, from the obligation of paying to the plaintiff the sum of \$3,781 residue still remaining to be paid of the cards of silkworm eggs bought from him as annual but proved to be polivoltine.

2ndly, the Court authorises Sig. Ferdinand Meazza to withdraw the legal deposit he has made at the Italian Consulate at Yokohama, amounting to \$3,653, as a guarantee of his obligations to the plaintiff, in case the Court should decide in favour of the latter;

3rdly, that the defendant Sig. Meazza shall claim from the plaintiff the reimbursement of \$2,571 as part of the purchase money already paid to him; in addition, interest on this sum at the rate of 6 per cent to date, from the 27th October, 1870;

4thly, is decreed to the defendant the right to consequential damages in such proportions as he may think fit to claim before competent authority;

5thly, that the defendant shall not be bound to pay the plaintiff the whole amount he owed him to complete the price of the cards, although they may have succeeded agreeably to the specified quality of the silkworm eggs, until he has been reimbursed by the plaintiff the sum of \$1,171 interest, and compensation.

The court hereby declares the present judgment provisionally in force, notwithstanding opposition or appeal, and without security.

The defendant, Signor Meazza, has commenced an action in the Japanese courts, claiming \$18,000 as compensation for losses sustained by him in consequence of non-fulfilment of contract.—*Japan Herald*.

## Extracts.

### THE INTELLECTUAL POWERS OF BIRDS.

(The Spectator.)

The *Popular Science Review* for July contains some interesting but too brief remarks by Mr. Leith Adams on the Mental Powers of Birds, which it is interesting to define specifically as distinguished from the mental powers of other animals of the higher order of sagacity. This we will briefly do. First, it would appear from Mr. Darwin's discussions—though Mr. Leith Adams hardly refers to them,—that none of the lower orders of creatures have so keen an appreciation of beauty as many kinds of birds, and certainly that none turn this taste for beauty so deliberately to the purpose of social amusement. That great naturalist has described how some

kinds of birds really celebrate festivities very closely approaching to our wedding fêtes, balls, and garden parties, in places carefully decorated and arranged by the birds for the purpose of social gatherings, and which are not used for their actual dwelling-places. The best evidence says Mr. Darwin, of a taste for the beautiful "is afforded by the three genera of Australian bower-birds." "Their bowers where the sexes congregate and play strange antics" [? at all stranger than our waltzes and quadrilles] "are differently constructed; but what most concerns us is that they are decorated in a different manner by the different species. The Satin Bower bird collects gaily coloured articles, such as the blue tail-feathers of parakeets, bleached bones and shells, which it sticks between the twigs, or arranges at the entrance. Mr. Gould found in one bower a neatly-worked stone tomahawk and a slip of blue cotton, evidently procured from a native encampment. These objects are continually rearranged and carried about by the birds while at play. The bower of the Spotted Bower-bird is beautifully lined with tall grasses, so disposed that the heads nearly meet, and the decorations are very profuse. Round stones are used to keep the grass-stems in their proper places, and to make divergent paths leading to the bower. The stones and shells are often brought from a great distance. The Regent-bird, as described by Mr. Ramsay, ornaments its short bower with bleached land shells belonging to five or six species, and 'with berries of various colours, blue, red, and black, which give it, when fresh, a very pretty appearance. Besides these, there were several newly-picked leaves and young shoots of a pinkish colour, the whole showing a decided taste for the beautiful. Well may Mr. Gould say, 'these highly-decorated halls of assembly must be regarded as the most wonderful instances of bird architecture yet discovered;' and the taste, we see, of the several species certainly differs." You could not have distinct evidence in a lady's salon carefully decorated with flowers, either of her taste for the beautiful, or of the deliberate subordination of that taste to social purposes, than we have here of the same qualities in birds. Mr. Leith Adams in his paper hardly refers, as we have already observed, to this remarkable class of facts at all, only pointing out that the obvious preference for gaily-coloured plumage on the part of the females clearly implies a genuine taste for the beautiful in birds, which is, of course, true, but is not nearly as good evidence of a distinct intellectual development on this point, as the elaborate decoration of their bowers by birds for festive purposes. The mere preference of gay colours may be unconscious and purely instinctive, but when a bird looks out for bleached land-shells and tall grasses to ornament its reception room, and fetches round stones to "fix" the grasses in their proper place, and then uses the hall thus provided only for festive social purposes, you can hardly deny such birds either the powers or the tastes of landscape gardeners and ball-givers. And we fancy this kind of deliberate taste for the beautiful, and the beautiful in subordination to social purposes, is confined among the lower animals to birds; and as regards the social purposes, to a very few orders of birds. A great many birds seem to have more appreciation of beauty of colour than almost any other class of animals, but only in a few species has it risen to the point of a really decorative social art. We may gather from this that in the bird the perception of harmony is of a very high kind, and this evidently applies to sound as well as colour. No creatures utter sounds so full of beauty, or display such wonderful qualifications for imitating the beautiful sounds they hear. Must we not say, then, that the bird has, in more force than any other species of the lower animals, the perception of harmony in forms, colours, and sounds, and the further consciousness of the fascination such harmony has for its own species, and the enhancement it lends to social enjoyments?

Another great mental quality which birds seem to have in excess of other animals is a very fine calculation of distance, and this, too, in direct subordination to their own well-being. It has been shown again and again,—and Mr. Leith Adams refers to some facts in support of it in this essay,—that as new weapons of offence are invented, many species of birds narrowly observe the range of the new bows or guns, and keep out of range, not even troubling themselves to go at all farther than is necessary to be out of range. Quite recently we have read, though we cannot verify the reference at present, of some birds which adapted themselves within a few days to the increased range of the rifle, directly after they had learned its range for the first time, having been previously accustomed only to the fowling-piece, and kept just outside the two thousand yards' range, or whatever range it was, retaining their composure perfectly at that distance. We suppose the wonderful accuracy of the travelling birds in striking the exact point for which they are bound, of which Mr. Leith Adams gives us wonderful illustrations, is a still greater proof of the same power. Mr. Adams tells us of swifths

which, after eight months' absence in the South,—at a distance of some 1,800 or 1,900 miles,—return not merely to the same region, but to the same nests which they had deserted, and that, too, year after year,—the individuals having been marked so that there could be no mistake as to their identity, unless indeed there be such creatures as Claimants to abandoned nests even in the ornithological world. Again, the delicate adaptation of the power of geometrical measurement to the welfare of its species seems to be shown by the weaver-bird of India, which hangs its "elaborately constructed, purse-shaped nest" "from the tops of branches over-hanging deep wells," in order to render it particularly difficult for enemies to get at the nest without running a great risk of falling into the well.

Again, none of the lower animals, except the monkey, seems to have so much imitative power, particularly in relation to sounds,—the imitative power of monkeys has more of capacity in it for imitating gestures,—as parrots, mocking-birds, ravens, and other tribes of birds. Curiously enough, this seems to be more or less a quality of tame, as distinguished from wild birds. At least, Mr. Leith Adams says that parrots, the cleverest of all these imitators when in captivity, "are not by any means given to copy the call notes of other birds in their native woods," so that imitation would seem to be the channel into which their intellectual energy is apt to be directed, when they are robbed of their natural occupations. That is, we suppose, their perceptions being very acute, and their voice well developed, directly they are cut off from their usual occupations, they begin to imitate all they hear by way of exercising their latent faculties. That birds can go beyond mere imitation, and are to some extent accomplished actors, the evidence as to all those birds which, by false pretences of agitation, lure the trapper away from the vicinity of their nest, completely shows. Mr. Leith Adams bears witness to this, and tells besides the story of the trick played by the ruby-throated humming bird of Canada, which, if captured, "feigns death by shutting its eyes and remaining quite motionless," and then suddenly makes a vigorous effort to escape. This shows not merely a dramatic gift, but a distinct purpose in the use of it. Ruses of a similar kind, are, however, not unexampled in other animals than birds. Cats, for instance, constantly feign sleep, for the purpose of catching birds or mice more effectually.

On the whole, however, it may be safely said that birds seem to have much more capacity for perceiving beauty, much more gift for social enjoyment, a finer knowledge of distance and direction, and more power of vocal imitation, than any other order of animals of which we know anything. On the other hand, they have less sense of power and sympathy than the dog, and therefore, much less sense of responsibility to their superiors, whom they often love, but seldom serve. Perhaps we might generalise these mental qualifications by saying that birds are chiefly educated by perceptions, wonderfully accurate indeed, but still of things at a distance, of things at an almost telescopic range; that their rapidity of flight makes them creatures of *wide* experience, but not of *full* experience of any species but their own; and that as a result, they cannot know men well enough to learn as much from men, as dogs, and cats, and elephants, and even other orders of creatures learn. Birds, in short, get bird's-eye views of the earth, and bird's-eye views, however instructive to those who have previously mastered the details carefully, do not exactly furnish a good basis for progressive knowledge. They obviously get a knowledge of geography, and in some sense of the air and its currents, such as no other creatures can have. They have an ear for music and an eye for harmony of form and colour, and probably of movement,—for there are bird-dances which Tagliomi would have despaired of imitating,—such as no other member of the animal world possesses; and the perception of beauty, we know, depends on nothing so much as the *coup d'œil*, and this birds can always command. But they lose, by their great privilege of wings, that slow and sure experience of the ways of man which some less gifted animals acquire. A swift which flies at the rate of 270 miles\* an hour, according to Mr. Leith Adams, clearly cannot have a brain to utilise an experience acquired at that rate in any but a very perfunctory way. Therefore, though birds have so strange a perception of beauty, which hardly needs close analysis, they are too fast, too migratory in their habits, to learn anything which needs perfect fidelity and vigilance confined to a very narrow circle of facts. They are the musicians, and we might almost say the sensuous poets of the animal world, but musicians and sensuous poets do not conduce to progressive knowledge and ethical culture. Birds range too high and fly too fast for sympathy with man, and so it happens that their intellectual powers, remarkable and unique as they are in the animal world, never become so human and so almost spiritual as those of creatures which can only boast of very inferior powers.

\* [A wholly incredible statement, we confess, Ed. J.W.M.]

## THE CASUISTRY OF JOURNALISM.

(The Spectator).

The *Cornhill* of this month publishes an able article on a subject very little discussed, and of much real interest, if not importance, the Casuistry of Journalism,—that is, the moral code by which a journalist ought in the practice of his profession to regulate his conscience. The writer contends that the mere hired swordsmen of politics are dying out, though not quite extinct; that journalism is becoming a profession, and an extensive one; that like every other profession, it has its own code of etiquettes and morals; and that they are not well understood by the public, which is apt to believe that a journalist, like a barrister, pleads always from his bar. He tries, therefore, to define the principles on which most journalists act, or ought to act, and reduces the law as far as contributors are concerned to three main principles:—"First, a journalist should write nothing which he does not believe to be true; secondly, he should write only in journals of whose general character he approves; thirdly he should agree with the journal to which he contributes upon the class of subjects on which he writes." Those rules, with all of which, in their condensed form, we agree, require of course expansion, and we are not quite sure that we can follow the essayist in his method of expanding them. He strikes us sometime as over-punctilious. To the first rule three can, of course, be no exception, except one, that the contributor may honestly accept an authority which he believes—of course we mean sincerely believes—to be superior to his own, even if he decidedly differs not only from his informant's view, but from his informant's theory of the facts. Very few men, for instance, would be justified in insisting on their own view of the facts as to the condition of Spain, if they found them denied, honestly denied, by high Spanish authority, would be more true to themselves in doubting themselves and accepting the new facts, than in blindly adhering to their own view. Some room must be left in journalism, as in every other walk of life, for authority, though its limit is extremely difficult to fix. There is no subject perhaps on which men are so thoroughly obstinate as that of the good government of India, yet we cannot assert that a contributor would injure his conscience if he took, in obedience to high Indian authority, a line which his whole mind did not accept. And the absolute proposition requires, moreover, the usual rider,—that though the journalist must write the truth, he is not bound to write the whole truth, to betray the secrets of his party, if he knows them, or to speak quite as harshly of his own side as he would of the other. Otherwise party journalism would be extinct at once, and that is just as useful as party organisation. We should, in fact, urge that he is not bound by any rule more stringent than this,—that he should never say anything in a journal he would not say face to face with enemies in Parliament, where he is open to immediate reply. The second and third points also require riders, which the essayist does not quite admit. If we understand him aright—and we can hardly be mistaken—he would exclude every Catholic from the English Press altogether, even as a mere reporter. Of course, the Catholic would be very wrong in writing Protestant theology, but the essayist argues that all good work of every kind helps on the journal in which it appears, and although "a writer may contribute legal, or artistic, or musical articles to a journal with whose general principles he has no sympathy, as regards the greater subjects of politics and religion, the agreement ought to be more comprehensive. Otherwise the main object of the rule will be defeated." That is to say, a good Catholic is acting immorally in reporting, *à fortiori* in writing, for the *Times*, while a Unitarian would be wicked who sent a clever political review to the *Tablet*, and Mr. Doyle was not only acting on high principle in quitting *Punch*, which nobody ever doubted, but was absolutely bound to do so. That is the view most Ultramontanians would take, but it seems to us a hard one to impose, if the artist is, on the whole, convinced that *Punch* is a benefit to the heretical world it addresses. It would be incomplete and almost silly, useless accompanied by the obligation never to buy a copy of *Punch*. Provided the contributor never aids in diffusing the creed he disapproves with his own pen, we do not see why the religious toleration he extends to his friend should not extend to their papers also. There is, of course, the curious point in relation to Catholics, that a Catholic reporter, if sincere, must believe that he is helping on the prosperity of those who are secure of eternal damnation, and of a journal which ought to be given to the flames; but we think he may fairly argue, that in making his opponents richer he is doing them no certain good, and that as to the paper, if he can tolerate its personnel, he can tolerate also their expression of their own opinions. As a Member of Parliament, he would act in concert with Pro-

testants, though he would not talk Protestantism, and why should there be a different rule for Journalists? An Abolitionist must not say a word in defence of slavery, but he might, we think, write in a paper which holds slavery, under certain circumstances, to be merely a crude form of human society. Tories, as a rule, hold that opinion; but we cannot go the length of declaring that a sincere Abolitionist, such as Lord Palmerston undoubtedly was—it was probably the only conviction he had over which his will had no power—could not honestly be a Tory.

The writer excludes the casuistry of Editorship from his remarks, and he obviously considers that the commonest of all difficulties, intellectual disagreement between editor and contributor, is now-a-days always settled by the editor selecting the writer who is most nearly in accord with him but he does not adequately discuss the question of indifferentism. There is more indifferentism among journalists than he thinks. Thousands of points are raised in journals every year, and some of them important points, upon which the majority of men, trained journalists included, have no definite views at all, and are as careless as most women which way the matter goes. May he not, when utterly indifferent, write to order, simply as a matter of business, supplying an article in demand just like any other dealer? We can see no moral objection, except that such a practice tends gradually to induce an affected indifference, which may by degrees degenerate into literary swordsmanship,—the worst vice, we agree with the writer, that can degrade a journalist. But still there are men who, profoundly indifferent upon some points are sensitive upon others and it seems to us that, as regards the former, they are fully at liberty to follow the policy of the paper which employs them, just as the rank and file of a party are fully at liberty to swallow an unpleasant Bill which their leader deems imperative. The indifference must, of course, be real, and not simulated; but if it is real, the mental subordination implied in taking the paper's side does not seem to us immoral, or to approximate in any degree to literary swordsmanship, any more than it does for a journalist to state fairly and frankly the side of a question he dislikes, but has not yet become absolutely convinced upon. As a rule, we should say there are, with every journalist, half-a-dozen subjects upon which, if he palters with his convictions in any way, he degrades himself; and one or two upon which even silence is more or less immoral, and a very much larger number upon which he may safely and conscientiously be a mere professional, merging himself in the paper of whose general theory he approves. Of course, this licence does not apply to Editors, because their responsibility is personal, but it does to journalists who have confidence in the general drift of their employer's mind.

There is a far nicer and more difficult question of casuistry than any the essayist has raised which remains still to be determined. What is the liability of an editor to his personal friends? Strictly speaking, he should have none; should attack his own father if he disapproves his speeches, or lash his wife's last book if he thinks it rubbish. This is, no doubt, abstractly true, as it is also abstractly true—to steal an epigram from an Australian who once wrote a pamphlet on the subject—that an editor should live in a cellar; but in practice men will not comply with either condition, and such demands would drive all the men with hearts and tempers out of the profession. It is, nevertheless, excessively difficult to find a rule that shall be morally sufficient, for silence, though it will meet the case of a book, unless of the first importance, will not meet that of grave political action. We suspect that in this case, as in all others we have quoted, the practice of Parliament is still the best guide, and that the journalist is bound, as the statesman would be bound, to do his duty, and take the consequences. He might be a little more gentle in his language, a little more apologetic in his tone, but the attack must not be deprived of its efficiency for any personal consideration whatsoever.

## ANARCHICAL POLITICS.

(The Nation—New York.)

Sir Henry Maine, in his work on 'Ancient Law,' published in 1861, made some observations on the part played, and likely to be played, in modern politics by Rousseau's notion about the law of nature (which includes the doctrine of "natural rights," with which we are so familiar here). These remarks have been verified in a very remarkable manner by the events of the last ten years:

"It is chiefly," he said, 'by allying themselves with political and social tendencies that the doctrines of Nature and her law have

preserved their energy. Some of those tendencies they have stimulated and others they have actually created; to a great number they have given expression and form. They visibly enter largely into the ideas which constantly radiate from France over the civilized world, and thus become part of the general body of thought by which its civilization is modified. The value of the influence which they thus exercise over the fortunes of the race is of course one of the points which our age debates most warmly, and it is beside the purpose of this treatise to discuss it. Looking back, however, to the period at which the theory of the state of nature acquired the maximum of political importance, there are few who will deny that it helped most powerfully to bring about the grosser disappointments of which the First French Revolution was fertile. It gave birth and intense stimulus to the vices of mental habit all but universal at the time, *disdain of positive law, impatience of experience, and the preference of à priori to all other reasoning.* In proportion, too, as this philosophy fixes its grasp on minds which have thought less than others and fortified themselves with smaller observation, *its tendency is to become distinctively anarchical.* . . . On this point it is a curious exercise to consult the *Moniteur* during the principal eras of the Revolution. The appeals to the Law of Nature and the State of Nature grow thicker as the times grow darker."

Of the soundness and acuteness of all this, the events of 1871 in France, and of the present year in Spain, afford abundant illustration. The whole body of political and moral ideas known as Socialist, and to a large extent the polity known in Europe as democratic, rest on the theory that political society ought to be and can be rearranged in harmony with a law of nature evolved by a certain number of advanced thinkers from their own breasts. The faith in this idea has mostly taken in Europe the form of determined hostility to property, which again is a close deduction from the doctrine of human equality. A poor man is not equal to a rich man in society as at present organized, but under the law of nature he ought to be; therefore, let us make him so. But it also takes inevitably the form of hostility to all distinctions whatever. It refuses to allow any class of society to be exempt from manual labor, or to wield any greater amount of the public force than any other body. Hence, an intense repugnance to officers of the law, whether policemen, soldiers, or magistrates. With courts of justice, in particular, it has no patience, inasmuch as they are composed of men who are armed with exceptional powers, and are forced to assume a certain moral and intellectual superiority to those who come before them for judgment. How anarchy results from all this is easily seen. If you once admit that experience may be disregarded, and society reorganized on an ideal basis, and that all men are of equal weight and authority, the question on *whose* ideal shall society be reorganized at once comes up, and it is incapable of solution. The consequence is that whenever the Reds get possession of a government, we at once witness a succession of revolutions which, for aught one can see, would last interminably if nobody from the outside intervened with the strong hand. Gambetta, for instance, first has his turn, but his ideal is not satisfactory to Pyat, so Pyat overturns him and tries his own, which in like manner gives no satisfaction to Raspail, who furiously demands his innings, and so on. During the reign of the Commune in Paris, the leading managers arrested each other nearly every day, so that it was impossible to say on any given day in whose hands the management of affairs would be. These rapid revolutions, too, are heartily applauded and supported by the rank and file, partly because of their permanent distrust of all men in power, but mainly because rapidity of realization is an essential feature of the Socialist programme. A slow working-out of results is something of which the genuine radical will not hear. He demands the perfect society now and here, and finding that one contractor does not supply it as he promised on Monday, he tries another on Tuesday.

Another and perhaps the strongest reason of all why the doctrines of the radical school are anarchical is that they call for an enormous increase of the machinery of government. A society in which everybody would be protected by the state against the consequences of folly, or imprudence, or laziness; in which all the products of industry would be equally divided by an impartial hand, and every man led to his appropriate task every morning by a policeman, all children carefully educated, and all women provided with husbands or even a society in which the principle of competition was to any considerable extent displaced by state superintendence, would call for a prodigious increase of officials and of official wisdom. No such system of accounts, no such opportunities for peculation or waste, were ever seen or dreamed of, nor any such state of things as many

of our reformers, either of the advanced or semi-advanced school, talk of. It would be ponderous and complicated beyond example, and almost beyond conception, and would, even if put into successful operation, kill human energy and darken the human mind as rapidly and inevitably as Egyptian priestcraft. But even if such a state of things were desirable, it is not practicable, because the world does not contain enough administrative talent for the management of even one nation on the Socialist plan. We cannot as we are to-day get enough of it for our government—simple as it is, and limited in its functions as it is—or our railroads, or our commerce, or our industry, or our steamships or armies. When, therefore, any considerable body of people makes an attempt suddenly to extend the functions of government, and to launch the ship of state on the dark and unknown *à priori* sea, honest men, who will not lie or deceive or undertake what they cannot perform, at once quit the deck, and the charlatans and jugglers and posture-masters rush up and take charge, and confusion reigns.

The question to what extent the "Law of Nature" has gained a hold on minds in this country is a more practical one than the extent of the ravages made by it in France and Spain. If we take Maine's three marks of its influence—"disdain of positive law, impatience of experience, and preference for *à priori* reasoning," and use them as tests, we should say that this influence was mainly, if not solely, visible among the reformatory speculators, who are, after all, a small body. The main body of the people are too busy, and the returns of labor too rapid and too large, and the national genius too intensely practical, to give much chance as yet for the ideal social state to become a subject of eager study and expectation. Probably nothing would do more, however, to spread and develop the anarchical tendencies of the new school in our politics than the admission of women to the suffrage. The female-suffrage movement here is in a large degree the result of the betrayal of a great philosopher into forgetfulness of his own canons of reasoning, through the disturbing influence of sex on his mental and moral vision—a phenomenon which the world has had many a time to deplore, and of which Mr. Mill was by no means the first or only illustrious example. It has, too, all the marks of the Socialist movement in Europe, and especially the strongly anarchical tendency, of which it furnished a striking illustration the other day, when, speaking through its principal organ about the election of Judge Craig in place of Judge Lawrence in Illinois (of which the Illinois people were already ashamed), it deduced the conclusion that any judge who decided "contrary to justice and *public opinion* ought to be impeached and deposed." This is, of course, simply another rendering of the Socialist plan of substituting "the justice of the people" (*i.e.*, judgment by a mass-meeting or large crowd) for that of courts composed of professional lawyers. The same paper warmly approved of young Walworth's assassination of his father, on the ground that marriage, as at present legalized, is a despotism which needs to be "tempered by assassination." This is worthy of note, inasmuch as it is an example of the readiness which we have remarked among nearly all the journals opposed to capital punishment to approve of private killing, if performed on a bad man, with a reasonable amount of provocation: that is to say, the killing of a human being by society, under the law, after judicial enquiry, and with official solemnity, they cannot bear; but slaughter by an individual, without forms or investigation, even that of a father by his son, they can see fitness in. The same tenderness for private vengeance under sentimental sanctions has been shown, and in much the same quarters, in the case of the killing of Goodrich by his mistress. So, too, when the *Nation*, commenting on the Walworth case the other days, spoke of the shocking amount of brutality of which women in the poorer classes were the silent and uncomplaining victims at the hands of drunken or depraved husbands, it was solemnly called upon by the *Woman's Journal* to assist in redressing this great wrong by advocating female suffrage—the writer's belief being evidently that if, when Pat came home drunk or irritable from a day's hod-carrying in the sun, he found that Bridget had the ballot, far from chastising her as usual with the poker, he would creep into bed in respectful silence. These things seem trifling on the surface, but as illustrations of the anarchical tendency, as Maine calls it, which runs through a good deal of the sociological speculation of the day, even among ourselves, they are worthy of note.

## Shipping Intelligence.

## ARRIVALS.

Oct. 19, *Gordon Castle*, British steamer, Holmes, 1,280, from London via Hongkong, Oct. 10th and Aug. 21st, General, to Cornes & Co.  
 Oct. 19, *Costa Rica*, American steamer, Williams, 1,917, from Shanghai and Ports, October 12th, General, to P. M. S. S. Co.  
 Oct. 19, *James S. Stone*, American barque, Phinney, 710, from Kobe, October 14th, General, to Van Der Heyde & Co.  
 Oct. 19, *Japan*, American steamer, Freeman, 4,351, from Hongkong, October 11th, Mails and General, to P. M. S. S. Co.  
 Oct. 20, *John Nicholson*, British ship, Grierson, 685, from Newcastle, N. S. W. August 21st, Coal, to P. M. S. S. Co.  
 Oct. 22, *Madras*, British steamer, Bernard, 1,185, from Hongkong, Mails and General, to P. & O. Co.  
 Oct. 23, *Relief*, American steamer, Corning, 795, from Hakodate, October 20th, General, to P. M. S. S. Co.  
 Oct. 25, *Mathilde*, German barque, Dan, 236, from Takow, Oct. 5th, Sugar, to Chinese.

## DEPARTURES.

Oct. 19, *Amade*, German barque, Nohmen, 370, for Hakodate, Ballast, despatched by L. Haber & Co.  
 Oct. 21, *Bombay*, British steamer, Davies, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.  
 Oct. 21, *Golden Age*, American steamer, Coy, 1,870, for Shanghai and Ports, General, despatched by P. M. S. S. Co.  
 Oct. 22, *Japan*, American steamer, Freeman, 4,351, for San Francisco, Mails and General, despatched by P. M. S. S. Co.  
 Oct. 25, *Relief*, American steamer, Corning, 795, for Kobe, Sea Weed & Co., despatched by P. M. S. S. Co.  
 Oct. 25, *Beema*, British ship, Blackstone, 870, for Kobe, None, despatched by Wilkin & Robison.

## PASSENGERS.

Per American steamer *Costa Rica*, from Shanghai and Ports. For Yokohama.—Mr. and Mrs. C. L. Grant, Mr. and Mrs. Swaby, Mr. Kinder, Miss Fielding, J. Pitman, A. G. Wood, J. D. Carroll, C. H. Beveridge, C. A. Flanders, F. Coit, A. Lenzy, L. Polano, E. R. Smith, L. R. Goldsmith, W. McRitchie, E. Powys, Gini Vlangoly, Mr. Damon, and 61 Japanese. For America.—Rev. E. P. Capp and wife, Mr. M. Crossette and C. J. Edridge.

Per American steamer *Japan* from Hongkong.—Messrs. Lehman and Lefert in the steerage, and 302 Chinese.

Per British steamer *Bombay*, for Hongkong.—Messrs. D. Pfanger, T. K. Shaw, Rosuin, Leong Chung Shing, children and 2 servants, Charles Poor, William Dayman, Henry Jeffrey, John Lewis, Aug. Lardiere, L. Spieler, G. Howell, and 3 Chinese.

Per American steamer *Golden Age*, for Hiogo.—Messrs. Thos. Lepper, Enoyé Bunda and wife, Okada and servant, Jas. E. Day, E. Behncke, Miss Harrison, Messrs. S. R. Goldsmith, A. H. Marcomber, Carson, and 10 Japanese, and 63 in the steerage. For Nagasaki.—1 Japanese, in the cabin, and 40 in the steerage. For Shanghai.—Messrs. H. Gillett, S. Coit, J. A. Primrose, E. H. Oliver, Lieut. H. G. Kunhardt, Mr. Jas. Macfarlane, and 10 in the steerage.

Per P. M. S. S. *Japan*: For San Francisco.—Lieut. W. L. Field, U.S.N., Dr. J. C. Whitehead, U.S.N., Mr. Brennan, U.S.N., Jno. Nowlan, Capt. Kirby and Wife, C. O. Shepard, U. S. Consul, Miss M. M. Crossett, A. C. White, R. T. Hayes and Son, and 10 in the Steerage. For New York.—Messrs. J. H. Leferts, J. Tsuda, E. Chaplin, C. J. Eldridge. For Europe.—Mr. Harborow.

Per British steamer *Madras*, from Hongkong.—Mrs. Hilston, Messrs. W. R. Certon, F. A. Thiel, Boardman, King, Fennel, Russell, H. Foss, B. H. Burns, G. F. Johnson, and 3 Chinese.  
 Per American steamer *Relief* from Hakodate.—15 Japanese.

## CARGOES.

Per American steamer *Costa Rica* from Shanghai and Ports.  
 Treasure ... .. \$483,625.

Per British steamer *Bombay*, for Hongkong:—

Silk ..... 910 bales.

Per British steamer *Madras*, from Hongkong:—

Sugar ... .. 3,471 bags.  
 Sundries ... .. 408 packages  
 Merchandise ... .. 371 "  
 Oil ... .. 505 "  
 Wine ... .. 148 "  
 Brandy ... .. 100 "  
 Shanghai Cotton ... .. 84 bales.

5,082 packages.

## REPORTS.

The American steamer *Japan* for first three days out had severe weather; after leaving the China Coast experienced pleasant weather, up to Port.

The American barque *James S. Stone* experienced strong N. E. after leaving Kobe, latter part southerly winds and rain.

The British steamer *Madras* reports sailed from Hongkong on 15th October, at 4.50 p.m.: experienced moderate and fresh N. E. winds with cloudy weather to Chichakoff, from thence to arrival, fresh northerly winds; exchanged signals with P. & O. S. S. *Bombay*, at 4.30 a.m. on 22nd, and passed P. M. steamer at 6.30 a.m. on 22nd, arrived 22nd October, at 4.40 p.m.

The American steamer *Relief* experienced fine weather with light N. E. winds during the passage.

The German barque *Mathilde* reports had very stiff monsoon and drizzling weather throughout.

## VESSELS EXPECTED.

R. M. L. I.

## COMMERCIAL INTELLIGENCE.

YOKOHAMA, OCTOBER 25TH, 1873.

THE only Mail arrival of the past week has been the P. & O. Steamer *Madras* from Hongkong on the 22nd instant bringing London Mails to the 5th September.

Departures have been the P. & O. Steamer *Bombay* for Hongkong on the 21st instant, and the *Japan* for San Francisco on the 22nd instant.

The *Gordon Castle* (str.) from London via Hongkong has arrived.

The *Bombay* took 910 bales of Silk for Europe.

The *Costa Rica* brought \$483,625 from Shanghai.

Business has been of a very unimportant nature during the closing week, operations being, to some extent, checked by the advance in *boos* and the speculative purchases "to arrive" entered into by the native trade. During the three last days of this week trade has been almost entirely suspended owing to the usual Autumnal Race Meetings. Good accounts are received of the prospects of the Rice harvest, and the favourable change in the weather lends authority to these reports.

We publish elsewhere the English text of the reply of the Japanese Silk Guild to the Sub-Committee of the Chamber of Commerce.

**COTTON FABRICS**—Business in *Shirtings* has been on a more slender scale and the sales reported do not exceed an aggregate of 16,500 pieces in all weights. In no other fabric is any change noticeable, *Velvets* being in weak enquiry with no sales and *Taffachelass* quite neglected. *T-Cloths* are unimproved. No other article calls for special remark.

**YARNS** are unaltered. Moderate sales only have been effected at quotations.

**WOOLLENS AND WOOLLEN FABRICS**.—Business continues dull in these goods and has shared the common inaction of the past three days.

**IRON AND METALS**.—The market is unchanged. We hear of no sales having been effected, and the quotations which we append may be considered as nominal.

**SUGAR**.—Prices remain unchanged. We have to report the following arrivals:—16,000 piculs Formosa; 3,500 piculs China.

Sales during the week are as follows:—10,000 piculs Formosa, at \$4.55; 510 piculs Kongfung, at \$6.72½; 170 piculs Kepak, at \$7.71; 200 piculs Kookfah, at \$7.15.

## COMMERCIAL INTELLIGENCE.

(Continued.)

**SILK.**—During the past week the departure of two mails, the transactions in silk worms' eggs, some petty difficulties raised by the Japanese in reference to certain long-established usages of the market and, finally, the autumn races, have interfered with the silk business.

Since the 19th instant, arrivals are 400 bales and purchases about 150 piculs. We have no change to report in prices.

**SILK WORMS' EGGS.**—Total arrivals since the beginning of the season are 971,000 cards, and total settlements amount to 702,000 cards against 1,080,000 last year at the same date. In consequence of the large purchases effected during the past week fine lots, in all descriptions, are scarce and command full prices. Our lower quotations for each sort only apply to the refuse of the market. We quote:—

Joshui, ... ..	\$2.35 to 2.80	Oshui, ... ..	\$2.50 to 3.35.
Bushui, ... ..	2.35 to 2.80	Koshui, ... ..	1.75 to 2.10.
Sinchui, ... ..	2.45 to 3.25	Goshui and other sorts, ... ..	1.75 to 2.25.

**TEA.**—Business in our Tea market was rather limited at the opening of the week, and native merchants were rather willing to obtain offers, which, however, owing to telegraphic information, were withheld. Within the last two days a little more confidence is apparent and settlements for the week amount to 3,500 piculs, which will unfailingly strengthen prices although no actual rise can at present be reported.

Arrivals have come in freely and stocks are again accumulating. It seems probable, however, that the producers in the Tea districts will not comprehend the necessity for lower prices, and any marked drop in quotations cannot be expected until well into December.

The *Tamerlane* is reported as being chartered for New York.

## MISCELLANEOUS.

## KEATING'S COUGH LOZENGES.

THIS UNIVERSAL REMEDY now stands the first in public favour and confidence: this result has been acquired by the test of 50 YEARS' EXPERIENCE. These Lozenges may be found on sale in every British Colony, and throughout India and China they have been highly esteemed wherever introduced. For COUGHS, ASTHMA, and all affections of the Throat and Chest, they are the most agreeable and efficacious remedy. They do not contain opium or any other deleterious drug, and may therefore be taken with perfect safety by the most delicate constitution.

Sold in Bottles of various sizes.

## KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL OR THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for children. Sold in Tins and Bottles of various sizes by all

Chemists.

CAUTION.—The public are requested to observe that all the above preparations bear the Trade Mark as herein shown.

THOMAS KEATING, London  
EXPORT CHEMIST AND DRUGGIST.

Indents for pure Drugs and Chemicals  
carefully executed.

Yokohama, August 9, 1873.

THE GREATEST WONDER OF MODERN  
TIMES!

## HOLLOWAY'S PILLS.

THESE famous and unrivalled Pills act most powerfully, yet soothingly on the liver and stomach, giving tone, energy, and vigour to these great main springs of life. Females of all ages will find them in all cases to be depended upon. Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." Blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," speaks of the Pills in the highest terms.

Mr. J. T. Cooper, in his famous "Travels in China," says that when money could not procure for him his necessary requirements, he could always get his wants supplied in exchange for "Holloway's Pills."

## THE GREAT CURE ALL!

## HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Rubbed on the neck and chest, it exerts the most beneficial influence over asthma, shortness of breath, sore throats, bronchitis, diphtheria, coughs, and colds. In the cure of gout, rheumatism, glandular swellings, and stiff joints, it has no equal. In disorders of the kidneys the Ointment should be most effectually rubbed over the seat of those organs.

## THE "MOFUSSIL GUARDIAN,"

Of August 31st, 1873, states that a severe case of that dreadful plague "dengue" was cured in a few hours, by well rubbing the body with Holloway's Ointment.

These remedies are only prepared by the Proprietor, THOMAS HOLLOWAY, 533, Oxford Street, London. Beware of counterfeits that may emanate from the United States.

Yokohama, September 27, 1873.

## Goodall's Quinine Wine.

(Prepared with Howard's Quinine.) Highly recommended by many eminent Physicians, to be the best and cheapest Tonic yet introduced to the Public, and has proved an invaluable and agreeable Stomachic to all suffering from General Debility, Indigestion, and Loss of Appetite. In large Bottles, at One and Two Shillings each. Prepared by,

GOODALL, BACKHOUSE & CO., LEEDS, ENGLAND.

The Food Journal.—An honest and useful preparation. The Anti-Adulteration Review.—A valuable Tonic, and has become popular from its intrinsic goodness. Arthur Hill Hassall, M. D.—We have tested this preparation, and can recommend it for its purity. The Lancet.—The samples of Goodall's Quinine Wine we have examined have been of excellent quality, and remarkable for unprecedented cheapness.

August 16th, 1873.
